Mr. RAY of New York. Mr. Speaker, this bill meets with the unanimous approval of the Senate and of the House committee. We did have a bill which extended the punishment of this offense and carried it into the States. That is eliminated from this bill, so that it applies only in the Territories, and every member of the Judiciary Committee is in favor of it.

Mr. BARTLETT. I understand the gentleman from New York, Mr. Speaker, to state that this is not the bill which the gentleman from Kentucky objected to several days ago.

Mr. RAY of New York. This is not; this is a Senate bill, and eliminates all that the gentleman from Kentucky [Mr. SMITH] objected to. This applies simply to the Territories, and, as I say, it meets with the unanimous approval of the Committee on the Judiciary.

Mr. BARTLETT. In other words, this bill would not give the United States courts jurisdiction of an offense like an assault upon any person or train simply because the train was engaged in interstate commerce?

Mr. RAY of New York. No, sir.

Mr. BARTLETT. It would not confer jurisdiction upon the United States courts except in cases where the United States courts had actual jurisdiction.

Mr. RAY of New York. That is right. It applies solely to the Territories.

Mr. CLAYTON. Mr. Speaker, just one word. The gentleman from New York has correctly stated the scope and the purpose of this bill, and that it meets with the unanimous approval of the House Judiciary Committee. It in nowise conflicts with the State rights idea of anybody.

Mr. RAY of New York. That is right; it does not.

The bill was ordered to be read a third time, was read the third time, and passed.

On motion of Mr. RAY of New York, a motion to reconsider the last vote was laid on the table.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. PARKINSON, its reading clerk, announced that the Senate had passed without amendment bills of the following titles:

H. R. 12702. An act to provide for the erection of a quartermasters' warehouse at Omaha, Nebr.; and

H. J. Res. 210. Joint resolution reappropriating and making available an unexpended balance of appropriations for work on the Capitol building.

The message also announced that the Senate had agreed to the amendments of the House of Representatives to the bill (S. 4139) to diminish the number of appraisers of the ports of Philadelphia and Boston.

The message also announced that the Senate had agreed to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 14244) authorizing the President to reserve public lands and public buildings in the island of Porto Rico for public uses and granting other public lands and buildings to the government of Porto Rico.

HOME FOR AGED AND INFIRM COLORED PEOPLE.

Mr. ROBERTS. I ask unanimous consent for the present consideration of the bill (H. R. 3108) to provide a home for aged and infirm colored people.

The bill was read, as follows:

Be it enacted, etc., That the sum of $100,000, out of all moneys, arrears of pay, and bounty which are due the estates of deceased colored soldiers who served in the late civil war, and which were in the hands of the commissioner of the Freedmen's Bureau and have been repaid into the Treasury, and for which no claim or claims have been or shall hereafter be made, filed, or presented prior to the 1st day of January, 1902, on an after which date all such claims not so filed and presented shall and are hereby declared to be

effectually, absolutely, and forever barred, be, and is hereby, appropriated, out of any such money in the Treasury of the United States not otherwise appropriated, for the purpose of erecting a memorial national home for aged and infirm colored people and to aid in maintaining the inmates of the same; the building or buildings for said home to be erected in the District of Columbia upon the lands owned by the association known as the Home for Aged and Infirm Colored Persons, a corporation duly incorporated under and by virtue of the incorporation laws of the District of Columbia: *Provided*, That no money shall be paid to said association under the provisions of this act until the Attorney-General of the United States shall have reported to the Secretary of the Treasury, after proper investigation, that such association is legally incorporated for the accomplishment of the purposes specified in this act, nor until the deed for said property shall have been approved by such Attorney-General, nor until the association shall have given good and sufficient bond, to be approved by such Attorney-General, conditioned upon the faithful discharge of their duties in the proper expenditure of the above-mentioned fund: *And provided further*, That no claim or obligation upon the United States for any appropriation of money for the support or endowment of said institution shall ever be asserted against the United States, nor will the United States recognize any obligation growing out of this act other than the duty of supervision specifically provided for herein; and the corporation aforesaid is hereby authorized to receive donations and gifts of endowment from benevolent and charitable persons and other sources.

SEC. 2. That the plans and specifications for the buildings to be erected for said home shall be submitted to and be subject to the approval of the Secretary of War; and the Secretary of the Treasury is authorized and directed to pay the money hereby appropriated to the association known as the Home for Aged and Infirm Colored Persons in the manner provided for and upon the fulfillment of the terms of this act: *And provided further*, That the Attorney-General shall have certified that the organization and constitution of the association afford reasonable security that the money hereby appropriated will be fully, wisely, and economically expended for the purpose set forth, and that no more than the amount certified by the Attorney-General to be reasonable shall have been expended for the work and materials provided, employed, and used in such part of the construction and erection of said building as may, in each case, be certified to by said Attorney-General; and that the association shall make annual reports of all the receipts and expenditures to the Secretary of the Treasury, to be by him communicated to Congress, and the Secretary shall have and exercise visitorial powers over said association.

SEC. 3. That all other moneys being a part of or belonging to such arrears of pay and bounty, and prize money and other allowances that are due the estates of deceased colored soldiers, sailors, and marines who served in the late civil war be, and are hereby, appropriated, out of any money in the Treasury of the United States not otherwise appropriated, to be invested as an endowment fund for the national memorial home for aged and infirm colored persons of the United States, with the exception of so much money as may be held to pay off all or any claims that may be proven against such fund, which shall be determined by the law governing the settlement of those claims which shall be presented before January 1, 1902, all claims which shall be presented after that date being hereby barred: *Provided*, That all the States in the United States shall have the right to organize one or more similar associations, and that such of the members of said similar associations as this present association shall from time to time determine may become members of the association known as the Home for Aged and Infirm Colored Persons of the United States by complying with the requirements of the association; and that any such similar association now existing or that may be formed hereafter shall have the right to place in the institution or on the grounds of the institution any memorial of deceased colored soldiers or representative colored men or of such other representative men as the association shall determine to have been benefactors of the colored people, providing that all such memorials are in harmony with such institutions, by and with the consent of the trustees of the national memorial home for aged and infirm colored persons of the United States: *And provided further*, That the Secretary of War, Secretary of the Treasury, and the Attorney-General of the United States shall constitute a board which shall have and exercise supervision over the expending and investment of the said fund, and that all vouchers must be certified by the Attorney-General before any money is drawn from the Treasury, and the money only taken from the Treasury by such vouchers as the work progresses; that the said endowment fund be invested in safe security in land or the first mortgage on land or in lands by the trustees of the national memorial home, with the approval of the Attorney-General of the United States, and that the disbursing officers of the Treasury are authorized and directed to pay the money upon the presentation of such vouchers, as approved and certified, as may be drawn by the association known as the Home for Aged and Infirm Colored People of the United States.

The amendments reported by the Committee on Military Affairs were read, as follows:

Insert after the word "dollars," in line 3, page 1, section 1, the words "or so much thereof as the Attorney-General shall deem advisable."

In section 1, after the word "owned," in line 4, page 2, insert the words "or to be owned."

"In section 1, after the word "fund," in line 18 of page 2, insert the words "and submit proper plans and contracts approved by the Secretary of War for such construction."

In section 3, page 3, line 24, after the word "moneys," insert the words "above such cost of construction."

Also, in lines 13, 14, and 15, strike out the words "the trustees of the National Memorial Home, with the approval of the Attorney-General of the United States," and insert the words "said board or under their direction."

Also, after the word "money," in line 16 of page 5, insert the following words, viz, "required for said construction and the income of said endowment fund."

Mr. LOUD. If the gentleman presenting this bill desires to offer some suggestions on the subject, I reserve the right to object.

Mr. ROBERTS. Mr. Speaker, this bill is one which passed the last House. It has been favorably reported by several committees of various Congresses. There never has been any adverse report on it. It is a bill which provides for taking out of the money now in the Treasury due the estates of deceased colored soldiers in the civil war $100,000, to be turned over to an incorporated association called "The Home for Aged and Infirm Colored Persons," for the purpose of erecting a home for such persons.

This association has raised by private subscription enough money to buy a suitable plot of land here in the city of Washington. The bill will take out of the Treasury $100,000 belonging to the colored people of this country and place it in a home where these people can get a decided and substantial benefit from it.

The bill also provides that the balance of the sum (the whole amount is about $230,000, the balance being $130,000) shall be invested, and the income used for endowment for the home. This balance, $130,000, will be under the control of the Secretary of War, the Secretary of the Treasury, and the Attorney-General. No money will be expended for the home until the Attorney-General and the Secretary of War shall report to the Secretary of the Treasury that the plans for the proposed buildings are proper and will come within the $100,000. The present bill is reported from the Committee on Military Affairs, as I am informed, by a unanimous vote. It seems to me, Mr. Speaker, there can be no reasonable objection to it.

Mr. HULL. This money is held as a separate fund in the Treasury; it belongs to the colored people; and this is the best disposition of it that can possibly be made as a recognition of the services of the colored soldier during the civil war.

A MEMBER. Where did the money come from?

Mr. HULL. From the pay and bounty of the colored soldiers.

Mr. BARTLETT. Mr. Speaker, as I understand, this fund is made up of the pay and bounty which were due to colored soldiers and which now remain undisposed of in the Treasury. But it is to be borne in mind that this money did not come altogether—possibly in very small part—from colored soldiers of the District of Columbia. The persons originally entitled to this money came no doubt from various parts of the Union. And now it is proposed to take this money due to those various people or their descendants and expend it for the benefit exclusively of persons residing in or near the city of Washington.

Mr. ROBERTS. Oh, no; that is to be a home for the colored people of the whole United States—not a local institution. It will merely be located here.

Mr. HULL. There can absolutely be nobody claiming this money now. It has been in the Treasury, and no valid claim has been made for it. In some cases forty or fifty persons have appeared claiming money as the descendants of one soldier, but have been unable to prove their claim.

The parties originally entitled to this money have moved to various States, in some instances changing their names, and it has been impossible to trace their descendants so that they could establish a legal claim on the Government for this money.

The money is carried in the Treasury as a separate fund, and unless some disposition of this kind be made of it the colored people of the United States will get no benefit from this fund, which is peculiarly the property of the colored race of the United States.

Mr. LOUD. Is there not a lot of money held in the United States Treasury that came from many other sources?

Mr. HULL. But this is a special fund which I think may be devoted with peculiar appropriateness to this particular purpose.

Mr. ROBINSON of Indiana. What authority is there for taking this money from the Treasury?

Mr. HULL. If this bill passes it will be done by the authority of the Congress of the United States.

Mr. ROBINSON of Indiana. As I understand, there is a fund there to which no claimants can make a valid title.

Mr. HULL. It is held there as a separate fund—has been there since the close of the war.

Mr. BARTLETT. Is it not a fact that this money has gone back into the General Treasury, or is it there as a separate and distinct fund? If we make this appropriation will it come out of a specific fund or will it be paid from the General Treasury? Is it not a fact that this fund has long since been turned back into the General Treasury?

Mr. HULL. It is still carried on the books of the Treasury as a liability of the Government to the soldiers.

Mr. BARTLETT. Then there is no specific fund of this character there?

Mr. HULL. Yes; $240,000, in round numbers.

Mr. BARTLETT. Kept a separate and distinct fund for forty years?

Mr. HULL. It is kept as a fund there belonging to these soldiers and these heirs, and will have to be carried there.

Mr. GAINES of Tennessee. If it belongs to them what right have we to give it away?

Mr. GROSVENOR. Mr. Speaker, I will state to the gentleman from Tennessee that it provides that these claims may be prosecuted up to a certain time, when the statute of limitations shall run, and then all who have not claimed the money at that time shall be barred and the balance of the money shall go to this purpose.

Mr. GAINES of Tennessee. How long is that limitation?

Mr. GROSVENOR. One year.

Mr. GAINES of Tennessee. Why, in that short time not one-tenth of the people of the country will know that this has passed.

Mr. ROBERTS. Mr. Speaker, I will state that the reason why this money has not been taken out of the Treasury long ago is due very largely to the fact that the colored soldiers in the civil war were mostly ex-slaves, and there was no record ever kept of the slave marriages, so it has been impossible for their lawful descendants to prove that they were the lawful descendants of these deceased soldiers, and they never can make that proof. You might as well put a limitation of a day ahead as a year or ten years. So much time has elapsed in which they have not been able to make the proof that it is an absolute certainty, almost, that they never will or can.

Mr. GAINES of Tennessee. Do not they make a practice of keeping a record of the marriages and deaths and the children in pension cases by the thousands and hundreds of thousands?

Mr. ROBERTS. I do not know what the rule is in pension cases, but I know this money is due the estates of these soldiers and can only be paid to their lawful heirs; and if a person can not prove himself the lawful heir he can not get it; furthermore, if he can not prove the marriage of his father and mother, he can not prove himself a lawful heir.

Mr. GAINES of Tennessee. In what time is he required to do that?

Mr. ROBERTS. He has until the 1st of January, 1903. I yield to the gentleman from New Jersey [Mr. PARKER].

Mr. CLAYTON. Mr. Speaker, before the gentleman yields to the gentleman from New Jersey——

The SPEAKER. Does the gentleman yield to the gentleman from Alabama?

Mr. ROBERTS. I yielded to the gentleman from New Jersey, and after I will be glad to yield to the gentleman from Alabama.

Mr. PARKER. Mr. Speaker, will the gentleman from Alabama put his question to me? I reported the case.

Mr. CLAYTON. Certainly. In connection with the remarks just made by the gentleman from Massachusetts as to the difficulty of the heirs of these dead soldiers establishing their claims, proving that they are the lawful descendants or legal heirs of these dead soldiers, I want to know what, if any, effort has been made in the direction of establishing their right to this money.

Mr. PARKER. A large part of the money on hand has been distributed through the past thirty-five years or thirty-seven years. The other part has had no claimants, because the heirs of these soldiers are unknown and have never appeared, in spite of all the efforts of the Treasury to find them. I desire to add that this fund is, as I understand it, kept as a separate fund in charge of trustees, who charge something toward it every year for taking care of it.

Mr. LOUD. What! Of the Government money?

Mr. PARKER. Of this part of the money; yes.

Mr. CANNON. Oh, no; my friend is dead wrong.

Mr. PARKER. Am I? All right. However that may be, the other part I speak of, but I understand that to be the case.

Mr. LACEY. That is the Freedman's Bureau the gentleman is speaking of.

Mr. GAINES of Tennessee. Has any book been published containing the names of these parties to whom this money belongs?

Mr. ROBERTS. I was just going to refer to that point. This money came originally into the possession of the Government, as I understand, in winding up the affairs of the Freedman's Bureau. That is how it got into the possession of the Government, and when the affairs and assets of that bureau were turned over everything that could possibly be proven up was taken out immediately, and this is what could not be proven up.

Mr. GAINES of Tennessee. Has any list been published in, say, the CONGRESSIONAL RECORD or any book?

Mr. ROBERTS. I do not know whether there has or not.

Mr. HULL. The gentleman is mistaken about the Freedman's Bureau. This is bounty and pay money, and I do not think it came through the Freedman's Bureau.

Mr. ROBERTS. Possibly I am misinformed.

Mr. HULL. Because this is a charge upon the Treasury for this purpose.

Mr. CANNON. There can be no doubt about it, I will say to the gentleman, if he will yield to me for a minute.

Mr. ROBERTS. I will yield to the gentleman from Illinois.

Mr. CANNON. There can be no doubt about it. This is the situation. There seems to be much misinformation about what this bill does. The law provided so much for pay of soldiers during the civil war and so much for bounties from time to time. Now, there were white soldiers and colored soldiers, and everybody that performed service, according to the time of his enlistment, as the law was then, was entitled to the pay and the bounty.

Now, out of the 2,200,000 enlistments or more in the Army of the United States there was a proportion of soldiers, mostly white, some colored, because the white greatly predominated in numbers, who through accident or otherwise did not get the bounty they were entitled to, and in some instances did not get the pay they were entitled to. Congress increased the bounties from time to time, and soldiers in the service did not know it until long after. Soldiers were killed or died and their heirs were entitled to these unpaid balances. The surviving wife, if any, or children, or, if none, the legal representatives were entitled to it. Congress from that time to this, whenever these cases have been made out, has been paying up these bounties. The proof has to be made, and invariably when it is made Congress authorizes the payment.

Mr. BARTLETT. May I ask the gentleman a question?

Mr. CANNON. In a moment. Invariably when the cases are made out and certified to Congress the appropriation has been made. We follow the practice of making a lump-sum appropriation each year to meet these audited accounts as they are ascertained. Now, there are pending in the Second Auditor's office for the War Department, I suppose, 50,000 or 100,000 claims, in some instances by soldiers who think something is due them when it is not, and in other instances by the representatives of deceased soldiers, and they keep on, to the extent of twenty-five thousand, fifty thousand, or a hundred thousand dollars each year as they establish their claims, receiving these payments.

Now, there is far more back pay and bounty due to white soldiers than there is to colored soldiers; and all this story about appropriating an amount due to colored soldiers for this home is mere leather and prunella. It is mere deception, mere sticking in the bark—buncombe, so to speak. This bill would do the manly and honest thing if it said, "There is hereby appropriated $100,000 to build this home," if that is the amount. That is the effect of it.

Mr. BARTLETT. That is exactly what I wanted to ask the gentleman. If the statement is correct with reference to our having periodically to make appropriations with reference to these claims, then it can not be true that there is now in the Treasury unappropriated any sum of money for this purpose.

Mr. CANNON. There is not a word of correctness in that statement.

Mr. BARTLETT. That is what I wanted to know.

Mr. CANNON. This money comes into the Treasury by taxation—internal revenue and customs—just as all other money comes in. This bill will bar the colored soldiers in 1903, if they do not prove up, making a statute of limitations against them. It does not bar the white soldiers, but it cuts the colored soldiers off.

Mr. GAINES of Tennessee. Who does that?

Mr. CANNON. It is done by this bill. Of course we would revive it. If colored soldiers should establish their claims notwithstanding the bar, if any of them could prove up, we would pay them.

Mr. GAINES of Tennessee. Has any list ever been published anywhere showing these claims?

Mr. CANNON. Why, it is on the Army rolls; that is all.

Mr. GAINES of Tennessee. Any newspaper publication?

Mr. CANNON. No; the claim agents are writing all over the country, hunting up folks.

Mr. GAINES of Tennessee. And they are coming in before Congress?

Mr. CANNON. Hunting up everybody to whom we owe anything, and three times as many bodies to whom we do not owe anything. They are lively ducks. They get in their work.

Mr. GAINES of Tennessee. They are still looking these people up?

Mr. CANNON. Now, this proposition is just one thing more. Let us see what it is. Let there be no misunderstanding about it. It appropriates this money for a colored old-folks' home, to be located in the District of Columbia; and colored old folks from Illinois, Pennsylvania, and Massachusetts—I think people outside of the District can come in, can they not?

Mr. ROBERTS. Yes.

Mr. CANNON. And from other States they come in here, and when once here they are always here, and the Treasury of the United States will again have to take the burden, not of sustaining the soldiers that defended the flag, pay and pension to them and furnish them with artificial limbs, but will have assumed the burden of the States for the poor and caring for the indigent.

Mr. GAINES of Tennessee. A poorhouse.

Mr. CANNON. Oh, yes; or by outside relief. Now, then, there it is in its length and breadth. I am a good deal of a States' rights man. I believe in Tennessee and Illinois and Massachusetts taking care of the indigent colored poor, just as it takes care of the indigent white poor, and I will not by my vote fly in the face of the whole theory of our Government by assuming this burden in the District of Columbia and from the National Treasury now.

Mr. TOMPKINS of New York. Is there a separate fund belonging to the colored and another fund which belongs to the white?

Mr. CANNON. No, no; every colored or white soldier that did not get his pay and bounty, as he was entitled to under the

law, is entitled to it, but he has got to prove that he is the fellow, and that the Government owes him that much, and if he never proves it he will never get it.

Mr. HULL. Will the gentleman allow me? The Government has already adjudicated it. It was paid in and it was decided that they owed the soldiers that much.

Mr. CANNON. No.

Mr. HULL. Yes; and the Treasury eight years ago published a report on the matter. The gentleman is mistaken in the statement he makes.

Mr. CANNON. I am not mistaken, because the gentleman will see at once that it would be impossible to adjudicate claims that are not made.

Mr. HULL. Oh.

Mr. CANNON. Hold on a minute. I understand what I am talking about. It would be impossible to adjudicate claims that are not made. Anybody can see that if the Government had adjudicated $100,000 due to A, B, C, D, E, and F the Government must pay it. Now, the Government no doubt may have published a roster of the services of the colored and white. That is all. And then somebody may have estimated that under the law, if somebody was in being that would come and claim it, he was entitled to it. That is all.

Mr. HULL. That is not what the Treasury published in this report. The Treasury reported on a bill first at the beginning of the Fifty-second Congress or the Fifty-third, a specific statement that this amount of money was due.

Mr. GAINES of Tennessee. Did they call the names?

Mr. HULL. You can go to the War Department and get a list of the names.

Mr. CANNON. The Government can do this and nothing more.

Mr. ROBERTS. Will the gentleman from Illinois yield to me for a moment? I think that I can clear up this point.

Mr. CANNON. In a moment. The Government can do this and nothing more. You can tell how many soldiers are on the rosters and who has drawn bounty and full pay and who is not found. I have no doubt that the Government may have done that.

Mr. ROBERTS. The gentleman said a few moments ago that this money got into the Treasury Department through the Freedman's Bureau. I want to read this report, made to Congress in the Fifty-third Congress, second session:

A joint resolution was passed by Congress in 1867 (see Stats. L., vol. 15, p. 26) which provided that all moneys certified to be due colored soldiers should be paid to the commissioners of the Freedman's Bureau. At that time most of the colored people from the Southern States who would be entitled to this money that had been slaves had no individual relationship, and where they had it was impossible to trace it. The law now governing the proper adjudication of these claims requires that the heirs of the deceased colored soldier must prove their lawful marriage relation by record evidence, and that to be certified to by a notary public or clerk of the court in the several States, but as no marriage record was ever kept of the slaves it is impossible that the law can be complied with, so that in a great many instances the proper proof can not be made. The Second Auditor of the Treasury in 1892, in his annual report, makes the following statement:

"When the bureau (referring to the Freedman's Bureau) was discontinued in 1872 the unexpended balance of said funds was turned over to the Adjutant-General's Department for disbursement, and every effort was made to find the person entitled thereto. In many instances it was ascertained that the payees were dead, and in all such cases the funds were held for seven years and then repaid into the Treasury on the legal presumption of the death of the payees. The total amount repaid was $504,000. In 1882 it was found that more than one-half of that sum had been claimed, the actual amount remaining unclaimed being $240,233."

Your committee find that while all of the money has been claimed (and in many instances as many as 10 persons from as many different States filed claims as the lawful heirs of 1 deceased soldier) since the date of that report there still remains in the Treasury at least $300,000, which, under existing conditions, can never be paid out on account of the utter insufficiency of the proof furnished to establish the claims. There have been numerous requests made by the colored people generally to apply the sum for the advancement and benefit of their race, but as there was no law in existence whereby this money could be so used no progress was ever made.

In 1893 a number of colored men in the District of Columbia formed a corporation for the purpose of establishing and maintaining a home for the aged and infirm colored people of the United States, and by private subscription have acquired a tract of land sufficient to erect a suitable home thereon, and have come to Congress for a transfer to them for that purpose of a portion of the fund in the Treasury which justly, equitably, and legally belongs to the colored people. There is no question but that the aged colored people who were once slaves are more subject to destitution and require charitable aid more than any other class of people in the United States, and as it is not the province of this Government to establish charitable institutions, but rather assist those already established in the District, these people suffer for want of an institution of their own. There are at the present time only 10 colored people permitted admittance in the charitable institutions in the District of Columbia on account of a lack of accommodations, and those are provided for in the basement of the Children's Asylum on Eighth street; therefore it is eminently proper that they should receive recognition to such an extent as will enable them to care for the needy and aged of their own race out of the funds which really belong to them and are withheld in the United States Treasury.

The SPEAKER. Is there objection to the present consideration of the bill?

Mr. LOUD. I object.

The SPEAKER. Objection is made by the gentleman from California.

FINAL ADJOURNMENT.

Mr. PAYNE. Mr. Speaker, I am directed by the Committee on Ways and Means to report back the following resolution with an amendment, and on it I desire immediate action.

The SPEAKER. The gentleman from New York, by direction of the Committee on Ways and Means, calls up the following resolution:

The Clerk read as follows:

Resolved by the House of Representatives (the Senate concurring), That the President of the Senate and the Speaker of the House of Representatives be authorized to close the present session by adjourning their respective Houses on the 1st day of July, 1902, at —— o'clock post meridian.

The amendment recommended by the committee was read, as follows:

In line 5, after the word "at," insert the words "five thirty."

Mr. PAYNE. On that I demand the previous question.

The previous question was ordered.

Mr. RICHARDSON of Tennessee. I desire to amend the resolution.

The SPEAKER. The previous question has been ordered.

Mr. SULZER. A parliamentary inquiry.

Mr. RICHARDSON of Tennessee (to Mr. PAYNE). Did the gentleman offer the amendment?

Mr. PAYNE. I did.

Mr. SULZER. Is a motion to recommit the resolution back with instructions in order?

The SPEAKER. The Chair thinks it would be.

Mr. SULZER. Then, Mr. Speaker, I ask that this resolution be recommitted to the committee with instructions to report——

The SPEAKER. It is not in order to make that motion yet. The question is on agreeing to the amendment.

The question was taken; and the amendment was agreed to.

The SPEAKER. The question is now on agreeing to the resolution.

Mr. SULZER. Mr. Speaker, I move that the resolution be referred back to the committee, with instructions to report an adjournment on the 8th day of July, 1902, at 5 o'clock p. m.

The SPEAKER. The gentleman from New York moves to recommit the resolution to the Committee on Ways and Means, with instructions to report it back for the 8th day of July, so that the adjournment will take place at 5.30 p. m. on that day; and on that question the gentleman from New York demands the previous question.

Mr. SULZER. A parliamentary inquiry, Mr. Speaker.

The SPEAKER. The previous question had been ordered by the House before the gentleman took the floor, and the motion to recommit is not debatable, and the Chair must submit it to the House at once.

The question was taken; and on a division (demanded by Mr. SULZER) there were 51 ayes and 104 noes.

So the motion to recommit was rejected.

The SPEAKER. The question now is on agreeing to the resolution.

Mr. SULZER. And on that, Mr. Speaker, I demand the yeas and nays.

The yeas and nays were ordered.

Mr. SWANSON. Mr. Speaker, under the rules are we not entitled to twenty minutes' debate on either side?

The SPEAKER. Demand was made for the yeas and nays, and the yeas and nays have been ordered. No debate was demanded until after the division began, and the Chair thinks it is too late now.

Mr. SWANSON. Pending the yeas and nays, Mr. Speaker, I desire to call the attention of the Chair to the fact that there had been no division prior to the call for the yeas and nays. The motion had not been put by the Chair, and the motion not having been put, as I understand, we are entitled to twenty minutes' debate on either side on a motion to adjourn sine die. The motion had not been put, and the previous question had been ordered, and when the previous question is ordered, under the rules, and and there has been no debate, we are entitled to twenty minutes' debate on each side after the previous question is ordered.

The SPEAKER. The point of order is not without some difficulty, but the Chair thinks it comes now too late. The question on the amendment and the motion to recommit have been considered, and the House is dividing, and the Chair thinks it comes too late. While it is not without difficulty, the Chair thinks it is now too late.

Mr. SULZER. Mr. Speaker——

The SPEAKER. The Chair will not recognize the gentleman from New York because he is filibustering.

Mr. SULZER. I am not filibustering, Mr. Speaker.

The question was taken; and there were—yeas 136, nays 76, answered "present" 13, not voting 125, as follows:

YEAS—136.

Acheson,	Dalzell,	Jones, Wash.	Payne,

So the resolution was adopted.

The following pairs were announced:

For the remainder of the session:

Mr. WANGER with Mr. ADAMSON.

Mr. GILLET of New York with Mr. CLAUDE KITCHIN.

Mr. JACK with Mr. FINLEY.

Mr. CURRIER with Mr. FEELY.

Mr. DRISCOLL with Mr. POU.

Mr. STEVENS of Minnesota with Mr. VANDIVER.

Mr. ADAMS with Mr. RUCKER.

Mr. SHERMAN with Mr. RUPPERT.

Mr. OTJEN with Mr. SHACKLEFORD.

Mr. BOREING with Mr. TRIMBLE.

Mr. BULL with Mr. CROWLEY.

Mr. METCALF with Mr. WHEELER.

Mr. DAVIDSON with Mr. SPARKMAN.

Mr. BALL of Delaware with Mr. LEVER.

Mr. DRAPER with Mr. LEWIS of Georgia.

Mr. DAYTON with Mr. MEYER of Louisiana.

Until further notice:

Mr. HEATWOLE with Mr. BELMONT.

Mr. RUSSELL with Mr. ROBERTSON of Louisiana.

Mr. SHELDEN with Mr. REID.

Mr. CONNELL with Mr. ELLIOTT.

Mr. POWERS of Maine with Mr. FOX.

Mr. WM. ALDEN SMITH with Mr. JETT.

Mr. SKILES with Mr. TALBERT.

Mr. JENKINS with Mr. SMITH of Kentucky.

Mr. FORDNEY with Mr. BURGESS.

Mr. MILLER with Mr. THOMAS of North Carolina.

Mr. RUMPLE with Mr. THOMPSON.

Mr. POWERS of Massachusetts with Mr. CONRY.

Mr. EMERSON with Mr. GILBERT.

Mr. LOUDENSLAGER with Mr. DE GRAFFENREID.

For this day:

Mr. VAN VOORHIS with Mr. ROBINSON of Nebraska.

Mr. TONGUE with Mr. SHALLENBERGER.

Mr. STEWART of New Jersey with Mr. SCARBOROUGH.

Mr. SCHIRM with Mr. ROBB.

Mr. PEARRE with Mr. PATTERSON of Tennessee.

Mr. MORRIS with Mr. MICKEY.

Mr. MORRELL with Mr. NAPHEN.

Mr. MARTIN with Mr. MAHONEY.

Mr. MCLACHLAN with Mr. MCLAIN.

Mr. LITTAUER with Mr. MCRAE.

Mr. KETCHAM with Mr. MCDERMOTT.

Mr. HANBURY with Mr. MCANDREWS.

Mr. GROW with Mr. MADDOX.

Mr. GRAHAM with Mr. LINDSAY.

Mr. GILL with Mr. LATIMER.

Mr. GARDNER of Michigan with Mr. LAMB.

Mr. FOSS with Mr. HENRY of Mississippi.

Mr. DOUGLAS with Mr. FOSTER of Illinois.

Mr. DAYTON with Mr. DOUGHERTY.

Mr. DAHLE with Mr. FLEMING.

Mr. CROMER with Mr. CREAMER.

Mr. WOODS with Mr. BROUSSARD.

Mr. CORLISS with Mr. BREAZEALE.

Mr. CALDERHEAD with Mr. BOWIE.

Mr. BRICK with Mr. THAYER.

Mr. WEEKS with Mr. SLAYDEN.

Mr. BEIDLER with Mr. BELLAMY.

Mr. WADSWORTH with Mr. BELL.

Mr. TAWNEY with Mr. LLOYD.

Mr. LAWRENCE with Mr. CALDWELL.

On this vote:

Mr. BROMWELL with Mr. RICHARDSON of Alabama.

Mr. HENRY C. SMITH with Mr. TAYLOR of Alabama.

Mr. GREENE of Massachusetts with Mr. GRIGGS.

The result of the vote was announced as above stated.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. PARKINSON, its reading clerk, announced that the Senate had passed without amendment a bill of the House of the following title:

H. R. 4346. An act to amend section 2743 of the Revised Statutes of the United States concerning the examination of drugs.

The message also announced that the Senate had agreed to the following concurrent resolution of the House:

Resolved by the House of Representatives (the Senate concurring), That the President of the Senate and the Speaker of the House of Representatives be authorized to close the present session by adjourning their respective Houses on the 1st day of July, 1902, at 5.30 o'clock post meridian.

The message also announced that the Senate had passed the the following resolution:

Resolved, That a committee of two Senators be appointed by the Chair to join a similar committee appointed by the House of Representatives to wait upon the President of the United States and inform him that the two Houses, having completed the business of the present session, are ready to adjourn, unless the President has some other communication to make to them.

The message stated that, in compliance with the foregoing, the President pro tempore had appointed as said committee on the part of the Senate Mr. ALLISON and Mr. COCKRELL.

SOUVENIR MEDALS FOR WASHINGTON MONUMENT ASSOCIATION.

Mr. RIXEY. Mr. Speaker, I ask unanimous consent for the present consideration of the bill (S. 4546) to provide certain

souvenir medals for the benefit of the Washington Monument Association, of Alexandria, Va.

The Clerk read the bill, as follows:

Be it enacted, etc., That for the purpose of aiding in the cost of erecting, in the city of Alexandria, Va., a monument commemorating the centenary of the death of Washington, in a manner designated by the Washington Monument Association, of Alexandria, Va. (an association chartered under the laws of Virginia), the Secretary of the Treasury is hereby authorized and directed to have made and prepared in the mint of the United States, in Philadelphia, four dies for medals of such size, shape, and design as may be designated by said Washington Monument Association and approved by the Secretary of the Treasury, and to have made and struck from said dies at said mint such number of medals out of silver or bronze, not to exceed 200,000, as may be required by said Washington Monument Association.

SEC. 2. That the material from which said medals are to be made shall be furnished to the Director of the Mint, at the mint in Philadelphia, by and at the expense of said Washington Monument Association, and the United States shall furnish the material for the said four dies.

The SPEAKER. Is there objection? [After a pause.] The Chair hears none.

The bill was ordered to be read a third time, was read the third time, and passed.

PUBLIC LANDS AND BUILDINGS IN PORTO RICO.

Mr. CRUMPACKER. Mr. Speaker, I call up a conference report on the bill (H. R. 14244) authorizing the President to reserve public lands and buildings in the island of Porto Rico for public purposes, and granting other public lands and buildings to the government of Porto Rico, and I ask unanimous consent that the reading of the report be omitted and the statement only be read.

The SPEAKER. The gentleman from Indiana asks unanimous consent that the statement only be read. Is there objection? [After a pause.] The Chair hears none.

The Clerk read as follows:

The managers on the part of the House on the disagreeing vote of the two Houses on the Senate amendments to House bill No. 14244 respectfully state that the Senate recedes from its amendments Nos. 4 and 7, and that the House recedes from its disagreement to Senate amendments Nos. 1, 2, 3, 5, 6, and 8, and agrees to the same.

Amendment No. 4, from which the Senate recedes, provided that the Secretary of War should make a survey of the harbors of the island of Porto Rico with a view of determining what improvements are necessary in the interest of commerce and navigation, and that the expense thereof should be paid out of the contingent appropriation for surveys of rivers and harbors.

Amendment No. 7, from which the Senate recedes, provides for the application of the naturalization laws of the United States to the inhabitants of Porto Rico and the Philippine Islands. Both of these amendments go out.

Amendments Nos. 1 and 2, to which the House agrees, are of an immaterial character.

Amendment No. 3 provides that rights which accrue under contracts, leases, and licenses made by the United States prior to May 1, 1900, shall not be affected by the bill.

Amendment No. 5 appropriates the sum of $2,000 to be used, under the supervision of the United States district judge for Porto Rico, in the purchase of a law library for the use of the United States district court therein.

Amendment No. 6 provides that the resident commissioner from Porto Rico to the United States shall, in addition to his salary, be allowed his actual traveling expenses to and from Porto Rico once each year; and further provides that his term of office shall commence on the 4th day of March next succeeding his election; and that the term of the present incumbent shall be extended until the 3d day of March, 1903.

Amendment No. 8 amends the title.

E. D. CRUMPACKER,
J. G. CANNON,
J. R. WILLIAMS,
Managers on the part of the House.

The report is as follows:

The committee on conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 14244) authorizing the President to reserve public lands and buildings in the island of Porto Rico for public uses, and granting other public lands and buildings to the government of Porto Rico, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses as follows:

That the Senate recede from its amendments numbered 4 and 7.

That the House recede from its disagreement to the amendments of the Senate numbered 1, 2, 3, 5, 6 and 8, and agree to the same.

E. D. CRUMPACKER,
J. G. CANNON,
J. R. WILLIAMS,
Managers on the part of the House.

J. B. FORAKER,
GEO. PEABODY WETMORE,
F. M. COCKRELL,
Managers on the part of the Senate.

Mr. CRUMPACKER. Mr. Speaker, I move that the report be adopted.

The SPEAKER. The question is on the motion of the gentleman from Indiana that the report be adopted.

The question was taken; and the report was adopted.

CONSTRUING ACTS GRANTING PENSIONS TO SOLDIERS AND SAILORS.

Mr. GIBSON. Mr. Speaker, I call up the privileged report from the Committee on Invalid Pensions on Senate resolution No. 8, construing the act approved June 27, 1890, entitled "An act granting pensions to soldiers and sailors who are incapacitated for the performance of manual labor, and providing for pensions to widows, minor children, and dependent parents," and I ask unanimous consent that it may be considered at this time in the House as in the Committee of the Whole.

The SPEAKER. The gentleman from Tennessee asks unanimous consent that the conference report he calls up may be considered in the House as in the Committee of the Whole. The Clerk will first read the resolution.

The resolution as amended by the committee was read, as follows:

Resolved, etc., That the act approved June 27, 1890, entitled "An act granting pensions to soldiers and sailors who are incapacitated for the performance of manual labor, and providing for pensions to widows, minor children, and dependent parents," is construed and held to include all persons and the widows and minor children of all deceased persons, subject to the limitations of said act, who served for ninety days in the military or naval service of the United States during the late war of the rebellion, and who have been honorably discharged therefrom, and section 4716, Revised Statutes United States, is amended accordingly: *Provided, however*, That the foregoing shall not apply to those who served in the First, Second, Third, Fourth, Fifth, and Sixth regiments United States Volunteer Infantry who had a prior service in the Confederate army or navy and who enlisted in said regiments while confined as prisoners of war under a stipulation that they were not to be pensionable under the laws of the United States, nor to those who, having had such prior service, enlisted in the military or naval service of the United States after the 1st day of January, 1865.

SEC. 2. That in the administration of the pension laws any enlisted man of the Army, including regulars, volunteers, and militia, or any appointed or enlisted man of the Navy or Marine Corps, who was honorably discharged from the last contract of service entered into by him during the late war of the rebellion, shall be held and considered to have been honorably discharged from all similar contracts of service previously entered into by him with the United States during said war: *Provided*, That such enlisted or appointed man served not less than six months under said last enlistment or appointment, that his entire service under said last enlistment or appointment was faithful, and that he did not receive by reason of said last enlistment or appointment any bounty or gratuity other than from the United States in excess of that to which he would have been entitled if he had continued to serve faithfully until honorably discharged under any contract of service previously entered into by him, either in the Army, Navy, or Marine Corps, during the war of the rebellion.

Mr. KLEBERG. Mr. Speaker, reserving the right to object, I would like my colleague on the committee to give us an explanation of the bill.

The SPEAKER. The first question is on the request for unanimous consent that it be considered in the House as in the Committee of the Whole.

Mr. KLEBERG. Mr. Speaker, reserving the right to object, I would like to have an explanation of the resolution.

Mr. GIBSON. Mr. Speaker, I would state to my colleague from Texas that the question is not yet before the House. Under the rules of the House the proper procedure is to go into the Committee of the Whole House on the state of the Union for the consideration of the resolution, but I thought instead of going into the Committee of the Whole we would consider it in the House as in the Committee of the Whole and thus shorten and simplify the consideration. That is the question now—whether we will consider it in the House as in the Committee of the Whole. It is not a question of unanimous consent for the consideration of the resolution, for the resolution is privileged.

Mr. GAINES of Tennessee. Before unanimous consent is given, the gentleman asks that the resolution be explained, so that he will know whether he will give consent or not.

Mr. GIBSON. That will be done when we get into the Committee of the Whole.

Mr. GAINES of Tennessee. The unanimous consent is to go into the Committee of the Whole.

Mr. GIBSON. I will state to the gentleman that this is a privileged question. It does not depend on the unanimous consent of the House. We have a right to move to go into the Committee of the Whole. Of course it takes a majority vote to go into the committee.

Mr. GAINES of Tennessee. I understood the Speaker to state the proposition that the gentleman asked unanimous consent to go into the Committee of the Whole.

The SPEAKER. The gentleman has called up a privileged repost which, if anyone objects, must be first considered in the Committee of the Whole House on the state of the Union. He has asked unanimous consent that it may be considered in the House as in the Committee of the Whole House on the state of the Union. Is there objection? [After a pause.] The Chair hears none. The question is on agreeing to the committee amendments.

Mr. KLEBERG. Now, Mr. Speaker, I would like my colleague to give us an explanation.

Mr. GIBSON. Mr. Speaker, I move the adoption of the committee amendments, and on that I would like to be heard.

The SPEAKER. The gentleman from Tennessee is recognized.

Mr. GIBSON. Mr. Speaker, I will state to the House that the act of June 27, 1890, on the subject of pensions, was originally intended to include all soldiers who served ninety or more days in the Army of the United States during the war of the rebellion and received an honorable discharge. When the matter was originally presented in the Senate, in 1890, the question was raised whether the bill included the men who served a while in the Confederate army and afterwards joined the Army of the United States and served faithfully to the end. It was stated by the Senator in charge of the bill that it did include those men who served in the

Confederate army and afterwards left that army and had a long and honorable service in the Union Army.

On that statement of facts the bill passed the Senate and the House, and the Commissioner of Pensions for over four years construed the law to include those men who served a while in the Confederate Army and afterwards served ninety or more days in the Army of the United States and received an honorable discharge. But under Mr. Cleveland's Administration, by order of the Secretary of the Interior, Hoke Smith, the rule of construction was changed; and it was held that section 4716 of the Revised Statutes cut out the class of men I have referred to. I will read that section:

No money on account of pensions shall be paid to any person, or to the widow, children, or heirs of any deceased person, who in any manner voluntarily engaged in or aided or abetted the late rebellion against the authority of the United States.

The Commissioner of Pensions under Mr. Cleveland's Administration, acting under the orders of Hoke Smith, Secretary of the Interior, held that that section cut out the men who had once served in the Confederate Army, notwithstanding a long and honorable subsequent service in the Federal Army and notwithstanding the statement made in the Senate when the bill was passed in 1890 that section 4716 was not "applicable."

Mr. Speaker, this section, 4716, which I have just read, has been repealed as to seven classes of soldiers. It was repealed by an act passed on March 9, 1878, as to the widows of those soldiers who served in the Revolutionary war. It was repealed by the same act as to those ex-Confederates who had served in the war of 1812 with England. It was repealed by the act of January 29, 1887, as to those ex-Confederates who had served in the Mexican war, and as to their widows. It was repealed by the act of July 27, 1892, as to those ex-Confederates who served in the Indian wars. It was repealed by the act of April 18, 1900, as to those ex-Confederates who served in the Spanish war. It was repealed by the act of March 3, 1877, as to those ex-Confederates who incurred a pensionable disability in the United States Army; and it was repealed August 1, 1892, as to those ex-Confederates who incurred a pensionable disability in the United States Navy; in all, seven partial repeals.

Mr. Speaker, under the law as it stands a man who served sixty days in the Mexican war and afterwards served four years in the Confederate Army is pensionable, while a man who served one day in the Confederate Army, conscript though he may have been, who escaped the next day and joined the Union Army the third day and served in the Union Army four years, can not draw any pension under the act of 1890. Sixty days' service in the Mexican war counts more than four years' service in the war for the Union as the law now stands.

Not only that, but under the act passed July 27, 1892, the men who served thirty days in the Indian wars and afterwards served in the Confederate Army are entitled to pensions, although they may have served four years in the Confederate Army. So a man who served thirty days in the Indian war is honored more than a man who served thirty months in the Army of the United States fighting for the preservation of the Union. Mr. Speaker, I can see no justice or patriotism in this discrimination, and we should wipe it out.

Mr. KLEBERG. Will the gentleman yield for a moment?

Mr. GIBSON. Yes.

Mr. KLEBERG. Will the gentleman, after the close of his remarks, yield to me a few minutes in opposition to the bill?

Mr. GIBSON. With great pleasure.

Those who served in the Indian wars are only required to show thirty days' service. Now, it so happens, Mr. Speaker, that a large portion of the men who served in the Indian wars served in the Confederate army, and many of them served for years, yet we have removed the ban from them, although they never served a day in the Union Army, and were only required to serve thirty days in an Indian war, most of them engaged in removing the Creeks, Cherokees, and Seminoles from Alabama, Georgia, and Florida to the country west of the Mississippi River, now the Indian Territory.

Yet those of them who served two, three, and four years in the Confederate army are to-day drawing pensions, while the Union man caught in Tennessee, or in North Carolina, or in northern Georgia, or in northern Alabama, and conscripted into the Confederate army for a week or a month, escaping as soon as he could, often traveling by night in order to join the Federal Army 200, 300, or 400 miles away, and serving honorably in the Army of the Union all through the war of the rebellion, is barred out, is treated no better than if he had served four years in the Confederate army and had never served in the Union Army at all.

Mr. CANDLER. Will the gentleman yield for a question?

Mr. GIBSON. Certainly.

Mr. CANDLER. I want to know the effect of this resolution. I could not hear all of the gentleman's remarks. The question I want to ask is whether or not the object and purpose of this resolution is to make it possible under the law for a man who enlisted in the Confederate Army and served for a while in that army, and then afterwards enlisted in the Union Army and served in that Army and got an honorable discharge, to receive a pension; whether it is for the purpose of repealing the statute that prevents him from receiving a pension and authorizes the Pension Bureau to grant him a pension under those circumstances.

Mr. GIBSON. That is the object of the resolution.

Mr. CANDLER. That is the entire purpose of the act?

Mr. GIBSON. The resolution would make the man pensionable under the act of 1890.

Mr. CANDLER. Under the act of 1890?

Mr. GIBSON. Yes; provided he joined the Union Army before the 1st of January, 1865.

Mr. CANDLER. Prior to January, 1865. After that he would not be pensionable?

Mr. GIBSON. Joining after January 1, 1865, would cut him out. I say that he ought to be in, but the committee have not so reported.

Mr. CANDLER. One other question. A man dropped from the roll for this very reason, because of the fact that he had served in the Confederate army, and afterwards enlisted in the Union Army, and granted a pension, and dropped from the rolls because this fact was discovered—would he be entitled to reinstatement under this act?

Mr. GIBSON. He would be, provided he enlisted in the Union Army prior to the 1st of January, 1865.

Mr. RAY of New York. Mr. Speaker, I desire to ask my friend if under this bill this class of soldiers will be pensionable. I will describe them. A man enlisted voluntarily in the Confederate army, served in that army until near the close of the war, when it became evident that the Confederate cause was lost. He then deserted from the Confederate army and joined the Union Army and served for more than ninety days in the Union Army, and, of course, received an honorable discharge. Will this bill place upon the pension rolls such a soldier as that?

Mr. GIBSON. It will not put him upon the pension roll. He is cut out. The resolution cuts out all who joined our Army as late as January 1, 1865. But I want to say here, so far as I am concerned, that I do not think that any discrimination as to date of enlistment ought to be put in. I say that any ex-Confederate who served in the Federal Army ninety days, made a good soldier, and received an honorable discharge should stand on the same basis under the law as any other man who served ninety days and received an honorable discharge. Where the service is the same the reward should be the same. The United States gladly accepted these soldiers when they offered to enlist, and should treat them all alike.

Mr. KLEBERG. Will the gentleman allow me to ask him a question?

Mr. GIBSON. Certainly.

Mr. KLEBERG. Does it include those very men that have served one year in the Union Army which the gentleman from New York confined to ninety days, and would it not include them if they served one year before the 1st of January?

Mr. GIBSON. It is possible there may be a few cases of that sort, if I understand the gentleman.

Now, Mr. Speaker, there is a class of ex-Confederates as to whom this disability has already been removed. It is the class that served in the Confederate Army, some of them for many months, and then joined the Union Army and incurred disability while they were in the Union Army. Now, that kind of a man may have served four years in the Confederate Army; he may have served in the Confederate Army down to Lee's surrender; he may have surrendered with Lee on the 9th day of April, 1865, and the next day joined the Federal Army and incurred disability therein.

He is now pensionable under the law, although he may have served in the Union Army less than a week; but the Union man, conscripted in Georgia, Alabama, North Carolina, Virginia, or Tennessee, forced into the Confederate Army, escaped the next week, traveling a hundred miles or 500 miles to get to the Union Army, joined the Union Army, and served with that Army four years, never in hospital, never incurred any wounds or any disease—that man is not pensionable under the laws of the United States.

Mr. Speaker, is that just? Is it just to draw this discrimination against a man who served so long and so faithfully in the Union Army and was so true to the Government and the flag of his country, and yet pension men who served years in the Confederate army and never joined the Union Army until Lee surrendered at Appomattox Court-House, just because they happened to incur a disability in our Army? Now I want to say to my friends on the other side that this resolution is a step to strike the word "disloyalty" from our statute books.

It is a step in that direction, and a very large proportion of the

friends of this resolution are on your side. There are no politics in this resolution. A large proportion of the bills presented to the Invalid Pensions Committee for relief from section 4716 have been introduced by Democratic members, and our committee have treated Democrats and Republicans alike in the matter of pensions. I now yield to the gentleman from Texas. How much time does he wish?

Mr. KLEBERG. Five minutes.

Mr. GIBSON. Then I yield five minutes to the gentleman.

Mr. KLEBERG. Mr. Speaker, I crave the attention of the House for a few moments to this important bill. As a member of the Invalid Pensions Committee I wish to make my protest against this bill. I think I have evinced a spirit of willingness as long as I have been in this House and on that committee to do everything in the world that is reasonable for the old Union soldier. As an old ex-Confederate I stand here more than willing to do more than justice to the old Union soldier, and to do all that is reasonable for the one who took his part in fighting for his country under the Stars and Stripes; but I am unwilling to offer a prize upon disloyalty.

I am unwilling that the man who first enlisted in the Confederate service, and served as a soldier in the Confederate service, and then possibly deserted, and, in the language of the gentleman from New York, when the thing got too hot, possibly went over to the other side and joined the Union Army, should now claim pension as Union soldiers. I do not think this great nation ought to recognize that kind of a soldier. I stand here as an ex-Confederate, and proud of that record, and also proud of the record that was made by the Union soldier on the other side. I do not want to place a price on disloyalty and pension the man who fought a while on the Confederate side, and when the clouds of adversity possibly stood over the Confederate cause went over to the other side and fought a while on the Union side, and for aught we know possibly deserted again and fought again on the Confederate side.

I do not believe that this great nation ought to give pensions to that class of soldiers. The pension list ought to be a list of honor. The soldiers who fought for the nation are entitled to these pensions. I am willing to extend them to them and give them all reasonable pensions, but when it comes to ex-Confederates who fought on both sides, I do not want to give them a prize for disloyalty. If a man was conscripted, if he went involuntarily into the service, give him a pension if he can show it. We have passed pension bills here under such state of facts.

This law includes all soldiers who went voluntarily or involuntarily into the Confederate service and then deserted to the other side and stayed there a while. Now, I do not think that that kind of a bill ought to pass, and if this be the last bar or exception, I believe in keeping it up.

Mr. WANGER. Will the gentleman allow me an interruption?

Mr. KLEBERG. Certainly.

Mr. WANGER. What effect, if any, will this have upon the class of persons known as professional bounty jumpers?

Mr. KLEBERG. Well, I suppose it will be very favorable to them, and for that reason and for other reasons I am not in favor of it. I do not know how many it will help, but I do not believe that men should have a pension who have fought on both sides, who promised to be loyal to both sides. Such a man can not be loyal to either side, and therefore I do not think they ought to be recognized.

I am perfectly willing to forget everything. I have. I am as loyal as anybody. I buried the hatchet, and am as loyal a citizen now as anybody, and I am proud of it. [Applause.] You might just as well, with just as much right, pension me or any other Confederate soldier. Pensions are given for loyalty to the United States at that time. That is the reason that pensions are given to Union Soldiers, and I do not believe their record of honor ought to be besmirched by men who have fought, or at least who have enlisted on both sides of the cause. [Applause.]

Mr. GIBSON. I now yield five minutes to the gentleman from Indiana [Mr. ZENOR].

Mr. ZENOR. Mr. Speaker, I very much appreciate the sentiments expressed by my friend from Texas [Mr. KLEBERG], in which he disclaims any feeling of prejudice or animosity toward those who were engaged in the service of the Union Army during our unpleasantness. But, Mr. Speaker, I think that full justice will never be done to all of the soldiers who served in the Union Army until this bill is enacted into law.

On July 14, I believe it was, 1852, the Congress of the United States enacted section 4716. This is the section that imposes disabilities upon those who served in the Confederate army and who subsequently joined and served in the Union Army, and who are cut off from the benefits of the act of 1890, the law imposing the disabilities, as in the section just read by my friend from Tennessee [Mr. GIBSON], upon all soldiers who had a short or a long period of service in the Confederate army and subsequently joined the Union Army, even though they were wounded in battle or incurred disabilities in the line of duty.

The first act of Congress recognizing the justice of this class of men that joined the Confederate army, whether through fear or patriotic motives, or otherwise, subsequently and shortly thereafter joined the Union Army, and served three or nearly five years, almost the entire period of the war. The Pension Bureau recognized the justice of the claims of this class of men who had first enlisted in the Confederate service but subsequently joined the Union Army and served two or three years, and were wounded in battle or incurred disabilities, that they could not receive a pension at the hands of the Government. The first act of Congress passed thereafter was to remove disabilities from all soldiers who had Confederate service but subsequently joined the Union Army and were wounded in battle and incurred disabilities in the line of duty. That will apply only to those who served in the Army in the first instance by enabling that class of meritorious soldiers to obtain benefits from the pension laws of this country.

It was subsequently discovered that that law was not broad enough to include those who had enlisted in the Navy. So Congress subsequently enacted another statute removing this disability from those who had enlisted in the Navy and had incurred disability in the line of duty. Subsequently, recognizing the justice to many old soldiers who served throughout the war in the Union Army, and those who had served in the war of 1812, and those who had served in the Mexican war of 1846, acts of Congress were enacted removing all the disabilities incurred by reason of a long period of service in the Confederate Army, though many of those soldiers did not serve the entire period of Confederate service. Some of the old Mexican veterans enlisted in that war and served throughout. All these disabilities have been removed.

There are no disabilities imposed to-day by any statute on the statute book upon the old soldiers who served in the Union Army who can not get the benefit of the provisions of the act of 1890, except those who have, some of them, had a short Confederate service, some of them a little longer service; but all of those who failed to enlist in the Union Army, who failed to have service in the Union Army for three months, and received an honorable discharge, are excluded under the provisions of this act. No soldier who enlisted after January 1, 1865, is entitled to the benefit of the provisions in the act of June 27, 1890.

I say, therefore, that the bill applies to a meritorious class of soldiers. There are not many of this class in the country at present. About four years ago the Commissioner of Pensions in his report stated that there were not exceeding 1,000——

[Here the hammer fell.]

Mr. GIBSON. I give the gentleman two minutes more.

Mr. ZENOR. Mr. Speaker, 800 or 900 of these old soldiers would receive the benefit of this bill if enacted. The bill has been indorsed by the Commissioner of Pensions. In fact, it has been indorsed by several Commissioners of Pensions. To-day there are, perhaps, not more than six or seven hundred living who would receive the benefit of this bill if enacted into law.

In addition to that, Mr. Speaker, there are many of those men, as I have said, who have had a long period of service in the Union Army, Some of them to-day are in such a condition that but for the aid of charity they would be in the poorhouses. In my own district I know one man who, if not supported by charity, would be there. He had a Confederate service of about eight months. When the war broke out, while an apprentice boy at the city of Nashville, he was pressed into the Confederate service, as he says.

[Here the hammer fell.]

Mr. GIBSON. I move the previous question.

The previous question was ordered; and under the operation thereof the amendments were agreed to.

The joint resolution as amended was ordered to a third reading, read the third time, and passed, there being on a division (called for by Mr. KLEBERG)—ayes 97, noes 19.

On motion of Mr. GIBSON, a motion to reconsider the vote by which the joint resolution was passed was laid on the table.

By unanimous consent, the title of the joint resolution was amended so as to read: "Joint resolution construing the act approved June 27, 1890, entitled 'An act granting pensions to soldiers and sailors who are incapacitated for the performance of manual labor, and providing for pensions to widows, minor children, and dependent parents,' and for other purposes."

MESSAGE FROM THE PRESIDENT.

A message from the President of the United States was communicated to the House by Mr. BARNES, one of his secretaries, who announced that the President had on the following dates approved and signed bills of the following titles:

On June 30, 1902:

H. R. 12804. An act making appropriations for the support of the Army for the fiscal year ending June 30, 1903;

H. R. 10279. An act to pay the claim of Stephen B. Halsey;

H. R. 621. An act for the relief of Daniel Cherry;
H. R. 12205. An act to provide for circuit and district courts of the United States at Valdosta, Ga.;
H. R. 8108. An act for the relief of John Hornick;
H. R. 2978. An act for the relief of Joseph H. Penny, John W. Penny, Thomas Penny, and Harvey Penny, surviving partners of Penny & Sons;
H. R. 12648. An act to establish a regular term of United States district court in Roanoke City, Va., and for other purposes;
H. R. 8586. An act amending the act of March 2, 1901, entitled "An act to carry into effect the stipulations of Article VII of the treaty between the United States and Spain, concluded on the 10th day of December, 1898;"
H. R. 2063. An act amending an act creating the middle district of Pennsylvania;
H. R. 2066. An act to change the terms of the district court for the eastern district of Pennsylvania;
H. J. Res. 6. Joint resolution in relation to monument to prison-ship martyrs at Fort Greene, Brooklyn, N. Y.;
H. J. Res. 182. Joint resolution authorizing the Director of the Census to compile statistics relating to irrigation; and
H. J. Res. 198. Joint resolution giving authority to the Commissioners of the District of Columbia to make special regulations for the occasion of the thirty-sixth national encampment of the Grand Army of the Republic, to be held in the District of Columbia in the month of October, 1902, and for other purposes incident to said encampment.

On July 1, 1902:

H. R. 2494. An act for the allowance of certain claims reported by the accounting officers of the United States Treasury Department;
H. R. 14019. An act making appropriations to provide for the expenses of the government of the District of Columbia for the fiscal year ending June 30, 1903, and for other purposes;
H. R. 12086. An act to extend the time for the construction of the East Washington Heights Traction Railroad Company;
H. R. 11400. An act to amend an act entitled "An act in relation to taxes and tax sales in the District of Columbia," approved February 28, 1898;
H. R. 2641. An act for the relief of Albion Christie;
H. R. 15270. An act to amend an act entitled "An act authorizing the Aransas Harbor Terminal Railway Company to construct a bridge across the Corpus Christi Channel, known as the Morris and Cummings ship channel, in Aransas County, Tex.;"
H. R. 367. An act for the relief of Angus A. McPhee;
H. R. 3690. An act for the relief of Jacob L. Hanger;
H. R. 97. An act to authorize the Secretary of War to furnish certificates in lieu of lost or destroyed discharges;
H. R. 5809. An act for the further distribution of the reports of the Supreme Court, and for other purposes;
H. R. 8327. An act to amend an act entitled "An act for the protection of the lives of miners in the Territories;"
H. R. 9960. An act to prevent a false branding or marking of food and dairy products as to the State or Territory in which they are made or produced;
H. R. 11656. An act to incorporate the Society of the Army of Santiago de Cuba;
H. R. 11987. An act relating to transportation of dutiable merchandise at subports of Tacoma and Seattle, State of Washington;
H. R. 12597. An act to accept, ratify, and confirm a proposed agreement submitted by the Kansas or Kaw Indians of Oklahoma, and for other purposes;
H. R. 13172. An act to ratify and confirm an agreement with the Choctaw and Chickasaw tribes of Indians, and for other purposes;
H. R. 13875. An act authorizing the adjustment of rights of settlers on the Navajo Indian Reservation, Territory of Arizona;
H. R. 14082. An act to provide for the construction of a bridge by the Duluth, Pierre and Black Hills Railroad Company across the Missouri River at Pierre, S. Dak.;
H. R. 15003. An act to authorize the construction of a bridge by the New York, Chicago and St. Louis Railroad Company and the Chicago and Erie Railroad Company across the Calumet River at or near the city of Hammond, Ind., at a point about 1,200 feet east of the Indiana and Illinois State line and about 100 feet east of the location of the present bridge of the New York, Chicago and St. Louis Railroad Company across said river; also to authorize the construction of a bridge by the Chicago and State Line Railroad Company across said river at the point where said company's railroad crosses said river in Hyde Park Township, Chicago, Ill., being at the location of the present bridge of said company across said river in said township;
H. R. 15108. An act making appropriations to supply deficiencies in the appropriations for the fiscal year ending June 30, 1902, and for prior years, and for other purposes;
H. R. 1456. An act granting a pension to William G. Miller;
H. R. 3323. An act granting a pension to Daniel L. Mallicoat;
H. R. 6005. An act granting a pension to James A. Chalfant;
H. R. 6009. An act granting a pension to Absolum Maynard;
H. R. 8644. An act granting a pension to John W. Thomas;
H. R. 10856. An act granting a pension to Jacob Findley;
H. R. 11171. An act granting a pension to Elizabeth A. Nalley;
H. R. 12299. An act granting a pension to William C. Roberts;
H. R. 13598. An act granting a pension to John J. Southerland;
H. R. 14206. An act granting a pension to Mary J. Moore;
H. R. 14234. An act granting a pension to John Williamson;
H. R. 6031. An act authorizing the payment of part of the pension of Ira Steward to Adell Augusta Steward;
H. R. 2487. An act granting an increase of pension to William S. Hosack;
H. R. 3500. An act granting an increase of pension to Kate O. Phillips;
H. R. 3519. An act granting an increase of pension to John Marble;
H. R. 4170. An act granting an increase of pension to Henry P. Macloon;
H. R. 5315. An act granting an increase of pension to Orrin J. Wells;
H. R. 6871. An act granting an increase of pension to Harmon Scramlin;
H. R. 7013. An act granting an increase of pension to Jason F. Freeman;
H. R. 8840. An act granting an increase of pension to John H. Lauchly;
H. R. 9187. An act granting an increase of pension to Caroline A. Hammond;
H. R. 9308. An act granting an increase of pension to Edwin P. Johnson;
H. R. 10178. An act granting an increase of pension to Daniel Thomas;
H. R. 10321. An act granting an increase of pension to Susan A. Phelps;
H. R. 10824. An act granting an increase of pension to George F. Bump;
H. R. 10964. An act granting an increase of pension to Francis M. Beebe;
H. R. 12026. An act granting an increase of pension to Baley W. Small;
H. R. 12056. An act granting an increase of pension to Warren C. Plummer;
H. R. 12284. An act granting an increase of pension to George W. Shaw;
H. R. 12507. An act granting an increase of pension to Ebenezer W. Oakley;
H. R. 12549. An act granting an increase of pension to Ransom Simmons;
H. R. 12800. An act granting an increase of pension to Horatio N. Whitbeck;
H. R. 14042. An act granting an increase of pension to George W. Edgington;
H. R. 14182. An act granting an increase of pension to Susan B. Lynch;
H. R. 14208. An act granting an increase of pension to Alexander Murdock;
H. R. 14221. An act granting an increase of pension to Nancy J. McArthur;
H. R. 14656. An act granting an increase of pension to Charles A. Scott;
H. R. 12977. An act granting an increase of pension to William L. Church;
H. R. 13617. An act granting an increase of pension to Anne M. Luman;
H. R. 7105. An act granting an increase of pension to Silas Stotts; and
H. R. 14087. An act granting a pension to Lizzie Dunlap.

NOTIFICATION OF ADJOURNMENT OF CONGRESS.

Mr. PAYNE. I offer for present consideration the resolution which I send to the desk.

The Clerk read as follows:

Resolved, That a committee of three members be appointed by the Chair, to join a similar committee appointed by the Senate, to wait upon the President of the United States and inform him that the two Houses have completed the business of the present session and are ready to adjourn, unless the President has some other communication to make to them.

The resolution was considered by unanimous consent, and adopted.

The SPEAKER announced the appointment of Mr. PAYNE, Mr. CANNON, and Mr. RICHARDSON of Tennessee as the committee on the part of the House under the resolution just adopted.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. PARKINSON, its reading clerk, announced that the Senate had agreed to the report of the

committee of conference on the disagreeing votes of the two Houses on the amendments of the House to the bill of the Senate (S. 2295) temporarily to provide for the administration of the affairs of civil government in the Philippine Islands, and for other purposes.

The message also announced that the Senate had agreed to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 14046) making appropriations for the naval service for the fiscal year ending June 30, 1903, and for other purposes.

The message also announced that the Senate had passed without amendment a bill of the following title:

H. R. 15258. An act authorizing Anton Brucken to construct locks and dams in Pond River, in the State of Kentucky, and to give the consent of Congress thereto.

The message also announced that the Senate had agreed to the amendments of the House of Representatives to the joint resolution (S. R. 8) construing the act approved June 27, 1890, entitled "An act granting pensions to soldiers and sailors who are incapacitated for the performance of manual labor, and providing for pensions to widows, minor children, and dependent parents."

ARBITRATION OF LABOR CONTROVERSIES.

Mr. McDERMOTT. I ask unanimous consent for the present consideration of the bill which I send to the desk.

The Clerk read as follows:

A bill (H. R. 15157) to authorize the appointment of boards of investigation and arbitration, and to define their powers and duties.

Be it enacted, etc., That whenever the President of the United States shall be informed, by petition or otherwise, that there exists in any State or States of the United States a dispute between any employer and employees, engaged in any business affecting commerce between the States, it shall be lawful for him, if he shall deem such action necessary and expedient, to appoint a board of investigation and arbitration to investigate the matters in difference between such employer and employees, and to make report thereon. The report of such board shall be made to the President, and shall be accompanied by the evidence taken during such investigation, and shall (together with all other things which the board, or any member thereof, may decide to report) include full statements upon the following points, namely:

First. A comprehensive account of the matters in dispute between the parties concerned.

Second. An account, in detail, of the wages offered to such employees, and of the cost of living in the locality in which they reside.

Third. If the employer is a corporation, a statement of its funded and floating debt, stock (authorized, and issued and outstanding), assets, surplus, profits during the five years immediately preceding such investigation, dividends earned or paid, a true valuation of the tangible property of the corporation (which shall, when practicable, be based upon the cost of reproduction), and the value of all franchises owned or controlled by such corporation.

Fourth. The opinion of each member of the board upon the justice of the demands and claims made by each party to the dispute, and the recommendation of each member of the proper course to be pursued by each party.

The existence of each board shall terminate with the filing of its final report upon the matter referred to it.

SEC. 2. That each board of investigation and arbitration shall be composed of seven members. If an employer concerned in such dispute shall designate a person whom he desires appointed to such board, the President shall appoint the person so designated. If the employees shall (either by the action of a majority of them, taken at a meeting or meetings called for that purpose, or through the officers of any labor organization of which a majority of such employees are members) designate a person whom they desire appointed to such board, the President shall appoint the person so designated. Such designation shall be made only upon request made by the President. If either or both parties to any dispute shall not, when requested so to do, designate a person to be appointed to such board, the President shall fill the vacancy caused by such failure to designate. Each of the members of such board shall, before entering upon his duties, take and subscribe to an oath or affirmation that he will faithfully and impartially examine the matters in dispute and make report in accordance with the provisions of this act, which oaths or affirmations shall be annexed to the report of such board.

SEC. 3. That each board shall hold its first meeting at such time and place as shall be designated by the President, and shall determine the rules of its proceedings and appoint such officers and agents as may be necessary for the transaction of its business. It shall be lawful for any district court of the United States, upon application for that purpose made by the chairman or any member of such board, to issue process to compel the attendance of witnesses to give evidence and the production of books and papers before such board. Disobedience to such process shall be adjudged a contempt of the court issuing the same. The board shall summon as a witness any person whose testimony is desired by any member of the board, and each party to any dispute shall be entitled to be represented by counsel, who may examine witnesses and present printed arguments under such rules as may be made by the board. Witnesses shall be entitled to the same fees that are provided for witnesses attending a district court of the United States.

SEC. 4. That each board shall conclude the taking of testimony within twenty days after its first meeting, and shall report to the President within five days after the testimony is closed: *Provided*, That the President may extend the time within which testimony may be taken upon application of said board.

SEC. 5. That if, after the apointment of said board, the parties to any dispute between employer and employees shall desire to end such dispute by arbitration it shall be lawful for them to submit all matters in difference to the arbitration of such board, which submission shall be made under such rules as may be adopted by the board. Upon the submission of any matter in dispute, as authorized by this section, the board shall consider the testimony offered by the parties and shall give judgment upon all matters submitted. Each side to any dispute thus submitted shall be represented by counsel, and a copy of the findings of the board shall be served upon the counsel of the respective parties within ten days after the closing of testimony. A report of all proceedings had under this section shall be made to the President.

SEC. 6. That oaths and affirmations shall be administered by the chairman or clerk of the board, and any person who shall testify falsely shall be deemed guilty of perjury. The term "employer" as used in this act shall be held to include "employers," "association," "company," and "corporation" as fully as if each of said terms had been herein expressed in each place where the term "employer" is used.

The amendments reported by the committee were read, as follows:

Amend section 1, line 5, by inserting after the word "dispute," the following: "in connection with which a strike or lockout has occurred or is threatened."

Same section, line 6, insert after the word "employees" the words "either of whom are;" change the word "any" to "the;" strike out the word "affecting" and insert in lieu thereof the words "of interstate or foreign."

Same section, line 7, strike out the words "between the States."

Section 1, page 2, insert instead of lines 8 to 15, inclusive, the following:

"Third. The investigation of the business carried on by the employer shall cover such period of time and such of the operations and resources of such business as are necessary for the proper investigation and consideration of the questions involved in any threatened or accomplished strike or lockout."

Add to section 1, page 2, line 21, the following:

"The members of said board shall each receive $10 for each day that he is actually engaged in the discharge of any duties prescribable by this act. All expenses of the board shall be allowed and paid on the presentation of itemized vouchers therefor approved by the chairman of the board."

Amend section 2, page 2, line 23, by changing the word "seven" to "five," after the word "of."

Add to section 6, page 5:

"No person shall be prosecuted or subject to any penalty or forfeiture for or on account of any transaction, matter, or thing concerning which he may testify or produce evidence, documentary or otherwise, before said board or in obedience to its subpœna."

The SPEAKER. Is there objection to the present consideration of this bill?

Mr. ROBINSON of Indiana. Reserving the right to object, I desire to ask the gentleman from New Jersey, as this bill seems to cover the entire field of dispute between employer and employees, what requests the gentleman has had coming to him or to the Committee on Labor from labor organizations for this legislation?

Mr. McDERMOTT. Mr. Speaker, the bill may be said to have evolved itself out of the necessity of the conditions existing in this country. The bill does not come before Congress as an official request from labor organizations or from employers, but is the result of some study that I have given to the question how disputes between both these parties may be settled. I would not introduce a bill badged, if I may use the expression, with the authority of either side. I have desired to draw and present a bill that will be perfectly fair to both. There can not be any objection on the part of labor organizations to this bill.

Mr. ROBINSON of Indiana. Mr. Speaker, may I ask the gentleman when the bill was reported?

Mr. McDERMOTT. Oh, two or three days ago.

Mr. ROBINSON of Indiana. The gentleman recognizes that in an hour and a half we will adjourn the session, by virtue of the resolution already adopted, and I wanted to know whether the labor organizations had not been consulted or whether they have criticised the bill to his knowledge.

Mr. McDERMOTT. I have not asked the criticism of anybody, except one concerned in the forum where the bill is presented. If there is objection and we adjourn in an hour and a half, they will have in another forum the right to present objections to it. With somewhat of a knowledge of the necessities of labor organizations and somewhat of a knowledge of the conditions that now exist in this country, and as a result of somewhat of study as to what should be done under those conditions, I have presented this bill. Of course it can not become a law without their having an opportunity to object to it.

Mr. ROBINSON of Indiana. The gentleman recognizes the absolute impossibility of giving any large consideration to it, and I only desire to have it stated on the floor as to whether the labor organizations were asking for this legislation.

Mr. McDERMOTT. No; they are not.

Mr. SULZER. Mr. Speaker, will the gentleman yield?

Mr. McDERMOTT. Yes.

Mr. SULZER. As I understand, this bill does not provide in any way for compulsory arbitration.

Mr. McDERMOTT. Not at all.

Mr. SULZER. There can not be any objection to this bill.

Mr. ROBINSON of Indiana. I have presented no objection. I wanted to make the inquiry.

Mr. McDERMOTT. I will explain the bill in one moment. I think there should be power in the President, when requested to do so, to appoint a board of arbitration. This bill provides that wherever there is a lockout or a threat of a lockout or a dispute between employers and employees affecting interstate commerce, the President, either on his own motion or on a request made to him may appoint a board of five.

Two of the members of that board are to be nominated, one by the employers, one by the employees, who may be represented by a labor union. The five thus appointed are to investigate the conditions between the employers and the employees, and they are to report to the President of the United States a comprehensive account of the matters in dispute between the parties concerned. Second, an account in detail of the wages offered to the employees

and of the cost of living in the locality where they reside is to be reported. Third, they are to investigate relations between employers and employees for such time as they may determine, and fourth, they are to report the opinion of each member of the board upon the justness of the demands and claims made by each party to the dispute, and the recommendation of each member of the board as to the course to be pursued by each party.

Now, I have provided that every member of that board shall make a report of what he considers should be the course pursued by each of the parties to the dispute. Of course under our Constitution it is absolutely impossible to give this finding any judicial force. It is impossible to follow it up, but where you have a board representing employer and employee and the nation, and that board reports to the President, then you have it in the forum of public opinion to determine on the truth of the difference between capital and labor, and the side that is wrong will have to yield to public opinion.

The condition in this country is one not affecting the miners employed in the coal fields, but affecting the employment of millions of men in every city in this country, affecting them here within the city of Washington to such an extent that in twenty days from this moment it will be impossible to carry on any business of transportation within this city, because coal is absolutely unobtainable, and there are not 10,000 tons within the District of Columbia. Soft coal is selling to-day in this District for more than $5 a ton, and even at that price it is impossible to obtain it; and it was simply because of my relations to interests that must have coal in order to supply power that I was led to draw this bill, a bill that I think perfectly safe in its provisions.

Now, the title of the bill indicates that it is a bill not only of investigation, but that it is a bill of arbitration. You can not force arbitration, but the last section of this bill provides that if in the course of the investigation of the dispute between employer and employee both sides desire to turn this board into a board of arbitration, they shall have the power to do so. Now, the judgment of that board of arbitration in a matter affecting interstate commerce would be nil, it would have no judicial force, but it would nevertheless be a judgment rendered in the forum of public opinion, and where you have one or two employers on one side and two or three hundred thousand employees on the other side, that is the only forum in which you can get a judgment that amounts to anything.

The design of creating the board was not to create a permanent bureau, and therefore every dispute is to be referred to a separate board. The life of the board expires with the investigation of the particular matter referred to it by the President. I do not mean to say that there may not be raised hundreds of objections to any scheme that looks to propositions of investigation of disputes between employer and employee; but I believe that it is proper for the nation, affected as it is from Maine to California by some of these labor agitations and disputes, to provide a forum in which the great judge of public opinion may be invited to sit; and he having rendered his judgment, I believe that judgment will be as effective as the ordinary judgment given in cases of arbitration where neighbor and neighbor dispute.

Mr. BURK of Pennsylvania. I object to the consideration of the bill.

The SPEAKER. Objection is made by the gentleman from Pennsylvania [Mr. BURK].

Mr. McDERMOTT. I move to suspend the rules and pass the bill.

The SPEAKER. The Chair can not recognize anyone to suspend the rules at this late hour.

DANISH WEST INDIA ISLANDS PURCHASE.

Mr. DALZELL. I submit a report of the select committee to investigate the facts connected with the purchase of the Danish West India Islands.

The SPEAKER. The gentleman from Pennsylvania [Mr. DALZELL] submits a privileged report.

Mr. DALZELL. Mr. Speaker, a large portion of the report consists of a recital of the charges and of the testimony, and unless the House is desirous of having it all read I suggest that the substance of the report is contained in what I have marked on pages 1, 2, and 7.

The SPEAKER. The Chair thinks that none of it ought to be read, and certainly there is no time to read it. The Chair suggests that it be read by its title, printed as a House document, and referred to the Committee of the Whole House. The Clerk will read the title.

The Clerk read as follows:

Report of the Special Committee to Investigate the Facts Connected with the Purchase of the Danish West India Islands.

Mr. COUSINS. Mr. Speaker——

The SPEAKER. For what purpose does the gentleman from Iowa rise?

Mr. COUSINS. I should like to have this report read.

The SPEAKER. The report has been disposed of. It has been referred to the House Calendar.

Mr. ESCH. Mr. Speaker——

The SPEAKER. The gentleman from Wisconsin is recognized.

Mr. ESCH. I ask unanimous consent for the present consideration——

Mr. COUSINS. Oh, no, Mr. Speaker, a high privilege is not disposed of in that way.

The SPEAKER. The report was made and referred to the House Calendar with the knowledge and consent of the House. No one objected.

Mr. COUSINS. Then it is privileged to be called up at any time. No motion was made to reconsider.

Mr. DALZELL. There is no disposition——

The SPEAKER. The Chair supposes that it is privileged to be called up if desired.

Mr. RICHARDSON of Tennessee. I suggest that no legislation is recommended.

The SPEAKER. There is no recommendation accompanying the report. All that has been done so far as the report is concerned is to put it on the Calendar, but the Chair thinks it can be called up if the gentleman desires to call it up.

Mr. COUSINS. I think it ought to have respectful consideration.

The SPEAKER. What is the gentleman's pleasure in regard to it?

Mr. COUSINS. Well, I will call it up at the pleasure of the Speaker.

The SPEAKER. Some motion must be made. There is no recommendation in the report.

Mr. COUSINS. No motion has been made to reconsider and lay on the table?

The SPEAKER. It is not necessary that that be done.

Mr. COUSINS. I move to reconsider the motion by which it was referred to the Calendar.

The SPEAKER. There was no motion of that kind made. No motion was made with respect to this.

Mr. COUSINS. Well, it is a privileged report, anyway.

The SPEAKER. It is a privileged report.

Mr. COUSINS. The highest privilege that is known.

The SPEAKER. The Chair has stated to the gentleman that it may be called up from the House Calendar for consideration.

Mr. COUSINS. At any time?

The SPEAKER. At any time; but there is no recommendation in this, nothing but a cool statement of facts in the report.

Mr. COUSINS. I move to take it up now.

The SPEAKER. The gentleman has a right to do that. He has a right to call it up.

Mr. RICHARDSON of Tennessee. I presume if it is taken up it is for debate, and of course the time will be equally divided. We desire to be heard.

The SPEAKER. That is all the use that can be made of it—for debate.

Mr. RICHARDSON of Tennessee. There is no legislation in it. If it is to be debated, we desire half the time, of course.

Mr. COUSINS. What time does the gentleman desire?

Mr. RICHARDSON of Tennessee. I do not want any, unless you take time, and then that I have the same time.

Mr. COUSINS. Oh, well, what is the hour of adjournment, Mr. Speaker?

The SPEAKER. Five-thirty is the hour fixed upon by the Congress for adjournment of this session. The gentleman has a right to an hour.

Mr. COUSINS. All right. I want to yield to the gentleman from Tennessee whatever is reasonable.

Mr. UNDERWOOD. Mr. Speaker, I move that the House take a recess for one hour.

Mr. MANN. I raise the question of consideration.

The SPEAKER. The gentleman from Illinois raises the question of consideration. That is unquestionably the right of the gentleman from Illinois.

Mr. COUSINS. A question of the highest privilege puts this report before this House.

The SPEAKER. The Chair overrules that point. The House has the right to raise the question of consideration on this proposition.

Mr. MANN. I withdraw the question of consideration.

The SPEAKER. Does the gentleman withdraw his demand?

Mr. MANN. I do.

Mr. BARTLETT. I raise the question of consideration on this measure.

The SPEAKER. The gentleman from Georgia renews the question of consideration.

Mr. UNDERWOOD. Pending that, I move that the House take a recess for one hour.

The SPEAKER. The question is on consideration.
Mr. BARTLETT. I withdraw the question of consideration.
Mr. RICHARDSON of Tennessee. Mr. Speaker——
The SPEAKER. For what purpose does the gentleman from Tennessee address the Chair?
Mr. RICHARDSON of Tennessee. I desire to ask as a parliamentary inquiry as to what is to be considered. The question of consideration has been suggested.
The SPEAKER. The question is the matter before the House, but the gentleman from Alabama moves to take a recess for one hour.
Mr. RICHARDSON of Tennessee. Well, I will not object.
Mr. UNDERWOOD. Mr. Speaker, it is evident that no business will be transacted, as the House is not in a humor to, and an hour will give us time to hear the report of the committee. [Cries of "Regular order!"]
The SPEAKER. The regular order is the motion of the gentleman from Alabama that the House take a recess for one hour.
The question was taken; and the Speaker announced that the noes appeared to have it.
Mr. UNDERWOOD. Division.
The House divided, and there were—ayes 32, noes 101.
So the House refused to take a recess.
Mr. BURK of Pennsylvania. Mr. Speaker, I desire to withdraw my objection to the consideration of the bill H. R. 15157.
The SPEAKER. That is not before the House. A matter of higher privilege is before the House.
Mr. BARTLETT. Mr. Speaker——
The SPEAKER. For what purpose does the gentleman desire to address the Chair?
Mr. BARTLETT. I desire to withdraw my question of consideration on this bill.
The SPEAKER. The gentleman withdraws the question of consideration, and the gentleman from Iowa is recognized, and will proceed.
Mr. SULZER. A parliamentary inquiry.
The SPEAKER. The gentleman will state it.
Mr. COUSINS. Mr. Speaker——
The SPEAKER. A parliamentary inquiry is pending.
Mr. SULZER. As I understand the situation, this matter was referred to the Calendar and ordered to be printed as a House document. If that is so, it seems to me that the matter can not be brought up by the gentleman from Iowa in this way at this time.
The SPEAKER. The matter is of high privilege, and can be called up from the Calendar by the gentleman from Iowa. There is no question about that.
Mr. RICHARDSON of Tennessee. A parliamentary inquiry, Mr. Speaker.
The SPEAKER. The gentleman will state it.
Mr. RICHARDSON of Tennessee. I desire to know if the time is to be equally divided. I am perfectly willing to discuss this matter, but I do insist that we should have the time equally divided upon the discussion.
Mr. COUSINS. Very well; that will suit me exactly. How much time do you want?
Mr. RICHARDSON of Tennessee. The same time as you use.
Mr. COUSINS. How much?
Mr. RICHARDSON of Tennessee. I do not know how much you are going to use.
Mr. COUSINS. Well, how much would the gentleman desire?
Mr. RICHARDSON of Tennessee. I want exactly the time that the gentleman from Iowa uses.
Mr. COUSINS. Indicate how much you would like.
Mr. RICHARDSON of Tennessee. If the gentleman will indicate how long he will occupy the floor.
Mr. COUSINS. You brought this before the House. How much time do you think ought to be given? I will say twenty-five or thirty minutes.
Mr. RICHARDSON of Tennessee. I want as much as you use.
Mr. COUSINS. The gentleman is very liberal. I yield twenty-five minutes to the gentleman, and if the gentleman wishes to say anything in regard to it, I yield to the gentleman from Tennessee first. [Great laughter.]
The SPEAKER. The gentleman from Tennessee.
Mr. RICHARDSON of Tennessee. I have no desire to occupy the floor.
The SPEAKER. Does the gentleman desire to reserve his time?
Mr. RICHARDSON of Tennessee. Yes; I reserve my time.
Mr. COUSINS. Now, Mr. Speaker——
The SPEAKER. Does the gentleman from Iowa reserve his time? [Great laughter.]
Mr. COUSINS. Not at all.
The SPEAKER. Then the gentleman from Iowa is recognized.
Mr. COUSINS. The gentleman reserved his time. Of course, if they want to use their time, they must use it now; for I have the right to close. If they have anything to say at all it must be said now.
The SPEAKER. The only certainty is that the gentleman from Iowa [Mr. COUSINS] has an hour, of which he has yielded twenty-five minutes to the gentleman from Tennessee [Mr. RICHARDSON], which the gentleman wishes to reserve. In that state of the case the gentleman from Iowa can proceed and use the entire hour if he desires. [Laughter.]
Mr. COUSINS. Except for the extraordinary character of this so-called "report" of Mr. W. Christmas Dirckinck Holmfeldt, authentically vouched for and solemnly spread upon the records of Congress some three months ago by the honorable gentleman from Tennessee (assisted by the honorable gentleman from Alabama), the whole matter might be passed without a moment's serious thought. But there are features of the fiasco so attractive that we tarry with them. Sometimes the ridiculous becomes so interesting that it deserves registration, and when skillfully mixed with a showing of seriousness and solemnity it is almost unavoidable.
During the brief moments that elapsed while this extraordinary Christmas present was being so dramatically flashed upon the attention of the House on the morning of March 27 by the honorable gentleman from Tennessee (assisted by the honorable gentleman from Alabama) there was neither time to read it nor to hear it read. It was placed before the House in such serious and sudden fashion and with such gravity of charges against Congress and the press that, although some thought it would be wiser to let it cool until morning, it was carried by its own furious impetus and by the apparent anxiety of its proposers to an order of investigation.
There are some things that will not keep over night, even in a refrigerator. This piece of putrid libel had to be used that very day or its own stench would have probably offended the nostrils even of its custodians before the next morning, and would have remained on their hands a useless, nauseous screed of miserable and ignominious defamation. It had already been dead a long while, the press refusing to handle or revive it, and by the special request of its general agent, Gron, an autopsy having been held upon it by that eminent and skillful surgeon, Dr. GROSVENOR, of Ohio, who expressed the opinion that no one would ever bite at it. But finally, after begging all that time for recognition, it was taken in from the Democratic doorstep just three days too soon. It should have been more appropriately discovered on the 1st of April.
As soon as it was printed the country smiled and went about its business. The papers gave it a parting shot and Congress had it on its hands and embalmed forever in its record. If the members could have read it before taking action, they probably would have thrown it into the sewer, where it belongs.
Instead of inviting any sort of credulity when it was read, it produced amusement and amazement. One began to think at once of all the foolish and extravagant hyperbole that he had ever read. The tales of Baron Munchausen are reasonable compared with this. The stories of crusaders and the necromancers and the alchemists and fortune tellers and the magnetizers become dull reading. Jack the Giant Killer and the fairies are outdone. All the magicians from Geber and Alfarabi down to Valentine Greatraks and Cagliostro are now in the shade since Christmas has been respectably vouched for. One involuntarily exclaims, as an old neighbor of mine used to do when he tried to avoid swearing, "Gemini Christmas!"
When we contemplate what this strange person claims to have done on credit and possibly with a dollar and seventy-five or eighty cents in cash, truly we may say that no one need abandon hope because of poverty. Think of it; according to the story, this outcast from the Danish navy, landing in a strange country, not even deputed or authorized by his own, at once commanded bankers, skilled interpreters, lawyers, capitalists, press associations, investors, intimate friends of men in power, Representatives, Senators, diplomats, premiers, presidents; claims to have secured unlimited credit with which, in his own imagination and in actual penury, he bribed a great nation, wined and dined associates that were his dupes, traveled to and fro in elegant apartments, stopping at the best hotels and peddling, meantime, the islands of the sea—dickering in little worlds! No wonder that his fiction captured the innocent and susceptible gentleman from Tennessee. It reminds one of that famous description of Talleyrand: "Like a spider in its web, he allured and caught in succession heroes, thinkers, great men, conquerors, kings, princes, emperors—Bonaparte, Sieyes, Madame de Staël, Chateaubriand, Benjamin Constant, Alexander of Russia, William of Prussia, Francis of Austria, Louis XIV, Louis Philippe—all the gilded and glittering flies who buzzed through the history of forty years."
Considering where he stood and the difficulties under which he labored, Mr. W. V. Christmas Dirckinck Holmfeldt appears to be about the most illustrious dealer in men and real estate of

whom we have any record. There was a man who lived in the fifteenth century who performed some wonders, hardly comparable with the alleged feats of Christmas, although his name was even longer—Aureolus Theophrastus Bombastes Paracelus Hohenheim. He was not a dealer in land, but in water. He was possessed in his imagination of the elixir vitæ. He performed in Prussia, Austria, Egypt, and other countries, and he, too, claimed certain influential and powerful friends. He could, in a hard pull, invoke "a whole army of demons," and he had one spirit friend called "Azoth," but he never succeeded in getting unlimited credit at a great bank and was obliged to spend considerable of his time "prescribing remedies for cows and pigs."

There is no record that he ever secured any Congressional indorsement. Then there was another person by the name of Joseph Francis Borri, who lived in the early part of the seventeenth century, and who claimed that he in some way obtained possession of the philosopher's stone. He, like Christmas, performed a while at Copenhagen, and it is said of him that, having more enemies than friends in Copenhagan, he sought an asylum in another country. Like Christmas, he, too, claimed to command certain influential friends. He had the aid of the angelic hosts and especially of the Archangel Michael, but with all his political and diplomatic seductiveness and power he never claimed to have landed anything so important as a brace of Senators or anyone like our old friend GARDNER, of New Jersey. It is said he borrowed money wherever he could get it, and finally died in the prison of St. Angelo in 1695.

But the one character in all history who approaches nearest to the similitude and accomplishments of Christmas was Dr. Dee, of London. He flourished about the middle of the sixteenth century. He dealt in astrology, philosophers' stones, and the elixir of life. He did business on a large scale and, like Christmas, had a partner, with whom he finally fell out. He also claimed some friendly spirits, and on one occasion he wrote a document purporting to relate what the spirits said to him, and that document is said to be among the Harleian manuscripts in the British Museum, entitled "A true and faithful relation of what passed between Dr. John Dee and some spirits; tending, had it succeeded, to a general alteration of most States and Kingdoms of the world."

It would seem almost as though he, too, had been dealing in islands. There is no record that Dr. Dee's report or document was ever vouched for or recorded in the House of Commons or of Lords, but there is strong evidence that at one time he worked "Good Queen Bess" for £20 through the Earl of Leicester, and for other sums at divers and sundry times. He got the best of Count Laski, of Poland, and after sponging his board and lodging from Emperor Rudolph for a considerable time, finally degenerated to the position of an ordinary fortune teller at Mortlake. This sounds so like Mr. Christmas's experience with Hansen and others that it almost seems worthy of the attention of the gentleman from Tennessee.

But the famous Dr. Dee is finally outdone, and we are indebted to the honorable gentleman from Tennessee and to his partner in glory, the honorable gentleman from Alabama, for the mysterious manuscript, one page shy, which proves it. If the missing page of this so-called "report" were only at hand, there is no telling what glory might be in store for its ambitious champions. Dr. Dee, in full favor with the court of Queen Elizabeth, armed with the assistance of spirits and of angels and with a full line of samples of astrological signs, philosophers' stones, and elixir vitæ, made a dismal failure.

Christmas, ousted from the navy of his own nation, penniless and unknown, according to this strange "report," grapples at once with our Yankee nation, allies with him the famous banking house of Seligman & Co., commands the services of foreign and domestic lawyers, gains the entrée to the White House, consummates sundry contracts for the corruption of Congress and various press associations, "secures" in ten minutes, on a railway train between Baltimore and Philadelphia, the illustrious author of The First Battle and The Cross of Gold, scorns elixir vitæ and the philosopher's stone, tarries not with spirits or with angels but makes straightway for a few choice Senators, and, wearing the flush of easy triumph and of Senatorial dignity on his radiant face and Farmer GARDNER'S honest name for a bosom pin, hies himself away across the billowy sea for Copenhagen. The manuscript of Dr. Dee reposes silently and modestly in a museum. The "report" of Captain Christmas is embalmed in the CONGRESSIONAL RECORD, authenticated by the illustrious leader and guardian of the modern Democracy and Populism.

Mr. Speaker, so much for the pretenses of this so-called "report," as appears upon its face.

Presuming that some such report had really been made, inasmuch as it was vouched for by the honorable gentleman from Tennessee (assisted by the honorable gentleman from Alabama), your committee has given opportunity to all available parties involved and named in the curious document. Most of them have appeared in person before your committee, and others have communicated in writing. As a result, it may be asserted without fear of contradiction that every charge and every intimation of dishonor in connection with the transactions involving the purchase of the Danish Islands are shown conclusively to be utterly without foundation and ridiculously absurd. I shall not augment the folly of it all by any extended review of the testimony. A few illustrations from the evidence will serve to show the character of all of it. It will be remembered that certain members of the House of Representatives were named and implicated in the so-called Christmas report. It is averred by Christmas, according to the report, that "members of the House, ALEXANDER, GARDNER, and others * * * promised me their very best assistance."

When this infamous libel was spread upon the record by the gentleman from Tennessee (assisted by the honorable gentleman from Alabama), Representative ALEXANDER of New York was absent at his home in Buffalo. He came before your committee and testified as follows:

I never spoke to Mr. Christmas; I have never met Mr. Christmas; I never heard of Mr. Christmas until this report, published in the RECORD, was called to my attention in the newspapers of Buffalo, where I was last Friday. I never spoke to anyone in or out of Congress in regard to the Danish treaty, nor has anyone spoken to me in or out of Congress in regard to the Danish treaty, nor have I ever heard it discussed at any time or in any place by anyone until after the publication of this alleged report. That is all I have to say.

Representative GARDNER of New Jersey, who once introduced a bill looking to the purchase of the Danish Islands, also appeared before your committee. He testified that after the introduction of his bill, which never had consideration either in the committee to which it was referred or in the House of Representatives, a person calling himself Christmas called at his committee room and left his card upon the table and later procured a card of admission to the House gallery, but that he never had any connection whatever with the said Christmas and could not even remember the balance of his name.

Mr. Speaker, while the proprieties do not permit any reference here to the other branch of Congress or to any member thereof, it may with propriety be asserted that this so-called report of Mr. Christmas is disputed and flatly denied in the essential by every one involved. It is disputed by everyone mentioned, both in and out of Congress. It is disputed by his alleged friends, bankers and attorneys in New York. In every particular charging dishonor it is denied by Grön and Hansen, native Danes, pronounced by Mr. Seligman, the New York banker, to be "made out of the whole cloth," denied by Mr. Rodgers, denied by Evans and Knox, denied by Wilbur C. Brown and Abner McKinley, and finally denied by Christmas himself. Our Secretary of State has transmitted to your committee the following letter received from Mr. Christmas since this investigation was instituted:

9 SKJOLDSGADE O.,
Copenhagen, April 8, 1902.

His excellency The AMBASSADOR FOR THE UNITED STATES IN COPENHAGEN.

YOUR EXCELLENCY: Nearly two months ago some Danish gentlemen engaged a Danish-born American citizen, named Niels Grön, to prevent the sale of the West Indian Islands.

By foul means one of these gentlemen got hold of a confidential report of my doings in America, and provided Grön with a copy of the same.

I have reason to believe that Grön has falsified my report, and I am already able to state—from newspaper cablegrams—falsifications on following points:

1. I have never impressed the former prime minister, Hövring, with the idea that bribery was the way of getting the islands sold.

I never wrote anything like this in my report.

The fact is that Grön, two years before taking the matter up, invented the whole 10 per cent commission theory, and declared that without spending this money no sale was possible.

2. Nowhere in my report have I given the name of any Congressman in connection with my personal promise of money.

3. I have never written that bankers I. and W. Seligman had guaranteed "certain contracts." I have, on the contrary, stated that these gentlemen declined to do so.

4. I have never in any newspaper declared Mr. Grön's copy of my report to be correct, for the simple reason that I have never seen any copy.

I do not understand how Congress can take up a matter like this without investigating about the informer, Niels Grön, and his so-called translation of a stolen document belonging to the Danish Government. After what I can judge, Mr. Grön has utterly falsified my report.

On the 19th of February I have, through Ritzaus Bureau, sent to all Danish newspapers a declaration by which I, under my oath, state that no members of Congress in Washington were interested directly or indirectly, with my knowledge, in the sale of the islands.

This declaration I deposited the next day in the Danish foreign office, demanding to have it forwarded to our ambassador in Washington.

I sincerely regret that the minister of foreign affairs declined to do so, and I do not understand his motives; the whole scandal might have been avoided.

I hereby entreat your excellency to cable the contents of this letter to Secretary of State, Mr. Hay, and I offer to pay the cable expenses myself.

I have the honor to remain, your excellency's most obedient
WALTER CHRISTMAS.

It not only appears that this so-called report is false and foolish on its face, but false in fact, and is now denied by its imputed author. It appears upon its face that the author was discredited not only by the Danish minister at Washington, but by the prime

minister in Denmark. Near the close of the report we find this language:

I had not seen the minister since my departure from Denmark in January, and it was in a bitter frame of mind that I again entered the minister's reception room in the ministry of finance. I had in the meantime worked to such a degree that my nerves were almost ruined and my means entirely exhausted. I had not saved myself, but thrown my whole energy into the affair, which the minister had shown such a lively interest for. In return the minister had done nothing for me. He had broken his promises and agreements even to such a degree that he had proven untrue to me and had made it appear that I had made myself impossible for the minister's confidence.

This is the indictment which, according to this report, Mr. Christmas drew against his own country and against himself when he returned. It seems that he had fallen out with everybody and was discredited by everybody, except possibly by the gentleman from Tennessee, assisted by the honorable gentleman from Alabama, who at last gave him sufficient credit to spread upon our record the ludicrous and monstrous charge which not only involves by name two members of this body, but directly impugns the honor of the whole American Congress and the press.

Nothing in this "report" nor in the facts developed by its investigation necessitates a defense either of Congress or the press, not even the assertion that the prime minister of Denmark expressed to Christmas "his abhorrence for the political situation in America, which makes it necessary to offer money in order to bring political action." The American people suspect neither themselves nor Denmark. They know too well the sterling qualities of Danes who live among us to believe that any high official of that country ever uttered such unbelievable and preposterous scandal.

The people of America regret with painful earnestness the silly exploitation of this whole affair, the embarrassment it may have brought to Denmark and likewise to ourselves; but remembering that our form of government and its procedure, by virtue of its very plan, is always subject to exposure, both by advocates for its eternal good and by the cheapest demagogues for temporary gain, rest their faith in the intelligence of all mankind, believing that the truth will finally be discerned and realized.

This wild and incoherent story of the adventurer Christmas belongs to the dark and bygone ages, when innocent credulity with wondering eyes believed the monstrous stories of the ancient oracles and accredited the spurious performances of the necromancers and the alchemists, when ignorance confided in imposture and daylight feared the shadows of the night.

There is but one thing in connection with the whole matter that approaches the silliness and absurdity of the driveling diatribe and fictitious tale of Christmas, and that is the unparalleled and ludicrous performance of deliberately and solemnly spreading it upon the records of the American Congress, where it must remain throughout all history as a shameless challenge to the credulity of men. If in the surging sea of time every chronicle of nonsense and folly should ever be submerged, and that one copy of the American CONGRESSIONAL RECORD containing this "report" should be washed up on the strand of some distant civilization, it will be enough to reveal to coming ages the most novel, extraordinary, and scandalous piece of fiction ever spread upon a public record. [Loud applause.]

Mr. RICHARDSON of Tennessee. Mr. Speaker, I don't know that I should make any reply to the speech with which we have been edified, nor shall I attempt to comment extensively on that effort. I hope it is not deemed necessary that I should do so. I only want a few words in justification of myself in the part I took in bringing these charges to the attention of the Congress and the country. On the 27th of March, as stated by the gentleman, I did present the report of Mr. Christmas, whom the gentleman from Iowa has ridiculed, a report made by Mr. Christmas to his own Government, that of Denmark.

Mr. Speaker, the gentleman from Iowa attempts to grow facetious over the fact that some attention was paid by myself and others to the grave charges of corruption which this agent of the Danish Government made to his Government. Mr. Speaker, in the light of all the evidence, it may be said by some persons that it was not necessary that these grave charges should have been noticed; but, sir, when you consider that they were made by an agent of the Danish Government in an official report to his own Government, it was sufficient to challenge the attention of members of this Congress and of the country. I feel fully warranted in having presented them.

What are those charges? Mr. Christmas charges that he had a contract with his Government to receive 10 per cent of the purchase price that the Government of the United States was to pay Denmark for the Danish West Indian Islands; and the price being fixed at $5,000,000, he was to receive $500,000. The gentleman grows facetious, and says that that charge should not be noticed. Who was Captain Christmas? I have already stated that he was an official agent of the Denmark Government. But that was not all, Mr. Speaker. The proof is distinct and clear that he was not only the agent of the Danish Government, but he was also the agent of the Government of the United States.

Now, what is to become of the speech of the gentleman from Iowa, and his effort to ridicule Christmas, in view of the fact that he was not only the agent of the Danish Government, but was made the agent of the United States Government—a diplomatic agent?

Mr. DALZELL. Mr. Speaker, the gentleman ought not to make that statement. There was not an iota of testimony to that effect.

Mr. RICHARDSON of Tennessee. I supposed the gentleman might deny this, but I have the proof of the Secretary of State himself—Mr. Hay—as well as the report of Captain Christmas, to sustain my statement. The Secretary of State says, in his testimony in the record, that he gave this man a letter of introduction to a member of our legation in London.

Mr. DALZELL. Undoubtedly; but that does not make him the agent of the United States.

Mr. RICHARDSON of Tennessee. And in that way he made him an accredited agent of the United States for a certain purpose?

Mr. COUSINS rose.

Mr. RICHARDSON of Tennessee. I do not yield to the gentleman now, but later on I will. Let us settle this question. I say that the Secretary of State gave Christmas a letter of introduction to a member of the American legation in London, and in this way put on foot a diplomatic movement looking to the purchase of these islands from Denmark. Does the gentleman deny it? Did not Mr. Hay when he did this make him our agent, at least to that extent?

Mr. COUSINS. Will the gentleman yield?

Mr. RICHARDSON of Tennessee. Yes.

Mr. COUSINS. Does the gentleman represent to this House that Mr. W. V. Christmas was the agent of that Government in fact in view of what he said when he returned and his own minister disowned him, the minister in Washington disowned him?

Mr. RICHARDSON of Tennessee. I am not speaking of the minister here. There is no controversy but that Christmas was the agent of the Danish Government.

Mr. COUSINS. Oh, the gentleman does not mean to represent that that is the fact.

Mr. RICHARDSON of Tennessee. I do not mean to misrepresent anybody. The gentleman from Pennsylvania raised the question, and I will read a letter from Henry White, the member of our legation in London, to Secretary Hay of April 23. I will print the whole of it in my remarks; it is all printed in the report here. This letter shows that Secretary Hay sent Christmas with a letter of introduction to Mr. White; that he called at the embassy in London, presented his letter or credentials from Mr. Hay, was received and went on to Copenhagen; that he arranged for the interview between Mr. White and the Danish officials, etc. The letter is as follows:

AMERICAN EMBASSY, *London, April 23, 1902.*

Hon. JOHN DALZELL, M. C.,
Chairman of the Select Committee on Purchase of Danish Islands, House of Representatives, Washington, D. C.

SIR: In accordance with the suggestion contained in your letter of 31st ultimo to the Secretary of State that I should make a statement for the information of your committee relative to the so-called report of Capt. von Christmas Dirckink-Holmfeldt to the Danish Government, dated October 1, 1900, I have the honor to inform you that on Saturday, December 9, 1899, Capt. von Christmas appeared at this embassy with a letter of introduction from the Hon. John Hay to me—not, as he states, to the ambassador, whom he did not see on that occasion.

Finding that I had left earlier in the day for Dover en route to the Continent, he followed me thither, and I had with him that same evening at the Lord Warden Hotel an interview, during which he assured me that if I would come to Copenhagen the Danish prime minister would be happy to receive me, and would furthermore inform me of Denmark's willingness (which he said amounted to a very earnest desire) to sell to the United States the three islands of St. Thomas, St. John, and St. Croix in the West Indies. I informed Captain Christmas in reply that after having taken my wife, who was seriously ill, to the south of France I would return to Copenhagen without delay, which I did.

I reached that city on Tuesday evening, December 19—not the 9th, as Captain Christmas states—having meanwhile received from him on the 14th at Bordighera, Italy, a telegram in French, of which the following is a translation: "Prime minister enchanted to receive you. When do you arrive?"

Capt. von Christmas met me at Copenhagen station and accompanied me to the Pœnix Hotel, stating on the way thither that the Danish prime minister, Mr. Höring, being unable to speak English or French, or even German enough to carry on a conversation satisfactorily, had decided, as I do not speak the Danish language, that it would be better for the minister of foreign affairs, Admiral Ravn, to see me on the next day, and that he would accordingly do so. Captain Christmas also said that he had registered me at the hotel under an assumed name, to which I objected; and upon reaching the hotel I at once gave the porter my own name and told him that I expected to receive several telegrams.

On the following morning, Wednesday, December 20, Captain von Christmas accompanied me to the Danish foreign office, where I was promptly received alone by the minister for foreign affairs, Admiral Ravn (who was also minister of marine), the Captain having been requested to remain in the public waiting room.

I informed the minister that the object of my visit was, as I assumed that he knew, to inquire confidentially what the intentions of his Government might be with respect to the Danish West India Islands, as my Government had been informed that His Majesty's Government would be willing to cede them to the United States for a consideration.

Admiral Ravn having given me to understand that the information which had reached my Government was correct, and that the Danish Government would cede the islands to us, I asked to be placed in communication with officials of the ministry of finance with a view to ascertaining the financial condition, indebtedness to Denmark, trade, etc., of the islands; all of which information was promptly placed at my disposal, and I was able to leave Copenhagen that same evening, Wednesday, December 20, having spent exactly twenty-four hours there.

With regard to Captain Christmas, I may say that I considered that his connection with the question ceased when he had carried out his undertaking to bring about an interview between the Danish minister of foreign affairs and myself. It is untrue that I asked him for "instructions" as to the manner in which I should broach the question to the minister, never having had any doubt in my own mind on that subject, and his other statements as to conversations with me before and after my interviews with the Danish officials are equally devoid of foundation, except that I did mention to him that the minister had hinted at a price between $4,000,000 and $5,000,000, because he (the Captain) seemed to be of the opinion that the Danish Government would sell the islands for $3,500,000.

I may add that Captain Christmas never hinted at any idea on his part that it would be necessary for him to return to the United States in order to "agitate during the coming negotiations and acts of Congress," and it is untrue that I "urgently advised the foreign minister to let him complete what he had begun," as I was wholly unaware that he had done anything but notify our Government privately that Denmark wished to sell the islands and undertake to bring about a meeting been a representative of our Government and a member of that of Denmark. On the contrary, in the course of my interview with the minister I said to him that if my Government should decide to enter into negotiations for the purchase of the islands, which I was not authorized to do, such negotiations would be initiated and conducted through the ordinary diplomatic channels.

I have honor to be, sir, your obedient servant,

HENRY WHITE.

A MEMBER. Who is White?

Mr. RICHARDSON of Tennessee. Mr. Henry White was secretary of the American legation in London. He is the man to whom Mr. Hay gave a letter of introduction to Mr. Christmas to go there and put on foot negotiations for the sale of the Danish islands. Mr. White in this letter substantially corroborates Christmas in his report.

Christmas says that he did not go with Mr. White from London to Copenhagen, because of some domestic trouble—the illness of the wife of Mr. White. Mr. Christmas went on to Copenhagen and arranged there an interview to take place between Mr. White, when he arrived, and the prime minister. Mr. White tells us in his letter about what Christmas had told us in his report.

Mr. White, in his letter, says:

Captain Christmas also said he had registered me under an assumed name

I will do Mr. White the justice to say that when he learned that *he had* been registered under an assumed name he objected. But let us see what he did further? On the following morning, after knowing that he had been registered under an assumed name by Christmas, what occurred? Here is his own statement:

On Wednesday, December 20, Captain Christmas accompanied me to the Danish foreign office, where I was promptly received, etc.

Why, sir, Mr. Christmas was the very life of the negotiations. Here is the man who went there ahead of him, who arranged for an interview, and who registered him at the hotel under an assumed name; and the next day, after knowing all this, Mr. White accompanied him to the legation for the purpose of being presented by him to the prime minister of state.

Mr. Speaker, I have established the fact that Christmas went there as an agent of the United States. Mr. White was his guest in Copenhagen, went with him to call on the officials when he entered upon the negotiations, etc.; but that is not all. Before leaving that subject, let me say I not only give the statement of Mr. White, but I will publish in my remarks the letter of Mr. Hay himself, dated April 3, 1902, addressed to Mr. DALZELL, in further substantiation of the contention I make.

The letter of Mr. Hay is as follows:

DEPARTMENT OF STATE,
Washington, April 3, 1902.

Hon. JOHN DALZELL,
Chairman Select Committee, etc., House of Representatives.

SIR: I have received your letter of the 31st of March, and in reply beg leave to say:

In the early part of December, 1899, Captain Christmas called upon me at this Department and informed me that, through private and personal sources in Copenhagen, he had become aware that there was a disposition among some of the leading members of the Danish Government to regard favorably an overture from the Government of the United States looking to the acquisition of the Danish Islands.

He said that he had been a naval officer, and spoke at some length in regard to the desirability of the island of St. John as a naval station for the United States. At my suggestion he conveyed what further technical information he had on this subject to Admiral Bradford, of the Navy Department. Although he presented no credentials whatever and expressly declared he had no official character, I thought his story was of sufficient interest to be worth investigation. I told him I would send a confidential and trusted agent of this Government to Copenhagen to ascertain unofficially the true state of affairs, and mentioned to him the name of Mr. Henry White, first secretary of embassy at London. Captain Christmas said he would like to be in Copenhagen when Mr. White arrived, and bring him into communication with the members of the Government, whom he mentioned.

I gave him a note of introduction to Mr. White, and they met in Copenhagen, where Captain Christmas had arranged for an interview between Mr. White and a member of the Danish Government. Mr. Christmas was not present at this interview, and his connection with the matter ceased entirely at that time. He afterwards returned to Washington, and I saw him once or twice, but told him that there was no need of the services of any private person in any negotiations which might be taken up between the two Governments in regard to the acquisition of the islands.

I inclose a copy of a letter which I gave the Danish minister in Washington at the time of the signing of the recent treaty, and also a copy of a letter which I have received from the Danish minister, Mr. Brun, dated the 31st of March, 1902.

Very sincerely, yours, JOHN HAY.

Now, Mr. Speaker, from the foregoing letter it appears that this man had called upon Mr. Hay to sell the islands, and he says he put him in communication with Admiral Bradford. What was the object? To investigate as to the sale of the islands, and nothing else. In this letter Mr. Hay says:

I told him that I would send a confidential and trusted agent of this Government to Copenhagen.

He gave him a letter of introduction to Mr. White at the embassy in London. He says that Captain Christmas arranged for an interview between Mr. White and the Danish officials.

Mr. Christmas was here, Mr. White was in London. The negotiations were to take place in Copenhagen. Mr. Hay gave Mr. Christmas a letter of introduction to Mr. White in London. I do not know what the contents of that letter were. The Secretary of State, I have no doubt, kept a copy of it; but he did not give us its contents. I have no doubt he gave him such a letter of introduction as a gentleman would need who was to put on foot such important diplomatic negotiations as the sale of those islands to the United States. I assume he did give him just such a letter as any man wishing an audience with the American legation in the city of London would wish to receive.

Now, I should like to know whether Mr. Christmas was not made the agent to start these negotiations by our own Government. With such a man as that making an official report to his own Government, was it unusual that we should take notice of the grave charges that he makes in his report? I should say not.

But that is not all. I shall publish the whole of the letter as I state it.

The gentleman from Iowa says that there is no proof that Mr. Christmas had any such contract as $500,000 for his services. No man can read the record in this case and doubt it.

The proof is conclusive that Christmas had a contract with the Danish Government to get 10 per cent of the purchase price of these islands. He says in that report that he intended to use it in bribing members of Congress and other officials of the United States. It is a matter of pride to every member of the committee, and should be a matter of felicitation to all of us, that the report is unanimous in the conclusion that no member of Congress was bribed. I was not surprised at it. I have here my remarks made on the 27th of April, when I brought these charges to the attention of Congress. I stated then, as did the gentleman from Alabama, that no man made any charge that members of the Senate or House had been bribed.

Why, Mr. Speaker, the report which we submitted shows on its face that there could be no bribery until the purchase price was paid, and the money has not yet been paid. It could not be possible that $500,000 could be paid until Congress appropriated the money, and there has been no appropriation. Therefore, there could be no proof, and nobody suspected that there would be any proof, that any member of Congress had been actually bribed. I expressly stated when I brought the charges to the attention of Congress, as did the gentleman from Alabama, that no man charged that a member of Congress had been bribed.

Now, Mr. Speaker, so much for Christmas. He was the agent of the two governments, the diplomatic agent. He put these negotiations on foot. But that is not all. The gentleman from Iowa [Mr. COUSINS] says that we should not have paid any attention to the charges when they were brought here. Now, who brought the charge? I only call attention for a few moments to the man who brought the charges here. Who was he? Niels Grön; and who is Niels Grön? He is a Dane, a native of Denmark, but a naturalized citizen of the United States, educated, a graduate of Harvard, and a Republican.

Mr. Speaker, so far as I know, no Democrat testified in this whole record. No Democrat had anything to do with bringing these charges. They were brought by Mr. Grön, a Republican. Will that be denied? Was he man of character? Will that be questioned? Does the gentleman from Iowa, in making his severe attack upon and heaping ridicule upon Mr. Grön, say that Mr. Grön is not a man of good character? I pause for a reply. Does the gentleman say that Mr. Grön, who made the affidavit that was used in the House on the 27th of March, is not a man of honor and integrity? The gentleman declines to answer. I take it that he concedes that he is.

Mr. COUSINS. Mr. Speaker, that rests entirely with the gentleman from Tennessee. He is the man that presented the only document that we have.

Mr. RICHARDSON of Tennessee. Yes.

Mr. COUSINS. And his own authority says he never wrote such a document. How can I answer?

Mr. RICHARDSON of Tennessee. He does not say anything of the kind. I beg the gentleman's pardon.

Mr. COUSINS. He says that he never made any accusation against any member of Congress.

Mr. RICHARDSON of Tennessee. Well, perhaps he did not.

Mr. COUSINS. Now, you settle with Grön.

Mr. RICHARDSON of Tennessee. I care nothing about that. Nobody is charging members of Congress with having been bribed. The money has not been paid.

Mr. COUSINS. I am glad to know that.

Mr. RICHARDSON of Tennessee. This was all stated in the very beginning. I am glad the gentleman has got up to that point. He does not seem to know what has been charged.

Mr. COUSINS. Just a moment——

Mr. RICHARDSON of Tennessee. The gentleman has had his hour. I am talking about Mr. Grön.

Mr. COUSINS. Just a moment, if the gentleman will yield.

Mr. RICHARDSON of Tennessee. I decline to yield, because I have not the time.

The SPEAKER. The gentleman from Tennessee declines to yield further.

Mr. RICHARDSON of Tennessee. Now, I will ask who Grön was, and I propose to show, not by the testimony of Democrats. I do not know whether Grön is an honest man or not. He appeared to be a gentleman. He had good credentials. I never saw him until he brought these papers to my room and made the affidavit about their authenticity, but I will read you some testimony as to his character and standing as a man and as a Republican. I will read you a letter, signed by Mr. MARCUS A. HANNA, sent to Senators HOAR and LODGE. It is in the testimony at page 53. It is as follows:

HEADQUARTERS REPUBLICAN NATIONAL COMMITTEE,
GLOVER BUILDING,
Washington, D. C., March 12, 1897.

DEAR SENATORS: I beg to advise you that Mr. Niels L. J. Grön, of Boston, a Scandinavian by birth, but a citizen of Massachusetts, was exceedingly useful and valuable in the campaign of 1896 and contributed efficient service. He organized the Scandinavian bureau at our Western headquarters and conducted it in a successful manner, and later on in the campaign entered the field and addressed his countrymen in Illinois, Wisconsin, Minnesota, South Dakota, Iowa, and Nebraska, and for this work in these States as a campaigner our speakers' bureau received numerous commendations.

Realizing that there were large settlements of Scandinavians at Jamestown, N. Y., Bridgeport, and New Haven, he was requested to make a trip East, and was equally efficient in the East as he had been in the West. At Jamestown, N. Y., his work was especially valuable, for he spoke to Scandinavians from Ohio, Pennsylvania, and New York.

You will pardon me, Senators, for this note, but I greatly desire to advise you of the good work done by this citizen of Massachusetts, and to remind you that the Scandinavian vote in the West was a potent factor in our victory, and to Mr. Grön due credit should be given.

I am, etc., yours, very truly,
M. A. HANNA,
Chairman.

Hon. GEORGE F. HOAR and Hon. HENRY CABOT LODGE,
United States Senate.

Now, if that is not a pretty good certificate of character, I would not know where to get one. I would take it. Almost any gentleman would, I think, take a certificate from Mr. HANNA as to his capacity, and so forth. But that is not all.

Mr. COUSINS. Will the gentleman yield?

The SPEAKER. The gentleman declines to yield.

Mr. RICHARDSON of Tennessee. But that is not all. I will read you another letter. If you will not take Mr. HANNA, I will read you a letter signed by Mr. SHELBY M. CULLOM, not to two Senators, but to the President of the United States. Mr. Speaker, here is what Mr. CULLOM says about this discredited man, this man who is not entitled to any credit according to the gentleman from Iowa; this is the man who brought these charges here; this is the man who says he translated from the Danish language into the English language this report of Mr. Christmas. Is he reliable? The gentleman from Iowa [Mr. COUSINS] says no. I have read you what Mr. HANNA says about it.

Mr McCALL. Mr. Speaker——

The SPEAKER. The gentleman from Tennessee has declined to yield.

Mr. RICHARDSON of Tennessee. I will yield to the gentleman from Massachusetts.

Mr. McCALL. I understood the gentleman from Tennessee to say that Mr. Grön said that these charges were true.

Mr. RICHARDSON of Tennessee. No; I do not say that he said that anybody had been bribed. He said nothing of the kind. He said this report had been made to the Danish Government and that this was a true translation; that he translated it. Now, what does Mr. CULLOM say about this gentleman? Here is Senator CULLOM's letter, from page 50 of the report:

DEAR MR. PRESIDENT: Mr. Neils Grön, of Boston, a Scandinavian by birth, is a candidate—

For what—

for appointment as minister to Siam. Mr. Gron is a thoroughly educated gentleman, is a graduate of Harvard, and in the campaigns of 1892 and 1896 did very valuable service for the Republican party. I should think he was just the man to send to the country to which he wishes to be accredited, and I shall be pleased if he should secure the position indicated.

Very truly, yours,
S. M. CULLOM.

Senator CULLOM of Illinois commends to the President of the United States this discredited man that my friend from Iowa has been slandering here to-day. Now, that is not all. Senator Cushman K. Davis says:

I take great pleasure in concurring in the above recommendation of Senator CULLOM.

But that is not all. Mr. Grön, while on the stand, testified that he had another indorsement, and possibly it was a better indorsement than the one I have referred to. After speaking of his campaigns in behalf of the Republican party and putting in evidence these letters that I have read, he said:

I applied for the position of minister to Denmark or Siam.

He then speaks of his indorsements for this position. He says:

Among other indorsements—

I read from page 52 of the printed testimony—

I had an indorsement from Mr. McCALL—

The gentleman who just a moment ago interrupted me, my distinguished friend from Massachusetts, a member of this investigating committee. He says:

I had one from Senator HANNA—

The one that I read—

I had one of which I am proud, being a citizen of Massachusetts, from the two Senators from that State, Senator HOAR and Senator LODGE, and besides that I had the indorsement of the majority of the Republicans in Congress from the State of Massachusetts.

Why, he says:

Senator HOAR accompanied me to the State Department and introduced me to the Secretary, and Senators HOAR and LODGE, in a joint statement to the President, thanked the President for having appointed Mr. Draper as ambassador to Italy; and that was followed up by a statement to the President that if, in the President's opinion, Massachusetts should deserve any more diplomatic positions, they beg to recommend the following gentlemen, and I had the honor to be the first one recommended.

Now, Mr. Speaker, that is the kind of a man Mr. Grön was. We do not have to vouch for him. As I say, I never saw him until he brought this paper to my room, but he had the indorsement of the ablest, the purest, and the best Republicans in the United States, some of them.

Now, after this testimony, which my friend from Iowa must have overlooked, does he still undertake to say that Mr. Grön is unworthy of confidence, unworthy of credit, and that we could not take the sworn affidavit of this Republican, who was competent to go to Siam, who had the indorsement of the Senators from Massachusetts, of the members from Massachusetts to go to Siam as the ambassador and representative of this great Republic there.

Mr. COUSINS rose.

The SPEAKER. Does the gentleman yield to the gentleman from Iowa?

Mr. RICHARDSON of Tennessee. I can not yield.

Mr. COUSINS. I want to answer your question.

Mr. RICHARDSON of Tennessee. And yet with all these testimonials, with all these certificates of integrity, of character, of capacity as a Republican, as a campaigner, as a stumper, a man who had rendered efficient services among the Scandinavians in seven or eight States mentioned by Senator HANNA; a man who had rendered service in Iowa, I believe, the State from which my friend [Mr. COUSINS] comes, this worthy man, this high Republican; a man who stood high in the councils of the Republican party, came and by his affidavit swore that this report was genuine; that he had brought it from Copenhagen; that he had just landed in the United States; and that it made these charges, as we could see on its face. Notwithstanding all that, because we presented it here, and asked simply that the charges might be disproved if not true, the gentleman from Iowa [Mr. COUSINS] gets into a rage and undertakes to ridicule our position.

But, Mr. Speaker, I say I rejoice that nobody has been bribed, and we say so in this report. I did not intend to bring this report before the House. The chairman of the committee and myself agreed that we would submit the report. There is no legislation called for. It acquitted Congressmen of having been bribed, and I was as much delighted as was the gentleman from Iowa or the gentleman from Pennsylvania.

I did not want it to go out that members of the American Congress had been bribed unless it was true. I did not charge it. I had expressly disavowed it on the 27th day of March; and now, because nobody has been bribed, the gentleman from Iowa gets in a very happy mood and brings the matter here and undertakes to ridicule the bringing of the charges before Congress.

I think the gentleman from Iowa, like all other gentlemen who think about this matter seriously, will conclude that this was exactly the thing to do. It is a thing in which no man rejoices more than I do that there is no proof that any member of Congress was really bribed.

Now, Mr. Speaker, a word or two as to what was done. We have acquitted members on the charge of having been bribed. I want to put into my remarks here a contract made (and there were about three of them, I think) by this agent of the Danish Government, this quasi agent of the United States Government, with an attorney in this city. The record shows that Christmas was very busy making contracts to pay money when he received his commissions.

Mr. Speaker, having said that no member was bribed, and having stated it with emphasis; having shown that this man was an agent of the Danish Government; having shown, I think, very clearly that he was to get 10 per cent of the purchase money when paid, I want to read you some of the contracts that he made, and one that he made with an attorney in this city. This attorney was called as a witness, and he gave his testimony before this committee, and here is the contract; it appears on page 87 of the report:

This memorandum of agreement made at Washington, D. C., the 23d day of February, A. D. 1900, by and between Capt. W. v. Christmas Dirckinck-Holmfeld, of Copenhagen, Denmark, and Richard P. Evans, attorney and counselor-at-law, of Washington, D. C:

Witnesseth, that the said Capt. W. v. Christmas Dirckinck-Holmfeld has retained the legal services of the said Richard P. Evans, attorney and *counselor-at-law*, *in* matters pertaining to the purchase by the United States from the Kingdom of Denmark of the Danish West India Islands, and has agreed to pay to the said Richard P. Evans for his said legal services hereinafter described, rendered and to be rendered in the matter of said purchase, the fee and compensation of $50,000—

A $50,000 contract with one attorney in this city!

in United States money, contingent upon the consummation of said purchase as far as the United States is concerned, by the enactment into law by the Congress, approved by the President of the United States, of a treaty or bill carrying an appropriation of money, acceptable in amount to the said Government of Denmark, exceeding $3,500,000 for the purchase of said Danish West India Islands, and in event of the said purchase being consummated by payment of an amount acceptable to the said Government of Denmark of $3,500,000 or less, then said Capt. W. v. Christmas-Dirckinck-Holmfeld agrees to pay to the said Richard P. Evans the sum of $40,000 as his full fee and compensation for his said services.

Provided, That said law shall be enacted before the adjournment of the present session of the present United States Congress; otherwise this agreement is void and of no effect.

And he agrees that the payment of said fee and compensation shall be made through the banking firm of J. & W. Seligman & Co., of New York, and that they will become surety for its payment.

And further witnesseth, that the said Richard P. Evans, attorney and counsellor at law, has entered upon the said services and has agreed to perform said legal services faithfully and with dispatch for the prompt accomplishment of said purchase; and that he will prepare and present facts, briefs, arguments, and necessary documents and data to the committees of Congress, and others, in the furtherance of said purchase, for the said fee and compensation of $50,000, or said alternative fee of $40,000, as hereinbefore stipulated, contingent upon the consummation of the purchase of said Danish Islands by the United States under a treaty or law enacted by the present session of the present Congress of the United States and to do any and all other acts as an attorney at law necesary in the accomplishment of said purchase, before the Congress, the Executive Departments, and the courts, without any other or further compensation or fee whatever for any of said services than as hereinbefore stipulated and set forth.

The foregoing considered, it is hereby agreed and stipulated by and between the parties hereto that the said fee of $50,000, or alternative fee of $40,000, shall be due and payable to the said Richard P. Evans upon the approval by the President of the United States of an act of the present session of the present Congress, appropriating the money necessary for said purchase, acceptable to the said Government of Denmark and not otherwise.

In witness whereof we have hereunto set our hands and seals the day and date hereinbefore stated in duplicate.

This testimony shows that Christmas had a contract with Mr. Evans, of the city of Washington, to pay him $50,000 to help him pass the bill through Congress for the sale of the islands.

But that is not the only contract he made. He had a contract with a man named Knox, and Mr. Knox was to receive $15,000. I will not print this contract in my remarks, but it appears at page 101 of the report.

He also had an agent in New York to guarantee these contracts. The gentleman from Iowa says that Mr. Seligman, of the banking firm of I. W. Seligman & Co., said that he never guaranteed any contract for Mr. Christmas. Well, that is true. He did not, and Mr. Christmas says in his report that he did not. He said that he laid the matter before Mr. Seligman, but that Mr. Seligman did not guarantee these contracts, and we may let that pass. But he did have an agreement with Carl Fischer-Hansen, of New York, to guarantee his contracts.

Mr. COUSINS. Will the gentleman from Tennessee allow me to ask him a question?

Mr. RICHARDSON of Tennessee. I yield for a question.

Mr. COUSINS. Did not the gentleman hear the question presented to Mr. Seligman in his testimony when he said it was made out of the whole cloth?

Mr. RICHARDSON of Tennessee. I know he said he never guaranteed the contract, but he said that Christmas called on him about it. I do not care about that. Mr. Christmas said in his report that Seligman did not guarantee them. But he says in his report that he found a man of wealth in the city of New York who would guarantee his contracts, and we find that Mr. Carl Fischer-Hansen did.

Mr. Carl Fischer-Hansen testifies, and his testimony in this record states that he did agree to guarantee certain contracts, among them the one I have referred to. It does not make any difference whether it was Seligman or Hansen who was the guarantor of these contracts. Mr. Hansen states that he was called upon by Mr. Christmas, and confirms the statement of Mr. Christmas that he was to guarantee these contracts. The proof shows that he was a man of wealth and that he did guarantee them. He afterwards had a difficulty with Mr. Christmas, and undertook to withdraw his indorsement of the contracts.

Mr. Speaker, this is all I care to say at this time. As I have intimated, I did not expect to say anything on the report, but was content to let it go on the files. The remarks of the gentleman from Iowa have made it necessary for me to say what I have said, and now I am content to dismiss the subject.

Mr. Speaker, how much time have I remaining?

The SPEAKER. The gentleman has twenty-five minutes remaining, but the House has not got that time.

Mr. SULZER. I yield five minutes of my time to the gentleman from Arkansas [Mr. DINSMORE].

Mr. DALZELL. One moment, Mr. Speaker. Does the gentleman from Tennessee intend that I shall not have an opportunity to reply to him?

Mr. RICHARDSON of Tennessee. I have nothing to do with that. I got my time from the opposite side.

Mr. DALZELL. If the gentleman occupies all the time, of course I can not reply.

Mr. RICHARDSON of Tennessee. How much time have I used, Mr. Speaker?

The SPEAKER. The gentleman has used thirty-six minutes.

Mr. RICHARDSON of Tennessee. I did not use as much time as the gentleman from Iowa.

Mr. COUSINS. I think, Mr. Speaker, we have sixteen minutes remaining over here.

Mr. RICHARDSON of Tennessee. I want to deal fairly on a question of time. I tried to have an agreement in advance.

The SPEAKER. This controversy is out of order. The gentleman from Arkansas is recognized.

Mr. DALZELL. Mr. Speaker, the gentleman from Arkansas has yielded to me to make a request. I ask unanimous consent that the report of your committee, not the testimony but the report, may be printed in the RECORD.

The SPEAKER. Without objection, this will be done.

There was no objection.

The following is the report:

SPECIAL COMMITTEE ON PURCHASE OF DANISH ISLANDS.

Mr. DALZELL, from the Special Committee to Investigate Facts Connected with the Purchase of the Danish West India Islands, submits the following report:

On March 27, 1902, Mr. RICHARDSON, of Tennessee, brought to the attention of the House of Representatives a certain document which purported to be a secret report to the Danish Government by one Capt. W. Christmas Dirckinck Holmfeld, of his services in endeavoring to bring about the purchase by the United States of the Danish West Indian Islands. In this document allegations were made of the bribery and corruption of members of Congress.

After a consideration of the matter by the House as one of the highest privilege, the Speaker, pursuant to a vote of the House, appointed a committee to examine into the truth of all the allegations and charges made by the said Walter Christmas in his secret and confidential report to the Danish Government as to the methods pursued and to be pursued by him and any of his assistants in the United States, and the contracts made or proposed to be made by him or other persons acting in any way for him, or as assistants to him, for the purpose of, or which in any manner had for their object, the bribery of, or the attempted bribery of, members of the United States Congress, or of the payment of any valuable consideration of any kind or character to them, or to any of them, to vote for or to assist in procuring the proposal, adoption, or ratification of said treaty of sale of the said islands as aforesaid.

This committee had power to subpœna and examine witnesses under oath, and to send for records, papers, and all other evidence that may be necessary for a full and complete investigation of the subjects mentioned.

The committee so appointed has held a number of sessions and examined witnesses, and submits herewith the testimony taken, together with the alleged Christmas report.

At the hearings there was incidentally brought out a great deal of evidence connected with the subject, in its various phases, of the purchase of the Danish West Indian Islands not necessarily connected with the subject given in charge to the committee. So much of the evidence as does not relate directly to the duties of the committee under the terms of their appointment they have eliminated as unnecessary for consideration in this report.

The authenticity of the Christmas report is vouched for by one Niels Grön, a native Dane and a naturalized citizen of the United States, who translated the report into English and who asserts that it was acknowledged by Christmas over his own signature in a Danish newspaper. There is no question that Christmas made a report—intended to be secret—to the Danish ministry; but the report produced by Grön, Christmas claims, in a letter addressed to the American minister at Copenhagen under date of April 8, 1902, to have been falsified. That letter is as follows:

9 SKJOLDSGADE O.,
Copenhagen, April 8, 1902.

His excellency the AMBASSADOR FOR THE UNITED STATES IN COPENHAGEN.

YOUR EXCELLENCY: Nearly two months ago some Danish gentlemen engaged a Danish-born American citizen, named Neils Grön, to prevent the sale of the West India Islands.

By foul means one of these gentlemen got hold of a confidential report of my doings in America and provided Grön with a copy of the same.

I have reason to believe that Grön has falsified my report, and I am already able to state, from newspaper cablegrams, falsifications on following points:

(1) I have never impressed the former prime minister, Hövring, with the idea that bribery was the way of getting the islands sold.

I never wrote anything like this in my report.

The fact is that Grön two years before my taking the matter up invented the whole 10 per cent commission theory, and declared that without spending this money no sale was possible.

2. Nowhere in my report have I given the name of any Congressman in connection with my personal promise of money.

3. I have never written that Bankers I. & W. Seligman had guaranteed "certain contracts." I have, on the contrary, stated that these gentlemen declined to do so.

4. I have never in any newspaper declared Mr. Grön's copy of my report to be correct, for the simple reason that I have never seen any copy.

I do not understand how Congress can take up a matter like this without investigating about the informer, Niels Grön, and his so-called translation of a stolen document belonging to the Danish Government. After what I can judge Mr. Grön has utterly falsified my report.

On the 19th of February I have, through Ritzaus Bureau, sent to all Danish newspapers a declaration by which I, under my oath, state that no members of Congress in Washington were interested, directly or indirectly, with my knowledge, in the sale of the islands.

This declaration I deposited the next day in the Danish foreign office, demanding to have it forwarded to our ambassador in Washington.

I sincerely regret that the minister of foreign affairs declined to do so, and I do not understand his motives; the whole scandal might have been avoided.

I hereby entreat your excellency to cable the contents of this letter to Secretary of State, Mr. Hay, and I offer to pay the cable expenses myself.

I have the honor to remain, your excellency's most obedient,

WALTER CHRISTMAS.

Waiving any question as to the authenticity of the Christmas report, the committee, as the result of their investigation, find and report:

That there is not the slightest semblance of evidence that any member of Congress, either directly or indirectly, was offered or received any bribe or was paid any valuable consideration of any kind or character to vote for or assist in procuring the proposal, adoption, or ratification of a treaty of sale of the Danish West Indian Islands to the United States. There is not the remotest ground from which to draw an inference or on which to base a conclusion that there was any corruption or wrongdoing on the part of the public officials of the United States in connection with the negotiations for the purchase and sale of the Danish West Indian Islands.

It is plain beyond peradventure that the bribery alleged in the report could have existed nowhere save in the imagination of Christmas, since the whole burden of his story is that he had no money. It is in evidence that he had to borrow in order to pay his passage home from this country.

According to the report, Christmas claims that the arrangement with his Government was that he was to get the American Government to take the first step toward purchasing the Danish West Indian Islands; that for his services in the event of success he was to receive 10 per cent of the purchase price (estimated at $500,000).

Whether this be true or not, the fact appears to be that he never received any money, save a small and insignificant sum of $1,600 prior to his leaving home, and consequently he never was in a position to bribe anyone.

The report contains the statement that in a conversation with the Danish prime minister relative to Christmas's proposed mission the latter pointed out the necessity for a large sum to bribe American legislators.

"His excellency expressed himself with greater force than I wish to report—his abhorrence for the political situation in America, which made it necessary to offer money in order to bring a political action, like that of transferring the islands, to a successful termination, but that he had long ago discovered the necessity for making such a money sacrifice, and he was ready to grant it."

Aside from the inherent improbability of this statement, we have the denial of Christmas as to its having been made in the letter just quoted wherein he says:

"I have never impressed the former Prime Minister Hövring with the idea that bribery was the way of getting the islands sold. I never wrote anything like this in my report."

The committee does not seek to justify its conclusions upon mere general statements, but will consider the charges of the report and the answers thereto in detail.

The report contains the allegation that Christmas had enlisted the services of Abner McKinley, brother of the late President, and of his partner, Mr. W. C. Brown, "who," it said, "know most accurately all the winding paths through Congress, and are well informed as to what members of Congress must be paid, as well as to the method which must be used to accomplish it." It further alleged that Christmas had contracts with them and others which the banking house of Seligman & Co., in New York, had conditionally agreed to guarantee. It furthermore said that these gentlemen had "rendered Christmas excellent assistance."

Abner McKinley appeared before the committee and testified, under oath, as follows:

"ABNER MCKINLEY sworn and examined.

"By the CHAIRMAN:

"Q. Your place of residence is where?

"A. New York City.

"Q. And your business?

"A. Lawyer.

"Q. Are you a brother of the late President McKinley?

"A. I am.

"Q. Do you know Captain Christmas?

"A. I met him once in a casual way. I lived at the Manhattan Hotel, and I met him in a most casual way in the lobby of the hotel.

"Q. Did you ever have a contract with him of any kind?

"A. Never, of any kind or character.

"Q. Had you any connection with him in seeking to bring about the sale of the Danish West Indian Islands to the United States?

"A. None, either directly or otherwise.

"Q. Did you ever bring that matter at his instance to the attention of the President?

"A. Never. I never talked to the President on the subject.

"Q. And the only relation you ever had with this Captain Christmas is that which you have already described?

"A. I may have met him a couple of times, but I met him in the public lobby of the Manhattan Hotel, where he was stopping. I do not recall who presented him to me, and only the ordinary courtesies of the day were extended. I never talked with him on any subject in relation to this inquiry."

"Mr. W. C. Brown appeared before the committee and testified as follows:

"WILBUR C. BROWN, sworn and examined:

"By the CHAIRMAN:

"Q. What is your place of residence?

"A. New York City.

"Q. What is your business?

"A. I am in a number of businesses. I am president of the Lincoln Coal Company and connected with the White Mountain Paper Company and the International Fire Insurance Company.

"Q. Do you know Captain Christmas?

"A. I met him, I think, once at the Manhattan Hotel.

"Q. Under what circumstances?

"A. I think he introduced himself to me.

"Q. Were you living at the Manhattan Hotel?

"A. Yes, sir; I have lived there since the burning of the Windsor Hotel.

"Q. Was he stopping there at the time?

"A. Yes, sir; he was stopping there.

"Q. Was that the extent of your acquaintance with Captain Christmas?

"A. I never had any conversation with him except on one occasion, when he came and introduced himself as Captain Christmas. He stated I had doubtless heard of him through Mr. Carl Fischer Hansen.

"Q. Mr. Hansen was an acquaintance of yours?

"A. Yes, sir; I had known him a number of years.

"Q. How often did you have a conversation with Captain Christmas?

"A. Never but the one time, when he came and introduced himself to me.

"Q. What was said in that conversation?

"A. Nothing whatever. He introduced himself as Captain Christmas and made no reference whatever to his business.

"Q. Did you have any conversation with him then or at any other time about the purchase of the Danish West Indian Islands?

"A. I did not.

"Q. Did you have any business arrangements with him?

"A. None whatever.

"Q. You had no relations with him except those you have just now indicated?

"A. None of any character.

"TESTIMONY OF MR. ISAAC N. SELIGMAN.

"ISAAC N. SELIGMAN sworn and examined.

"By the CHAIRMAN:

"Q. Your place of residence is New York?

"A. Yes, sir; New York.

"Q. You are a member of what firm?

"A. I am a member of the firm of I. & W. Seligman & Co.

"Q. Their business is what?

"A. Bankers.

"Q. How long have you been a member of that firm?

"A. I have been a member of the firm since 1878, I think.

"Q. Do you know Captain Christmas?

"A. Yes; I have met him a number of times in our office.

"Q. Will you state what particular relations you had with Captain Christmas?

"A. Yes, sir; I will be glad to do so. If I recollect correctly, it was some time in October or November, 1899, that he came to our office, introduced I forget by whom, and he stated to us that he was the representative of the Danish Government unofficially, as I recollect, in the matter of the sale of the West Indian Islands to be made to the United States, and that he was substantially directed by his Government, also unofficially, to say to it that the sale could take place on a fair basis (I think he mentioned four or five million dollars; I forget the basis), and that he was desirous of obtaining the instrumentality of reputable bankers to undertake the transmission of the money on commission, etc., and asked us whether we would do it.

"We told him yes, that we would be very glad to do it. He then told us that he was to receive, as I understood it, a commission of 10 per cent as commission in connection with the matter, and that he would give a banker's commission of 2½ per cent commission for all work that we could do, and, if I recollect correctly, we should pay all commissions on the other side, exchange, transmission of money, etc. He made a fairly good impression. He then told us that Privatbanken was the bank in Denmark in touch with the Government, and that the moneys would be paid over through them to us, as I understood it.

* * * * * * *

"Without hearing anything for some time, in order to more clearly establish Mr. Christmas and his entire arrangement, we then wrote to Privatbanken, Denmark, in reference to this entire business, and the letter which we received from them was not entirely satisfactory, was no confirmation whatever from the Government that Mr. Christmas was the agent or that moneys were to be paid so thereafter; we substantially dismissed the entire business from our minds. That is substantially the entire connection we had with Mr. Christmas.

* * * * * * *

"Mr. COUSINS. He says in his report, on page 25, 'Here I have been obliged to place my own person and my personal property as security, and, besides, Seligmans have (who have absolute confidence in me) placed their highly respected name as guaranty for my administration of the 10 per cent.'

"The WITNESS. That is unqualifiedly and wholly untrue, made out of the whole cloth."

The report contained this allegation:

"I had * * * made the acquaintance of different members of Congress—for example, Senators LODGE, DEPEW, CLARK, BACON (the last two were Democrats): members of the House, ALEXANDER, GARDNER, and others. They all took a great interest in the acquirement of the islands and promised me their very best assistance. I got them to establish the price of $4,000,000, as the prime minister had desired."

Each and every one of the parties thus named appeared before the committee and gave the lie to the statement of the report, with the exception of Senator CLARK, of Montana, who, however, stated to the chairman that he had never met Christmas, and had not, therefore, as a matter of course, had any conversation with him on any subject.

Senator LODGE met Christmas two or three times, but it is unnecessary to cite his testimony, since the report speaks of him as "the most respected member of the Senate, and who, of all the political persons I have met in America, is the only one that can not be bribed."

The testimony of the other gentlemen, members of the Senate and House, mentioned in the report follows:

"STATEMENT OF HON. CHAUNCEY M. DEPEW.

"The CHAIRMAN. Senator, you were a member of the United States Senate during the last Congress?

"A. Yes, sir.

"Q. Do you know Captain Christmas?

"A. I have no recollection of ever having met him. I will state my belief is that I never did, but so many thousands and thousands of people come to see me in New York and here, I would not want to say I had not met him.

"Q. You do not ever recollect having any conversation with him about the purchase of the Danish West Indian Islands?

"A. No, sir; I never had a conversation with anybody on that subject.

"6.

"STATEMENT OF HON. A. O. BACON.

"By the CHAIRMAN:

"Q. You are a United States Senator from the State of Georgia?

"A. Yes.

"Q. And you were United States Senator during the last Congress?

"A. Yes, sir. I have been Senator since the beginning of the Fifty-fourth Congress.

"Q. Do you know Captain Christmas?

"A. I do not know how broad that question might be. I have seen him, but I do not know that I would know him by sight if I were to see him now; but I did see him, I recollect, twice in Washington.

"Q. He says that you, together with certain other Senators whom he named, took a great interest in the matter of the acquisition of the Danish West Indian Islands, and promised the very best assistance to him. Is there anything in that?

"A. Will you kindly read what he says? I did not know he mentioned my name except at one place, where he said he had formed my acquaintance.

"The CHAIRMAN. On page 21 he says: 'I had, as above mentioned, at last made the acquaintance of different members of Congress—for example, Senators LODGE, DEPEW, CLARK, BACON (the last two were Democrats); members of the House, ALEXANDER, GARDNER, and others. They all took a great interest in the acquirement of the islands and promised me their very best assistance. I got them to establish the price of $4,000,000, as the prime minister had desired.' What have you to say in regard to that?

"A. That is absolutely untrue so far as I am concerned. So far from that being the truth, I did not desire the Government to acquire the islands, and do not desire it now, and am very sorry for what appears to be the necessity for that fact. With the permission of the committee, I will tell all I know with reference to any personal communication between him and myself.

"Q. Certainly.

"A. As I said in the beginning, I only remember to have seen him twice, each time in Washington. The first time was at a private house in this city at an afternoon reception where there were a number of callers, and he was presented to me apparently in an entirely incidental way, just from the fact we happened to be standing near each other, and the person presenting him—I really do not remember who it was; it was some lady. However, I remember that he stated he was a captain in the Danish navy, and in the same connection, probably in the same sentence, said that he was here in the interest of the sale of the Danish West Indian Islands to the United States.

"I did not desire the acquisition of the islands, and consequently I made no reply to that statement at all. I did not encourage any conversation in that line, and the only thing that passed between us was in the nature of the most commonplace civilities between strangers. Not a word was said either by him or by me as to the Danish Islands, and in possibly less than a minute we were separated in a crowd, and I saw no more of him.

"The other time I saw him was equally as accidental, at a reception of Mr. McKinley, in the East Room at the White House, where the crowd was, as is usual, thronging, and in a purely accidental way I was thrown near him, or he near me, I do not know which.

"His wife was with him at the time, I remember, and I spoke to him and we had again some of the most commonplace civilities without a word said in regard to Denmark or the West Indian Islands. If he had said anything about them I should have turned the subject, because I would not have desired to be rude to him, and if I had said anything at all expressing my own wish it would have been that I hoped he would fail in his mission. I use those words "fail in his mission" because I supposed at that time he was an officer in the Danish navy and was the accredited agent of the Government.

"STATEMENT OF MR. ALEXANDER, MEMBER OF CONGRESS FROM NEW YORK.

"Mr. ALEXANDER. I never spoke to Mr. Christmas; I have never met Mr. Christmas; I never heard of Mr. Christmas until this report, published in the RECORD, was called to my attention in the newspapers of Buffalo, where I was last Friday. I never spoke to anyone in or out of Congress in regard to the Danish treaty, nor has anyone spoken to me in or out of Congress in regard to the Danish treaty, nor have I heard it discussed at any time or in any place by anyone until after the publication of this alleged report. That is all I have to say.

"STATEMENT OF HON. JOHN J. GARDNER.

"By the CHAIRMAN:

"Q. Mr. GARDNER, you are a member of Congress from New Jersey?

"A. I am.

"Q. Do you know Captain Christmas?

"A. I think I met Captain Christmas; I am not certain about it.

"Q. You read or heard read this alleged report of his to the Danish Government?

"A. I have looked over it.

"Q. You noticed what was said therein about yourself?

"A. As I remember it now, I saw he says that he made the acquaintance of Mr. GARDNER. Captain Christmas has not yet made my acquaintance in any sense there indicated. When I say I think I met him once I mean this: Somebody, whom I can not exactly recall now, came to the Labor Committee room one morning and asked to present a lady and her husband. The lady was introduced with a long name, and my recollection is that the gentleman was simply introduced as her husband. He had very gallant manners, however, and seemed like a very fine gentleman. He laid his card upon the table on going out, and it had a number of names on it, and I recall somewhere in the middle, I think, occurred the name of Christmas. Afterwards, I think, he called one morning and asked the courtesy of a card to the gallery of the House, That is the extent of my acquaintance with Captain Christmas or his with me.

"Q. You notice that in his statement he says that at a certain time a speech was prepared to be delivered by you in connection with the Danish West Indian business.

"A. I was going to come to that. I never had anybody prepare a speech on the subject for me to deliver. I never had any knowledge at any time that anybody was preparing a speech on the subject for me to deliver, and I never had any knowledge that I was expected to deliver one.

"Q. And you were not preparing a speech yourself on that subject?

"A. I was not preparing a speech on that subject.

"Q. You had no connection with Mr. Christmas?

"A. None in the world.

"Q. Mr. GARDNER, you introduced a bill relative to the purchase of the West Indian Islands?

"A. I did.

"Q. Was that at the instance of Mr. Christmas?

"A. That was not at the instance of Mr. Christmas, nor could anybody representing him have known anything about it in any way."

From the foregoing citations of the evidence taken before the committee it is manifest that the charges made in the Christmas report with respect to Senators and Members of Congress are wholly untrue.

Christmas, according to the report and as shown in the evidence, had contracts with several parties to assist him in his work.

One of these was a young lawyer in New York named Carl Fischer-Hansen, who was to act as counsel for Christmas and to receive $20,000, payable out of the latter's commissions when earned. Mr. Fischer-Hansen testifies that he never met or spoke to any member of Congress or Government official in connection with his retainer. (See p. 77, testimony.)

Another party with whom Christmas, according to the report and the evidence, had a contract for legal services was one Richard P. Evans, of Washington, who was to have $50,000 for his services, payable out of Christmas's commissions when earned. (See p. 87, testimony.)

Mr. Evans testified that he "did not come in contact personally with any members of Congress relative to this matter." He went to the committee room of the Committee on Foreign Affairs to inquire about the Gardner bill. This was the extent of his services.

Still another party with whom the report and evidence shows Christmas had a contract for services was a Mr. C. W. Knox, of Glenelg, Md., who was to receive $15,000 out of Christmas's commissions. (See p. 101.)

Knox testifies that he "never said anything on the subject to any member of the House of Representatives." "That he talked to a number of people, but does not remember any particular conversations; all of them were simply to ascertain the views of the persons with whom they were conducted, and nothing else.

This is the party who the report says introduced Christmas to W. J. Bryan. Knox testifies that he never saw W. J. Bryan.

There is no evidence that any of Christmas's assistants bribed or made any attempt to bribe any member of the United States Congress, or to use corrupt methods to bring about the purchase by the United States of the Danish West Indian Islands; but there is abundant evidence to the contrary.

Upon the whole, that there may be no doubt, misapprehension, or misunderstanding about the matter, your committee, repeating in substance what they have already said unequivocally and emphatically, report that in connection with the negotiations for the purchase of the Danish West Indian Islands no member of the Congress of the United States was bribed or attempted to be bribed, nor did any member of Congress of the United States receive payment or promise of any valuable consideration of any kind or character to vote for or to assist in procuring the proposal, adoption, or ratification of the treaty of sale of the Danish West Indian Islands to the United States.

Attached hereto as an appendix is a full account of all hearings before the committee.

Mr. DINSMORE. Mr. Speaker, I must confess that I was very much surprised that this discussion was injected for the consideration of the House in the last hour of the session, because a report had been agreed upon unanimously by the committee that had this matter under consideration, and their report fully and emphatically acquits every member of this Congress and every official of the Government from any charge of bribery or improper conduct whatever.

I do not think it is worthy of discussion by me at all except from one consideration. My honorable friend the gentleman from Iowa [Mr. COUSINS], who thought proper to open the discussion with one of his brilliant speeches, has, by the manner of the discussion and by the language used in his remarks, seen proper to reflect upon the gentleman from Tennessee [Mr. RICHARDSON] and the gentleman from Alabama [Mr. UNDERWOOD], who participated with him in bringing the matter before the House, for having done so.

You have heard, Mr. Speaker, the source from which this report came. You have heard the affidavit of the man who brought it before Congress, a man who was vouched for by the highest authorities in the Republican party in the United States, a man who was commended to the President by honorable and distinguished Senators, a man who was commended to the organization of the Republican party for the distinguished services which he rendered, and who testified under oath that he had made a correct translation of an official report which was made by the man Christmas to the Danish Government, in which the character of this House was involved and members of the House were reflected upon.

Their integrity was not only questioned, but impugned, and when gentlemen arise and bring it to the consideration of the House and to have an investigation of the subject made, they are to be criticised in a partisan spirit by gentlemen of the opposition for doing so.

I am willing, for one, Mr. Speaker, to rest under the insinuation. I am willing to abide the criticisms of the honorable gentlemen who see proper to indulge in them against us, for we on this side of the House stand ready upon all occasions to vindicate the honor and the dignity of the House against all persons. [Applause on the Democratic side.]

The report was unanimous; it was agreed upon. It was presented to the House. It goes before the country with every syllable of the testimony taken before that committee, but the honorable gentleman is not content to rest upon this report. The honorable gentleman is not willing that the report shall go before the country, that the people shall make up their own minds from that. The gentleman does not seem willing to accept the supplemental report of the committee appointed by the Speaker of the House to make this investigation and that the public shall decide upon it, but he must question the motives of the gentleman on the Democratic side for bringing it before the House at all.

It rests with him to question the motives of members in bringing this matter here. It was for the purpose of maintaining the honor and the dignity of the Congress of the United States, and I am glad to know, and I believed from the beginning, that so

member of this House nor of the other House would be shown to have been guilty of any misconduct in the premises.

It was our duty out of self-respect to investigate the matter and show to the country whether the honor of any of our members might be questioned. A report of his relations both with the Danish Government and with Secretary Hay was made to the Danish Government by Christmas, a man who went from Washington with a letter from Secretary Hay to our legation in London, in which he stated distinctly that members of Congress must be controlled, a man who had contracts with different people in which large amounts of money were to be paid for services rendered, and as proven, and the gentleman from Iowa evidently resents that we should seek to inquire into the facts.

WITHDRAWAL OF PAPERS.

By unanimous consent, leave was granted to withdraw from the files of the House papers in the following cases:

To Mr. RUSSELL of Connecticut, papers in reference to the preservation of Fort Griswold, Conn., Fifty-sixth Congress, no adverse report having been made thereon.

To Mr. GRIFFITH, papers in the case of Ortho Adams (H. R. 13133), Fifty-sixth Congress, no adverse report having been made thereon.

METRIC SYSTEM.

Mr. SOUTHARD. I ask unanimous consent that House bill 123 be made the special order in the House for December 3 next, the consideration of the bill not to interfere with revenue bills——

Mr. RICHARDSON of Tennessee. What is this bill?

Mr. SOUTHARD. It is the bill providing for the adoption of the metric system.

Mr. RICHARDSON of Tennessee. I object.

ENROLLED BILLS SIGNED.

Mr. WACHTER, from the Committee on Enrolled Bills, reported that they had examined and found truly enrolled bill of the following title; when the Speaker signed the same:

H. R. 15108. An act making appropriations to supply deficiencies in the appropriations for the fiscal year ending June 30, 1902, and for prior years, and for other purposes;

H. R. 14244. An act authorizing the President to reserve public lands and buildings in the island of Porto Rico for public uses, and granting other public lands and buildings to the government of Porto Rico, and for other purposes;

H. R. 14046. An act making appropriations for the naval service for the fiscal year ending June 30, 1903, and for other purposes;

H. R. 4346. An act to amend section 2743 of the Revised Statutes of the United States concerning the examination of drugs;

H. R. 12702. An act to provide for the erection of a quartermaster's warehouse at Omaha, Nebr.;

H. R. 15258. An act authorizing Anton Brucken to construct locks and dams in Pond River, in the State of Kentucky, and to give the consent of Congress thereto;

H. R. 15257. An act to cede jurisdiction over place on which the National Home for Disabled Volunteer Soldiers is located to the State of Ohio; and

H. J. Res. 210. Joint resolution reappropriating and making available an unexpended balance of appropriations for work on the Capitol building.

The SPEAKER announced his signature to enrolled bills of the following titles:

S. 2162. An act to increase the efficiency and change the name of the United States Marine-Hospital Service;

S. 6148. An act providing for the resurvey of certain townships in San Diego County, Cal.;

S. 5956. An act to provide for the allotment of the lands of the Cherokee Nation, and for the disposition of town sites therein, and for other purposes;

S. 5587. An act for the relief of Ann Eliza Isabella von Hemert;

S. 6016. An act for the suppression of train robbery in the Territories of the United States and elsewhere, and for other purposes;

S. 4546. An act to provide certain souvenir medals for the benefit of the Washington Monument Association of Alexandria, Va.;

S. R. 8. Joint resolution construing the act approved June 27, 1890, entitled "An act granting pensions to soldiers and sailors who are incapacitated for the performance of manual labor, and providing for pensions to widows, minor children, and dependent parents;"

S. 113. An act authorizing the Secretary of War to furnish condemned cannon for a monument to the soldiers of Worcester County, Mass., who served in the war for the Union, to be surmounted by an equestrian statue of the late Maj. Gen. Charles Devens, United States Volunteers;

S. 6196. An act to regulate the sale of viruses, serums, toxins, and analogous products in the District of Columbia, to regulate interstate traffic in said articles, and for other purposes;

S. R. 123. Joint resolution for the relief of Naval Cadet William Victor Tomb, United States Navy;

S. R. 130. Joint resolution authorizing certain temporary repairs to the Aqueduct Bridge, District of Columbia;

S. 4815. An act to grant certain land to the South Platte Canal Reservoir Company;

S. 4139. An act to diminish the number of appraisers at the ports of Philadelphia and Boston;

S. 2295. An act temporarily to provide for the administration of the affairs of the civil government in the Philippine Islands, and for other purposes;

S. R. 23. Joint resolution authorizing the Secretary of War to furnish condemned cannon for a statue of the late Maj. Gen. Alexander Macomb, United States Army;

S. 6232. An act for the relief of I. I. Barber; and

S. R. 120. Joint resolution providing for the removal of shoal in North River of New York Harbor.

W. L. WALTER.

Mr. JOY. I desire to call up a resolution from the Committee on Accounts.

Mr. RICHARDSON of Tennessee. Mr. Speaker, I raise a point of order. I have not yielded the floor. I reserved my time.

The SPEAKER. There is nothing left but a few formal matters and then the adjournment.

Mr. RICHARDSON of Tennessee. I did not want anyone else to take the floor from me.

The SPEAKER. Nobody is going to have the floor.

Mr. RICHARDSON of Tennessee. I do not want any further debate.

The resolution called up by Mr. JOY was read, as follows:

Resolved, That the Clerk of the House is hereby authorized to pay, out of the contingent fund of the House, to W. L. Walter the sum of $356.76, for services rendered as clerk to the Committee on Elections No. 3, at the rate of $80 per month from December 10, 1901, to April 15, 1902, inclusive.

The resolution was adopted.

MESSAGE FROM THE PRESIDENT OF THE UNITED STATES.

A message from the President of the United States was communicated to the House of Representatives by Mr. B. F. BARNES, one of his secretaries, who informed the House that the President had approved and signed bills and joint resolutions of the following titles:

On June 30, 1902:

S. 4923. An act to ratify and confirm a supplemental agreement with the Creek tribe of Indians, and for other purposes;

S. 4776. An act to authorize the construction of a bridge across the Emory River, in the State of Tennessee, by the Tennessee Central Railway or its successors;

S. 4611. An act to authorize the West Elizabeth and Dravosburg Bridge Company to construct and maintain a bridge across the Monongahela River, in the State of Pennsylvania;

S. 5434. An act to authorize the city of Little Falls, Minn., to construct a wagon and foot bridge across the Mississippi River within the limits of said city;

S. 493. An act to amend an act entitled "An act to establish a code of law for the District of Columbia;

S. 1949. An act to authorize the Secretary of the Navy to appoint George H. Paul a warrant machinist in the Navy;

S. 4762. An act to prevent any consular officer of the United States from accepting any appointment from any foreign state as administrator, guardian, or to any other office of trust, without first executing a bond, with security, to be approved by the Secretary of State;

S. 4792. An act relative to the control of dogs in the District of Columbia;

S. 6091. An act extending the time for making final proof in desert-land entries in Yakima County, State of Washington;

S. 3320. An act granting an increase of pension to Adelaide G. Hatch;

S. 5856. An act granting an increase of pension to Elizabeth A. Turner;

S. 1225. An act granting an increase of pension to Clara W. McNair;

S. 5506. An act granting an increase of pension to Clayton P. Van Houten;

S. R. 118. Joint resolution authorizing the Secretary of War to receive for instruction at the Military Academy at West Point Arturo R. Calvo, of Costa Rica;

S. 5383. An act providing that the circuit court of appeals of the fifth judicial circuit of the United States shall hold at least one term of said court annually in the city of Atlanta, in the State of Georgia, on the first Monday in October in each year;

S. 3360. An act for the promotion of First Lieut. Joseph M. Simms, Revenue-Cutter Service;

S. 4450. An act confirming in the State of South Dakota title to a section of land heretofore granted to said State;

S. 2162. An act to increase the efficiency and change the name of the United States Marine-Hospital Service;

S. 6148. An act providing for the resurvey of certain townships in San Diego County, Cal.

On July 1, 1902:

S. R. 113. Joint resolution authorizing the Secretary of War to furnish condemned cannon for a monument to the soldiers of Worcester County, Mass., who served in the war for the Union, to be surmounted by an equestrian statue of the late Maj. Gen. Charles Devens, United States Volunteers;

S. R. 120. Joint resolution providing for the removal of shoal in North River of New York Harbor;

S. R. 123. Joint resolution for the relief of Naval Cadet William Victor Tomb, United States Navy;

S. R. 130. Joint resolution authorizing certain temporary repairs to the Aqueduct Bridge, District of Columbia;

S. 3896. An act to amend sections 3362 and 3394 of Revised Statutes of the United States relating to tobacco;

S. 5956. An act to provide for the allotment of the lands of the Cherokee Nation, for the disposition of town sites therein, and for other purposes;

S. 6196. An act to regulate the sale of viruses, serums, toxins, and analogous products in the District of Columbia, to regulate interstate traffic in said articles, and for other purposes;

S. 6232. An act for the relief of I. I. Barber;

S. 2295. An act temporarily to provide for the administration of the affairs of civil government in the Philippine Islands, and for other purposes;

S. 4139. An act to diminish the number of appraisers at the port of Philadelphia and Boston, and for other purposes;

S. 6016. An act for the suppression of train robbery in the Territories of the United States and elsewhere, and for other purposes;

S. 4815. An act to grant certain land to the South Platte Canal and Reservoir Company;

S. 4546. An act to provide certain souvenir medals for the benefit of the Washington Monument Association, of Alexandria, Va;

S. 5587. An act for the relief of Anna Eliza Isabella Von Hemert;

S. R. 23. Joint resolution authorizing the Secretary of War to furnish condemned cannon for a statue of the late Maj. Gen. Alexander Macomb, United States Army;

S. R. 8. Joint resolution construing the act approved June 27, 1890, entitled "An act granting pensions to soldiers and sailors who are incapacitated for the performance of manual labor, and providing for pensions to widows, minor children, and dependent parents, and for others;"

H. R. 303. An act for the relief of Sol Bear & Co.;

H. R. 8209. An act for the relief of P. A. McClain;

H. R. 10775. An act for the relief of Charles E. Sapp;

H. R. 12702. An act to provide for the erection of a quartermaster's warehouse at Omaha, Nebr.;

H. R. 15257. An act to cede jurisdiction over a place on which the National Home for Disabled Volunteer Soldiers is located to the State of Ohio;

H. R. 15258. An act authorizing Anton Brucken to construct locks and dams in Pond River, in the State of Kentucky, and to give the consent of Congress thereto;

H. R. 14046. An act making appropriations for the naval service for the fiscal year ending June 30, 1903, and for other purposes;

H. R. 12805. An act requiring the Anacostia and Potomac River Railroad Company to extend its Eleventh street line, and for other purposes;

H. R. 11578. An act for the relief of settlers on lands granted in aid of the construction of wagon roads;

H. R. 9501. An act to provide for the sale of the unsold portion of the Umatilla Indian Reservation;

H. R. 14244. An act authorizing the President to reserve public lands and buildings in the island of Porto Rico for public uses, and granting other public lands and buildings to the government of Porto Rico, and for other purposes;

H. J. Res. 210. Joint resolution reappropriating and making available an unexpended balance of appropriations for work on the Capitol building;

H. R. 4346. An act to amend section 2743 of the Revised Statutes of the United States concerning the examination of drugs; and

H. R. 11273. An act to pay F. Y. Ramsay, heir at law and distributee of the late Joseph Ramsay, $430.42, for balance due the said Joseph Ramsay as collector of customs and superintendent of lights in the district of Plymouth, N. C.

NOTIFICATION OF ADJOURNMENT OF CONGRESS.

Mr. PAYNE. Mr. Speaker, the committee appointed by the House to join the committee appointed by the Senate to wait upon the President of the United States and inform him that the two Houses of Congress had concluded their business and were ready to adjourn, and to ask him whether he had any further communication to make, have performed that duty, and the President has informed them that he had no further communication to make.

The SPEAKER (at 5.30 p. m.). Gentlemen of the House of Representatives, many of us met at the beginning of this session as friends; many of us at the commencement of this session met as strangers. I believe that we shall all part, when the moment for adjournment comes, as friends. [Applause.] The prayer which I made to this House at the commencement of this Congress that the House would help to sustain the Chair in enforcing the rules has never been forgotten. You have been each and all of you sustaining forces in aiding me in the discharge of my duty. [Applause.] For that, my friends, I return my grateful acknowledgments.

I am proud to say that no House of Representatives since the Constitution was adopted has in the same length of time done the amount of work that this House of Representatives has done. [Applause.] And you have done your work like men—earnest and honest as you have all been in carrying your convictions, so far as possible, into legislation. There has never been an hour when the acrimony of debate left scars in any breast in this House. That fact has much gratified your presiding officer. You have all been faithful and untiring; and in the twenty years of my service I have never seen so many friends in the closing days of a session as I now witness.

Now, as we are about to part, I wish you all a safe return to your homes, and that you may all come back to the next session rested and refreshed; and I ask no more than that you may be as earnest then as you have been in the session just closed. [Applause.] And now, gentlemen, in pursuance of the concurrent resolution of the two Houses, I declare this session of the Fifty-seventh Congress adjourned sine die. [Loud applause.]

EXECUTIVE COMMUNICATIONS.

Under clause 2 of Rule XXIV, the following executive communications were taken from the Speaker's table and referred as follows:

A letter from the Acting Secretary of War, transmitting a report of the Adjutant-General showing promotions in the Army of officers who within one year thereafter were retired at a higher rank than that held previous to such promotion—to the Committee on Military Affairs, and ordered to be printed.

A letter from the Acting Secretary of War, transmitting, in response to a resolution of the House, a copy of a letter from Brig. Gen. Leonard Wood relating to payments to F. B. Thurber out of Cuban funds—to the Committee on Military Affairs, and ordered to be printed.

A letter from the Doorkeeper of the House of Representatives, transmitting a statement of the sale of waste paper—to the Committee on Accounts, and ordered to be printed.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII, bills and resolutions of the following titles were severally reported from committees, delivered to the Clerk, and referred to the several Calendars therein named, as follows:

Mr. MOODY of Oregon, from the Committee on the Public Lands, to which was referred the bill of the Senate (S. 597) granting to the State of North Dakota 30,000 acres of land to aid in the maintenance of a school of forestry, reported the same without amendment, accompanied by a report (No. 2747); which said bill and report were referred to the Committee of the Whole House on the state of the Union.

Mr. PAYNE, from the Committee on Ways and Means, to which was referred the bill of the House (H. R. 15155) to refund the amount of duties paid on merchandise brought into the United States from Porto Rico between April 11, 1899, and May 1, 1900, and also on merchandise brought into the United States from the Philippine Islands between April 11, 1899, and March 8, 1902, and for other purposes, reported the same with amendment, accompanied by a report (No. 2748); which said bill and report were referred to the Committee of the Whole House on the state of the Union.

Mr. DALZELL, from the special committee to investigate facts connected with the purchase of the Danish West India Islands, submitted a report (No. 2749); which said report was referred to the House Calendar.

Mr. McCLEARY, from the Committee on the Library, to which was referred the bill of the House (H. R. 3075) in regard to a monumental column to commemorate the battle of Princeton, and appropriating $30,000 therefor, reported the same without

amendment, accompanied by a report (No. 2750); which said bill and report were referred to the Committee of the Whole House on the state of the Union.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials of the following titles were introduced and severally referred, as follows:

By Mr. HENRY C. SMITH: A bill (H. R. 15349) to increase the efficiency of the United States Marine-Hospital Service—to the Committee on Interstate and Foreign Commerce.

By Mr. DRISCOLL: A bill (H. R. 15350) for the erection of a monument to the memory of Commodore John Barry—to the Committee on the Library.

By Mr. SCHIRM: A bill (H. R. 15351) to establish the Department of Labor—to the Committee on Labor.

By Mr. MUDD: A bill (H. R. 15352) to provide for the purchase of a site and the construction and equipment of a building for a naval hospital at Solomons Island, Calvert County, Md.—to the Committee on Naval Affairs.

Also, a bill (H. R. 15353) authorizing the Secretary of the Navy, in his discretion, to contract for the construction of a dry dock at Drum Point Harbor, at the mouth of the Patuxent River, Chesapeake Bay, Maryland—to the Committee on Naval Affairs.

Also, a bill (H. R. 15354) authorizing the Secretary of the Navy, in his discretion, to contract for the construction of a dry dock at or near St. Marys City, on St. Marys River, between said St. Marys City and the mouth of said river, upon the Potomac River, Maryland—to the Committee on Naval Affairs.

By Mr. SAMUEL W. SMITH (by request): A bill (H. R. 15355) to reorganize and improve the present form of government for the District of Columbia—to the Committee on the District of Columbia.

By Mr. SHAFROTH: A joint resolution of the legislature of Colorado, relating to the national currency—to the Committee on Banking and Currency.

Also, a joint resolution of the legislature of Colorado, relating to the Philippines—to the Committee on Insular Affairs.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills and resolutions of the following titles were introduced and severally referred as follows:

By Mr. BATES: A bill (H. R. 15356) to remove the charge of desertion from the military record of Samuel C. Davis—to the Committee on Military Affairs.

By Mr. DOVENER: A bill (H. R. 15357) granting an increase of pension to George W. Fitzgerald—to the Committee on Invalid Pensions.

By Mr. GRAHAM: A bill (H. R. 15358) granting a pension to John Snodgrass—to the Committee on Invalid Pensions.

By Mr. MUDD: A bill (H. R. 15359) for the relief of the heirs of Nicholas Stonestreet, deceased—to the Committee on War Claims.

By Mr. PEARRE: A bill (H. R. 15360) for the relief and compensation of William Forsythe—to the Committee on Claims.

By Mr. TOMPKINS of New York: A bill (H. R. 15361) for the relief of Nancy Rose—to the Committee on Claims.

Also, a bill (H. R. 15362) granting a pension to Grace G. Harrington—to the Committee on Pensions.

By Mr. WILLIAMS of Mississippi: A bill (H. R. 15363) for the relief of Elias Nichols—to the Committee on War Claims.

PETITIONS, ETC.

Under clause 1 of Rule XXII, the following petitions and papers were laid on the Clerk's desk and referred as follows:

By Mr. ALEXANDER: Resolutions of Broadway Business Men's Association, North Jefferson Business Men's Association, and Cold Springs Business Men's Association, all of Buffalo, N. Y., favoring a bill to authorize the Mather Power Company to construct an experimental span in Niagara River at Buffalo, N. Y.—to the Committee on Interstate and Foreign Commerce.

By Mr. ALLEN of Kentucky: Petitions of V. P. Stateler, A. T. Brown, and others in favor of House bills 178 and 179, for the repeal of the tax on distilled spirits—to the Committee on Ways and Means.

By Mr. BINGHAM: Petition of John J. Keenan and other retail druggists of Evansville, Ind., urging the reduction of the tax on alcohol—to the Committee on Ways and Means.

Also, petition of Andrew Carnegie, Charles F. Adams, Carl Schurz, Edwin Burritt Smith, and Herbert Welsh, urging the appointment of a special committee to investigate the condition of affairs in the Philippine Archipelago—to the Committee on Insular Affairs.

By Mr. BOWERSOCK: Papers relating to Senate bill 688, for the relief of David H. Lewis—to the Committee on Claims.

By Mr. CRUMPACKER: Petitions of citizens of Hammond, Crown Point, Lafayette, and Idaville, Ind., favoring House bill 178, for the reduction of the tax on alcohol—to the Committee on Ways and Means.

By Mr. DOVENER: Papers to accompany House bill granting increase of pension to George W. Fitzgerald—to the Committee on Invalid Pensions.

By Mr. GRAHAM: Affidavits of Dr. R. L. McGrew and Dr. Theodore Diller to accompany House bill granting a pension to John M. Snodgrass—to the Committee on Invalid Pensions.

By Mr. HALL: Petition of Charles A. Schrum and four other druggists of Dubois, Pa., favoring the enactment of House bill 178, reducing the tax on alcohol—to the Committee on Ways and Means.

By Mr. KAHN: Petition of retail druggists of San Francisco, Cal., in favor of House bill 178, for the reduction of the tax on alcohol—to the Committee on Ways and Means.

By Mr. PATTERSON of Pennsylvania: Paper to accompany House bill 13443, granting a pension to Sarah Williams—to the Committee on Invalid Pensions.

By Mr. RUPPERT: Resolutions of Woman's Republican Club of New York City, in favor of the proposed increase of pay of letter carriers—to the Committee on the Post-Office and Post-Roads.

By Mr. SIBLEY: Petitions of druggists of Bradford and Oil City, Pa., in favor of House bill 178, for the reduction of the tax on alcohol—to the Committee on Ways and Means.

By Mr. SULLOWAY: Petition of druggists of Manchester, N. H., for reduction of the tax on alcohol—to the Committee on Ways and Means.

APPENDIX.

APPENDIX

TO THE

CONGRESSIONAL RECORD.

The Isthmian Canal.

SPEECH

OF

HON. JAMES R. MANN,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 7, 1902.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 8110) to provide for the construction of a canal connecting the waters of the Atlantic and Pacific oceans—

Mr. MANN said:

Mr. CHAIRMAN: When Columbus set sail from Palos on August 3, 1492, it was in search of a western route to the Far East. He discovered instead a new continent, which was also a barrier lying across the water route which he had vainly hoped would lead him to the dazzling riches of the Orient. He died believing that he had discovered the outposts of the land which he had sought.

But in 1513 Balboa, with wondering eyes, gazed upon the Pacific Ocean, or South Sea, as he called it, and it then became known that a great ocean lay upon each side of the narrow isthmus and that the straight western water route from Europe to the Indies had been closed by the hand of God and the surface of nature.

No natural channel being discovered between the two oceans, the enterprise of man began early to contemplate the construction of an artificial connection by water as well as over land.

In 1534 Charles V of Spain directed that the Isthmus be examined by experienced men to ascertain the most practicable route for water communication between the two oceans, but his son Philip II, who succeeded him, in the fervor of his religious beliefs, thought that what God had joined together no man should put asunder, and that it would be wicked to sunder the two continents of the Western Hemisphere by a water route connecting the two great oceans.

The policy of Philip II continued to be the policy of the Spanish Government until shortly before Spain was deprived by revolution of her possessions in Central America, and no great progress, either in the way of obtaining technical information or otherwise concerning maritime communication between the two oceans, was made during the more than three hundred years of Spanish occupation.

In 1825 the then Republic of Central America asked the cooperation of the United States and the American people in the construction of a Nicaraguan Canal, and in 1826 entered into a contract with certain American citizens for that purpose. After this effort and still another one in 1830 had ended in failure, the Republic of Central America proposed to grant to our own Government the right to construct a canal. In his annual message to Congress in 1831 President Jackson, referring to treaty with the Republic of Central America, said that this treaty—

promises a great benefit to commerce between the two countries—a commerce of the greatest importance if the magnificent project of a ship canal through the dominions of that State from the Atlantic to the Pacific Ocean, now in serious contemplation, shall be executed.

But before the close of Jackson's second term he reported to the Senate that there was no probability of an early execution of any of the projects for a ship canal. President Van Buren, however, who succeeded Jackson, sent Mr. John L. Stephens to examine the Isthmus for a canal route and he reported the Nicaragua route as the most desirable, estimating the cost at $25,000,000.

In 1838 the Republic of New Granada, owning the Panama route, granted a concession to a French company which, in connection with the French Government, made an examination of the route, and a report was made by Napoleon Garella that the cost of a canal at that point would be about $25,000,000 if constructed with a tunnel 3 miles long, or about $28,000,000 if constructed with an open cut. The summit of water level of this canal was to be over 160 feet above sea level.

Our war with Mexico, as well as the territory we gained thereby, greatly increased the interest of our Government in the isthmian connection between the two oceans, and in December, 1846, a treaty was negotiated between this country and New Granada securing to us certain rights concerning transit across the Isthmus of Panama, and imposing upon us certain obligations. That treaty still remains in force, and it is under that treaty that our Government has had a special interest in all propositions relating to the construction of a Panama Canal.

In 1849 Mr. Elijah Hise, then in charge of affairs for the United States in Nicaragua, negotiated a treaty with that Republic conferring upon the United States or its citizens the exclusive right to construct a canal through Nicaragua. But President Taylor, who was elected on a ticket opposing the natural results of the Mexican war and who was not in sympathy with the Administration which had appointed Mr. Hise, recalled Mr. Hise, disapproved the treaty which he had negotiated, and, instead, directed and approved the negotiation of the Clayton-Bulwer treaty, which has proven such an obstacle and source of obstruction ever since. President Taylor did not live long enough to do much in his high office, but he built up a barrier in front of an isthmian canal fully as hard to overcome as the hills themselves. If it had not been for the narrow-minded opposition of the Whig party to the natural and desirable results of the Mexican war, it is probable that the canal would have been built many years ago.

In 1850 The American, Atlantic and Pacific Ship Canal Company, having obtained a proper concession from Nicaragua, appointed Col. O. W. Childs to make a complete survey and report upon the feasibility and cost of a ship canal through Nicaraguan territory. In 1852 Colonel Childs made his report in an elaborate form and reported in favor of the practicability of the canal to be built at an estimated cost of $31,538,319.55. This canal was to have 12 locks on the eastern side and 13 locks on the western side, each to be 60 by 250 feet, with a depth of 17 feet of water on the miter sills. The project of Colonel Childs was submitted by President Fillmore to United States engineers, who reported favorably upon it, with some modifications, and it was also submitted by the English Government to English engineers, who also reported favorably, with some modifications. No work was ever done under this project. Surveys, examinations, and reports were made from time to time, both as to the canal in the Nicaraguan territory and in the Darien territory, including the Panama route.

INTEROCEANIC CANAL COMMISSION.

In 1872 General Grant appointed an Interoceanic Canal Commission, and in the same year the Navy Department commenced a more complete examination of the Nicaraguan route. The report of the latter is known as the report of Commander E. P. Lull, who estimated the cost of the Nicaragua Canal at $65,722,137, including 25 per cent for contingencies. The depth of the canal was to be 26 feet and the locks were to be 75 by 400 feet.

In 1874 Major McFarland was detailed by the War Department to make an examination and report, and he made a rough estimate of a 26-foot canal at Nicaragua at $140,000,000.

In 1875 Commander Lull made an examination and report upon a Panama Canal. His estimate of a 26-foot canal there, with locks 65 by 450 and a summit level of 124 feet above sea level, was $94,511,360. These reports were all laid before the Interoceanic Canal Commission, as well as reports of other exploring and examining expeditions which made surveys and estimates of the San Blas route, the Caledonia route, and other routes.

The Interoceanic Canal Commission, which had been appointed by President Grant, consisting of Gen. A. A. Humphreys, Chief of Engineers of the Army; C. P. Patterson, Superintendent of the Coast Survey, and Commodore Daniel Ammen, Chief of the Bureau

of Navigation of the Navy, after a careful examination of the surveys and information relating to all of the different routes, made a unanimous report in 1876 as follows:

That the route known as the Nicaragua route, beginning on the Atlantic side at or near Greytown, running by canal to the San Juan River; thence * * * to * * * Lake Nicaragua; from thence across the lake and through the valleys of the Rio del Medio and Rio Grande to * * * Brito on the Pacific coast, possesses, both for the construction and maintenance of a canal, greater advantages and offers fewer difficulties from engineering, commercial, and economic points of view than any of the other routes shown to be practicable by surveys sufficient in detail to enable a judgment to be formed of their respective merits.

OLD PANAMA CANAL.

In 1876 and again in 1878 Lieutenant Wyse, as the agent of a French provisional company, obtained a concession from the Republic of Colombia, the successor of the Republic of New Granada, for a Panama canal, and this concession, as subsequently modified from time to time by agreement between the parties, became the basis of the Panama Canal Company. In accordance with the provisions of the Wyse concession, an international scientific congress was assembled at Paris in 1879 to decide upon the best line for and kind of a maritime canal across the American Isthmus. This international congress was composed of 135 delegates from various nations, including the United States, though a majority of the congress were Frenchmen.

In this International Scientific Congress the principal consideration of the subject was had in the committee on technology, which reported that a canal with locks could be constructed for $114,000,000; a sea-level canal at the same point for $214,000,000; that the Nicaragua Canal would cost $154,000,000; that the San Blas sea-level canal would cost $254,000,000. The committee reported that the expense of repairs and working of the canal capitalized at 5 per cent would be about the same at each place and would amount to $26,000,000, making, as the committee reported, a total estimated cost of $180,000,000 for the Nicaragua Canal, $140,000,000 for the Panama Canal, with locks, $240,000,000 for sea-level canal at Panama, and $280,000,000 for sea-level canal at San Blas, through a 9-mile tunnel. I shall refer more particularly to the report of that congress a little later.

TEHUANTEPEC SHIP RAILWAY.

In 1849 Peter A. Hargous, of New York City, had presented a petition to Congress setting forth the advantages of communication between the Atlantic and Pacific across the Isthmus at Tehuantepec, and that route was called to the attention of the American Republic from time to time, though not with great force, until Col. James B. Eads proposed the construction of an interoceanic ship railway at Tehuantepec. Various hearings upon this proposition were held before committees of the House and Senate in 1880 and subsequent years, and in 1881 the Committee of the House on Interoceanic Ship Canals reported in favor of the Eads ship railway. A favorable report upon this same proposition was made by Senator Vest, from the Committee on Commerce, in the Senate, in 1882.

MARITIME CANAL COMPANY.

In 1884, under the Administration of President Arthur, the Frelinghuysen-Zavala treaty was negotiated authorizing the construction by the United States of the Nicaragua Canal, but President Cleveland withdrew the treaty from the Senate when he entered upon his term of office. Following the negotiation of this treaty a new survey was ordered by our Government, under command of A. G. Menocal, of the Navy, who had been connected with the previous surveys by Commander Lull. Menocal reported, in 1885, a new project for the Nicaragua Canal, with a proposed depth of 28 feet and locks 65 by 650 feet, at a total estimated cost of $64,036,197, which included 25 per cent for contingencies. Following the withdrawal of the Frelinghuysen-Zavala treaty Mr. Menocal, in 1887, secured a concession for a canal by the Nicaragua route, and this concession was turned over to the Maritime Canal Company, which was granted a charter by Congress in 1889.

The project of the Maritime Canal Company contemplated the construction of a dam at Ochoa, on the San Juan River just below its junction with the torrential stream the San Carlos River, about 69 miles from Lake Nicaragua, on a clay foundation, about a quarter of a mile in length, having a thickness at the bottom of about 500 feet and a height from base to top of 85 feet, designed to hold the water above the dam in the San Juan River at above the level of the water in Lake Nicaragua, between 100 and 110 feet above sea level. To carry out the idea of the backing up of the San Juan River, and in extension of the lake thus formed, it was proposed to construct on the north side of the river 67 other dams, having a total crest length of about 6 miles, and on the south side of the river 21 other dams, having a total crest length of about 5,500 feet. Some of these dams were to be high and wide, one of them being 70 feet in height and 1,050 feet in length.

RECENT COMMISSIONS.

In 1895 a new Nicaragua Canal Board was appointed, consisting of Col. William Ludlow, of the Army; M. T. Endicott, of the Navy, and Alfred Noble, civil engineer, of Chicago, which board made a thorough examination of the project of the Maritime Canal Company, favored various changes in the project, reported favorably upon the project with such proposed changes, and estimated the cost at $133,472,893, which included 20 per cent for contingencies.

In 1897 a new Nicaragua Canal Commission was appointed to continue the work of the board of 1895, and upon this Commission were placed Admiral John G. Walker, of the Navy; Col. Peter C. Hains, of the Army, and Prof. Lewis M. Haupt, civil engineer.

It must be remembered that during the time from 1890 to 1899 the Maritime Canal Company was constantly seeking additional legislation in Congress, and for several years was asking from Congress financial aid in its enterprise. Meanwhile the time for the construction of the canal under its concession was rapidly running out, and although that company expended several millions of dollars and commenced the construction of the work upon the ground, it was never able to obtain the necessary financial support for the proper undertaking of such a great work. It came before the Committee on Interstate and Foreign Commerce of the House, as well as going before the proper committee in the Senate, urging in every way that some action be taken by Congress through which the canal might be restored to financial life and the company obtain something for its expenditures and its concessions.

When it became evident that the Maritime Company could not finish the canal and that the work which it had done was of little practical utility, our committee did not feel inclined to favor any legislation which would further commit this Government to the proposition of raising the money to be expended by the canal company or which would operate so as to permit that company to obtain an extension of its concession. Meanwhile other individuals and companies were seeking, and some claimed that they had obtained, concessions from the Republic of Nicaragua exclusive in their character.

HISTORY OF THE PRESENT BILL.

It was at this juncture that the distinguished chairman of our committee, the gentleman from Iowa [Mr. HEPBURN], presented the proposition, in the form of a bill introduced by him, that the canal should be constructed, owned, and controlled by the United States Government. Before this could be done various obstacles must be surmounted. There was the Clayton-Bulwer treaty; there was the Panama Canal concession in the Republic of Colombia, the Maritime Canal Company's concession, and the Grace-Eyre-Cragin concession in Nicaragua, as well as various other concessions whose reputed owners made claims at both places.

In May, 1899, the Walker Nicaragua Canal Commission made its report, favoring the construction of the Nicaragua Canal 30 feet in depth, with a bottom width of 150 feet, with locks 80 by 640 feet in the clear, and at an estimated cost of $118,113,790, including 20 per cent for contingencies. This estimated cost included $27,257,037 for the four items of engineering, police, sanitation, and contingencies, leaving the actual estimated cost of the canal at $90,856,753. The present Commission estimates the four items of engineering, police, sanitation, and contingencies at $31,644,010, and the actual cost of the canal at $158,220,052, showing an increase in the estimate from less than $91,000,000 to over $158,000,000 for the items enumerated and estimated for.

When the conclusions and figures of the Nicaragua Canal Commission of 1897 were made known to your committee on Interstate and Foreign Commerce they reported favorably to this House the Hepburn bill for a canal to be built by the United States. It was natural that all the friends of all the concessions which had been granted and were outstanding, both at Panama and at Nicaraugа, should arouse as much opposition as possible to this bill, which proposed a canal to be constructed by the Government and without any profit to be paid the concessionnaires. The Hepburn bill was reported to the House in the winter of 1899. It was never taken up for consideration by itself; but when the river and harbor bill of that year passed the House and went to the Senate the Hepburn bill was added to the river and harbor bill as an amendment in the Senate. That amendment caused for a time a deadlock between the conference committee of the House appointed from the River and Harbor Committee and the conference committee from the Senate over the river and harbor bill.

Finally a provision was agreed upon which was enacted into law in the river and harbor bill of 1899 providing for a new Commission to reexamine the canal question and make a new report. Pending the report of that Commission the Hepburn bill for Government ownership was reintroduced into the last Congress and favorably reported by our committee. It was urged then against its consideration and passage that Congress ought to await the report of the Commission which had been appointed; but notwithstanding this objection, the House passed the bill two years ago next spring. Since that time the obstacle of the Clayton-Bulwer treaty, by which our Government agreed not to build a canal, has been removed.

The Hepburn bill is now before us for disposition. Let me call your attention to its terms: It authorizes the President to acquire from Costa Rica and Nicaragua control of such territory as may be desirable and necessary on which to construct a canal of sufficient depth and capacity to accommodate ships of the greatest tonnage and draft now in use. The canal proposed by the present Commission has a depth of 35 feet, a bottom width of 150 feet, with locks 84 by 740 feet in the clear. I shall call attention later to the fact that the only method by which the President can enter into an agreement with a foreign power is by a convention or treaty, which must be ratified by the Senate before it takes effect.

Section 2 of the bill provides that when the President has secured full control over the territory in section 1 referred to he shall direct the Secretary of War to construct the canal. The responsibility for the work is placed upon the President. It is not proposed that there shall be any divided authority through which those in charge may escape the force of scandal or fraud if that shall occur. We adopt, at least for the present, the Nicaragua route, if this bill becomes a law. But, Mr. Chairman, the Nicaragua route has been favored by every commission of our country. Time and time again the commissions and the engineers appointed by this Government to examine into the question of an isthmian canal have made reports favoring the Nicaragua route as the most available, the most practicable, and the least expensive. The subject has been before the world for more than four hundred years. It has been actively and incessantly before our people and our Government for more than fifty years. The subject has been considered from all sides and from all standpoints. Surveys have been made and remade and made over and over again. There is much that we have learned concerning the subject; there is much that we have yet to learn.

But, Mr. Chairman, in spite of the history of the past; in spite of all of the investigation which has been made upon the subject; in spite of the testimony which has been given by eminent engineers before the committees of Congress and elsewhere; in spite of all these favorable reports of the past; in spite of the report of the present Isthmian Canal Commission favoring the Nicaragua route, although that Commission was appointed by legislation secured by those who favor delay; I say, Mr. Chairman, in spite of all these circumstances and many more of like character, we are again met, as we climb toward the summit of the hill of legislation, with the proposition for more delay, with the request that we turn back, march down, and wait a time before we climb up again.

Mr. Chairman, there is a studied effort being made in this House now, and doubtless the same studied effort will be made throughout the country, to show that because the Panama Canal Company at this last hour makes a newspaper proposition we should set aside the reports and recommendations of American engineers during more than fifty years, in favor of the Panama route, which has never had a favorable report from any American commission or board or any American engineer holding an official position under the Government. The opposition accuses us of undue haste. But, Mr. Chairman, we are supported by the evidence, the information, the propositions, the policy, and reports of half a century, all favoring the Nicaragua route. Our project has been examined over and over again, each new board looking with critical eyes at the reports of the board which preceded it. We are not acting with haste. We are expressing the deliberate judgment of the American standpoint for fifty years. We are carrying into effect the decree in favor of the Nicaragua route, which has been oft repeated. [Applause.]

The gentlemen now opposing us cry out for delay. They say: "Do not act in haste." In the same breath, Mr. Chairman, they exclaim in favor of the Panama route, and all they have to support their contention are a few favorable expressions used by the present Isthmian Commission in its report, which report favored the Nicaragua route. There never was, Mr. Chairman, a more flimsy excuse for delay. It will be an excuse, however, which will receive support from many people throughout the land, and especially from those who have given no consideration to the history of the subject or the examinations and reports of the past. Mr. Chairman, I believe in the fullest discussion of this subject. I believe in the widest latitude of research and examination. I am not absolutely sure that the Nicaragua route is better than the Panama route. I do not believe any man can know that. The only way we will ever find out whether either of these routes is feasible is to make the attempt of actual construction. [Applause.]

Mr. Chairman, it was only yesterday, as it were, that we were seeking some possible route for a canal. The Congress of the United States was not prepared to say by legislation whether there existed upon the Isthmus at any point a practicable, or feasible, or possible canal route. To-day the situation is somewhat changed. Where yesterday there was none, to-day there is a surplus. Where yesterday the contention was as to whether Congress should authorize the construction of a canal at all, because possibly there was no place where one could be constructed, to-day we are divided only upon the question as to which of the two favorite routes we shall select. Heretofore the objection to legislation has been that no practicable route existed. To-day the objection to legislation is that there are too many practicable routes. Yesterday we were in doubt whether a canal could be constructed at Panama or whether one could be constructed at Nicaragua. To-day we are told that both are possible, but that we must wait further to find out which one shall be selected.

I confess, Mr. Chairman, that I have approached the question with grave doubts in my mind as to my ability to pass upon the question and grave doubts as to the possibility of engineering authorities to decide the question correctly. We are all of us prone to accept expert testimony which is on our side of the case; but those of us who, either in the profession or elsewhere, have had occasion to examine the truthfulness or correctness of expert testimony have learned to question its value in many particulars. The expert testimony in regard to the canal routes has been varied and has been before the public for many years.

No two commissions have ever agreed either upon the cost or the exact place of constructing a canal. Great engineering commissions have been created by this country, by other countries, and by other organizations and companies, to report upon the cost and the feasibility of canals across the Isthmus, and no two of them have ever agreed either upon the exact route to be selected, the manner of construction to be accepted, or the cost to be expended. Hence I say it is with considerable doubt that I approach a conclusion reported by the present Commission or by any of the preceding commissions.

We are told to-day that the Nicaragua route is practicable. We are told to-day that the Panama route is practicable. Why, Mr. Chairman, when De Lesseps first proposed the Panama Canal he called together in convention one hundred and thirty-five of the most distinguished engineers of the world, and, after consideration of the plans, surveys, maps, and the reports of the engineers upon the question, this distinguished body of one hundred and thirty-five engineers reported that there could be built a sea-level canal from Colon to Panama at a cost, subsequently estimated by De Lesseps at $127,600,000. No such distinguished body of engineers has ever been collected upon any other question or at any other time, and it took the expenditure of $246,000,000 by the old Panama Company to demonstrate, in the course of five or six years, by work upon the ground, that this distinguished body of engineers who had reported upon the practicability and the feasibility of a sea-level canal was utterly mistaken. Since that time every body which has examined the project has declared that it was never feasible and that the construction of a sea-level canal, in the face of the obstacles to be encountered, is impracticable, wholly and without reserve. The recent engineering commission of the New Panama Company reports that the control of the Chagres River is an "insurmountable obstacle" to a sea-level canal.

When the Panama people went into bankruptcy, in 1889, and the liquidator was appointed by the French court, it was provided in the reorganization of the company that there should be appointed by the liquidator a commission of study. That commission of study was appointed for the purpose of reporting upon the feasibility and the cost of the project of a sea-level canal or of a lock-level canal. Pending the report of that commission another commission was appointed, consisting of some twelve or fifteen distinguished engineers, gathered from France, Germany, England, Russia, and the United States, the most distinguished men of their profession in the world. That commission, known as the technical commission or engineering commission, finally reported, in 1898 or 1899, that the original project of the Panama Company of a sea-level canal was utterly impracticable, and they reported in favor of the construction of the canal which the Panama Company has been working upon recently.

The commission of study adopted the report of the technical commission, reporting in favor of the Panama Canal at a water level, on the summit, of about 100 feet above sea level; but our new Isthmian Commission, which has just sent its report to Congress, again disagrees with the technical commission and the commission of study, and says that while a canal at Panama is practicable, a change must be made in the method of construction and in the plans. The technical commission overruled the original commission of one hundred and thirty-five engineers. Our new Isthmian Canal Commission overrules the technical commission, and I presume that as time goes on, and possibly new commissions are appointed with reference to the Panama Canal, the new commissions will overrule the present one as the present one has overruled others in the past.

The great difficulty at Panama is in the construction of an enormous dam and locks to control the waters of the Chagres River.

The original body of engineers selected one place and one method of controlling those waters, the technical commission selected another place and another method, and the Isthmian Canal Commission has reported in favor of another method and another place of solving this great question. The whole question of canal construction there hinges on a point upon which no two engineers have yet agreed. The proposition of the technical commission, which is the proposition of the Panama Canal Company, is to construct a great dam for the purpose of holding back the waters of the River Chagres and creating an artificial lake. Their proposition is to construct an earth dam with an earth foundation.

That was the proposition of the Maritime Canal Company when it was originally seeking to construct a canal on the Nicaragua route, and finally the civil engineers of the world laughed the project out of existence. There never has been, and I dare say there never will be, a dam of such dimensions, with such a pressure upon it, with such a torrential stream dammed up by it, constructed as is proposed by the Panama Canal Company at Bohio on the Chagres River. They themselves in their report state that they limit the height of the dam to 65 feet, because the nature of the ground is such that they dare not make it higher. The report of the technical commission says, referring to its own conclusions, "The engineering commission unanimously agreed that it would not be prudent to build on that location a dam forming a reservoir of a depth of more than 20 meters (65.62 feet) above the river bed," which is sea level at that point.

That of itself is sufficient to damn the measure. Mr. Chairman, there are many gentlemen upon the floor of this House and elsewhere in the country who earnestly, honestly, and conscientiously believe that the new offer made by the Panama Canal people of that route ought to receive further consideration before any action is taken by the Congress pledging the United States to the Nicaraguan route. To that I can only say that all of these engineering problems are only possibilities. No one can tell you which is the better route, or which would be the more or which the less expensive. The engineer does not exist who has the power in his mind, without actual work upon the ground, to tell which the Government can construct the cheaper. The only way we can ever find that out is by commencing the work.

I believe, Mr. Chairman, that the experience of mankind has been that no great engineering work has ever been carried out in the manner of construction as it was originally contemplated by the engineers who planned it. In all of these canal reports of recent years they have referred, for instance, to the great sanitary canal at Chicago, which, up to date, is the most stupendous enterprise in the way of canals which the world has ever yet undertaken. I can say to you that which most of you probably know, that if it had not been for the discovery of new methods and new machinery at Chicago the cost would have been prohibitive before the undertaking was completed; but that with the new machines and new methods that they discovered the engineers found that they could reduce the cost already contemplated on the points which they had considered, and out of the money thus saved do those portions of the work which the engineers could not foresee and did not contemplate.

I know of no better illustration of the faultiness of engineering expert testimony than the reports made by the different commissions appointed to report upon this subject. Fifty years ago Engineer Childs reported in favor of the construction of the Nicaragua Canal at an expense of $31,000,000. A few years later, in 1873, Engineer Lull reported in favor of the construction of the Nicaragua Canal at an expenditure of $65,000,000. A few years later, in 1886, Engineer Menocal reported in favor of the construction of the Nicaragua Canal at an expenditure of $64,000,000. The Maritime Canal Company followed, in 1890, with another report with an estimate of $65,000,000.

Three reports, which ran nearly alike, and then we appointed the Ludlow Nicaragua Board of 1895, which reported the cost of the Nicaragua Canal at $133,000,000. Then the so-called Walker Commission of 1897, consisting of Admiral Walker, Professor Haupt, and Colonel Hains, and they reported that the Nicaragua Canal could be constructed at a cost of $118,000,000. That report was made since the present Commission was appointed. The chairman of that Commission was the chairman of the present Commission. Three of the membership of that Commission, or the whole of the membership of the former Commission, are members of the present Commission; and yet, with practically but little change in the size or route of that canal, they report now that the cost leaps up from one hundred and eighteen millions to a hundred and eighty-nine millions of dollars; and no one can read the report of the Commission and find out why the difference of cost is proposed.

Mr. WANGER. Will the gentleman permit me to ask him a question?

Mr. MANN. Certainly.

Mr. WANGER. Colonel Hains dissented, I believe, from the former report estimating the cost, and estimated it at a hundred and thirty-five millions, did he not?

Mr. MANN. Colonel Hains estimated it then at one hundred and thirty-four and now at one hundred and eighty-nine millions.

Mr. WANGER. The last report, as I understand it, provides for duplicate locks, whereas the earlier report provided for single locks.

Mr. MANN. That might make a difference of $25,000,000.

Mr. WANGER. A very considerable item.

Mr. MANN. A very considerable item, Mr. Chairman, but very far from explaining a discrepancy of more than $70,000,000. And if duplicate locks were not required two years ago, I think the country might manage to have the canal built without duplicate locks to-day.

Mr. WANGER. My colleague will permit one further suggestion at this point?

Mr. MANN. Certainly.

Mr. WANGER. As to the duplicate locks, it occurs to me, and I submit that to him, is not that simply indicative of the greater thoroughness of the work in all respects as provided for in the last report than as provided for in the report of the Nicaragua Canal Commission?

Mr. MANN. Well, I do not think it is. The matter of duplicate locks is one which has always been discussed at all times in the making of all canals, and there has been no change in situation between the time of the former report and the present one.

Mr. LACEY. The gentleman is discussing a matter in which I feel a deep interest, because it is one of very great importance involved in this case—that is, the cost. I would like to suggest to him that he explain that thoroughly, as he is upon the committee.

The estimates started in at thirty millions: the last is one hundred and ninety millions. The Panama Canal is estimated as costing approximately the same if we were to begin at the beginning, by the same Commission. Now, the French company have spent two hundred and forty-odd million dollars, and they have built only one-quarter of the canal. If it costs $246,000,000 to build one-quarter of the Panama Canal, how are we going to build the Nicaragua Canal for $190,000,000? Is there not a very gross underestimation even in the last figures?

Mr. MANN. The gentleman wants my own opinion, which, of course, is worth practically nothing, because I am not an expert engineer; but I will give it. I think the testimony of the expert engineers is not worth very much; I think the last Commission has vastly overestimated the cost of the construction of the Nicaraguan Canal; I think the last Commission, or two members of it, who reported in favor of $118,000,000 two years ago, were much nearer right than they are now.

Now, let us treat it as a practical question. When the Commission two years ago reported in favor of $118,000,000, what did they adopt as the basis of price? They took the price of construction both for earth and rock at the Chicago Canal, added 50 per cent to that, and then added 20 per cent of that total.

I will say to the gentleman that the price of the work at Chicago was duly fixed when the contractors had not yet learned how they could do the work most cheaply; and nearly every one of them who had a contract became a wealthy man, and legitimately wealthy, because of the great profit in digging the Chicago Canal at the prices fixed. And yet the Commission two years ago added 50 per cent to that, and then 20 per cent to the total, and only reached $118,000,000. Now, with practically no change, except the construction of double locks, they have reported in favor of $189,000,000.

Mr. LACEY. I should like to ask my friend another question.

Mr. MANN. Certainly.

Mr. LACEY. What consideration is given to the climatic difficulties, the enormous death rate that followed the construction of the Panama Railway, and the tremendous waterspouts that would be interfering with and destroying the work as it progressed? What I want to get at is, are we not underestimating the magnitude of the undertaking, and shall we not be disappointed when it costs us a great deal more than we thought it would cost?

Mr. MANN. I may say to the gentleman that outside of a few problems the difficulties of canal construction there are not so great. The climatic difficulties at Panama have undoubtedly resulted in the death of thousands of employees. My understanding is there is no favoring breeze at that point. The climatic difficulties at Nicaragua exist largely in imagination. There is no high death rate there.

The engineer forces who went from here to Nicaragua have had exceptionally good health—far better, on an average, than the members who sit in this Chamber from year to year. It is true, at Nicaragua, on the east side near the coast, there is an immense rainfall, aggregating the enormous amount of 2 feet per

month. But the difficulty of construction there is only a difficulty of building a dam—a dam to dam up the San Juan River; and the difference between the dam at that point and the dam proposed by the Panama people is that the dam proposed by this Commission for the San Juan River is a masonry dam which rises from the rock under the surface to the top, and the dam proposed by the Panama Commission is an earth dam upon an earth base, and no one can tell until after it has been built whether it will wash out or not. Such a dam will never be safe. If built, it is sure to give way some time.

Mr. WANGER. If my friend will pardon me, the Isthmian Commission estimates on a basis of a wall lining to that great dam upon the Panama route, does it not, from the rock surface?

Mr. MANN. The Isthmian Commission changed the plans of the Panama company entirely, without due consideration, and after reporting upon the masonry lining of the dam, said that they hope and believe that a better location for the dam will be secured. Neither the Isthmian Commission, nor the Panama Canal Company, nor the technical commission, nor any other commission has ever been able to find a satisfactory place for the main work of the Panama Canal route, namely, the dam at Bohio, on the Chagres River. No two commissions have ever agreed upon a place, and no commission has ever stated yet that the place, if selected, was a good one or a satisfactory one, and every commission has hoped that a better location might be selected.

I say that when the French people spent $246,000,000 in endeavoring to solve that problem on the Panama Canal route, and that no engineering commission has since endeavored to say that they could satisfactorily solve it, it is not the place of the United States Government, because of its overflowing treasury, to undertake that expense. [Applause.] I do not know, as I said, which of the two routes will cost the most. I do not believe that any commission or any expert on earth knows. I believe that a canal can be built at either place. My own preference, after a somewhat large reading (though not exhaustive) upon this subject, would be to have a canal built by the San Blas route by a tunnel through the mountains—a sea-level canal—at far less expense, in my judgment, than at either of the two other places; but I cheerfully yield to the reports of the engineers that that would be too expensive and is not feasible.

Now, Mr. Chairman, there are many things about the Nicaragua Canal route and about the construction of the canal which I frankly say I do not like. The distinguished chairman of the Interstate and Foreign Commerce Committee, who made so able a presentation of this case, said that it had been his hope that when a canal was constructed American shipping might receive a privilege and a benefit thereby. Ah, Mr. Chairman, the trouble with that hope is that it has been forever cruelly stifled and killed before birth. By the present treaty between this country and England, no preference can be given to American shipping, and we might as well frankly understand it. I had hoped that when any canal was built this country, if it should be at war with another country, would have the treaty right to prevent the warships of the enemy from passing through the canal from the Atlantic to the Pacific coast or vice versa. I fear that the construction of this canal under the present treaty, if we ever go to war with a sea power, will either involve danger to our Pacific coast or will involve us in trouble with other nations.

This treaty under which we are now operating provides that the war ships of the enemy shall have the same rights upon the same terms as the war ships of this country to pass through the canal both in time of peace and in time of war. Ah, but the Isthmian Canal Commission says: "No enemy would place its war ships within the power of this country while we control the canal." I feel most certain, Mr. Chairman, that if (to use for illustration the recent Spanish war)—that if we had had the Nicaragua Canal constructed at that time, Spain would have been most anxious to have a war ship started on its way through the Nicaragua Canal, and had an "accident" happen to it by the explosion of a dynamite stick or otherwise. That would have brought disgrace upon this country; it would probably have brought about intervention by the European powers between us and Spain.

If I had my way I would not, in a canal built and controlled by this country, give the war ships of any enemy an entrance. I would fortify the canal; treat the commerce ships of all countries with equality; treat the war ships of nations with which we are at amity with equality; but I would, not by breach of faith, but by open-handed announcement, see to it that no enemy's war ship should pass from one coast line to the other.

Now, Mr. Chairman, I wish to address myself for a few moments to the offer just reported in the papers of the Panama Company. In one particular I do not agree with the distinguished chairman of the committee or the gentleman from Florida [Mr. DAVIS], who stated that an offer made by that company is a breach of its concession. The minister from Nicaragua himself, in the correspondence published in the report of the Isthmian Commission, invited the Panama people to present proposals for ceding their rights to this nation; and proposals were made in answer to that invitation; and it is upon that basis that negotiations have been carried on between the Panama people and the Isthmian Canal Commission of this country. I do not think they have forfeited any right, so far as that matter is concerned.

The truth is that the Panama Canal people believed that they had the only practicable route. With a fatuity that sometimes enters into the minds of men, they stood back, believing that they had this country by the throat; that the United States was determined to build a canal; that the only place it could build a canal was at Panama, and that we would be compelled to come to them and beg humbly the privilege of buying their concession and their work at enormous cost.

I have already stated that after the reorganization of the Panama Canal Company a technical commission was appointed, which reported in 1898. There has been no change of situation so far as the Panama Company is concerned since that time. After they had received the report of this technical commission—after their reorganization had been effected, when they had all the light upon the subject which they now have—they were invited to appear before the Committee on Interstate and Foreign Commerce, over which the gentleman from Iowa so ably presides, for the purpose of communicating any facts which it might be useful to lay before Congress in the consideration of this subject. And the very first proposition that was made before that committee by the gentleman representing the Panama Canal Company was made by their general counsel, under authority, as he stated, of the company. And he said:

I beg to remind the committee that we are not appealing for any money; and of course we are rather independent in regard to our financial statements.

He also said:

As two-fifths of the entire length of the Panama Canal is essentially constructed and in a measure open to navigation; as nearly one-half of the entire work of excavation is actually completed; as the harbors at the terminii are natural, open, and free to entry by vessels of the largest draft; as there is an existing railroad parallel to the canal, vastly expediting the work of construction; as the concessions, titles, and solvency of the company are unquestionable; as over 3,000 men, with a force of over 150 engineers, have been for four years and are now actually engaged in the canal work; as the United States has by a treaty with Colombia entered into special guarantees respecting a canal across the Isthmus of Panama, and as this work has been done and will be completed without the cost of a penny to the people of the United States, we have the right to assume that the Panama Canal is a necessary if not the controlling factor in the solution of the isthmian canal problem.

In the course of the statement of the general counsel of the company the distinguished chairman of the committee said to the counsel of the Panama Canal Company:

I think that this committee would like to be advised of another very important matter. I suggested there were two questions we would no doubt like to have heard about. One was as to the practicability of this canal. Gentlemen have heretofore confined themselves solely to that question and to engineering matters. Another question quite as important will be the financial ability. Now, is there some gentleman here present who proposes to speak in regard to that matter?

And the general counsel of the company, Mr. Cromwell, replied, stating:

I suppose I should respond to your natural inquiry, and I will, by saying that the new Panama Canal Company, not soliciting any aid financially from this Government, has not deemed it to be necessary to go into the condition of its finances.

Further on in his remarks he said:

It has millions of dollars to go on with this work. It has very large resources and a very powerful board of directors, composed of the most prominent bankers in all France, and of great resources. Its resources are very large. It has confidence in its own financial ability. That confidence is unwavering, and when it reaches the point where it desires to make an issue of securities, it will base the issue upon values and conditions which will invite general confidence. It is a very natural question that you have asked me, and one which I have answered to the best of my ability; by which I mean that our company is quite content with its resources, is pursuing its work, has entire reliance upon its resources to complete the work without Government aid.

In the course of that argument the distinguished gentleman from New Jersey [Mr. STEWART] asked this question:

If this Nicaragua Canal should be built, would you still go on and complete your canal?

And Mr. Cromwell replied:

Our company has no apprehensions on that question, and will pursue its course. Of course we must go ahead with the investment that is already made—with nearly half the canal completed. The company does not think that any other canal will be constructed.

And I asked him this question:

I suppose that the only object of this hearing is for the purpose of showing that this canal may be finished, and that as a necessary corollary two canals would not be successful. There is not business enough there for two canals. Your purpose—the only purpose, I assume, when not asking any money—is to show that this canal can be and will be finished. If this Government should start to build another canal, it would complete it. That might result in your not getting money enough to build your canal. If that is the case, and this hearing is for the purpose of showing that you can build the canal, do you not think that you ought to show the committee not only that you have the engineering ability to finish it, but the financial ability to finish it?

Mr. Cromwell replied:

The same apprehension has been before us for four years and has not made us waver for one instant.

Then I asked this question:

The same apprehension has not been before your canal company, because the Government of the United States has not up to the present time started to build a canal.

And he replied:

Has it started yet?

That is about the key to the present situation. They desire delay; not through improper motives on the part of gentlemen here, but the whole course of their dealing is for delay. With no authority under their concession to bind themselves by any agreement to sell, they present, so the newspapers report, some kind of a proposition upon which honorable gentlemen may legitimately base a demand for delay.

They had their opportunity before the committees of this House. They had their opportunity before the Isthmian Canal Commission. The Committee on Interstate and Foreign Commerce made every effort with this company to obtain some kind of a proposition from them under which our Government might enter into proper negotiations for the acquiring of the Panama Canal. These gentlemen, believing that they had us by the throat, stood back against the wall, refusing to make any proposition, refusing to make any suggestion, and simply saying: "We have the controlling factor in the isthmian canal construction. We are able to build our own canal," meaning thereby "make us an offer of our first investment."

I asked the honorable counsel of the company before the committee this question:

Then, I suppose you expect confidence to be inspired in a sufficient degree to enable you to build this canal?

And the counsel of the Panama Company replied:

I have no more doubt that it will be built than that I am standing here now.

A change seems to have come over the dreams of the company to-day.

I also asked him this question:

Your object in appearing here is that you wish to prevent any complications that may arise by this Government helping to build another canal?

And the counsel replied:

I would hardly put it that way. Our prime object is to invite your attention; * * * we are not asking anything. * * * We have stated very fully that the company has not a dollar of indebtedness, but has millions of dollars of cash, and feels no doubt whatever of its ability to continue this work and complete the canal.

That has been the attitude of the Panama Canal Company before Congress. When the Isthmian Canal Commission was appointed, with Admiral Walker at its head, in the spring of 1899, one of the first things the Commission did was to visit in Paris the Panama Canal office and administrative force. Admiral Walker, as chairman of the Isthmian Canal Commission, requested the director-general, Mr. Hutin, to inform the Isthmian Canal Commission, "First, whether the Panama people would sell to the United States at all; and, second, if so, at what price would they sell." In a letter dated April 10, 1900, nearly two years ago, from the chairman of the Isthmian Canal Commission to the director-general of the Panama Canal Company, he asks this question:

Is the Panama Canal Company willing to sell to the United States all the rights, privileges, etc.?

That was question No. 1; and question No. 3 was:

For what sum of money, in cash, will the company transfer to the United States all of the rights, privileges, franchises, property, etc.?

That letter was received by the director-general, and on July 20, 1900, he made a reply. In the course of his reply he said:

We would be much obliged, Mr. President, to be informed by what date you wish to have our reply to your above-mentioned letter.

Admiral Walker replied to this letter, under date of August 13, 1900, nearly a year and a half ago:

In response to your inquiry, I have to say that I will be glad to have your reply at as early a day as practicable, but I think it should not be later than the 1st of next October.

Here was a request to the Panama people to have an answer to the question as to whether they would sell, and for how much, by October 1, 1900, a year and a quarter ago, and no answer was made to these specific inquiries. The director-general and other gentlemen connected with the Panama Canal Company came to the United States and discussed the question of the Panama Canal, its feasibility, its cost, its practicability, its plans, and its route with the Isthmian Canal Commission, but no answer was made to the inquiry as to whether they would sell and at what price they would sell to this country. On May 16 last Admiral Walker again reminded the director-general of the Panama Canal Company, as a basis of negotiations—for the canal company had proposed some negotiations—there should be some expression of the views of the company as to the value of its property, "and perhaps this could be done in no better way than by a specific reply to the questions asked you in my letter of April 10, 1900."

No answer was received to those questions asked in April, 1900, and in July last Admiral Walker wired the agent of the Panama Company: "Will give valuation prompt attention when received. Will take up discussion here on your arrival." There had been an intimation that they would answer the question, but they did not. On September 14 Admiral Walker again wired the Panama people at Paris: "If you intend naming price for property and concessions there should be no delay."

Still no reply. No reply to these questions was submitted by the Panama people. On October 18 last Admiral Walker again addressed the director-general of the Panama company, who at that time was in this city, and in the course of his letter he said:

At our subsequent conferences and in my answer of May 16 to this letter, without replying to the suggestion as to the manner in which you would fix the value of the property, and without inquiry as to the basis and conditions of the arbitration suggested by you, I again called attention to my letter of April 10,1900, and stated that there should be a specific reply to this third question as a basis for future negotiations.

But still no answer was made by the Panama people.

On October 22 last, at the time the Isthmian Canal Commission was making every effort in its power to prepare its report and submit it to Congress for its action, Admiral Walker again addressed the director-general of the Panama Company and again asked an answer of the previous question, at what price the Panama people would sell to this country.

This matter was first called to your attention at the sessions of the Commission held with you in Paris on the 7th and 8th of September, 1899. Since that time it has been the subject of frequent conferences and of a correspondence of some length, to which your attention is called, and particularly to my letter of April 10, 1900, in which the powers of the Commission were frankly stated and three definite questions asked, the substance of these questions being the willingness of the company to sell, its ability to do so, and the money, in cash, for which it would dispose of its property. These questions have been repeated at intervals since that date, and the third still remains unanswered.

From April 10, 1900 to the date of the report of the Commission the third question still remained unanswered. Gentlemen may hide behind the proposition that we ought to investigate an offer made by the Panama Canal people, but after the committee in charge of this matter in this House had endeavored for years to obtain a proposition from the company, after the Isthmian Canal Commission had endeavored from April 10, 1900, to October, 22, 1901, to obtain an expression of opinion from the Panama Company at what price they would sell, I can assure them if they favor delay in this matter, all they need to do is to have it postponed until some definite proposition is really made by the Panama people. [Laughter.]

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. DALZELL. Mr. Chairman, I ask unanimous consent that the gentleman may have an opportunity to conclude his remarks.

The CHAIRMAN. The gentleman from Pennsylvania asks that the gentleman from Illinois may have time to conclude his remarks. Is there objection?

There was no objection.

Mr. MANN. Mr. Chairman, I would not accept the indulgence of the House in this matter if I thought that there was any other more pressing business coming before the House.

Mr. CUMMINGS. Go on, we want to hear you.

Mr. MANN. I believe, Mr. Chairman, that we ought to deal fairly and frankly with the French people. They have my sincere sympathy for the losses which they have sustained in endeavoring to construct this great highway of water commerce. I would gladly favor the Panama route on sentimental grounds if I believed, first, that the work was a practicable work, and, second, if I believed that there was any method by which we could commence operations in connection with that company.

But, Mr. Chairman, while I extend my sympathy to the French people who have lost their money in this enterprise, it is proper for me to call the attention of the House to the remarkable fact in connection with the reorganization of the New Panama Canal Company as to the method in which they received subscribers to their stock. Let no gentleman in this House think that he would put any great amount of money into the pockets of the men who lost their all, or their portion, in endeavoring to build the Panama route by now buying its concession from the new company.

The old Panama company failed in 1889, and a liquidator was appointed by the French court. That liquidator commenced proceedings against a number of financial houses, agents, contractors, etc., in France, whom he alleged had defrauded the old Panama company. The claim was made that in the negotiation of securities, in the construction of the work, and in various other ways in dealing with the old company these houses, large and small, had swindled that company out of its money, and proceedings were commenced to recover the money thus fraudulently taken from the old company.

These proceedings were never carried to the extreme, but an

arrangement was entered into between the liquidator and these gentlemen who were being pursued, under which it was agreed that the suits against them should be dropped, and that they should subscribe to the stock of the new company.

The stock of the new company was to consist of 65,000,000 francs. Five million francs of paid-up capital was paid over to Colombia for the extension of the franchise. About forty millions, nearly, out of the sixty millions balance was subscribed by these gentlemen who had swindled the old company. The public were invited to subscribe, but with remarkable unanimity stayed away, and they only received from the public a subscription of about 3,000,000 francs. The liquidator subscribed the balance; so that the gentlemen who are now interested in the New Panama Canal Company are men who went into it because they had swindled the old company. There is no loss on their part. They are not out anything. Having fraudulently made money in the expenditure of these $246,000,000 expended by the old company, they subscribed about $10,000,000 to the new company, in order that they might not be compelled to pay back the money which they had beaten the old company out of.

Mr. WANGER. Will my friend permit me a question?

Mr. MANN. Certainly.

Mr. WANGER. Does the gentleman understand that the first nine persons named as subscribers on page 84 of the report of the Isthmian Commission are among those who had secured advantages under fraudulent contracts?

Mr. MANN. I do.

Mr. WANGER. If so, I call the gentleman's attention to the fact that the next statement is "Various persons, to the number of 60, who had profited by syndicates created by the old company," which would seem to exclude the other subscribers as being in that category. Otherwise I think it would have read "Various other persons." If this idea which has suggested itself to me is correct, then only 3,285,700 francs of the 60,000,000 came from that class of people.

Mr. MANN. The gentleman very appropriately calls attention to the question because it is a grave charge. He will notice that that item is "sixty persons who had profited by syndicates created by the old company." The other companies have not entered into syndicates. The other companies have directly swindled the old Panama Company without going into syndicates. If the gentleman will read a line or two below, he will notice the public subscription to the new company. It is 3,484,300 francs—between half a million and a million dollars which was subscribed by the public.

Mr. WANGER. I beg pardon for interrupting the gentleman so frequently——

Mr. MANN. That is all right.

Mr. WANGER. But I want to ask this further question. Outside of the public subscription, the liquidator subscribed, as I understand, over 15,000,000 francs. Now, does my friend understand that the liquidator was in any sense a party to the questionable contracts of the old company?

Mr. MANN. The liquidator subscribed for the balance of the stock, representing the old company, and, I presume, paying no money for the stock.

Now, it is true that the old company, or the liquidator for the old company, has a contract with the new company under which, when profits are realized and certain dividends are paid, 60 per cent of the balance shall go to the old company. Nobody has yet been able to find out in this country the terms of that contract. We have repeatedly asked for the contract between the new and the old company. They always say, in describing the contract, that it provides for the payment of "certain dividends." What those are I would like to know. The terms of that contract we can not find out.

But, Mr. Chairman, I appreciate the fact that in the construction of this canal we ought to exercise, if possible, a friendly feeling to the French Government and the French people. Upon even terms, I would much prefer to take the canal partially constructed in which the French people may be interested; but I say that if this bill passes this House and becomes a law in its present form we shall be actually doing something and there will still be ample opportunity for any change of plan or any negotiation in the future.

The gentleman from Illinois [Mr. CANNON] raises a question in regard to this bill upon the ground that it commits Congress in such a way that the Republic of Nicaragua may raise its price. Permit me to call the attention of the House to the fact that the only method by which the power conferred in this bill upon the President can be carried out is by the power which he is now authorized to use.

This bill, in so far as it authorizes the President to acquire a right of way, confers no new authority upon him. The only way in which the President can exercise this power is by treaty. That treaty must be ratified by the Senate of the United States. The President has now the power to negotiate any treaty that he pleases with Nicaragua in reference to this bill and to lay it before the Senate of the United States for confirmation. In this respect the present bill confers upon him no additional power. What, then, it may be asked, is the purpose of putting this provision in the bill? Why, Mr. Chairman, before you and I were born various companies and individuals were dealing with the Republic of Nicaragua, obtaining franchises, etc.

A few years ago anybody in this House could have gone to Nicaragua and obtained a concession for a canal, guaranteeing to the Republic of Nicaragua certain rights and privileges. If the President is now to go to Nicaragua, he ought to go with some authority of Congress behind him. We ought to give an evidence of good faith. If he goes to the Republic of Nicaragua and says, "If you make the proper terms with me, which I can submit to the people of the United States, feeling the responsibility resting upon me, then I have the authority to proceed with the construction of the canal," who will say that he can not obtain better terms in that way than he can by saying to the Republic of Nicaragua, "I wish that you would make a treaty with our country, but I can not guarantee that anything will ever be done under the treaty."

I welcome the newspaper rumor that the Panama people have now realized that they can not "hold up" this country. It may have a very advantageous effect upon the Republic of Nicaragua and the Republic of Costa Rica. We are now in a position to say to Costa Rica and Nicaragua, "If you wish the great advantage which will come to your countries through the construction of this canal on the Nicaragua route, you must deal fairly with us." And there is no doubt that they will do so.

Mr. Chairman, I have delayed the House much longer than I had anticipated, though I have occupied less time than I would like to have occupied in the discussion of the question. I do not believe that the House can make any mistake in passing this bill.

For four hundred years Europe has been looking for a waterway to the West across the Western Hemisphere. That wish of years gone by, that expectation to-day of the people, will, I think, shortly be realized. It will not be realized by talk. It takes digging and work to construct a canal. As you meet one obstacle another rises in its place. To never approach the first will not overcome the second. For every reason that can be given, so far as lies in my power, both from an engineering and a sentimental standpoint, I do to-day favor the Nicaragua route. I have one selfish reason for this position. The great expenditures of the nation are made upon the seacoast. We build there our fortifications and our navies. We place there most of our armies. We do the great public work of the country largely along the line of the seacoast. It makes some difference to New York City in distance whether the canal is located at Panama or Nicaragua, but it makes a greater amount of difference to the Mississippi Valley.

The Nicaragua route is 600 miles shorter to San Francisco from the Mississippi Valley than the Panama route. That distance means a considerable sum in transportation of freight by water. To-day the margin in the cost of transportation is so close that this difference may decide the traffic between the Mississippi Valley and England or France or Germany. I believe we are entitled to that consideration, to that favoritism. It seems to me that whichever route we take, now is the time for us to express our views by action and by the passage of the most practicable bill which has been before this House in many years. [Loud applause.]

Mr. Chairman, when the century plant which, through its years, has gathered strength, proportions, and vitality, comes close to the fruition of its life and begins to show signs of flowering, it is the object of admiration and wonder on the part of the people. Mr. Chairman, we are now showing signs of reaching the fruition of the efforts of four hundred years; and the building by this Government of a connection between the two great oceans of the world will be the flowering of one of the objects of mankind for ages—a flowering which will not fade away and decay, but which will be everlasting in its nature.

Our country and our people owe much to the civilization and the efforts of humanity in the past. We have been spared much of the troublous times and many of the travails through which the people of other countries and other ages have been compelled to pass. But in this auspicious period of history, in this crowning glory of civilized effort, in this dawn of the new century, the United States of America, the beneficiary of the past, will make to the future a present of the greatest public engineering enterprise ever undertaken. We have received much from civilization. We have benefited greatly by the work and trials of other nations and other peoples. To-day we will give to all nations and to all peoples, without preference and without discrimination, a reminder of our prosperity and our generosity which will stand like the pyramids of Egypt—a lasting memorial to our labor—and which, unlike the pyramids, will be of constant use and benefit to progressive mankind. [Applause.]

Other nations have been great in public enterprises. It was

Portugal which circumnavigated Africa; it was Spain which discovered the New World; it was mainly England and France which planted and nourished the settlements in the wildernesses of the North American Continent. Russia has contributed greatly, both in Europe and in Asia, to the progress of mankind. Germany is spreading her influence throughout the globe. But all these countries have acted with a view to secure for themselves some special benefit, some preferential advantage. Have we not the right, then, to contemplate with satisfaction the proposition we are now making that our country, at its own expense and out of its own treasury, without contribution or aid from other peoples or other nations, take this mighty step forward in the march of civilization, not for itself, not for our advantage, not to benefit ourselves, not to gain a preference over our neighbors, but in the interest of the whole world, for the good of all people? We pay the expense; they share equally the results. No sublimer conception of a great enterprise was ever entertained by man or by spirit.

And, Mr. Chairman, this undertaking is not desired by only a majority of our people. It is their universal desire that our country, out of the abundant means of its prosperity, shall make this present to all mankind and to all the future.

We may be divided here to-day upon the question as to the necessity of immediate construction; we may be divided here to-day upon the question as to whether the information already received is sufficient to warrant present construction; we may be divided here to-day upon the question as to which of the routes proposed is most desirable; but, Mr. Chairman, when this bill shall have been reported back into the House and the roll shall be called upon its passage it will receive the unanimous support not only of the membership of this House, but of the people of this nation. The heart of the American people grows greater when it undertakes works like this. It beats in rhythm with the progress which is yet to come when it approves a project like this. [Applause.]

We shall pass this bill after debate, probably spirited and somewhat heated, but when it shall have become a law; when the conception of this work shall have proceeded until the work itself is ready to be commenced, we ought to bow our heads in solemn contemplation of the responsibilities which we have accepted toward mankind, and in thankfulness that we can, through the blessings which have been showered upon us, make some returns under the guiding hand of the Almighty for that which we have ourselves received. [Applause.]

The Isthmian Canal.

SPEECH

OF

HON. WILLIAM P. HEPBURN,

OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, January 7, 1902.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 3110) to provide for the construction of a canal connecting the waters of the Atlantic and Pacific oceans—

Mr. HEPBURN said:

Mr. CHAIRMAN: In opening this discussion it is not my purpose, or it has not been my purpose, to occupy any considerable portion of time. I am moved to this self-denial by the recollection that this subject of a waterway across the Isthmus connecting the waters of the two oceans has been in the minds of the people of the world for more than four hundred years. It is quite four hundred years since the first expedition started from Spain to find a waterway across this continent. In every age since, in every generation, by the maritime people of the world, this subject has been one of inquiry and discussion. In this country, more than seventy-five years ago, the Congress of the United States took action upon this subject. We have had innumerable expeditions and surveys authorized by the United States and by corporations, all looking to penetrating this great barrier. It is a subject in which all of the people, I may say, of the United States take a deep interest and have manifested that interest.

Thirty-seven of the States of this Union have instructed their Senators and requested their Representatives at various times to support a measure of this character. All of the great political parties have hastened in their national conventions to align themselves in favor of this great measure. It has been discussed in the Congress, in scientific societies, in the newspapers, on the hustings, in the legislatures, until a volume of literature has been secured such as perhaps has never been devoted to any other subject. In the archives of this House there are tens of thousands of pages of reports of committees, of commissions, and of others authorized and unauthorized to investigate this subject and report their findings. More than a thousand pages were contributed to this fund of literature from one body in the last Congress, and already we have from that same body thus early in this session a large and valuable contribution. We have upon our desks the report of the last authorized Commission, of nearly 300 well-considered pages, in which almost every conceivable feature of this question is shown to have received the attention, the full examination, and the exposition of the Commission.

I hope that that paper has been thoroughly read by the membership of this House. If so, members have a graphic picture placed before them of what is desired, of what will probably result, of the possibilities of construction—in fact, the whole history of this enterprise. Moved by the recollection of what has been said—of how completely the subject has been discussed—your committee in their report have been brief, and the bill to which your attention is now directed is one of but few sections and few words. The purpose of your committee—the leading thought with them, next to securing the execution of this great work—has been to concentrate authority and responsibility. Therefore the bill has invested the President with all the authority necessary to accomplish all that is preliminary and then to accomplish this great work. At the same time, somewhat relentlessly, perhaps, we have thrust upon that officer the entire responsibility of this work in its execution. There is no divided authority under the terms of this bill. There is no commission. There is no place made in this bill for the retirement of partially defunct statesmen. [Laughter.]

There is no opportunity to pension those who have been passed in the race of life. We have concentrated, as I have said, this authority and this responsibility in the hands of one man. We have given to the President the amplest power to select, throughout the length and breadth of the land, those aids and agents in whom he has confidence and who he believes are capable and willing to honestly aid him in this great enterprise without asking the advice and consent of anybody on earth.

Mr. Chairman, I believe that this is wise policy. The first section of the bill authorizes the President of the United States to secure the control over that strip of territory lying in the State of Nicaragua on which he will be enabled to construct, protect, and operate this canal. The word "control" has been used, because in this connection I know of none of broader signification. It means all. Some gentlemen have suggested to me to-day that there should be some provision made by which this property when constructed would avoid onerous taxation.

It seems to me that that word "control" covers everything. Taxation is an attribute of sovereignty. Control includes sovereignty, jurisdiction, all efforts in the exercise of power. And so the word has been selected and used. I am told by those who are in a position to speak and to know that that word will be satisfactory to that Government with which we shall have to deal, although another word that might well be included within it, giving to us less of power, would have been objectionable and would have proved an insurmountable obstacle.

Mr. Chairman, there is no question in the mind of any informed man as to the practicability of the construction of this great waterway. That question has passed beyond the domain of speculative thought. The best engineers on this and the European continent, called into consultation, with all data before them, have arrived at the conclusion that a canal is a feasible engineering enterprise and that it can be accomplished within the limits of reasonable cost.

"Reasonable cost" is a phrase that necessarily has relation to environment. It is estimated by the last Commission that this work will cost $189,000,000. That would have been a stupendous sum during the Administration of George Washington, and perhaps would have been so objectionable that an enterprise of this kind would not have been undertaken. But it is a very different matter to 80,000,000 people. It is a very different matter to us, with our unlimited credit, with the possibility of a bond issue, if one should be necessary, bearing a less rate of interest than 2 per cent per annum. It is a very small consideration in comparison with the features that it would have presented years ago.

The first survey that was made of a canal, accompanied by estimates, fixed the cost at $35,000,000; but that was a very different undertaking from the one now proposed. That canal would have had a width of 40 feet and a depth of 15 feet, which perhaps would have been entirely adequate to the commerce of those times. The last estimate that we had preceding the one now under consideration was $135,000,000; but that was a very different canal—5 feet less in depth, 50 feet less in width, than the one now proposed—and entirely unadapted to the commerce of to-day; certainly unadapted to the ships that within a few years will use this waterway. I believe that the Commission has done wisely in fixing the estimate at the maximum; I do not mean by

that the maximum of possible expenditure, but the maximum of reasonable probable cost of the different works. Of course, the estimates of engineers will vary.

Different engineers will give undue importance to particular items of cost. We must remember that this canal is to be built, wherever it may be built on the Isthmus, in a sparsely settled region, in a tropical country where rainfall is excessive, sometimes reaching in parts of the line nearly 300 inches annually; that the treatment of torrential streams will have to be dealt with, and that one of these streams is said to have had a phenomenal rise of 70 feet in twenty-four hours, and is known to have had a rise of 35 feet in a very few hours. These streams must be controlled, because they occupy the ground that must be occupied, in part at least, by the canal. The gentlemen who have made these estimates have in the abundance of caution made them large, and then, to cover the possibility of accident or of error, they have added 20 per cent to all of the elements of cost, I think even including that of administration. So that it is altogether probable that there will be none of those disappointments that have been experienced in other efforts to secure a like waterway.

I know that there are some discouraging incidents in the history of the past that well might make men chary about embarking in this great work. Less than twenty years ago certain gentlemen in France undertook the solution of this problem. They raised $256,000,000 by the sale of $435,000,000, face value, of securities. They embarked in that work, and after the lapse of seven or eight years found themselves with less than a quarter of the work accomplished, found themselves penniless and bankrupt in money and character. Our engineers have wanted to avoid the recurrence of such things, and hence they have made estimates of the most careful kind.

The enterprise to which I have alluded was prematurely and unfortunately undertaken. The engineers had but partially accomplished their work. They had been unsuccessful in the selection of the best sites for their most expensive operations. That is not true of the present enterprise. Remember that we have had the amplest of opportunity, and we have made the closest of research.

In 1852 a careful survey was made of this entire line under the authority of the Government. In 1870 another careful survey was made by another officer under the authority of the Government. Three or four commissions and officers of distinguished merit were required to verify the work that was done, and the record shows that in every instance it met with their approval. Later the Maritime Canal Company secured the most ample surveys by Mr. Menocal, an engineer of high repute, whose work was approved by a commission of the most notable civil engineers of the United States.

Later that work was verified by a Commission of which the late Brigadier-General Ludlow was the head, with two associates conspicuous for their skill, their learning, and fidelity to the duties of their profession. They made ample surveys in the field, with a personal inspection and scientific verification of the works heretofore reported. Not content with that, two years later the Nicaragua Canal Commission was inaugurated, presided over by Admiral Walker, a man most admirably fitted by his reading, his experience, his industry, his fidelity to duty, and his great common sense, to head an enterprise of that kind. Two most eminent engineers, one standing at the head of his profession in civil life, the other ranking among the best of our military engineers, were his associates. They spent months in exploration, they verified all the borings previously made; they searched the earth to the very bed rock, to discover whether error had crept into the report that had been previously made.

Not content with that, two years later another Commission, again headed by Admiral Walker, with whom were associated eminent engineers of the Army and eminent engineers in civil life. They have again, with large parties, with abundant means, with ample time, with all of the aids that could be beneficial in the direction of complete research, gone over the work so often gone over before. There is no part of the work in the general engineering of this great enterprise yet to be done; and the reports, the specifications, the blue prints, the estimates, everything, are in condition now to begin the work if this Congress authorizes it. I undertake to say, gentlemen, that in favor of the feasibility of the proposition, in favor of its practicability, and within the limits of reasonable cost, as that is now defined, no enterprise that has ever received the attention of man has been more amply approved and more convincingly shown to be an enterprise that engineering skill gives its heartiest approval to than this. [Loud applause.]

This much for the feasibility of the enterprise. I need not discuss further the elements of money. Every gentleman knows that we can do this if we choose. What may be the best method eventually with regard to raising the funds is a matter that well may be relegated to later days. Six years must be expended on this work. One of the works, the Conchuda Dam, will require four years, the engineers say, to complete it. They estimate that two years will be required for the perfection of the harbors and building of the railway and such other work as may be required antecedent to the work proper. Yet they say with regard to this great enterprise, with the dam in the San Juan River, that they have added two years to the four years that they regard as essential to the accomplishment of that work under the best and most favorable conditions. So that it is their opinion that eight years will be required for the completion of the canal.

I do not know certainly, nor in my judgment does any other man know, just what this will be to us as a purely commercial venture or investment. There are so many factors that will control, or that may control, the use of the canal by the shipping of the world that at this time probably no more very reliable estimate can be made. I have seen a statement by a statistician to the effect that not more than 300,000 tons would pass through the canal annually. I heard a gentleman of eminence, the late Senator Miller, when speaking as a witness before the Interstate and Foreign Commerce Committee, say that in his judgment 11,000,000 tons of shipping would pass through the canal the second year after its completion. Senator Miller was the president, as some of you may know, of the Maritime Canal Company. We may make some allowance for the enthusiasm that a president of a corporation would have when coming to the American Congress seeking a gratuity of $75,000,000. But he was a gentleman of great attainments. He had had opportunity for the study of the subject. He had given it probably a great deal more attention than any of us.

His fortune at that time was embarked in the enterprise; and, making allowance for his enthusiasm, we may still insist that it corroborates the estimates of our Commission, who say that very shortly after the canal is opened we may certainly expect that seven millions of tonnage will pass through the canal. Seven millions annually! Now, at the rates that are charged by the Suez Canal, that would yield a revenue, if the premises are correct, of fourteen millions a year, a sum largely abundant to meet the estimated cost of maintenance and operation, three and one-third millions, and still leave more than ten millions to meet the interest account, if the Government of the United States have such a one. That is more than 5 per cent of the estimated cost.

But suppose that to make certain this seven millions and to meet the necessary and proper demand and to give to our people something of advantage, the Suez rate should be cut in two and we should charge for the use of this canal but a dollar a ton. We would still have ample means to meet all of the operating expenses and the cost of maintenance and still have $3,700,000 annually to apply to this account that I have called the interest account. Remember that this revenue is a constantly growing sum. The use of this canal undoubtedly must increase. The use of the Suez Canal has multiplied more than seven times in the few years that it has been in operation. While the number of vessels in late days may not have increased, the tonnage has vastly increased, resultant from changes in naval architecture, the larger vessels now being used.

There is a mistaken idea upon the part of many people as to the future disuse of the sailing vessel. Very many men in the United States who have given attention to this subject tell us, on the contrary, that there is an increase in the percentage of tonnage of sailing vessels in late years being built in the United States, and that 52 per cent of all the vessels of the United States are those that are propelled by wind, and that that percentage is increasing rather than diminishing. Anyone who has taken note of the wonderful doings of the Maine shipyards during the last three or four years, the large number of four, five, six, and seven masted schooners that are being sent forth from their shipyards, is ready to believe that gentlemen have been premature in the belief that the sailing vessel was disappearing.

Now, if that is true, then this canal that this bill proposes to construct is of peculiar advantage. It has advantages over every other route that is known, because of its location and because of the universal prevalence of the trade winds that blow through this low depression in the backbone of the continent. Where this canal crosses the divide the elevation is but 153 feet above sea level. No other place known to exist between the Canada border and the Magellan Straits has so low a depression as this. There is no other depression like that, and the one that has been discussed in connection with this presents an elevation of 333 feet, or where the canal is located several tons of feet more than that. This low depression secures a constant draft through that region, making it the healthiest of all tropical regions. In contrast I might say that in the cemetery owned by the Panama Canal Company there are said to be 8,000 graves dug while work was in progress on that route. Senator Warner Miller, whom I have referred to, in testifying before the committee that reported this bill, testified that during a period of nearly two years with a force of more than 2,000 men only six deaths occurred in their hospitals.

It is phenomenal not only in the matter of health but in the wafting of the sails of vessels that may desire to cross the continent. The doldrums seldom exist in the vicinity of either of the termini of this canal, while at other points south there have been known periods of five months at a time when no favoring breeze filled the sails of the vessel waiting to make its escape from the western shore of the continent.

Not long ago, in discussing this subject with a gentleman living in San Francisco, he told me this remarkable story: That as he left Panama on a steamer, a few miles out he passed a sailing vessel, becalmed. He went to San Francisco and completed some business, then went to Portland, then returned to San Francisco, and then was compelled to make the journey back, and when he reached the vicinity of Panama that same disconsolate vessel was waiting for the breeze that was to help it onward in its voyage. So that all of the elements seem to conspire in pointing out this route as the one most favored.

There are many gentlemen who speak of the difficulties there will be in navigating a canal and who desire to have the minimum length of canal, and who therefore favor the route south of the Nicaragua as furnishing only about one-quarter as much of canalized waterway. This is an error. There is not quite double the miles of pure canal on the Nicaragua as is found on the Panama, owing to the fact that the San Juan River and the Nicaragua Lake are utilized as part of the waterway—52½ miles of the San Juan River and 70 miles of the lake. So that you have a continuous waterway, not through a canal, but by a large river and a broad lake, for 120 miles of the distance; and this is effected through the Conchuda Dam—I venture upon the pronunciation of that word with a great deal of diffidence. Fifty-two and a half miles from the lake this dam is erected, so as to bring the waters of the San Juan to the level of the waters of the lake. Then by the excavation of a small river flowing in from the west the waterway is extended some 8 or 10 miles farther toward the Pacific Ocean; so that there are less than 73 miles of canal in the entire distance.

Remember, too, gentlemen, that this is fresh water. I am not much of a sailor myself. I am, however, enough of a sailor to go across the Chesapeake Bay without being laid up for any considerable length of time after I get off the boat. [Laughter.] But I am told that placing a ship in fresh water cleans the bottom of the ship—takes off the barnacles and dispenses with the frequent dockage and the expense incident thereto.

Now, I do not know how long a ship must lie in fresh water to meet with these desirable results; but I have been told by sailors—they are said sometimes to tell yarns to greenhorns—that the passage of a vessel through this water would have an appreciable effect. I do not know exactly what an "appreciable effect" is, but it is urged by some—how wisely, I do not know—as a consideration.

I do know this, that when they reach the level they find a vast body of water there. It is a wonderful phenomenon. Away up within 43 feet of the summit of the Cordilleras Range is found this lake, 145 miles long and 45 miles wide, drained by the San Juan River. It has a surface area of more than 3,000 square miles. It has a drainage area of 4,500 square miles. It solves the question of water at the summit level in a way that can not be disputed. Not only that; this vast reservoir regulates the flow of the San Juan River and prevents those torrential aspects that are such a terror to the engineer when he contemplates other routes.

I think there is no question that this enterprise will be of value to us. I have hoped—and I do not yet despair—I have hoped that this canal could be used as a subsidy in promoting the rehabilitation of American shipping. I sometimes despair as to whether we shall be able, with the preconceived notions of many of our associates, to secure that aid in the form in which other nations give it, to upbuilding the merchant marine of the United States. There is something in the word "subsidy," coming down from the days of Thomas Jefferson, that excites the fear and disturbs the heart pulses of some of our brethren. I had hoped that by calling this by some other name they would be able to take much more kindly to the project, and that by the use of this great waterway free of all charge to the American citizen who in an American shipyard built a ship from American material, manipulated by American workmen, sailed by American sailors, loaded with American products, he could have the use of this canal free of all charge. [Applause.]

If that might be done, what an impulse that would give in the direction that you so much desire. The Liverpool merchant today trading with Hongkong, using a 6,000-ton ship, using the Suez Canal, pays $24,000 of toll for the round voyage. What an infinite advantage would his American rival have, sailing his vessel from New York or New Orleans or Mobile, using this canal free of all tolls, as he goes upon his journey in competition with the English merchants.

The nation building this waterway removes all probability of cupidity on the part of a corporation that might control the enterprise. With us the object is commercial, industrial, political; and the benefits to be secured can be enumerated under all those heads. In the case of the Suez Canal the only motive in its operation and maintenance is the commercial idea. Those who control it want to make the most they can out of the tolls. They want their 19 per cent per annum upon the fabulous cost of that sea-level ditch, built without masonry or concrete—dug out with a shovel—a work which a Chicago man will duplicate to-day for $5,000,000. Mr. Bates, of Chicago, with one of those wonderful dredges of his, that removes to a distance of 1,000 yards 6,000 cubic yards of sand in every hour, would dig the whole canal in seven months, and do it for $5,000,000, And yet the engineers who constructed the Suez Canal expended $97,000,000 in its construction.

I have said that we can not compute the advantages that will result to us in dollars and cents by the construction of this canal. The commercial part of it, at best, we can at this time only speculate upon; but we have no doubt that in the industrial advancement of the future it will be a most important factor. We have no doubt that in its political significance, binding closer and closer together in interest and purpose the Pacific coast with the Atlantic, there will be great advantage to the public. I can conceive of no aspect in which we can view this great enterprise in which it does not loom up as of primary importance to the people and of the greatest advantage to the American people of to-day and their posterity.

I believe that this House is to-day intent upon building the Nicaragua Canal. I ask that we now begin it. Gentlemen, has there not been talk enough in the years and centuries that have gone? Is it not time to do something? There are some interests in the United States which it is said will be harmed by the rivalry of this canal, and there are many gentlemen of honest purpose who think that either the time is not ripe, or that an enterprise of this kind should not be undertaken. There are men who are terrified by the specter of scandal, by the possibility of wrongdoing—men who feel that returns in money will not be ample. But I insist upon it that the American people have made their decree that the canal is to be built, and that now is the time to build it, and now is the time to commence it. [Applause.]

I reserve the balance of my time.

Mr. ADAMS. Mr. Chairman, I wish to ask the gentleman a question.

The CHAIRMAN. The gentleman has time remaining. Does he yield?

Mr. HEPBURN. Certainly.

Mr. ADAMS. I wish to know if opportunity will be given to amend this bill?

Mr. HEPBURN. Why, I do not know of any method by which it could be prevented, without the House prevents it.

Mr. ADAMS. I wish to know if it is the desire of the chairman of the committee to give that opportunity, or if he means to foreclose it by moving the previous question to cut off debate?

Mr. HEPBURN. It is my present purpose to give the amplest time for the consideration of this bill.

Mr. ADAMS. That is not an answer to my question, as the gentleman knows.

Mr. HEPBURN. Well, that is as much as I desire to answer at this time. I mean it in good faith, in the broadest possible way.

Mr. SHAFROTH. I should like to ask the gentleman a question for information.

The CHAIRMAN. Does the gentleman from Iowa yield to the gentleman from Colorado?

Mr. HEPBURN. Certainly.

Mr. SHAFROTH. I was not in the room during all of the gentleman's remarks and perhaps he covered this phase of the case. I should like to know what is his construction upon this bill and upon the late treaty that has been ratified as to the power of the United States to fortify the canal?

Mr. HEPBURN. Why, I have not any doubt about the right of the United States to defend that canal and to do it in the way that seems wise to the United States. If that involves the erection of fortifications at the termini of the canal or of stockades at the sites of the important works, I have no doubt about the authority of the United States to do it, and that it would exercise that authority. I know there are a great many gentlemen, skilled in the art of defense, who say that the proper place to defend this canal is upon the sea; who say that the works will be so expensive and difficult as to preclude their practicability; but I remember that we are spending millions of dollars every year upon a comprehensive plan that promises the expenditure of $250,000,000 in defending localities along our coast. The argument that can be made against the use of fortifications for the defense of this canal can be made against the use of fortifications at New York, at Philadelphia, at every point along the coast. If the Navy is to be relied upon to defend the canal, why not rely

upon the Navy to defend New York and Philadelphia and New Orleans? The gentleman may judge from the tenor of my remarks that for myself I do not take a great deal of stock in that kind of talk. I want to see the canal fortified whenever it is in peril.

Mr. SHAFROTH. And you think there is nothing in the way of fortifying it in the measure presented here?

Mr. HEPBURN. I think not.

Mr. FOWLER. I should like to ask a question for information.

Mr. HEPBURN. Certainly.

Mr. FOWLER. The gentleman stated in his remarks that it was possible that we could allow American ships to pass through the canal without charge. Is that his view, in the light of the treaty?

Mr. HEPBURN. I said I had hoped that that would be the condition.

Mr. FOWLER. Well, without referring to the treaty, with which I am not particularly familiar, is that your opinion now?

Mr. HEPBURN. I have no doubt but that the United States can use that canal in a manner advantageous to its own people above the advantage that it would be to other people, but I have not so carefully studied that treaty as the gentleman has done, perhaps. At all events, Government ships will go through free, and at all events, there is that trend on the part of other nations toward yielding to the desires of the United States that makes me hopeful that if there was a barrier of that kind now, we would brush it out of the way pretty soon. [Applause.]

Mr. CUMMINGS. I should like to ask the gentleman a question.

The CHAIRMAN. Does the gentleman yield for a question?

Mr. HEPBURN. Certainly.

Mr. CUMMINGS. I should like to ask whether, in your opinion, if your bill should be passed under the treaty that has been confirmed by the Senate, England would have any special privileges in the canal over any other nation?

Mr. HEPBURN. I think not.

Mr. MCDERMOTT rose.

The CHAIRMAN. Does the gentleman yield to the gentleman from New Jersey?

Mr. HEPBURN. Certainly.

Mr. MCDERMOTT. Realizing that we all want the canal built, I want the benefit of the idea of the gentleman on this question. The Commission's report, which the gentleman has undoubtedly absorbed to an extent that I have not had opportunity to, has this conclusion:

There are certain physical advantages—

Speaking of the Panama Canal—

such as a shorter canal line, a more complete knowledge of the country through which it passes, and the lower cost of maintenance and operation in favor of the Panama route, but the price fixed by the Panama Canal Company for a sale of its property and franchises is so unreasonable that its acceptance can not be recommended by this Commission.

Now, in the report of the Commission the price fixed as the purchase price of the Panama Canal property is $109,000,000 for that part of it built for the route. Using the Panama Canal as a basis for building the proposed canal, we find a difference of $63,000,000. It is rumored that the Panama Canal can be purchased for the sum of $40,000,000. If that be true, and we subtract forty millions from the one hundred and nine millions, we would have a fiscal aspect in favor of the Panama Canal. Now, as the Commission have given the price as a reason, in the concluding paragraph of the report, why they declare the Nicaraguan as the most feasible route, I desire the gentleman to answer the question, whether, in his opinion, if the fiscal propositions had been equal, and if we could obtain the Panama Canal as at present constructed, the Commission would have reported in favor of that canal?

The CHAIRMAN. The time of the gentleman from Iowa has expired.

Mr. PAYNE. Mr. Chairman, I ask that the gentleman's time may be extended until he concludes his remarks.

There was no objection.

Mr. HEPBURN. If the gentleman from New Jersey had absorbed the report of the Commission he would have learned that they did not base their conclusion upon the condition that he has recited, although it is only one reason for that part of the report. He would have found that they have stated the respective advantages of each route. It says that each has advantages over the other, and they did not express any opinion as to where the greater majority of advantage lies.

They have contented themselves with the one question of cost. I can not say what the Commission might have done under other circumstances; but I believe that I can say that every gentleman who absorbs that report, and who understands it, will come to the conclusion to favor that canal which is 400 miles nearer this country, that brings New Orleans 560 miles nearer to San Francisco than this other, that brings New York 375 miles nearer to San Francisco than this other—that that would be the better one for us to construct. [Loud applause.]

Mr. MCDERMOTT. If the difference in cost could be eliminated, would it not be better for those who have to pass upon this question to have full knowledge of all the particulars about it? There is not the slightest doubt that nearly every man in both branches of the national legislature is in favor of a canal, and there is also very little doubt that there are not ten members in either branch who can give you the slightest idea as to which is the best route—whether one is better than the other. The Commission has reported, and it has reported against one on the question of cost. Now, I should like to have an opinion as to their views, if the question of the additional expense were eliminated.

Mr. HEPBURN. The query of the gentleman involves so much of speculative philosophy that I submit it for answer to himself.

Mr. KEHOE. I would like to ask the gentleman from Iowa if the committee which prepared this bill had any special reason for using the word "control," rather than the word "ownership?"

Mr. HEPBURN. We thought that control included everything we wanted. [Laughter.]

Mr. SIMS. I would like to ask the gentleman a question which is pertinent in this connection—if they have made any investigation as to the fact whether if the Nicaragua Canal should be constructed the Panama Canal will also be built, and that we will have a competing line to the detriment of the canal built by us?

Mr. HEPBURN. Well, I will say that there will be the same probability of the Panama Canal Company completing their canal then that there is of the French Government building its capitol on the Mall below us here. [Laughter.]

Mr. GILBERT rose.

Mr. HEPBURN. They have had their opportunity, if the gentleman will permit me, for eight years to secure capital to carry on this enterprise. They have utterly failed. After having expended $246,000,000, they have accomplished less than one-fourth of the work, this money having been raised from 200,000 citizens of France. This great proportion of their people having been robbed in this manner, there is no reasonable probability of their ever being able to raise the money. They have time and again, or at least two or three times, asked for an extension of their rights because of the impossibility in the past of raising money. The whole scheme is discredited in France. It is not credited except in the United States.

Mr. SIMS. I do not understand it to be a French Government enterprise.

Mr. HEPBURN. It is not a Government enterprise.

Mr. SIMS. I will ask further if it is not more likely that the canal will be completed by France, or the people of France, or by some other country, if we build the Nicaragua Canal, than it would be that the Nicaragua Canal should be built if we should buy and construct the other one?

Mr. HEPBURN. That is a matter I can not tell anything about. I think, though, there is the same probability of two canals across the Isthmus that there is of having the Suez Canal paralleled by another.

Mr. SIMS. In other words, the gentleman thinks there is no probability of more than one canal.

Mr. HEPBURN. Yes.

Mr. GILBERT. Mr. Speaker, the gentleman from Iowa has been so amiable in answering questions that I desire to ask him two. The gentleman said in the outset that the power of taxation was an attribute of sovereignty. Now, in reading this report of the Walker Commission on page 173, they say that it is not desirable or advantageous for the United States to obtain the right of sovereignty; that that ought to be retained by the Governments of Nicaragua and Costa Rica. If that be true, why is it not true that by the retention of the sovereignty they would exercise the right of taxation?

Mr. HEPBURN. They have a constitutional provision in both of those States that prohibits the alienation of "jurisdiction" over any part of their sovereignty. They are sticklers for observing that, as I am told, while they are entirely willing to give us complete and absolute "control" in the form of a perpetual lease.

Mr. GILBERT. And they will not have the power to tax?

Mr. HEPBURN. I understand not. I am told by the Secretary of State that arrangements have so far progressed that he is able to state with great confidence that we shall be able to get that portion of the territory we desire with the title we desire, and for a sum that will be entirely satisfactory to the United States.

Mr. GILBERT. Now, one other question. On page 180 of this report there is a résumé of the different treaties existing between Nicaragua and sundry other governments. And here is an epitome of these treaties:

These points of agreement indicate a well-defined policy with reference to this subject, which is acceptable to the nations and people of the world that have manifested an interest in an interoceanic communication.

4. Military force to be supplied by Nicaragua when needed for the security

and protection of the canal and auxiliary works, the officers and workmen engaged in its construction and operation, and the vessels passing through it, with their officers, crews, passengers, and cargoes.

Now, it seems that in all these treaties made by Nicaragua with England and other countries, that Nicaragua has uniformly retained the right to exercise control over that territory. Does the gentleman from Iowa understand by the terms of this bill that we will have the right, notwithstanding these treaties, to protect the canal by a military force?

Mr. HEPBURN. I take the view of the Commission who have been instructed to investigate this subject. They say in that report—and the gentleman has undoubtedly read it—that there is no treaty, no obligation on the part of either of these Governments which will prevent them from giving us the rights that we desire.

Now, I have not examined this vast number of treaties and concessions, although some of them I have. I know that some years ago Nicaragua alone had granted 21 concessions to different companies or different people for the construction of this waterway. It used to be sort of an industry down there to sell a concession, and there was thus a great number of them. I know that there have been numerous treaties, but the Commission say, at the date of that report, that there was no international obligation upon the part of either of these countries that prevented them from giving us all the rights we desire.

Mr. FINLEY and Mr. REEVES rose.

The CHAIRMAN. Does the gentleman from Iowa yield to the gentleman from South Carolina?

Mr. HEPBURN. Yes; after I have yielded to the gentleman from Illinois.

The CHAIRMAN. The gentleman from South Carolina rose first.

Mr. HEPBURN. Very well; I did not notice him. I will be glad to answer any question that he may ask, if I can do so.

Mr. FINLEY. The bill fixes the Nicaragua route as the one to be constructed under the control of the President of the United States. Now, in view of the fact that the commissioners reported that the only objection to the Panama route is of the cost, if the Panama route can be secured cheaper than the amount proposed at the time the Commission made the report, what would be the objection in providing in the bill an alternative route, the Nicaragua or the Panama, and leave the selection to persons to be provided for in the bill or to the President of the United States?

Mr. HEPBURN. I do not agree with the gentleman from South Carolina in his conclusion with regard to the report of the Commission. I think, if he reads the entire report, he will find that they do not base their recommendation solely on the question of comparative cost. But passing that, I believe so supremely in the superiority of the route that is nearest to us that I want to labor, if I can, to carry out the views of the committee that I represent [applause]; and I look upon any attempt to entangle us in any way with the Panama Canal as simply another effort in the direction of delay. [Applause.]

Mr. FINLEY. As matters now stand, I believe the United States have no treaties with Nicaragua and Costa Rica providing for the building of this canal. Any treaties which may be made with those countries for the acquirement of the right of way must yet be accomplished. Now, why not leave the matter of securing the right of way, the best right of way, with the President, as you propose to do the building of the canal?

Mr. HEPBURN. That is simply a question of opinion.

Mr. FINLEY. We have no right of way secured now?

Mr. HEPBURN. We have to negotiate for it. But we do know this: That steps have been taken, are now being taken, and are about completed that will give us all the right we desire. There can be no question about it. This canal to the people of Nicaragua, situated, as they are, with this great lake in the very heart of their country, the making of it available by this enterprise, is to them what our entire interior system of transportation is to the people of the United States. They have the same anxiety to have these barriers in the San Juan River removed that the people living upon that great inland sea, the Mediterranean, would have if there were a blockade at the Straits of Gibraltar; they would want it removed. The people of Nicaragua want these barriers on the San Juan River removed. They recognize, after seventy-five years of experiment, that there is no way of securing their removal save through the instrumentality of the United States. We have a right, therefore, to expect—we do expect—that whatever we desire in this direction will be given to us; that we shall pay only fair prices for the territory that we actually receive. It is inconceivable that the case should be otherwise. There is nothing in all the negotiations, nothing in all the history of this enterprise and the negotiations between the two nations to induce any gentleman to say that the scheme of consent is not practicable.

Mr. REEVES. The gentleman has practically answered what I wanted to ask him. Will he allow a further inquiry? In view of the fact that negotiations are now pending—in view of the fact that a treaty (if you please to call it such) is in process of making, to give us the right of way through Nicaragua and Costa Rica, I wish to ask—and at the same time I assure the gentleman from Iowa that I am with him on this general proposition of a canal, perhaps this canal—still would it not be prudent on the part of Congress to wait a week or a month, if need be, until the Secretary of State has concluded the necessary negotiations and informed us what they are and what it will cost us if they are carried out? Would it not be best that we should in that way act intelligently, instead of proceeding upon mere supposition? Would violence be done to the interests of this country if we should wait a little while until that is accomplished?

Mr. HEPBURN. Mr. Chairman, there never has been a day, there never will be a day, when a proposition of this magnitude is being considered by this House when some gentleman will not be able to give some reason for postponement—for delay. We have been suffering from such things for years, and now I think the time has come for action, especially in view of the information that perhaps I can give to the gentleman, that I am assured by those who know that this protocol has already reached such a stage as to make it certain that we shall get what we want. [Applause.]

Mr. REEVES. Is it not true that instead of the arrangement being consummated numerous conditions of it have been rejected by our Secretary of State and the matter sent back?

Mr. HEPBURN. Yes, sir; with regard to inconsiderable matters. But the great matter of transfer, the great matter of control, the great matter of cost, the great matter of policing, and of all of that; the establishing of courts and all of that—those matters have been arranged; and it is only the inconsiderable things—the annoying things, as it was expressed to me—that are involved in the matters sent back.

Mr. REEVES. Will the gentleman pardon me—one more question? He has just said that among the things that have been completed is included the question of cost?

Mr. HEPBURN. Yes, sir.

Mr. REEVES. Would the gentleman violate any confidence if he should tell us what the cost is to be?

Mr. HEPBURN. My recollection is that there are two items—$5,000,000 and $1,000,000.

Mr. DOUGLAS. Mr. Chairman, I should like to ask the gentleman from Iowa whether, with the greater distance through the Nicaragua Canal and with eight locks in place of four, as provided by the Panama route, the cost to steamers and sailers would not be much larger and whether the time in transit would not be much greater; if the cost of maintaining the Nicaragua route would not be much more costly than Panama? I would like to ask the gentleman this question: While the proposition is that we shall build this canal for the benefit of American commerce, is it not the fact, in view of the very few ships we have to go through that canal at present, that it would be a dead failure if we endeavored to restrict the use of the canal to American commerce and ships only? Therefore is it not absolutely essential that we should throw the canal open to the world, so that we may get a revenue from it; and if we do not throw it open to the world would not other nations at once take up the Panama Canal and complete it?

If these considerations are good, and if France has now come to a point where she is willing to sell her rights for reasonable compensation, would it not be well for us to give the most careful consideration to the question of buying the Panama Canal, which, in all probability, if built would serve our purpose better than building the Nicaragua Canal with a possibility of a competing canal? Is it not undoubtedly the fact that if we should endeavor to carry out our project of constructing the Nicaragua Canal and thereby benefiting American commerce, which I am in favor of, we might meet opposition, as France will still try to raise funds and complete her enterprise, while if we should take hold of and finish the Panama Canal, I think it very doubtful whether we shall have any competition for many years? I am aware that I am putting a series of questions.

Mr. HEPBURN. Now, which one of his seventeen questions does the gentleman desire me to answer? [Laughter.]

Mr. DOUGLAS. There are only two, not seventeen. In the first place, as to the cost. I claim it would be the heaviest——

Mr. HEPBURN. If you are asking me a question, it is not important what you claim, for the purposes of the colloquy.

Mr. DOUGLAS. It is important to the country, even if it is not to me, if you will excuse me.

Mr. HEPBURN. It is not important to the colloquy.

Mr. DOUGLAS. I consider it is of vast importance also to know how much more it is going to cost, and how much longer it is going to take to get vessels through by the Nicaragua route, and the extra cost of towage, etc., than by the Panama route.

Mr. HEPBURN. Well, the probabilities are that the Nicaragua Canal can be built in less time than the Panama. The cost of maintenance and operation of the Nicaragua Canal would be $3,300,000 per annum, as estimated, and of the Panama Canal Company $2,000,000. As I stated in my opening, there is that much in favor of the Panama Canal.

Mr. DOUGLAS. What is the difference in the time of transit through the Panama Canal and the Nicaragua Canal?

Mr. HEPBURN. The time of transit is twelve hours by the Panama and thirty-three hours by the Nicaragua.

Mr. DOUGLAS. Not more than that?

Mr. HEPBURN. Thirty hours by the Nicaragua, for a 4,000-ton ship.

Mr. MORRIS. Will the gentleman from Iowa permit a question?

Mr. HEPBURN. Certainly.

Mr. MORRIS. Would there be any objection to so amending this bill as to give to the President of the United States the alternative power to construct the canal along the line of the Panama route, provided the rights of the Panama Canal Company, free and clear of all incumbrance, could be obtained for $40,000,000, and provided further that we could get equally favorable concessions from the Government of the United States of Colombia—I believe that is the proper title——

Mr. HEPBURN. I think it is—to-day. [Laughter.]

Mr. MORRIS (continuing). As from Nicaragua and Costa Rica? Would there be any objection to so amending this bill that, provided those things could be done, the President could leave the matter to the Isthmian Canal Commission to say on which route this canal should be constructed, and be guided by their advice?

Mr. HEPBURN. To my mind there would be objection. I am in favor of our determining this matter. It has been under consideration for a long time. This bill is the product of the best inquiry that the committee having charge of it could make. I do not want any commission to have the power to determine this question. I believe that the Nicaragua Canal route is the better one; and yet here is a foreign corporation with a stake, they say of $109,000,000, our Commission say of $40,000,000. They are playing for that stake. They have everything to gain and nothing to lose. If they gain the half of it they are $20,000,000 ahead.

Mr. MORRIS. But the gentleman seems to have misunderstood my question.

Mr. HEPBURN. No, I do not think I misunderstood you.

Mr. MORRIS. I said, if these rights could be acquired——

Mr. HEPBURN. I understood just what the gentleman said. He has not understood me.

Mr. MORRIS. They can not make anything, if they get what the Commission says is the value of their property.

Mr. WILLIAMS of Mississippi. Would they not make whatever they get? Would they not make whatever we should give them?

Mr. MORRIS. Possibly that is true.

Mr. WILLIAMS of Mississippi. Yes.

Mr. HEPBURN. Then I should like to know—so many of these hypothetical inquiries have been made—I should like to know what the gentleman bases his hypothesis upon.

Mr. MORRIS. I base it upon the statement made here at the end of this report. They seem to have based their report——

Mr. HEPBURN. No; I beg your pardon; you can not base it upon that. There is something which has occurred since then. What is it you base your inquiry upon?

Mr. MORRIS. What does the gentleman mean by that?

Mr. HEPBURN. Is it on this rumor that we can now secure it for $40,000,000?

Mr. MORRIS. Yes; on that, connected with this report.

Mr. HEPBURN. What assurance have you, what assurance has any man, what assurance can be given, that ought to influence legislation like this, that any proposition of that kind has ever been made; that there is any party that can make it; that there is anything that they can sell? You must remember that there are four parties interested in this property. There is the new Panama Canal Company; there is the old Panama Canal Company with reserved rights; there is the liquidator of the court, in whose hands the whole thing is now; there is the Government of Colombia. Now, in view of that, here comes a rumor across the sea; an alleged or a real cablegram. We are told—I have been told—the Secretary of State told me that Admiral Walker told him that Mr. Bovee told him that he had received a cablegram from somebody in Europe stating that the Panama Canal Company was ready to sell us its property at $40,000,000.

Now, that is what you have got, and upon that you propose to delay legislation in a body like this.

Mr. MORRIS. There is no intention of delay. I wanted an answer from the gentleman from Iowa to the two questions which I have asked on the amendment which I suggest as a simple matter of inquiry. There is no need of excitement about the matter.

Mr. HEPBURN. I am not excited; are you?

Mr. MORRIS. I am asking for information. This report comes to us now.

Mr. HEPBURN. It is not worthy of the dignity of being called a report.

Mr. MORRIS. There is no desire for delay. The chairman of the committee stated that it would take two years to get these harbors constructed and this railroad constructed before the work upon that canal could be done.

Mr. HEPBURN. Yes, sir.

Mr. MORRIS. Now, the harbors are already there on the other route.

Mr. HEPBURN. One of them is there. Do not use the word "harbors," because there is a harbor on one side and on the other side it is simply a roadstead.

Mr. MORRIS. It is a place for vessels to discharge their cargoes.

Mr. HEPBURN. They have to go to sea when there is a storm.

Mr. MORRIS. It is already there for use. Now, I would not delay this project one minute, and I say to the gentleman that I will vote for no proposition that will delay it for a moment. But would there be any delay in allowing the President to institute negotiations and see whether these things can be accomplished or not, and letting him have power enough to select either route?

Mr. HEPBURN. Now I want to ask the gentleman a question. Would it not be better for us to go on and start this matter?

Mr. MORRIS. Decidedly.

Mr. HEPBURN. And if a proposition comes, tangible in its character, valuable in its essence, then during these two years there is ample time for that corrective legislation that the gentleman thinks ought to be initiated. [Loud applause.]

Mr. MORRIS. Possibly so; but in the meantime we could be making progress.

Mr. HEPBURN. In the meantime we are making progress now. We can not make any progress until a bill passes. And I confess that I do not want to have this great enterprise tarnished, tainted, by any connection with the discredited scheme of the Panama Canal. I do not want that kind of a heritage.

Mr. McCLEARY. Will the gentleman permit me to ask him a question?

Mr. HEPBURN. Certainly.

Mr. McCLEARY. I want to ask the gentleman two questions. First, assuming the canal to have been constructed, what protection is provided against a man with a 10-dollar stick of dynamite who may determine to blow up one of these locks?

Mr. HEPBURN. None in the world.

Mr. McCLEARY. And, second, what protection is there against a convulsion of nature, such as an earthquake?

Mr. HEPBURN. None in the world.

Mr. WILLIAMS of Mississippi. I would ask the gentleman, in speaking about dynamite, would there be any protection against damage in either project?

Mr. HEPBURN. I do not think there would. The gentleman may know, the same as I know——

Mr. McCLEARY. I asked the questions as affecting the merit of the whole proposition.

Mr. HEPBURN. There is a possibility of a stick of dynamite destroying one of these locks. There is a possibility of destroying the Conchuda Dam. There is no question about that; and there is a possibility of the assassination of the President of the United States.

Mr. MERCER. I want to ask the gentleman a question. Have the parties representing the so-called Panama interests ever appeared before the committee of which the gentleman is chairman and made any proposition looking toward a concession?

Mr. HEPBURN. I want to say that the only time I recall of them ever appearing before our committee was some four years ago. They extolled their route; they told us of what they were going to do. Their effort was to secure delay on our part—that we should not go on and interfere. It interfered with their purposes. I tried to find out what there was behind this management; what there was of capital——

Mr. GILBERT. Would you attach any weight at all——

Mr. HEPBURN. Let me answer this question. I tried to find out what some two or three members of the committee had attempted by some pointed questions. I said to one of the attorneys, who was the spokesman, I would be glad to know what they had in the way of revenues and resources. He fenced about it a little while and I repeated it again, possibly a third time, and then he said as they were not here asking any favors of the United States they would be excused, they thought, from opening up their private affairs to the prying eye of the inquisitor. And I quit at that. [Laughter.]

Mr. GILBERT. France was once a great friend of ours when we needed a friend.

Mr. HEPBURN. When?

Mr. GILBERT. A long time ago.

Mr. HEPBURN. No; she was a great friend of herself and wanted us as an ally.

Mr. GILBERT. Other things being equal, would not you attach some importance to the fact that some estrangement might result from our refusing to entertain the French proposition?

Mr. HEPBURN. Oh, I wish the gentleman would not point his jokes at me. [Laughter.]

Mr. GILBERT. No, Mr. Chairman, really, if other things were equal, would not the gentleman from Iowa prefer the Panama route on account of the friendly relations with France?

Mr. HEPBURN. No, sir; I have a more kindly feeling for the Nicaragua people than I have for France. I remember not very long ago when the French people took advantage of us. I remember when they invaded a neighboring State, notwithstanding our declaration that it must not be; they took advantage of our straits. I am glad to know that in the sequel they dodged out when Phil Sheridan, with 100,000 men, reached the Mexican border.

Mr. GILBERT. Well, England was a party to that transaction, and furnished money and supplies both.

Mr. HEPBURN. Yes; but England repented early and got out of her own accord, while France did not get out until she was kicked out. [Laughter.]

Mr. REEVES. I would like to ask the gentleman one more question. If this great big rumor that you have stated as being cabled across the ocean that we could get the Panama property for $40,000,000 were known to be true instead of a rumor, does the gentleman from Iowa think he has made such investigation that he is able to say whether it would be worthy of sufficient delay and time for consideration or not? I mean to say if the rumor were true.

Mr. HEPBURN. If it were true that that proposition had been made, I would then deal with the State of Colombia. Colombia, then, is the owner of this property, if it is true that this offer has been authoritatively made.

Mr. REEVES. The gentleman means, upon the basis of the treaty rights, that they have been forfeited by the attempt of the company to sell out?

Mr. HEPBURN. Yes.

Mr. REEVES. It is hardly likely that they would jeopardize their property in that way.

Mr. HEPBURN. Isn't it? Is it not more probable that Colombia would prefer to have the $40,000,000 property in addition to the franchise to sell to us? Does not the gentleman believe that if she can effect that forfeiture she will do it?

Mr. REEVES. Yes; but I do not believe that the other fellows are so senseless as to put themselves in that position.

Mr. HEPBURN. Why? They recognize that the jig is up now. [Laughter.]

Mr. REEVES. Well, the gentleman makes that statement, but I do not know of any information upon which it is authorized. Without wishing to be offensive in any degree, I want to say to the gentleman that I do not believe that any exists.

Mr. HEPBURN. Of course that is not offensive to me. [Laughter.] I am under bonds not to take offense to-day. [Laughter.]

Mr. REEVES. I hope the gentleman will not break the bond. [Laughter.]

Mr. HEPBURN. I would like to ask the gentleman from Illinois a question, if he please.

Mr. REEVES. Certainly.

Mr. HEPBURN. Does the gentleman know of any authority or of any concession given by the Colombian Government to the new Panama Canal Company to sell or to offer to sell their franchise and their property?

Mr. REEVES. I do not know of any such arrangement. I doubt if any exists. But going further I will say that I do not believe that the Panama Canal Company has forfeited what rights they have by offering to sell, if any offer has been made, any provision of any treaty to the contrary notwithstanding, because they would not do it, as a matter of course.

Mr. HEPBURN. I do not know what they would do or would not do. I know that the Commission has said that they are prohibited in express terms from the sale of the canal property, and they are prohibited in the case of the railroad property from even an offer to sell, and either one or the other will work a forfeiture of the franchise and all the property there in Colombia.

Mr. REEVES. Will you allow me now?

Mr. HEPBURN. Certainly.

Mr. REEVES. It certainly would not be a violation of the agreement if they were to say, We will take so much on condition that we can have the consent of the Colombian Government. So I say again, giving them ordinary intelligence, I do not believe they have deliberately forfeited all their property rights.

Mr. HEPBURN. I think the gentleman is wrong for this reason: Undoubtedly they have been striving to secure a release from that obligation. If the gentleman had read this report and the correspondence accompanying it he would have found that the Colombian minister has stated that the Colombian Government would be willing under certain conditions that they should make this offer to the United States. So that there has been no negotiation, and so far as I can learn the Colombian Government has never yet given its consent. If this is an offer, in my judgment, with due respect to the superior opinion of the gentleman, I think it must work a forfeiture. Just why they should take that action I do not know, but it may be that, realizing that the construction of the Nicaraguan Canal would destroy the possibility of ever utilizing that capital which is buried in the soil of Colombia, they may have adopted this as the last resort, hoping through the joint influence of the United States and France to coerce Colombia into some recognition of their action.

I think that for another reason. I want to call the gentleman's attention to the time when this proposition came. Mind you, for nearly two years the Commission, under the leadership of Admiral Walker, has been striving to get from the Panama Canal Company a definite statement of what they would take—what they would do in this matter. They have haggled. Read the correspondence. To my mind it is not reputable on the side of the Panama Company. It shows from first to last an effort to get an advantage—a disposition to "jockey." On our side there has been an utter failure to secure any other response than that they valued their property at $109,000,000. Then on a day just before the adjournment of Congress for the holidays the House determined to take up this matter. For the first time in two years it looked as if something was to be done. And what is the result? Three days afterwards we are told by cable that there has been a meeting of 250 of the stockholders—whether of the Panama Canal Company or of the New Panama Canal Company I do not know—that a meeting was held; that the old president and engineer were deposed, or that they resigned, new ones taking their places, and it was announced that this offer of $40,000,000 had been made.

The whole circumstance is, to my mind, full of suspicion that the transaction is not being conducted in good faith. It comes at a most inopportune time. After long deliberation and many consultations and board meetings and stockholders' meetings, nothing less than $109,000,000 would suffice. But all at once when we began to act, when there was a probability of something being done, then this apple of discord was thrown into our midst.

Mr. WILLIAMS of Mississippi. Will the gentleman allow me a question?

Mr. HEPBURN. Certainly.

Mr. WILLIAMS of Mississippi. I agree with the gentleman that this proposition is simply a proposition to delay the game. But in connection with the question asked by the gentleman from Illinois, I wish to ask the gentleman from Iowa whether this Panama concern is not to-day virtually bankrupt or insolvent?

Mr. HEPBURN. The new Panama Canal Company, as I am informed, has never had but $13,000,000. They have been operating since 1894 on that $13,000,000. How much of it has been expended I do not know, but I know that this report says there have been 5,000,000 yards of excavation done by them since 1894.

Mr. WILLIAMS of Mississippi. Now, to follow that question up in answer to the suggestion of the gentleman. Suppose that this concern could get from us $40,000,000, could they not declare a dividend to their stockholders so much higher than any dividend they have hoped for lately or do now hope for that they would not care a cent whether the Government of Colombia forfeited the charter or not?

Mr. HEPBURN. If they could get the money, I think that would suffice them.

Mr. CANNON. I should be glad to ask the gentleman a question. This bill, if it passes, will locate the canal, as I understand, in what is now territory of Nicaragua and Costa Rica?

Mr. HEPBURN. It locates the canal in territory belonging to Nicaragua, but some of the overflow of the river would be over lands belonging to Costa Rica.

Mr. CANNON. Now, as I understand, there is as yet no concession from either Nicaragua or Costa Rica of the land upon which to place this canal.

Mr. HEPBURN. I think that is correct.

Mr. CANNON. If I understood the gentleman aright, he said, in answer to another question, that in conversation with the Secretary of State he had learned that, in his opinion, the most material matters had been agreed upon and were ready to be placed in a proposed protocol, but that the question of price was not agreed upon.

Mr. HEPBURN. No; I said that was included among the important matters that had been agreed upon.

Mr. CANNON. Well, now, what is the price—$5,000,000?

Mr. HEPBURN. Five million dollars and $1,000,000. I think there are two sums.

Mr. CANNON. Six million dollars, then. Now, let me say to the gentleman that I have not talked with the Secretary of State, but from the gentleman's talk with that officer I understand that this matter is as yet all "up in the air;" that no protocol has been reduced to writing; that no treaty making these concessions has been agreed upon. I have been told by a gentleman, who ordinarily is a knowing man, that according to his understanding Nicaragua asked the sum of $25,000,000.

Mr. HEPBURN. Twenty million dollars originally; then $16,000,000, $12,000,000, $10,000,000, $8,000,000, and finally $6,000,000.

Mr. CANNON. The matter is not as yet closed?

Mr. HEPBURN. The Secretary thinks that practically it is.

Mr. CANNON. Then why not come to Congress with that information? Why not transmit it by message?

Mr. HEPBURN. Simply because the protocol, as I understand, was sent here with some conditions—not of great consequence—which the Secretary disapproved, and therefore he sent the paper back with his disapproval. But all the essentials, all the important matters, were, as we understand, agreed upon.

Mr. CANNON. Well, does that agreement bind our Government? Suppose it were reduced to black and white?

Mr. HEPBURN. That in itself means simply this, that they will go into treaty relations with us on lines indicated in the protocol.

Mr. CANNON. Does that bind the Congress of Nicaragua.

Mr. HEPBURN. No; I imagine that it does not bind it any more than the preliminaries of a treaty would bind us.

Mr. CANNON. Then it is on both sides as yet in the air. Now, as a business proposition, does the gentleman consider it good policy, with these differences as yet unadjusted, even by a protocol, that the Congress of the United States, the House moving first, should absolutely, without limitation as to cost, commit the Government of the United States to this route?

Mr. HEPBURN. I have no thought that this Government will be bound by any unfair, improper, exorbitant proposition; but I remember that even if this legislation occurs, it is not of that imperious, immovable, binding influence that the gentleman thinks it is. I have known legislative enactments to be repealed. I have known them to be modified; and I think that if any such condition should arise as he thinks may arise, that the House of Representatives will be quick to act in undoing and taking away a power that was being misused.

Mr. CANNON. Does not the gentleman——

Mr. HEPBURN. And I think, if the gentleman will allow me to go on——

Mr. CANNON. Certainly.

Mr. HEPBURN. As I believe that there never will be a day when something will not be in the way; as there never will be a time that will be just the opportune time, when everything will converge so that everyone will say that now and now only is the proper time to act; as I never hope for that condition with regard to any legislation, I think we must take our chances; and it is better to do something, even if we undo it afterwards. [Applause.]

Mr. CANNON. If the gentleman will allow me——

Mr. HEPBURN. Certainly.

Mr. CANNON. This bill not only locates the route as I have indicated, but makes the appropriation. Now, is it not perfectly patent that, although this bill might be enacted into law to-day, there could not be one spadeful of dirt thrown until this concession is obtained by treaty and ratified both by Nicaragua and the United States? And do we lose anything by postponing this matter for thirty days, with a six months' session in front of us, or by postponing it sixty days, and letting these negotiations proceed in an orderly, businesslike manner?

Mr. HEPBURN. Mr. Chairman, I think this is a matter of delay. Without accusing any gentleman of bad faith, without saying anything discourteous, I think it is an attempt to get a better legislative hold in favor of some theory. I remember that we have been subject to this class of delay in the past. Here was this proposition before the Interstate and Foreign Commerce Committee. That committee made a report. Another committee of this House that had never been charged with jurisdiction over it, that had never given it consideration, introduced a proposition on an appropriation bill, in defiance of the rules of the House, perhaps, making an appropriation and raising a Commission further to investigate. It was said that we wanted more time, that we must have delay. That was the argument, and so we had the delay. Other gentlemen, timid gentlemen, said, "We will not act while this Commission is considering its report."

That Commission made its report. It affirmed the benefits of this route. It approved it heartily; but on an appropriation bill, by another committee than that which had jurisdiction, a second time an appropriation of thousands of dollars was made for still further investigation, still further delay, more time. Gentlemen said, "We must not act upon this great measure while that report is being formulated."

Not content with that, two years later still another committee of this House, without jurisdiction of this matter, usurped it for the time being, introduced a provision upon one of the great bills of the House authorizing the expenditure of a million dollars in establishing and creating another Commission, and at once it was argued, "We must not act now. Let us have this report. Let us see what these commissioners say."

Now we have their report. We have removed all of these difficulties out of the way, and I beseech the House not to be beguiled into further delays in the beginning of this great work. [Applause.]

The Isthmian Canal.

SPEECH

OF

HON. STEPHEN M. SPARKMAN,

OF FLORIDA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, January 9, 1902.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 3110) to provide for the construction of a canal connecting the waters of the Atlantic and Pacific oceans—

Mr. SPARKMAN said:

Mr. CHAIRMAN: Having given my views fully on the question of an isthmian canal, its importance, and our duty in relation thereto, a little less than two years ago, when a similar measure was before this body, I did not intend to trouble the House with any remarks on the pending bill, and I would not do so now but for the fact that a difference of opinion has arisen since the discussion began as to which is the better route for such a canal, the Nicaragua or the Panama. The interests I represent on this floor, as well as the wishes of the people whose commission I hold, require that I should not be silent when these interests are threatened, as I think they would be if the views of many of those who have spoken on the bill should prevail.

That a canal crossing the Central American isthmus and connecting the Atlantic and Pacific oceans should be constructed all are agreed, or appear to be agreed, but divergent and conflicting views exist as to the choice of a route, even among those who wish the canal constructed, some preferring the Panama, others, and a majority, I hope and believe, the Nicaragua route. The views of the latter are embodied in the Hepburn bill, while those of the former find expression in one or more of the amendments offered, but especially in that presented by the gentleman from Minnesota [Mr. MORRIS].

I shall vote, Mr. Chairman, against all of these amendments, at least those which up to the present time have been proposed to the pending bill, and finally in favor of that measure, for several reasons.

In the first place, this bill provides for the building of a canal many hundreds of miles nearer the United States than would be one built on the Panama route. The Isthmian Canal Commission tells us, and a glance at the map will confirm its statement, that the Nicaragua route is shorter by at least one day between our Atlantic coast and Pacific ports, and between our Atlantic coast and the Orient, while between the Gulf ports—such as Key West, Tampa, Pensacola, Mobile, New Orleans, and Galveston—the route is shorter to the same ports on the Pacific and to the East by about two days.

Now, while we do have in mind the great advantages that will accrue to the world by reason of the construction of this waterway, yet the consideration which moves us mainly is the advantages that will come to our own country and her people. But for them the canal would not be constructed; but for them we would not for one moment entertain the proposition to build any transisthmian canal, entailing, as it will, an expenditure of nearly $200,000,000, to say nothing of the cost of the military and naval preparations necessary for its protection and control. That being true, I am unalterably in favor of that route which brings our own possessions and the different sections of our own country so much nearer together.

Consider for a moment what this means in the matter of time saving—about 800 miles in distance and two days in time the round trip in the one case and more than 1,200 miles and four days in the other. If, then, a vessel should make one trip per month during the year, she would save by the Nicaraguan route from 10,000 to 15,000 miles in distance, or from twelve to twenty-four days in time, for each vessel, according as she went from the Atlantic or Gulf ports to the Pacific coast or our insular possessions in the East. Multiply, then, these figures by hundreds and thousands and you have the grand total in time and distance thus saved by adopting the one route instead of the other.

Let us figure a little, using the Suez Canal as a basis. The number of vessels of all nations and sailing from all countries which went through this canal for the four years between 1895 up to and including 1899 was 16,939, with a tonnage of 44,042,274. If one-fifth that number of vessels should use the Isthmian Canal from the United States, and should be equally divided between those plying between the Gulf and Pacific and our Atlantic and Pacific ports, we would have 1,693 to each class, a large majority of which would be steam vessels of an average, perhaps, of 2,500 tons burden. Such vessels would burn from 40 to 50 tons of coal per day; so that, saying nothing of the time saved by using the Nicaraguan route, the saving in fuel alone would likely amount to much more than $1,300,000, the difference in the cost of the maintenance of the Nicaragua Canal over that of the Panama route.

This estimate is somewhat of a guess, to be sure, but is rather under than over what will likely prove to be the exact figures for the first four years of the operation of the canal.

But, Mr. Chairman, we are not building for the moment, but for all time; not for a year, but for the centuries; not for the commerce of to-day, but for all the future, with its vast, its boundless possibilities, and we should adopt that route which will save the most to our commerce; that will place the lightest burden upon American enterprise and industry.

Then, too, the time may and doubtless will come, when, under a wiser policy and more liberal laws, the restrictions now thrown around American shipbuilding and ship owning being removed, our merchant marine shall revive and our commerce once again be carried on in American bottoms and under the American flag, so that not only will the shipper be benefitted by the adoption of the route nearest our shores, but the American shipowner as well.

This is an age of the greatest commercial activity the world has ever witnessed. Railroads spanning continents and crossing national boundaries are being built and mighty and swift steamships constructed by private enterprise, while rivers and harbors are being deepened and their navigation improved by the governmental hand, and all at the behest of the restless enterprise of man and the ever-increasing commercial and business activities of the nineteenth and twentieth centuries. Larger and more powerful locomotives are being evolved and swifter steamships builded in order that freight and passengers may be transported quickly and rapidly across hill and mountain and plain and over ocean and sea and river to meet the wants of man, whether at home or abroad. Time is money, and its economy is the great desideratum in the transportation of the world's commodities from place to place. To that end the inventive genius of man is being taxed as never before, and nobly is it responding to the demands made upon it.

This great enterprise—the building of the isthmian canal—one of the greatest ever undertaken by man, is the child of that same idea of timesaving and quicker transit, and every mile it is brought nearer to our own ports, our fields, mines, and factories, the greater the benefits to be derived by us from its construction. Then let it not be said that the American Congress, deliberating in this progressive age, and legislating primarily for American interests, did not have the wisdom to perceive or the statesmanship to act in accordance with the demands of the commercial and business interests of this great country. [Applause.]

It is feared by some that a canal constructed along the Nicaragua route may cost a little more than one built on the other. I for one do not believe this; I do not think it will cost as much by many millions of dollars, and I base my opinion upon the data gathered and furnished by the Isthmian Commission. Certainly I am correct in this view, if a tide-water canal is contemplated over the Panama route, for in that case it would cost, according to the report of the Commission, at least $100,000,000 more than a canal on the Nicaraguan route. But, Mr. Chairman, should the latter cost a hundred millions more than the former the Government of the United States can, in view of the benefits accruing to the American people, well afford the outlay.

Another reason for the preference I have for the Nicaraguan route is the fact that it passes through countries whose possibilities in the way of business and commerce between the United States and those sections are great. The countries of Nicaragua and Costa Rica are rich and productive, and with the stimulus which will be applied to these regions by American energy and enterprise their vast resources will be rapidly developed, commerce between our country and theirs greatly increased, and an additional market furnished for our own commodities. Not so according to the report furnished us by the Isthmian Commission on the business and industrial importance of the two routes. Hear what it says on that point:

A canal by the Panama route will be simply a means of communication between the two oceans. That route has been a highway of commerce for more than three hundred years, and a railroad has been in operation there for nearly fifty years, but this has effected industrial changes of but little consequence, and the natural features of the country through which the route passes are such that no considerable development is likely to occur as a result of the construction and operation of a canal.

In addition to its use as a means of communication between the two oceans, a canal by the Nicaragua route would bring Nicaragua and a large portion of Costa Rica and other Central American States into close and easy communication with the United States and with Europe. The intimate business relations that would be established with the people of the United States during the period of construction by the expenditure of vast sums of money in these States and the use of American products and manufactures would be likely to continue after the completion of the work, to the benefit of our manufacturing, agricultural, and other interests.

Furthermore, along the canal on either side we are to practically own and control a strip of land probably 10 miles wide. This would give us more than 1,000 miles on the Nicaraguan route, as against less than 400 miles on the Panama route. The former is susceptible of development; the latter barren and practically uninhabitable. When, therefore, our relations to this canal and contiguous territory for all time are considered it is worth much to us to construct this waterway where the land and country are susceptible of such development, rather than through the other, which is fit for little except to furnish a route for the canal.

But, sir, I have yet another reason among the many that might be given for the passage of this bill and the adoption of the Nicaragua route. I want to see the canal constructed without delay, and I know, as I think every one else knows who has given thought to this matter, that the adoption of any one of the amendments and the selection of the Panama route means indefinite and vexatious delay. I do not say, because I do not believe, that anyone on the floor of this House would be so un-American as to wish the defeat of this great work, but the inevitable result would be to postpone indefinitely even the commencement, to say nothing of its completion.

It has been stated here by the gentleman in charge of the bill that the negotiation of a treaty with the Government of Nicaragua has already progressed so far that all except minor details have been arranged, and that these will likely be concluded within a short while—probably a month or two—and the treaty be ratified by the Senate before the adjournment of Congress, so that the President can by midsummer begin the construction of the Nicaragua canal, if this bill is passed without amendment. But not so if any of these amendments prevail, and the President is compelled, as he will then be, to open negotiations with the new—perhaps also with the old—Panama Canal Company, as well as with the Colombian Government, all of which would likely require years to bring to completion, if all the substantial and necessary rights and privileges are to be acquired.

The amendment seemingly meeting with most favor by those opposed to the Nicaragua route is the Morris amendment. The proposition involved in this amendment is that the President is required (because the language will admit of no other construction) to ascertain if the Panama Canal and the property rights, privileges, and franchises of all the corporations or parties interested therein can be acquired by the United States, free and clear of all incumbrances, for a sum not exceeding $40,000,000, and in addition thereto equally desirable political and territorial rights and privileges as in the case of the Nicaragua route, and at no greater expense, within six months from the passage of this act. Then the President of the United States, if the Isthmian Canal Commission shall so recommend, is authorized to purchase the same and complete the construction of the Panama Canal, the sum of $50,000,000, or so much thereof as may be necessary, being appropriated for that purpose.

Now, let us look into the proposition for a moment and see what its possibilities are in the matter of delay. The President is given six months after the passage of the bill—about next May or June, if it should pass the Senate at all—in which to look around and ascertain what may be done with all the corporations and persons interested in the Panama Canal toward securing the property rights, privileges, and franchises of those parties therein, and to sound the Colombian Government to see if as good a bargain can be struck with that country as can be obtained from the Nicaraguan and Costa Rican Governments, for a route through those countries. Then if the Isthmian Canal Commission shall so recommend, the President is authorized to purchase the Panama Canal, together with all rights, privileges, franchises, and appurtenances, and complete the canal.

No time is fixed within which the President is to consult the Commission or in which the Commission is to make its recommendation. So far as this amendment is concerned, it may take a day or ten years, or the President may take an indefinite period in which to purchase after the recommendation is made. Then, again, who is to determine the character of the political and territorial rights and privileges to be obtained, or whether they are equal with those acquired or which may be acquired from Nicaragua? Certainly not the President alone.

Territorial and political rights and privileges to come from a sovereign state must be obtained by and through a treaty, if at all, and the Senate has equal voice with the President in such matters. Who can coerce, who can force the Senate to act within a given time, or to act at all?

Besides, the Isthmian Canal Commission may take the position—and a very reasonable one it would be—that the object of its creation having been performed, having examined into the merits of the two routes and given its final opinion to the effect that "the most practicable and feasible route for an isthmian canal, to be under the control, management, and ownership of the United States, is that known as the Nicaraguan route," it has no further power in the premises. That having placed Congress and the President in possession of all the information obtainable as to the merits of the two routes, Congress can judge as well as it as to what ought to be done, and refuse to volunteer any suggestions unless its powers are extended or the Commission given a new lease of life, for which no provision is made in the bill or in any of the proposed amendments.

If it should take this position, who can force it to act? Certainly not the President nor the Senate alone, and then the whole proposition will be held up, like Mahomet's coffin, between the heavens and the earth, until Congress should again take action.

Mr. Chairman, the Morris and all the other amendments mean delay and should be defeated. The same would likewise be true if the President were authorized in so many words to construct the Panama Canal instead of that by the Nicaragua route. We may not be able to acquire all the rights, franchises, and privileges from the Panama Company or the requisite territorial and political rights from the Colombian Government. No effort has as yet been made in that direction and no one knows what can be done. The Panama Canal Company is bound hand and foot to the Colombian Government and prohibited from selling or offering to sell the canal under penalty of forfeiture of its rights and privileges. So that we can do nothing until we first obtain from the United States of Colombia the right to build the canal, and years will be required to obtain all that will be necessary to take up the construction of the Panama Canal where the French have practically left it off.

So, Mr. Chairman, if we really want a canal and want it for the benefit of the American people, and desire it to be under our control and management, let us take that route which the Commission has said we should take. If we do not want such a canal, then either defeat this bill or, which is the same thing, sidetrack it with the Panama proposition. It will make no difference; the end will be the same—no canal.

When a similar bill to this was under discussion in the Fifty-sixth Congress, objection was then made to the Nicaragua route on account of the Clayton-Bulwer treaty. The objection being that under the provisions of that treaty we could not have that control of the canal the American interest demanded. I did not even then share those views or fears; but that bogy has passed away and a new treaty giving us all the power needed to build, own, control, and protect the canal has taken place of the Clayton-Bulwer treaty. Yet among those favoring the Panama route are those who believe, or seem to believe, that the recent treaty does not go far enough in the way of a surrender by Great Britain of the right to the United States to own and control, to police and protect this great work.

But, sir, I submit that when the treaty gives, as it does give, to the United States the right to construct, as well as the exclusive right of providing for the regulation and management of the canal, and further, the right to maintain such military police along the canal as may be necessary to protect it against lawlessness and disorder, while we charge and collect toll for the use of the canal, it gives us the right and the power to do any and every thing requisite to preserve the waterway from injury or destruction.

All nations may, as they should, be permitted to use the canal, but let none suppose for a moment that a hostile fleet will ever be permitted to pass through its waters until our naval power is swept from the seas and our military force destroyed.

Now, Mr. Chairman, the time for talking has ended, and that for action has arrived. Nearly three years ago, in response to the demand of those who wished delay, we provided for a commission to investigate this whole matter, to tell us which was the most practicable and feasible route for an isthmian canal to be under the control and ownership of the United States. This Commission has with laborious and painstaking care discharged its duty, and we have its final report before us. It found, as everybody believed it would find, in favor of the Nicaragua route, and that finding is abundantly fortified by the facts submitted in this report. Now, after three years of delay, we find those who, though not perhaps seeking delay, come here with propositions which, if adopted, would result not only in delay but with the further result that the canal will probably never be constructed.

Ever since Columbus, in the fifteenth century, sought a passage to Asia through western seas there has been an ever-increasing demand for a channel through this Isthmus which barred his passage and disappointed his hopes. The demand today, with the business interests of this progressive age ever on the increase, with all the world's energies at their very highest tension, is greater than ever before. The commercial activities of the world require its construction, and the American people demand its early completion. Let us, then, listen to their voice and give heed to their wishes. [Loud applause.]

The Isthmian Canal.

Water transportation and internal improvements better than foreign wars—Peace and commerce with all nations, enslavement of none—Home first and the world afterwards.

SPEECH

OF

HON. WILLARD D. VANDIVER,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, January 9, 1902.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 3110) to provide for the construction of a canal connecting the waters of the Atlantic and Pacific oceans—

Mr. VANDIVER said:

Mr. CHAIRMAN: When a small boy beginning the study of geography in a country school, I looked at the map of the American continent, glancing down the coast line to the point where the hand of the Creator seems to have crushed and crumpled the continent into a narrow strip that looks like one more pinch of a giant's finger would have made two continents out of one, and drew a pencil line across that narrow ridge, wondering what would happen if the Gulf Stream or some other ocean current should break through and wash that neck away. From that day to this I have been hoping to live to see the day when that experiment should be tried. It is a singular fact that for more than 300 years navigators have been seeking for a "Northwest passage." The discovery of America itself was the result of an effort on the part of enterprising navigators to find a shorter route from Europe to India. Columbus, after discovering the Bahama Islands and the Orinoco coast, died in the belief that he had found this western route to India, not knowing that he had really discovered a great continent, less than halfway by the western route from Europe to India.

In 1513 Balboa climbed to the top of the ridge along the Isthmus of Panama and looked across on to the great waters of the Pacific Ocean. And so great was the importance of a passageway across this narrow strip of land that the bold Spanish adventurers undertook an expedition transporting material for four ships on the backs of Indians and slaves across to the west coast of the Isthmus, and establishing a line of communication which has been of historical interest from that day to this. Three years later when Charles V came to the throne of Spain he gave orders for a complete exploration of the coast, with a view to finding a passage from one ocean to the other, and from that day to this it has been the hope of the world that the passage which the navigators failed to find, because nature had not provided it, would be provided by the arts and industry of mankind. In 1522 Gonzales, another Spanish explorer, discovered Lake Nicaragua, and soon after the city of Granada was founded on its shore. Ferdinand, one of the Spanish governors of the province, despairing of a water channel, established a line of posts across the Isthmus, and land transportation has been carried on more or less ever since. At one time, after the conquest of Pizarro, large quantities of gold and silver were brought from the mines of Peru across the Isthmus to Panama, and from there transported in royal vessels to the King of Spain. The town of Panama thus became a place of some commercial importance, and it is recorded that about the year 1585 Panama was considered "the tollgate between western Europe and eastern Asia."

It will be remembered, too, that nearly all of the efforts of the old navigators—Dutch, English, and Portugese, as well as Spanish—were directed toward finding a passage through the continent. When the Hudson River was first discovered it was hoped a passage was found through it. When the Mississippi was discovered it was hoped that that was an open channel through the continent. Cortez had sent more than one expedition through the Gulf of Mexico to search for a strait; but the failure of all of these efforts, owing to the fact that nature had not furnished such a passage, naturally led to the ambitious project by which human ingenuity might supplement the Almighty's designs.

The perplexing question which has agitated the commercial world, as well as the scientific world, has never yet been fully settled, as to whether the effort should be made to dig a canal which would be open clear through on the sea level from one coast to

the other or to construct the canal with a series of locks and dams by which the ascent could be made from the sea level to the top of the divide, without being obliged to remove the vast amount of material necessary to get down to the sea level. Here, I may say, hinges the whole of the argument as to whether the Nicaragua route should be adopted, or the Panama route, or the Darien route. It is conceded by all engineers that a sea-level canal is impossible by the Nicaraguan route.

It is claimed, by some engineers, at least, that it would be possible by the Panama route. The superiority of the sea-level canal over the lock and dam system is also fully conceded by all persons interested in navigation. It may also be stated that even by the Panama route the sea-level canal would be immensely more expensive than one utilizing the system of locks and dams, because it would require the excavation of vast mountains of earth and stone, and therefore the engineers in their recommendations have not dared to advise that a sea-level canal be undertaken for the whole of the distance, even by the Panama route, but only for a part of it; while the Darien route is for a sea-level canal clear through by means of an immense tunnel under the mountain, 3 miles long.

But passing over a large part of the interesting history of this great project, for the last fifty years our Government has taken special interest in the project and has appointed one commission after another to investigate and report on it.

In 1850 Col. O. W. Childs, an eminent civil engineer, surveyed the route from Lake Nicaragua to the Pacific Ocean, and reported it to be a feasible and practicable project. In 1872 Commander Lull, of the United States Navy, made investigation of the subject, and reported favorably. In 1895 President Cleveland, by authority of Congress, appointed a special Commission, of which Brigadier-General Ludlow was president and Admiral Endicott and Colonel Noble, a civil engineer of great experience, were the other members. This Commission spent many months in making surveys and studying plans of others. Two years ago still another Commission was appointed under authority of Congress. Admiral Walker, of the United States Navy; Col. P. C. Hains, of the United States Army, and Prof. Louis N. Haupt constituted its personnel. They examined the work with great care, studying the conditions of the country, its formation, and all the questions connected with the important subject. Their report is now before us. All agree that the canal can be constructed by either route—Panama or Nicaragua. But the Darien Canal seems not to be seriously considered. Which route shall we adopt? This is the question.

The Panama route has an unfortunate history. The great French engineer, De Lesseps, recommended the Panama route to the French people and the French Government. It was adopted by them in about 1873, and the Panama Canal Company of France organized, and proved to be one of the most gigantic swindling schemes of modern times. I am persuaded that the great engineer himself was the innocent victim of scheming financiers. But however this may be, more than 200,000 stockholders found their investments swallowed up in what was worse than the "South Sea bubble." A financial crash followed, scandals honeycombed the French Republic and the French army until the whole world stood aghast at the amazing and stupendous frauds. The company collapsed after spending perhaps more than $100,000,000 and scarcely having made a good beginning of the real work to be done. A new Panama company, it is said, has since been organized, and claims to hold the rights of charter and all tangible property of the old corporation.

In this sense it may be said, at least, that the scandal attaching to the very name of "Panama" has made it a disreputable word, and I am persuaded that the prejudice thus created constitutes the largest part of the argument against the Panama project. The people of our country naturally prefer to originate their own schemes instead of taking them second hand from others. The question now is: Shall we buy the Panama Canal, and proceed to complete the work which they have commenced, or shall we start a new canal of our own? From an engineering standpoint it seems to me that almost every advantage is on the side of the Panama route. The total length of the Nicaragua route, using the Lake Nicaragua and the San Juan River as parts of it, would be 183.6 miles, while the total length of the Panama route is only 49 miles. The actual length of the canal to be dug by the Nicaragua route is 73.7 miles, and 36.4 miles by the Panama route. In other words, the Panama is less than half the length of the other.

In the second place, the Nicaragua Canal, with all of its locks and dams, its harbors and entrances, is estimated by the engineers to cost, in round numbers, $190,000,000, while the Panama route is estimated at $144,000,000, but to this last should also be added what would have to be paid to the Panama Canal Company for their interest in it, and this interest has been estimated by the engineers at $40,000,000. And it is believed that they will yet recommend its purchase. In addition to this it must be remembered that the cost of maintaining the canal after it is constructed is a point of great interest, and the engineers' estimate of this cost for the Nicaragua Canal is $1,300,000 per year greater than for the Panama. On the other hand, it may be said that the Nicaragua route is 200 miles nearer to us, and that the distance from a point on the Atlantic coast to a point on the Pacific coast would be 400 miles shorter by the Nicaragua route than by the Panama. This latter fact seems to me to constitute the strongest argument in favor of the Nicaragua route.

Now, Mr. Speaker, whatever may be our ideas as to the comparative advantages of these two projects for a great interoceanic canal one thing seems to be fully settled, that in the public mind one of them must be constructed. The growing sentiment of the world has been in this direction for more than three hundred years. The great impetus given to commerce and public enterprises of every character by the results of our recent war with Spain seems to have culminated in this conclusion, that this project shall be no longer delayed.

Our great cotton-growing States of the South are united in the demand that this open highway to the seas shall be furnished for all the products of their fields; the great grain-growing States of the Mississippi Valley unite their voices with those of the South and demand that this granary of the world shall have free access to the markets of the world; the great manufacturing States of the East also unite in the general demand that the products of the loom and the shop shall likewise have the amplest facilities for reaching the lands beyond the seas, while the great States of the West and Pacific slope all join in the chorus. So that the East and the West, the North and the South, all combine to swell the loud acclaim that henceforth and forever the Atlantic Ocean shall not be separated from the Pacific by impassable barriers, but they shall mingle their waters through the channel which the industry of man has constructed to break down the ramparts of nature.

I confess, sir, to some little misgiving as to the business management of this enterprise and as to some of the details of this bill. But if in future years my children shall see the commerce of the cotton States doubled and the grain-growing States furnishing food supplies to the hundreds of millions of inhabitants of the Orient, the bulk of this commerce passing through this canal, I shall hope that they will forgive any inaccuracies or imperfections of details in this piece of legislation, which I, at least, am not able to perfect as I would like to do. This bill is vastly better than the one which passed this House two years ago, and which was defeated in the Senate.

I was one of the 35 members of the House who voted against that bill two years ago. I have never regretted that vote; and on yesterday, when the distinguished gentleman from Ohio [Mr. BURTON], chairman of the River and Harbor Committee, paid a fitting compliment to the wisdom of those 35 minority members, I took a part of the compliment to myself.

But now, Mr. Speaker, as I shall vote for the passage of this bill I think it incumbent on me to state briefly the reasons why in the first place I voted against the other. It was for two very good reasons: First, that under the provisions of the other bill, considering the Clayton-Bulwer treaty then in force, this Government would have been absolutely precluded from fortifying that canal if it saw proper to do so.

The seventh section of the Clayton-Bulwer treaty provided that when that canal should be built it would be under the joint control and encouragement of the British Government and the United States. Under the first article of this treaty neither Government was to be allowed to fortify or defend the canal. I read from the first article of the Clayton-Bulwer treaty, as follows:

> The Governments of the United States and Great Britain hereby declare that neither one nor the other will ever maintain for itself any exclusive control over the said ship canal, agreeing that neither will ever erect or maintain any fortification commanding the same or in the vicinity thereof.

In addition to that it will be remembered that in the second place the bill which we considered two years ago had first been introduced with a provision in it that we should have the right to defend it; but that provision was subsequently stricken out of the bill, and that by the express language of the bill the American Government should be prohibited from fortifying or defending the canal.

For these two reasons I voted against it and am glad to-day that I did, for now we have a much better bill. Here in this bill we find that in the first section it provides that the President shall secure the right to "construct and protect a canal," and in the second section that he is "also to construct such provisions for defense as may be necessary for the safety and control of the said canal." Therefore I am willing to vote for it. It is now to be an American canal, to be built with American money, and controlled by the American Government, and fortified if necessary by American forts, and defended by American arms. [Applause.]

Besides this, sir, the Democratic national platform adopted at Kansas City on the 4th of July, 1900, commissions every Democrat in this House to vote for it. I read from that platform as follows:

We favor the immediate construction, ownership, and control of the Nicaraguan Canal by the United States, and we denounce the insincerity of the plank in the Republican platform for an isthmian canal, in the face of the failure of the Republican majority on this subject to pass such a bill in Congress.

But, Mr. Chairman, there are broader questions yet involved. This bill opens up the whole subject of water transportation, and I want to see it go still further. I hope to see a great ship canal connecting the lakes with the Mississippi River.

Then let the Mississippi be dredged and her banks revetted, her shores leveed, some of her kinks and curves straightened out, her surplus waters in flood time hoarded in reservoirs for use in low-water seasons, and a minimum depth secured of at least 8 feet from Chicago and 10 feet from St. Louis to the Gulf of Mexico, and then her placid bosom will float the commerce of half a continent.

It would be far better than shooting civilization into heathendom with Gatling guns and Mauser bullets at a cost of $200,000,000 a year. Ah, Mr. Chairman, when I think of how much might be done with the money we are wasting on our policy of imperial conquest I am, indeed, astonished that the people take it so calmly. Taxes wrung from them by the millions and thrown away in the vain pomp and show of military aggrandizement! Aye, sir, worse than thrown away; absolutely burned up in the shameless business of quenching the spirit of human liberty in other lands.

But, sir, returning to the point, I want to see the Mississippi River leveed from the foothills of Cape Girardeau to the Gulf and her banks so protected with stone revetment as to stop the turgid waters from washing away the richest farm lands on the face of the earth.

By dikes and revetments protect them from erosion and caving; by levees protect them from floods; by ditching drain them and protect them from the surplus of surface water, and the farmers of the Mississippi Valley can supply the world with breadstuffs. Then by blasting and dredging give us the canal and the depth of channel from Chicago to the Gulf and on through the Nicaragua Canal to the Pacific Ocean and the Orient, and the farmers of this great valley will feed the starving millions of India and China and the isles of the sea.

Tell me it will cost a hundred millions! Well, we have only to stop our brutal war in the Philippines and we can pay the bill in six months.

Now, Mr. Chairman, as to the general subject, I am through. But I shall take advantage of this opportunity to incorporate as a part of my remarks a brief synopsis of river work that should be done in the district which I have the honor to represent; not that I expect these projects all to be incorporated in this bill, but that I desire to bring them to the attention of the House, confident as I am in the belief that most of them will be provided for in the river and harbor bill soon to be brought in and passed by this body, some as specific projects and others as part of the general fund for the Mississippi River to be allotted by the River Commission.

This is the memorandum which I have placed before the Rivers and Harbors Committee as the basis of my argument for liberal appropriations for each of these projects. Each stands for itself a worthy project. I will not dwell on each one here, as I have fully explained them to the committee. But here is the list, those for points on the Mississippi River to come out of the general fund appropriated for that river, and the others by specific appropriation in the river and harbor bill:

MEMORANDUM OF RIVER WORK.

(1)	For Cape Girardeau Harbor, removing sand bar, dredging, etc	$15,000
(2)	College Farm, dikes and wing dams to direct the channel and prevent river from cutting through into its ancient channel and destroying thousands of acres of valuable lands	10,000
(3)	Continuing work already begun at Anita Towhead and Price landing to protect the old Government levee and a large district of farm lands back of it	10,000
(4)	For Thompson landing, revetment work, bank protection, etc	10,000
(5)	Birds Point levee, continuation of work already begun in connection with local levee board	50,000
(6)	Levee work on southern border of Mississippi County, Mo	50,000
(7)	For New Madrid Harbor, completion of work of revetment already well under way	20,000
(8)	Point Pleasant landing, protection of bank by wing dams and dikes to control the channel	10,000
(9)	Carruthersville Harbor, completion of work of revetment of bank, already started	50,000
(10)	Completion of levees, New Madrid and Pemiscot counties	40,000
	Total for Mississippi River	265,000
(11)	St. Francis River, dredging, snagging, etc	50,000
(12)	Black River, dredging, snagging, and clearing	22,000
(13)	Current River, snagging and clearing	10,000
(14)	White River, in Taney County, snagging and dredging	20,000
	Entire total of present projects	367,000
(15)	Two other projects not yet surveyed and estimated—Eleven Points River and upper part of St. Francis River—can not here be estimated, but surveys and estimates should be at once ordered.	

These sums may be too much to expect all in one bill, but I confidently expect that fully half of them will be provided for in this year's appropriation, and within the next two or four years, if I am permitted to continue my services here, I shall insist on all of these projects being fully carried out.

The Isthmian Canal.

The sentiment of the American people is overwhelmingly in favor of the construction of a canal—The destiny of the United States is to lead the world.

SPEECH

OF

HON. JAMES A. NORTON,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, January 9, 1902.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 3110) to provide for the construction of a canal connecting the waters of the Atlantic and Pacific oceans—

Mr. NORTON said:

Mr. CHAIRMAN: Discussion upon the subject of an interoceanic canal seems to be almost interminable. It is now time for action. For four centuries the question of a shorter route for the transportation of commerce from the eastern, or Atlantic, ports to the Pacific markets than the long and dangerous voyage around the Cape has been agitated and a solution sought.

Ever since Columbus discovered Nicaragua, in his fourth voyage to the New World in 1500–1503, adventurous and enterprising spirits have endeavored to find or make some connection between the great oceans.

There is no dispute to-day anywhere but that a canal is an urgent necessity and should be constructed, but in these days of progress, in these days of our advancement, when we all flatter ourselves with the idea that there is nothing too good for us, we insist upon having the very best possible, and on a question of the magnitude of this now before us nothing should be allowed to stand in the way of our having the best canal, over the best route, and giving the best facilities for our constantly increasing commerce that we can in any way honorably acquire.

It has been successfully demonstrated that great ship canals can be built and operated to the advantage of those who have invested in them, and a canal across either Nicaragua or Panama would save a greater distance in proportion to its length than any existing or possible canal on the globe. The commerce of the world is subjected now to a greater loss, by many times, than would be the cost of either canal, even at the highest figures named, by reason of the long distance required to reach opposite shores.

The trend of events shows that the Pacific Ocean is destined to become more and more largely the sphere of the commercial activity of our great Republic, and the necessities of the times demand that we treat this question fairly and honestly, meeting all issues boldly, and challenge the future by the drafts we make upon it.

As the ancient Roman orator continually repeated "Carthage must fall," so we should continually cry "This canal must be built," and not only talk, but go ahead and build it, with an eye single to the best interests of our own country.

I am no iconoclast; I have no desire to break down or hinder the advancement of any nation or people on the face of the earth, but I stand for my own country and its good, first and foremost at all times; and the canal route that, all things considered, seems to me to be the best for this country is the one I want to see built, and is the one I shall support. I do not object to the expenditure of a large amount of money for this purpose. For my part, I would never quibble over any sum if the good of our country was to be secured or advanced. I believe in progress, in internal improvement, in building up every interest of our country, until we can take our rank as the best endowed nation of the world. Yes; I would like to have money expended here in Washington to make our nation's capital, the most beautiful city of the land, the mecca of every lover of the beautiful, in which every American citizen would take a just pride.

Every improvement costs something, and the people expect it. Every great business concern, and every possessor of a home, as well as those who have but little of wealth or opportunity, are constantly on the watch to better their condition, and plan for the outlay of their means. They look ahead and have no hesitation in bonding their future, if they see indications or prospects

of material advantage; so I say I do not shrink, as a public servant, from favoring the expenditure of public money or incurring an obligation which will redound to the prosperity and glory of our country, and not for the aggrandizement and profit of any interest alone.

The great surplus in our nation's Treasury has been piled up by exactions and enforced contributions from the people, and should be sacredly safeguarded and used in their behalf. Rapid and cheap transportation is conceded to be a factor of the greatest moment in cementing and unifying States and peoples, and in promoting their general welfare, hence the construction of a great interoceanic waterway must commend itself to all patriotic sentiment.

William H. Seward, in addressing the United States Senate, said, as to the commerce, politics, thought, and activities of Europe, that they would "ultimately sink in importance, while the Pacific Ocean, its shores, its islands, and the vast regions beyond, will become the chief theater of events in the world's great hereafter," and it becomes incumbent upon us to prepare to meet just such conditions.

The distance from New York to San Francisco, around Cape Horn, is 14,840 miles, while by either the Panama or Nicaraguan routes there is a saving of nearly two-thirds of this great distance. This fact alone shows the importance of the early completion of a canal so forcibly that, to an unprejudiced and unbiased mind, opposition to the project seems like the stopping the swing of the pendulum of progress.

The sentiment of the American people is overwhelmingly in favor of the construction of a canal. Its feasibility is assured. As has well been said, "It is only a matter of engineering skill, and the work of the engineer is plain and simple."

In my own district there is a company able to do the entire work of excavating the canal through Nicaragua. The mechanical and financial resources of our country are abundantly able to successfully meet any and all the problems incident to the building and maintenance of a canal, and the people will indorse and approve the appropriation of any sum necessary for the completion of the enterprise.

Why not, then, at once pass this bill and let work begin in Nicaragua? Because the people are not as yet convinced that the Nicaraguan route is enough better than the Panama route as to justify the expenditure of $140,000,000 more than would be necessary should the Panama route be chosen. The American people will not question or hesitate over the expenditure of any amount if they are convinced that the results to be gained justify it, but, sir, they resent all bunco games, and will condemn unnecessary extravagance.

There are presented for our consideration numerous reasons why we should pause just now and not rush this matter through under the force of partisan rule, but at least give it sufficient time to have these objections fully met, and each one of us be enabled to give our constituents a full and clear explanation, and show to them the reasonableness and wisdom of our action. The Nicaraguan route involves $180,000,000. The Panama Canal is offered to us for $40,000,000. It has two good harbors already existing, while with the Nicaragua route it will be necessary to construct artificial harbors at great expense and difficulty. At Panama there is a good railroad in full operation extending along the entire route, while at Nicaragua from 120 to 140 miles of railroad would have to be constructed through territory involving serious engineering problems.

At Panama the canal is now well advanced, a large portion actually completed, and for the balance, surveys and plans show definitely and absolutely the character and nature of difficulties to be met, none involving anything which is not easy or practicable by the ordinary application of every-day engineering practice. The Nicaraguan route involves starting from the very beginning, no work done, and many questions undecided, and others requiring new and untried experiments of engineering skill, which may prove elements of constant danger and menaces to the safety of the completed canal, especially when the annual rainfall is nearly three times as great as at Panama.

The Panama route lies wholly within Colombia, and the distance to be guarded, lighted, and cared for is only 46 miles, and there are no active volcanoes within 200 miles of the route, making danger from earthquake and volcanic disturbance far less probable, while the concessions granted by the Government of Colombia are ample, satisfactory, and unquestioned.

On the other hand, the route proposed in this bill is on the border line between Nicaragua and Costa Rica, exposed to the jealousy of divergent local interests, covers a distance of 176 miles, to be supervised, lighted, and controlled, with active volcanoes within 40 miles of proposed route, and concessions which the President is authorized to acquire from Nicaragua and Costa Rica are all subject to diplomatic action on the part of those Governments.

To me it seems the part of wisdom to have these objections met before we bind ourselves beyond recall to the Nicaragua project. They are not fanciful or imaginary objections. They are all sustained by the report of Gen. H. L. Abbot, of the Engineering Corps of the United States Army.

There are, however, some great obstacles that confront us at Panama, the rumors—they may be facts—that by the terms of the cession by the Panama Government to the French company the very act of offering the property for sale the charter may be wholly invalidated and the entire rights and privileges secured to the company and all its holdings may revert back to the Panama Government.

Another question is, that the company holds its rights by a limited franchise expiring in ninety-nine years. If these are true, ascertained to be facts, they are most serious objections, and raise at once questions of great magnitude, questions that may be of such potent difficulty as to make the Panama route wholly untenable.

Then, at the very outset there must be assured to us beyond the possibility of a doubt a good, valid, and sufficient title vesting in the French company, and their power to dispose of their property established beyond question.

Our title, also, to the canal, to a strip of territory from 5 to 10 miles in width on each side of the canal extending its whole length, must be made perpetual. The Nicaraguan route has been prominently before the country for many years. In 1805 Alexander von Humboldt, the famous scientist, declared that a canal was feasible. Twenty years later the States of Central America passed a decree authorizing the digging of a canal; and the next year Henry Clay, who was our Secretary of State, ordered the route examined. Nothing came from this. In 1835 President Jackson sent parties down to look over the route. In 1848 the Government of Nicaragua contracted for the construction of a canal, but the difficulties were so great that it was dropped.

The Clayton-Bulwer treaty in 1850 providing for the neutrality of the waterway, the next year a company was organized by Cornelius Vanderbilt to construct a canal; but no appreciable work was done, and the subject dropped until 1867, when Rear-Admiral Davis presented a report to the President adverse to the canal enterprise. During the next ten years a Commission was appointed, which in 1876 reported to the President, but it was not until 1890 that work was actually begun at Greytown, the eastern terminal. This work, however, did not go far. In 1895, after prolonged discussion, the Senate passed a bill appropriating $70,000,000, but the bill failed to pass the House, a commission appointed by the President presenting an unfavorable report. In 1897 another Commission, headed by Rear-Admiral Walker, was appointed, which Commission in 1899 reported in strong terms in favor of constructing a canal. The measure, however, failed to pass Congress. The Commission was continued, and its report is now before us.

It has gone deeper and extended its investigations further than ever before. It not only touches upon the merits of the Nicaragua route, but it gives us information concerning Panama which has never before been at our disposal.

Conditions surrounding this question have changed, and the hindrances of the past no longer exist. It seems now to be a most fitting time for action upon the question. We have never before had such clear understanding of the situation as we have now. The report of the Commission is full to the smallest detail, and they deserve the greatest credit and honor, and I would not that one word of mine should ever serve to block the progress of this work, but there is no occasion for immediate haste. The canal is bound to be built. We are here on the long session, and there is ample time for the fullest discussion. A delay of two weeks, or even two months, will not jeopardize the success of a canal.

I am not sure but that it would be best, in view of the distinctive advantages of each route as presented by the report made by the Commission, to leave the selection to the President, allowing him the alternative between the two routes, and I have all confidence in the honesty and integrity, as well as the good judgment, of the President to decide for the best interest of the country. This is not a partisan question; it is a business proposition, and I am interested and desirous of having at least a small share of the honor attendant upon the success of this work, a work which will be a monument to the glory and power of our nation, but I want my action to help secure for us the very best route that can be selected.

We will have not only Nicaragua to consult and make treaty with, but we must also deal with Costa Rica on the one hand, while on the other there will be need of rare diplomatic ability and business acumen in dealing with Panama. I must confess that when I study the report of the Commission I am forcibly reminded of the words "How happy I would be with either, were the other dear charmer away."

They tell us that at Nicaragua the construction of the dams will be easier, the climate will be healthier, and the local surroundings will be such that a large amount of trade and commerce will be developed; and this whole project has its foundations not upon sentiment but upon the demands of commerce. At Panama the water in the canal will be self-regulating; the summit will be 28 feet less; there will be a shorter line, about eight less locks, with at least a million dollars smaller annual cost of operation. A million dollars is a great deal of money. The syndicates and trusts I know consider a million as a mere bagatelle, and say this is a billion-dollar nation; but the great mass of the people are poor like myself, and are more familiar with handling a few dollars than they are millions or even thousands. We have to look after the pennies, and ofttimes we find it hard work when we come to pay our taxes to raise the necessary amount. But, as I have said, we do not begrudge the payment of money when it is for our betterment or for our best interests.

It will not be in the expenditures for the construction of a canal, whether it be at Nicaragua or Panama, that will meet opposition and criticism, but it will be in the details and the manner in which the work is conceived and carried to conclusion, and now at the very inception it behooves us to act with sound judgment, patriotism, and wisdom.

We have had a war Congress and made history; we should now have a business session that will build up our country and add to its luster. The fierce heat of the campaign has died away, and there is no reason why we should not calmly, dispassionately, and intelligently discuss measures. There should be no unseemly haste, but all things conducted with decency and order. This measure involves a work greater in magnitude than any undertaking projected in the history of our country.

It is in the line of progress and in keeping with the spirit of the age.

As a people, difficulties do not discourage us, and we shrink from no enterprise however formidable. Other nations have undertaken this same enterprise and have failed. The destiny of the United States is to lead the world. The twentieth century opens before us big with possibilities. Let us take up this task with a determination based on the characteristics of our race, and we can not fail, but will hand down to posterity the triumphant realization of this gigantic project, and the waters of the Atlantic mingling with the waters of the Pacific will form a mid-continent stream, the acme of engineering skill and genius unparalleled in the world's history. [Applause.]

The Isthmian Canal.

The Marriage Bond of the Oceans, whose Union will Enrich the United States, and Bless the Whole World.

SPEECH

OF

HON. HENRY R. GIBSON,

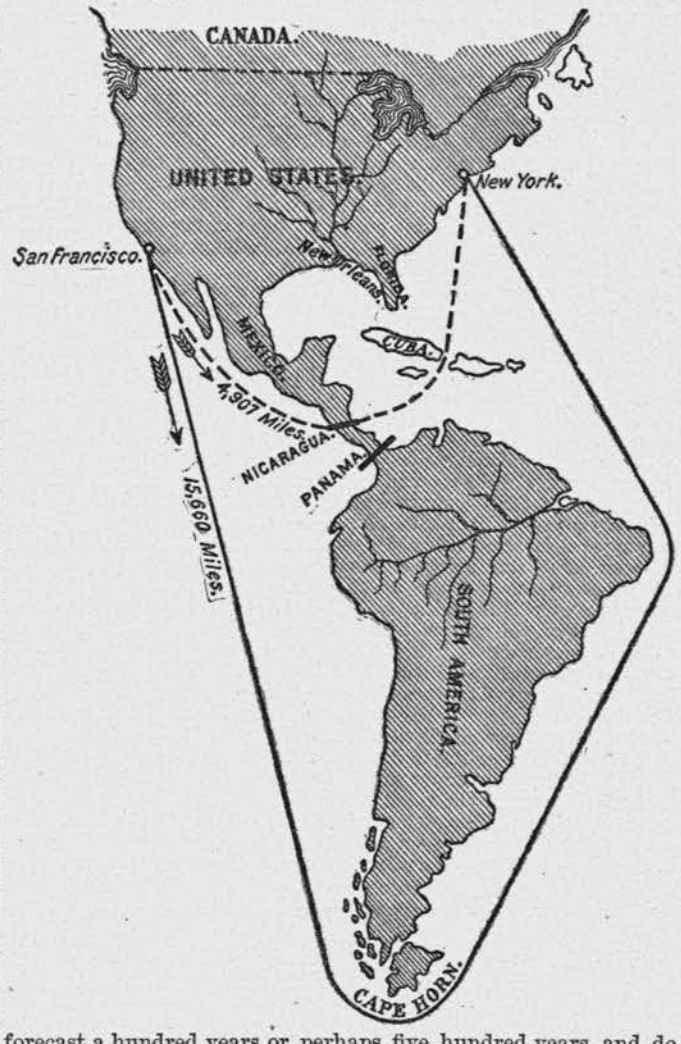
OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 8, 1902.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 3110) to provide for the construction of a canal connecting the waters of the Atlantic and Pacific oceans—

Mr. GIBSON said:



Mr. CHAIRMAN: I have for many years been an ardent advocate of the construction of an isthmian canal. No man who takes a proper view of the commercial welfare of the United States or, I may say, of the world can help being confronted by the fact that the narrow strip of land connecting the continent of North America with the continent of South America is a most gigantic impediment to the commerce not only of our own country but of the whole world. That isthmus is an obstruction that chokes the throat of commerce between the eastern and western parts of North America, and prevents the natural flow of traffic in what otherwise would be its ordinary channel.

The commercial world has for four hundred years been endeavoring to solve the problem of how speedy communication could be effected between the Atlantic Ocean, the Gulf of Mexico, and the Caribbean Sea on one side, and the Pacific Ocean and the Chinese Sea on the other side. All manner of plans and expedients have been devised and many of them have been experimented upon, but all without satisfactory success.

During the last fifty years the world seems to have settled down to the conclusion that a canal of some sort across the Isthmus of Panama, or somewhere through the Central American States, was the best possible solution of this gigantic problem, and the thoughts of the American people have been directed to the execution of this solution. In the seven years I have been a member of this House that question has come up at some time during every session.

THE TIME FOR ACTION HAS COME.

The newspapers have been filled with editorials and communications and the magazines have contained elaborate essays upon the subject. And we are this day, here and now, confronted with the question whether we shall stand up like men, like American citizens, like people of progressive ideas, like statesmen who can

forecast a hundred years or perhaps five hundred years, and do the duty which we owe not only to the present generation of our countrymen, but to all the generations yet to come.

Some say, "Let us delay;" others say, "Select this route;" still others say, "Let us select that route," until a great many do not know what to do, and are almost in the condition of the ass in the fable who saw two stacks of hay—one on the right hand and one on the left—the two seeming equally desirable; and, not knowing which to choose, stood in his tracks and died of starvation within reach of both. [Laughter.] That seems to be the plan some gentlemen on this floor have mapped out for this Congress. Whether it is a policy of obstruction, whether it is a plan of delay, or whether it is an honest and patriotic doubt I can not say; but, be the motive what it may, it has the effect of making delay.

Some gentlemen remind me of boys, who in early spring strip for a river bath, but linger shivering on the bank debating whether to take a plunge or resume their clothes. These gentlemen think they are in favor of an isthmian canal, but are in doubt whether now is the time or this is the route. They look at the clock and see it is about to strike the hour, but are not sure that the clock is right.

> And thus the native hue of resolution
> Is sicklied o'er with the pale cast of thought,
> And enterprises of great pith and moment
> With this regard their currents turn awry
> And lose the name of action.

But, Mr. Chairman, the canal will be built, and this bill will begin the work, and he who fails to vote for it will regret as long as he lives that he lost so grand an opportunity to link his name to so mighty an event.

WHAT BENEFIT WILL THE CANAL BE?

I wish in a very few words, Mr. Chairman, to put upon record my views on this subject. The first question is, what will this canal accomplish if it can be built? In the first place, it will bring the Pacific coast in close touch with the Atlantic coast and the Atlantic coast in close touch with the Pacific coast. It will, as it were, bring the Pacific States and the Atlantic and Gulf States face to face, instead of their having their backs turned upon each other, as now. It will make New York, Philadelphia, Boston, Baltimore, Charleston, Savannah, and New Orleans neighboring cities to San Francisco, Los Angeles, Portland, Seattle, and Tacoma. To show the enormous commercial advantage of this canal, I will merely call attention to the fact that it will reduce the distance between New York and San Francisco by water from 16,000 miles to 5,000 miles—a saving of 11,000 miles. Commercially this canal will, as it were, extend every bay and every river on the Atlantic Ocean or the Gulf of Mexico into the Pacific Ocean, and will make the Atlantic and the Pacific, for all of our great commercial and naval purposes, one mighty American sea. It will bring the whole of China, Japan, India, and eastern Africa within near reach of our Atlantic cities.

And when we remember that in those countries to-day there are three-fourths of all the people of the world; when we take into consideration further the enormous strides that Japan has made, even within the memory of living men; when we take into consideration further the high probability that China will soon be infused with the same spirit of enterprise, actuated by the same principles of development, through the dissemination of Western ideas, of American and European civilization; when we consider the possibility that China, under the influence of this new spirit, will become another Japan; when we consider the enormous increase, the marvelous development of commerce which will result from 400,000,000 of people becoming commercialized, we see what enormous benefits would accrue to the United States of America by our being enabled to advantageously participate in the commerce of these great Asiatic nations, as well as the commerce of Malay, India, and the newly growing and developing peoples on the eastern coast of the continent of Africa.

The construction of this canal will make our Hawaiian Islands the greatest entrepôt of the greatest ocean in all the world, and along with our ownership of the Philippine Islands and the Samoan Islands, will make the Pacific Ocean literally an American sea. What Malta is in a small way to the Mediterranean Sea the construction of this canal will make the Hawaiian Islands in a much greater and grander sense to the Pacific Ocean—a mighty factor in the commerce of the world.

Mr. Chairman, I have been in favor of this canal for many years. Four years ago, when we were here discussing the question of annexing the Hawaiian Islands, I spoke as follows:

THE NICARAGUAN CANAL.

Yes, Mr. Speaker, we must not only annex Hawaii; we must also construct the Nicaraguan Canal, and we must do both at once. When the Nicaraguan Canal is completed, California and the Pacific Ocean are brought close to the Atlantic coast. The East and West shake hands. This canal unites our two great oceans as the ligament united the Siamese twins. It operates like magic to bring our Atlantic coast 10,000 miles nearer to our Pacific coast, and our Pacific coast 10,000 miles nearer to our Atlantic coast. It brings Europe 7,000 miles nearer to California, and brings Asia 6,000 miles nearer to New York. It revolutionizes the commerce of the world. It does away with a voyage of 14,000 miles around the great continent of South America, and puts in its place a voyage of 147 miles.

This canal we are bound to build. The necessities of commerce require it. Our national welfare demands it. It will double the effective force of our Navy. Now San Francisco and New York are 15,000 miles apart on the sea, and in time of war our Atlantic fleets can not defend our Pacific coast, nor can our Pacific fleet defend our Atlantic coast. This canal brings these fleets together and thus doubles our war power on the sea.

There are three great keys to the commerce of the world—the Suez Canal, the Nicaraguan Canal, and the Hawaiian Islands. Give us the latter two, and no dream of national greatness that ever illuminated a patriot's mind will equal the transcendent commercial greatness of our country.

The ocean is God's great highway. Any man can use it who owns a ship. Any nation can use it that has a fleet. No tolls are charged. There are no tunnels to build, no cuts to make, no fills to keep up, no cross-ties, no rails, no side tracks, no switches, no culverts, no bridges, but one wide, smooth, level road, open to all, and free to all, without money and without price.

The Nicaragua Canal completed and the Hawaiian Islands annexed, the book of fate is closed and sealed; our supremacy of the seas is assured; the oceans become our domain; the dream of the Vikings is realized. God gives us the Hawaiian Islands, but He requires us to construct the canal ourselves.

THE CANAL A MILITARY NECESSITY.

Not only that, Mr. Chairman, but the construction of a canal will greatly aid us in defending our country in time of war against any of the great naval powers. It will enable us to transfer our war ships from the Pacific Ocean to the Atlantic Ocean, or from the Atlantic Ocean to the Pacific, according as the exigencies of war may require, in a very short time, whereas now it will require months; and in these months what calamities may befall us!

How well we can all recall the voyage of the *Oregon* from the Pacific Ocean to the Atlantic Ocean during the Spanish-American war. How we watched that grand battle ship as she sailed southward, southward, southward, day after day, week after week, through the waters of the Pacific, until she rounded the Cape, and then as she turned northward around South America how we watched her, how we grasped every little item of intelligence as to her location and progress, until finally the glorious news came that she had completed her voyage of 15,000 miles and joined the balance of our war ships in the waters of the West Indies, reaching there just in time to participate in the great naval battle off the harbor of Santiago and to be one of the principal factors in achieving the magnificent victory won there by our Navy.

Now, Mr. Chairman, how long shall we continue to risk a war with some great naval power that may attack us with mighty fleets on one ocean or the other, and we have no ability to speedily transfer our fleets from one ocean to the other in order to meet the emergency? It would necessitate the doubling of the number of our war ships and our naval defenses. I regard this canal as a military necessity, and this is the opinion of all the great experts in the science of war.

WILL THE CANAL PAY?

Another question, Mr. Chairman, is, Will this canal pay? I do not care to discuss this question in detail by any presentation of statistics. It is proof enough that it will pay to know that the business men of the world have put their hands in their pockets and expended over $250,000,000 in an attempt to construct a similar canal. The business world agrees that it will be a grand financial investment; not necessarily to-morrow or next day. We are not going to build this canal exclusively for this day and generation. We are going to build it for all time, for the centuries, for a thousand years. It is to become a permanent link to bind the two mightiest oceans of the world in perpetual wedlock, and this bill is a part of the marriage ceremony. A statesman does not look forward to to-morrow only, nor to next month, nor to next year, but to a hundred years. A statesman looks forward to the building of this canal not only for our generation, but for all the generations to come.

This canal, Mr. Chairman, will not only benefit us, but it will benefit the world. It will tend to peace. Whatever makes men better acquainted makes men better friends. Ignorance is the mother of distrust. Whatever brings nations together, whatever ties of friendship, relationship, and business result from commercial intercourse tend to prevent war. Nothing does so much to engender enmities as unacquaintance.

> Lands intersected by a narrow frith
> Abhor each other. Mountains, interposed,
> Make enemies of nations, which had else,
> Like kindred drops, been mingled into one.

This canal, while mingling the waters of two great oceans, will also contribute to the mingling of mankind. It will bring all the peoples who dwell upon the shores of the Pacific, whether in South America, in Asia, in Africa, or in Oceania, into more intimate relationships with the peoples who dwell upon the shores of the Atlantic, whether in America or in Europe, and thus hasten the dawning of that millennial day when war shall be no more, and all be brethren.

Mr. COOPER of Wisconsin. I should like to ask the gentleman from Tennessee a question.

The CHAIRMAN. Does the gentleman from Tennessee yield to the gentleman from Wisconsin?

Mr. GIBSON. Certainly; with pleasure.

Mr. COOPER of Wisconsin. Is the gentleman from Tennessee a member of this committee?

Mr. GIBSON. No, sir. I am a member of "this committee" in the sense that I am a member of the Committee of the Whole House on the state of the Union. [Laughter.]

Mr. COOPER of Wisconsin. I wish to ask the gentleman a question for information, because I think from his speech he has devoted a good deal of attention to the subject, and I will confess that I have not so far as the amendment of the gentleman from Minnesota [Mr. MORRIS] is concerned. I wish to direct the gentleman's attention to what I consider to be a vital point touching the amendment offered by the gentleman from Minnesota. This report of the Commission says that—

The Republics of Nicaragua and Costa Rica are untrammeled by any existing concessions or treaty obligations and are free to grant to the United States the rights necessary for the attainment of these ends; and in December, 1900, demonstrated their willingness to have their territory so occupied by the United States by executing protocols by which it was agreed that they would enter into negotiations to settle in detail the plan and agreements necessary to accomplish the construction and provide for the ownership of the proposed canal whenever the President of the United States is authorized by law to acquire the necessary control and authority.

Now, the following paragraph of that report says:

The Government of Colombia, on the contrary, in whose territory the Panama route lies, has granted concessions which belong to or are controlled by the New Panama Canal Company and have many years to run.

Now, this is the paragraph to which I wish to call the gentleman's attention specifically:

These concessions, limited in time and defective in other ways, would not be adequate authority for the purposes of the United States, but while they exist Colombia is not free to treat with this Government. If the Panama route is selected these concessions must be removed in order that the two Republics may enter into a treaty to enable the United States to acquire the control upon the Isthmus that will be necessary and to fix the consideration.

Now, if a treaty be necessary, and that treaty is not to be entered into until six months have expired, as is proposed practically by the amendment of the gentleman from Minnesota [Mr. MORRIS], that carries the negotiation of the treaty over until after this session of Congress shall have adjourned. A treaty must be ratified by the Senate. That takes the treaty into the short session of this Congress, and the Senate can talk it to death before the 4th of March, and that carries the whole canal legislation over until a year from next winter, or two years from now.

Mr. GIBSON. Mr. Chairman, I do not see any question in what the gentleman has said [laughter], but I see what is in the gentleman's mind, and I do not object to his views. The point the gentleman makes is a very good one. What he wants to know is whether delay will not be fatal. Now, this danger of delay is one of the things that I am contending against. We do not want delay. If our action here was final, if it was irrevocable, then there might be some good reason for some gentleman on this floor being so very cautious; but we only start the ball.

The Senate has yet to act. The President of the United States has then to act; and if at any time in the future before the final action has been taken we find that what we do here needs revision the Senate or the President can revise it; but until somebody starts a thing there will be nothing to be revised. If we never make a beginning, there will never be a canal, and the question is, Are we going to begin and when shall we begin?

ALL PARTIES FAVOR THE CANAL.

I have no thought, Mr. Chairman, that our action here will be absolutely perfect. I take it that in the discussion in the Senate something new may be developed. They can modify our bill. If something new appears, the Senate can take advantage of it. If after the Senate has acted something newer appears, the President can take advantage of it. Our action is not a finality. We are simply starting the thing. We are putting the machinery into operation; we are begetting the canal, not delivering it. [Laughter.]

The people of the United States are in favor of this canal. The Republican Presidential convention declared as follows:

We favor the construction, ownership, control, and protection of an isthmian canal by the Government of the United States.

The Democratic party in their Presidential convention said:

We favor the immediate construction, ownership, and control of the Nicaragua Canal by the United States.

And denounced the Republican party for not having passed this bill at the previous session.

The Silver Republican party in their Presidential convention said:

We favor the speedy construction of the Nicaraguan Canal, to be built, owned, and defended by the Government of the United States.

M'KINLEY AND ROOSEVELT COMMEND IT.

Thus we see, Mr. Chairman, all political parties have joined hands in support of this canal.

President McKinley, in his great speech at the Buffalo Pan-American Exposition, on September 5, the day before his assassination, speaking for the whole country, declared:

We must build an isthmian canal which will unite the two oceans and give a straight line of water communication with the western coasts of Central and South America and Mexico.

In his message to the present Congress President Roosevelt said:

No single great material work which remains to be undertaken on this continent is of such consequence to the American people as the building of a canal across the isthmus connecting North and South America. Its importance to the nation is by no means limited merely to its material effects upon our business prosperity; and yet, with view to these effects alone, it would be to the last degree important for us to immediately begin it. While its beneficial effects would perhaps be most marked upon the Pacific coast and the Gulf and South Atlantic States, it would also greatly benefit other sections. It is emphatically a work which it is for the interest of the entire country to begin and complete as soon as possible. It is one of those great works which only a great nation can undertake with prospects of success, and which when done are not only permanent assets in the nation's material interests, but standing monuments to its constructive ability.

I am glad to be able to announce to you that our negotiations on this subject with Great Britain—conducted on both sides in a spirit of friendliness and mutual good will and respect—have resulted in my being able to lay before the Senate a treaty which, if ratified, will enable us to begin preparations for an isthmian canal at any time, and which guarantees to this nation every right that it has ever asked in connection with the canal.

And this treaty has been ratified, and the last obstacle to the canal removed. So it seems to me, Mr. Chairman, that with all of the people commanding us to act, and our Presidents reiterating this command, there is nothing for us to do as representatives of the people but obey this command and execute their order by passing this bill.

THE BARRIERS TO COMMERCE BEING REMOVED.

For thousands of years the Alps were a mighty barrier between western Europe and Italy, but Hannibal crossed them, and Rome trembled, and all the civilized world has applauded ever since. One hundred years ago Napoleon crossed these same Alps, and Austria and Italy fell as though stricken by an avalanche, and the fame of his achievement has thrilled the hearts of men. But the Alps no longer separate France from Italy. Two mighty tunnels have been bored through them, and men travel from one side of the Alps to the other without realizing the existence of the Alps, so that commerce might stand up and say: "For me there are no Alps." And when this canal is completed the United States will be able to say: "For me there is no Isthmus."

According to mythology, the Mediterranean was once a closed sea, but Hercules tore open an outlet for it into the Atlantic Ocean and made the Straits of Gibraltar. But a greater than Hercules is here. The young giant of the New World, to whom all things are possible, will with his mighty hands tear the two continents of America apart and join the two oceans together when this Congress says the word. Mr. Chairman, the isthmian obstruction has been in our way long enough. Let us say the word and let the work be done.

The CHAIRMAN. The time of the gentleman has expired.

Mr. GIBSON. I desire a few more minutes, Mr. Chairman.

The CHAIRMAN. Without objection, the time of the gentleman will be extended.

There was no objection.

Mr. GIBSON. Mr. Chairman, I have another point, and to this I wish to call the attention of my brethren from the South. The South is far more interested in this canal than are the New England or Middle States. This canal will be of wonderful benefit to the people of the South. It will open the greatest new cotton markets of the world to the raisers of cotton and the manufacturers of cotton goods, and these new markets will be worth millions of dollars every year to the cotton people of the South—first, by giving them new and good markets, and, second, thereby raising the price of cotton and cotton goods in the markets of Europe.

TENNESSEE SPECIALLY BENEFITED.

Now a special word for my own State. Will the canal help the State of Tennessee? I would vote for this bill even if it did not directly benefit Tennessee, for it will certainly benefit the whole country, and what benefits the whole country will certainly indirectly benefit my own State and every other State in the American Union. But, Mr. Chairman, this canal will directly and greatly benefit the State of Tennessee. We have in Tennessee, in addition to our magnificent cotton lands and many cotton factories, more square miles of commercial coal lands than any other State in the Union. And we have alongside of our coal lands boundless quantities of commercial iron ore.

We are in a condition to supply the whole world with coal and iron for a thousand years. But the demand for these two great factors in the world's commerce, though now so great and rapidly on the increase, will be vastly enlarged by the opening of this canal. The coal mines of Tennessee and Alabama are nearer to this canal than are any other mines in the United States, and, I may say, nearer than any other good mines in the whole world; and it will certainly result in a marvelous impetus being given to the mining and shipping of our coal and the making and selling of our iron, and will thus bring into Tennessee and Alabama millions of dollars that, without this canal, our people would never see. Ex-Senator Warner Miller, of New York, in writing of the Nicaragua Canal, says:

The developments now going on in Japan, and the enterprises which will undoubtedly be undertaken in the near future in China, will call for iron in all its forms. This can be furnished more cheaply from Alabama and Tennessee than from any other place in the world, provided we are able to furnish cheap transportation; and that can be done so successfully through the Nicaragua Canal as to defy competition from any source.

And, Mr. Chairman, this canal would, along these same lines, be of vast special benefit to the States of West Virginia, Maryland, Pennsylvania, and all the rest of our coal and iron States. But, Mr. Chairman, while I thus specify these special benefits to my own State, I want it understood I favor this bill because it will be of vast and everlasting benefit to my whole country, and to every part thereof—North and South, East and West.

I regard this canal as the greatest and most potential factor for good, the most far-reaching in effect, of any deed of peace or war in all the history of the world. He who votes for this bill may well be proud of this epitaph: "He voted for the isthmian canal that united the Atlantic and Pacific; that brought the East and the West together; that made the New World and the Old World next-door neighbors, and hastened the millennial day." And all mankind, on reading this epitaph, will say of him, "Whatever else he did or left undone, this we know—he did not live in vain." [Laughter and applause.]

The Philippine Problem.

SPEECH

OF

HON. JAMES E. WATSON,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 22, 1902.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 9615) making appropriations to supply urgent deficiencies in the appropriations for the fiscal year ending June 30, 1902, and for prior years, and for other purposes—

Mr. WATSON said:

Mr. CHAIRMAN: Inasmuch as this debate has hitherto covered a wide range of topics, and inasmuch as our Democratic friends have confined themselves almost exclusively to a discussion of our relations to the Philippines, I thought I might, perhaps, without overstepping the limits of propriety, indulge in a few observations upon the same theme.

I confess, Mr. Chairman, to having hitherto indulged the hope that when the Philippine question again demanded the attention of Congress our Democratic friends would be willing to concede the past; that they would be willing to acknowledge the fact that we are in full possession of those islands, and that they would, with us, have eagerly sought a happy solution of the vexed problem which confronts us there. I believed that, when the results of the last two elections broke in full upon them and they came to thoroughly comprehend the situation, they would be willing to share with us the burdens and responsibilities arising from our relations to those islands, and that with ready hands and willing hearts they would aid us in upholding our country's flag beyond the sea.

I had fondly hoped that, if discussion of that topic were to be indulged in at all upon this floor, it would be in a calm, dignified, and statesmanlike manner, free from the argument of slander and the logic of vilification, and that it would be an earnest effort, without a single appeal to partisan rancor, to successfully grapple with the momentous question involved.

I indulged the hope that because the people of the Republic had twice pronounced their verdict the Democratic party would be willing to abide by their decision, and that in obedience to the manifest sentiment of the nation they would turn their backs upon their dead past and face hopefully a new future.

But in this, I regret to say, sir, I have been mistaken. I relied upon a willingness which the Democratic party does not possess, a readiness of which it is not capable, and a patriotism which it has never displayed. But, sir, after all I should neither express surprise nor receive sympathy, for he who, knowing the past history and the present situation of the Democratic party, hopes for any display of wisdom or patriotism by that aggregation of malcontents is indeed more foolish than he who builded his house upon the shifting sands. [Laughter.]

And so I acknowledge, Mr. Chairman, that that fond hope has been blasted, for not only have we been invited to a third thrashing of the musty straw pile of imperialism, but we have had again the old and harrowing tales of woe. We have had again the doleful prophecies dinned into our ears on the stump for two successive campaigns throughout the land rehashed here for our reproof, if not for our delight. We have again heard of bloody-handed tyrants. We have again been warned of the overthrow of the Republic. We have again been told of the establishment of an empire upon the ruins of the Union. We have again had pictured to our fancy the pleading Filipino, shivering and crouching in despair, while the mailed hand of the despot clutches at his throat.

And we have again had presented to us the sorry spectacle of Representatives of the nation assailing their own flag upon this floor and branding our government in the Philippines as a despotism without mercy and a tyranny without hope.

These songs have all been sung to us before, and always in a minor key. They have all been dissipated and lost in air, too, for the American people have more faith in their institutions and more faith in their flag than to believe such accusations, especially when made by such accusers; and yet, at a time when we had every reason to hope that the Democratic party had learned something in the last four years, we are again invited to a discussion of past events, events which are now embalmed in history, whose decrees are unerring and whose edicts never change.

Why is it? For what purpose, sinister and concealed, is this question again thrust upon us? To what end have Democrats upon this floor assailed our sovereignty in the Philippines? The reason has not been disclosed during the progress of this debate, and yet, I apprehend, is not far to seek. The Philippines have not yet been completely subdued, our boys are still bleeding and our treasure is still outflowing. Under these conditions, which should inspire to union and not discord here, the Democracy, driven to desperation for an issue, have again sought by this discussion to bring forth from their closet of cast-off problems the skeleton of imperialism and with it to frighten the American people in the approaching campaign.

To this end, gentlemen have vied with each other on this floor in the construction of phrases with which to assail the Administration. They have exhausted their cunning in building sentences with which to attack the conduct of affairs in the Philippines.

But, Mr. Chairman, it was reserved for the distinguished gentleman from Missouri, Judge DE ARMOND, to distance all competitors in this mad race, to outrival all his colleagues in the bitterness of his invective and the caustic character of his comments, to paint the future of the Filipino a darker hue and give to the coming days of his own country a blacker tinge than any other who essayed to speak upon this theme. He poured out the vials of his wrath upon our heads, he vented his spleen against those in authority, he filled the present with woe and the future with horror unless we listened to and obeyed his prophetic voice. With classic sentence and well-rounded period he depicted the suffering of the oppressed Filipino and the deep disgrace of his own land, and with well-carpentered clauses he declaimed against the honor of his flag.

I can readily understand, sir, how in the heat of debate, when the brain is afire and the face is aflame, men may say such things, but the gentleman from Missouri can not seek to palliate the character of his deed with even this excuse. For he was not excited; he was, on the contrary, unusually calm and unperturbed. With measured sentence, with modulated flow of speech and rhythmical cadence of voice he deliberately assailed his country and coolly attacked the defenders of his flag 7,000 miles away.

He again indulged in a speech which perhaps he has delivered in substance, if not in form, a dozen times on the floor of this House, and no doubt time without number to his admiring constituency in the State of Missouri, in the midst of their rapt and silent attention. This gentleman is always courteous, always cultured, always literary, and always wrong. [Laughter.] He almost invariably sees things with a distorted vision, and is unable to grasp the affairs of life in their real relation the one to the other.

GREAT CHANGES IN THE PHILIPPINES.

Why, Mr. Chairman, in that very remarkable speech delivered upon this floor the other day, the gentleman took occasion to again call attention to the sad estate of the Filipino, and almost at the outset of his remarks he gave utterance to a statement which I desire here and now to challenge and to show by indisputable proof is absolutely unwarranted by the condition of affairs in the Philippine Islands. What did he say?

> The Filipinos, unhappily, have been dependents and the victims of tyranny for three hundred years, and when they hoped that by their own exertions and by our timely aid they had escaped from the taskmaster and achieved their own independence, lo and behold, by the administration of such gentlemen as the gentleman from Illinois [Mr. CANNON] and those who subscribe to and entertain the same philosophy, they found themselves face to face with the unexpected condition that the rescurer was merely going to take the place—was determined to take the place—of the despoiler from whom they had escaped.

Mr. Chairman, we are here presented with the spectacle of a Representative of the American people, in this presence, in this forum, branding his country as a despoiler of the liberty of the Filipino, the very man to defend whom our blood has become as free as water and our money as plentiful as leaves. [Applause.]

CHANGE IN EXPENDITURES.

Why, Mr. Chairman, has there been no change in the Philippine Islands since Dewey's guns sounded in the bay? Has there been no transformation there? Has American genius touched them but to corrode, and American civilization entered them but to canker? Are conditions the same there to-day that they were when Dewey's guns first poured forth the shot that rang round the world and made us the first nation of history? No changes? Is the gentleman's estimate of his country correct? Have the American people simply supplanted mediæval Spain without any corresponding change in policy—with the same tyranny and the same despotism and the same savagery and the same administration? There is not a solitary fact to support this broad assertion, made with such splendid diction and such rounded sentences by the distinguished gentleman from Missouri.

I hold in my hand several complete budgets of Spain with reference to the Philippine Islands for many years, and I will ask the Clerk to read those I have indicated, reminding gentlemen that the sums given are in pesos, of which two are about equal to an

American dollar in gold—or, perhaps, I may say, to an American dollar, for under the administration of the Republican party every dollar that circulates under the flag, of whatever substance composed, is the equal of every other dollar, and every one is worth 100 cents every day and everywhere. [Applause.]

The Clerk read as follows:

Receipts of the General Government in the Philippines for the year 1896-97 were as follows:

Direct taxes	$8,496,170.00
Indirect taxes (customs)	6,200,550.00
Monopolies	1,222,000.00
Lotteries	1,000,000.00
From State property	257,000.00
Miscellaneous receipts	298,300.00
Total	17,474,020.00

Expenditures of the General Government in the Philippines for the year 1896-97 were as follows:

General obligations	$1,507,900.46
State	74,000.00
Grace and justice (church and courts)	1,896,277.71
War	6,042,442.43
Treasury	1,393,184.68
Navy	3,566,528.58
Government	2,198,350.05
Public works	473,298.24
Instruction	141,900.50
Total	17,293,882.65

Mr. WATSON. In the foregoing table it will be observed that $9,608,971.01, or nearly 60 per cent of the entire expenditure, was for the army and navy, and but $141,900.50, or less than 1 per cent, was expended for public instruction, and $474,298.24, or less than 3 per cent, for public works.

In other words, Mr. Chairman, as we can see from this budget of Spain, carrying a total of all the appropriations of that country for the Philippine Islands, one-half of every dollar raised in the Philippines was diverted to the treasury of Spain and only one-half was permitted to remain in the Philippine Islands.

We give every dollar that we raise by tariff on all goods going into the Philippine Islands for the benefit of the Philippine government itself; and not only that, but on all goods coming into this country from the Philippine Islands the tariff that we collect goes back to the Philippine treasury. Spain took one-half of all the revenues for her own treasury. We give it all to the Philippines. Yet the gentleman from Missouri says that we are the same despoiler that Spain was and that no change has been made in the general treatment of the Filipinos. Is it true?

Why, Mr. Chairman, this budget shows that 1,420,188 pesos were every year given to the clergy—the friars—three orders of whom, as I understand, have done so much to produce trouble and discord in those islands; for, as I am informed, there are several orders of the friars, of whom three or four are peaceable and contented and satisfactory in their conduct, while the others are those who stir up strife and produce difficulty. Yet in the face of this fact these are the three orders to which Spain diverted 1,400,000 pesos that ought to have gone into the treasury of the Philippine Islands and donated it to these gentlemen, whose only claim to recognition was the strife and turmoil they had produced.

Mr. Chairman, have the American people simply taken the place of the Spanish Government? Are we to-day despoiling those people of their treasure? Are we to-day sapping the vitality of those islands and filching their funds from their treasury? Why, sir, how much did the Spanish Government appropriate for public works of every character for that year? Two hundred and forty thousand dollars. How much did Spain expend for educational purposes for that year? Seventy thousand dollars!

In striking contrast with this treatment of her Philippine colonies on the part of Spain, I call the attention of the House and the country to the receipts and expenditures of those islands under our control for the year ending June 30, 1901, reminding gentlemen that the sums stated are on a gold basis.

Receipts of the General Government in the Philippines for the fiscal year ending June 30, 1901, were as follows:

Customs	$9,032,600.70
Postal	121,559.26
Internal revenue	932,484.91
Miscellaneous	591,017.52
Total	10,677,662.39

The expenditures for the same period were as follows:

Customs	$280,815.23
Postal	147,031.25
Other expenditures	6,335,975.68
Total	6,763,821.68

It is impossible at this time to supply with exactness the items which are included in the term "Other expenditures" as used above. From acts of the Philippine Commission making current appropriations, and conservatively computed estimates based thereon, the following is presented as a fair distribution of the sum, $6,335,975.20, shown above:

There was expended for public works, including streets, parks, fire departments, cold storage, ice plants, and printing office, public buildings, markets, telegraph lines, water, roads, and bridges, quartermaster's department, light-houses, ferries, benguet, cemeteries, and crematories	$2,818,488.00
There was expended for current expenses, including Manila police, courts, registers, scouts, native police, and cavalry, prisons and prisoners, cable and telegraphing, harbor police and tugs, hospitals, lighting claims, poor, secret service, civil-service commission, mining and forestry bureaus	1,919,218.00
There was expended for education, including transportation of teachers	980,336.00
Total	5,718,042.00
There appear in the acts of Philippine Commission items aggregating the sum of $549,860, expended in military districts not under civil government, to which added, say, $68,073 to carry them to end of fiscal year, account for	617,933.20
Total	6,335,975.20
Amount of item "Other expenditures"	6,335,975.20

The unexpended surplus is in the Philippine treasury, as no part of the revenues of the Philippine Islands has been sent out of the islands, except to pay for purchases made for island use.

Spain, for public works, $240,000; America, for public works, more than $4,000,000. Spain, for education, $70,000; America, for education, a million dollars!

Spain donating 60 per cent of all the island's income for her own selfish purposes; America expending every dollar for the benefit of those islands themselves. Spain expending less than 1 per cent for education; America, 12 per cent. Spain expending 3 per cent for public works; America, 30 per cent. Spain collecting a large portion of her revenues by direct taxation upon an already overburdened and impoverished people; America collecting her revenues by a tariff upon imports and exports.

Spain appropriating large sums for the maintenance of the relations between church and state; America forever divorcing church and state and ushering in the glad day of religious toleration and religious liberty. Sir, it is the contrast of darkness with light, of liberty with bondage, of the fourteenth with the nineteenth century, of barbarism with civilization. [Loud applause.]

CHANGE IN THE SCHOOL SYSTEM.

What have we done for the school system upon those islands? Pertinent inquiry, sir, for education is the sovereign hope of those peoples. What was their condition under Spain's despotic sway? I read from the December (1901) Report of the Philippine Commission:

> The city of Manila, with its 11 districts and 247,000 inhabitants, has but three buildings erected by the Spanish Government for primary school purposes, and one of these is so poorly constructed and is in such a dilapidated condition that it is utterly unfit for use.

Under the Spanish régime, in a city of 240,000 people, but three schoolhouses, and one of them unfit for occupancy! Why, sir, among the very first things that the Philippine Commission did was to appropriate at one time $600,000 for the benefit of the schools!

Not only that, but before the Philippine Commission assumed control of affairs in those islands the Army of the United States had been at work along the same line; for the American soldier, ever true, ever patriotic, ever loyal, remembering always that under our Government the military authority is subject to the civil—the soldier of the Republic, when he marched through the swamps in pursuit of the swift-footed warriors of Aguinaldo and across the plains of the Philippine Islands, sheathed his sword long enough to erect a schoolhouse wherever he rested, so that he left in his pathway not desolation and despair, but places where citizens are to be educated and brought up to the exalted plane of republican institutions. [Applause on the Republican side.]

Yet in the face of this, our friends would have us believe that the Filipinos are faring no better under our Government than they did under the government of the Spaniards. Why, sir, what is the condition of the school system there now? Listen a moment. The Commission say in this report, which was made in December, 1901, but a short month ago, and is absolutely accurate beyond dispute, and I challenge successful contradiction by the gentlemen from Missouri—either the distinguished gentleman, Judge DE ARMOND, or his literary and scholastic colleague, Mr. CLARK, who made something of the same statement:

> It is impossible, on account of the short time that has elapsed since the majority of the American teachers were sent to their stations, to make a definite and correct statement of the number of pupils enrolled in all the public schools of the archipelago or to determine the ratio of those in regular attendance to the whole number enrolled. An estimate based on reports already received and on the number of teachers employed indicates that there are over 150,000 Filipino pupils enrolled in the free primary schools established by the government, and that there are over 75,000 pupils in actual daily attendance. The discrepancy between the number of primary pupils

enrolled and the number in actual attendance is in part due to the fact that in many towns schoolhouses are still used or occupied by the military authorities, and it is impossible to assemble all the pupils who wish to attend school.

This estimate indicates, moreover, that there are between 3,000 and 4,000 elementary Filipino teachers engaged in the schools, about 2,000 of whom are daily receiving at least one hour of English instruction. There are also at least 10,000 adults receiving English instruction in the evening schools conducted by American teachers. Demands for the establishment of schools for the instruction of adults in English are coming from all parts of the archipelago, and the American teachers have been given authority to establish evening schools for giving instruction in English wherever they are needed. Judging from the applications and the numbers already under instruction, and considering the eagerness of the Filipinos to learn English, it is safe to say that within a few weeks between 20,000 and 30,000 adults will be attending these evening schools.

One hundred and fifty thousand Filipino students enrolled in the free primary schools established by the American Government in the Philippine Islands; 30,000 men and women eagerly seeking a knowledge of our language, our laws, our Government, our civilization—and yet the gentleman from Missouri sees no star of hope in the universal gloom which surrounds him.

Mr. WHITE. Will the gentleman allow me to ask him a question?

Mr. WATSON. Certainly; with pleasure.

Mr. WHITE. As I understand it, the gentleman's argument is that if we confer upon these people greater material and financial benefit than have been conferred upon them by Spain it is a complete justification for us in depriving them of their liberty.

Mr. WATSON. I will show the gentleman what has been done in the way of conferring liberty upon these people. The gentleman seems to assume that material and financial benefits are all. I am endeavoring to show that since the Government of the United States acquired these islands the people are in a better condition than they have ever been before. Talk to me about liberty! Why, Mr. Chairman, what is the first thing to be done in all of these cases? What is the first thing that we should consider in dealing with these people? What condition did we find them in? And what have we done for them under free American rule, under the shadow of the American flag, in fitting them for the enjoyment of liberty?

The gentleman speaks sneeringly of the material benefits which have been conferred upon them. What have we been doing for them? We have been educating them under our own system, so as to fit them for civil government. Talk of liberty! Why, Mr. Chairman, the first thing that we should do is to feed and clothe and educate these people and give them an opportunity to be somebody, to make something of themselves.

Give them something for their heads to do and their hands to do. Give them employment, pay them wages, show them the method of civilization, and, above all else, plant the flower of hope in their hearts. Give them happy homes, and teach them how to enjoy the liberty of free citizens. This condition of affairs can not be brought about by making specious arguments on the floor of the House. Something must be done for them. We can not accomplish it by making abstract speeches on the question of human liberty. [Applause on the Republican side.]

Mr. Chairman, in the face of this magnificent result, in view of the strenuous conditions which have arisen and which we have to face in dealing with these islands, the gentleman from Missouri rises to say that we have only taken the place of barbarous Spain, that we have become the despoilers of the liberties of the people, and that, in the guise of American liberators, we are clutching at the throats of the Filipino people!

Sir, we are spending $100,000 in those islands every month in the cause of education. Do despoilers do thus? Is this the course of despots? Does tyranny form a partnership with knowledge? Is the public school system a means for the suppression of liberty? I deny it. There is not a fact adduced to support it.

CHANGE IN JUDICIAL SYSTEM.

What else have we done? What else has taken place? I call your attention to the further fact——

Mr. GAINES of Tennessee. Will the gentleman from Indiana yield for a question?

The CHAIRMAN. Does the gentleman from Indiana yield to the gentleman from Tennessee?

Mr. GAINES of Tennessee. I should like to ask the gentleman a question.

Mr. WATSON. Oh, Mr. Chairman, this is too much. [Laughter on the Republican side.]

Now, Mr. Chairman, what else? My distinguished and literary friend from Missouri [Mr. CLARK] stated upon the floor of this House—and I am sorry that he does not honor me with his presence—that he had recent information that almost every attempt at municipal government in the Philippines had proven a failure and had fallen abjectly to the ground. Do I state it too strongly? Rather, do I not state it too feebly? Because the gentleman is a master of language and knows full well how best to state his thought. What do the Commission say? This Commission, reporting a month ago, say that—

Six hundred and sixteen towns have thus far been reported as organized under this law, with the provinces of Bataan, Bohol, Capiz, Cebu, Isabela, and Suriago yet to be heard from. In actual practice the law has worked to the *supreme satisfaction of the people and of the Commission.*

Six hundred towns under civil authority. Six hundred towns redeemed from barbarism. Six hundred towns lifted from savagery. Six hundred towns placed under the control of the American flag and under the authority of American law. Six hundred towns, gentlemen of this House, where little children are going to school, taught the rudiments of language and of literature in order that they may become useful citizens in the future. Six hundred towns under municipal government, with our school system established in all of its branches. Six hundred towns that are to-day sending up pæans of praise to American liberality and American genius and the glory of our free American institutions.

Yet in the face of that fact the learned gentleman from Missouri [Mr. DE ARMOND] says that we are usurpers and have simply taken the place of barbarous and tyrannical Spain. I deny it. There is not a fact to support that. There is no truth upon which to base it. It was born alone in the distorted imagination of the fertile and ingenius gentleman from the banks of the Kaw. [Laughter on the Republican side.]

CHANGE IN INTERNAL IMPROVEMENTS.

But, sir, what else have we done? As the very first act of the American Congress was an act in favor of upbuilding home industries, so the very first act of the Philippine Commission was an act for the improvement of the Philippine Islands. It reads as follows:

Resolved, SECTION 1. That the sum of $2,000,000 Mexican is hereby appropriated, out of any money in the insular treasury not otherwise appropriated, to be expended in the immediate construction and repair of highways and bridges in the Philippine Islands.

And shortly after this follows another act appropriating a million dollars for the improvement of the harbor at Manila.

Such acts are at once the despair of the scoffer and the hope of the patriot, for they demonstrate beyond cavil the generous purposes and the broad methods of our country in dealing with those people.

Gentlemen, what is the masterful work that is being done there? Desolate islands are being transmuted by highways, by bridges, by roads, by schoolhouses, by laws, by a jury system, by the methods of peace, and the means of civilization. And yet, in the face of it all, the gentleman says that we have simply supplanted Spain; that no change has taken place in the islands since Spain abandoned them, and that we, like Spain, are usurpers and tyrants. Do I state it too strongly?

CHANGE IN FINANCIAL CONDITION.

And, Mr. Chairman, we have every ground for reasonable hope that these great and beneficent measures may be continued in the future, for, notwithstanding the unwholesome and pessimistic deluge poured out here by gentlemen upon this floor, those islands in the future will be self-sustaining. I quote again from the report of the Philippine Commission, page 111:

The general condition of the insular treasury is highly satisfactory. On the 1st day of September, 1900, when the Commission first assumed legislative power in relation to income and expenditures, there was in the insular treasury available for appropriation the sum of $3,023,834.29 gold values, on the basis of $2 insular currency for $1 in United States money.

At the date of our last preceding report, November 30, there was in the treasury available for appropriation the sum of practically $2,500,000, gold values, the Commission having in the period intervening between September 1 and November 30 made large appropriations for general improvements, particularly one of the $1,000,000 gold for building of roads under the supervision of the military government, and another of $1,000,000 gold for carrying on the improvement of Manila Harbor.

At the date of this report, September 30, 1901, there is in the treasury available for appropriation the sum of $5,106,518.46 gold values. Meanwhile all the expenses of the insular government have been met and very large appropriations have been made out of the insular treasury during that period for purely military and naval purposes. It is only a reasonable and conservative statement to say that under any proper management of the finances of the islands the revenue will be at all times sufficient to meet all ordinary expenses of good administration and to make considerable appropriations for large general improvements and the erection of public works.

In the ordinary current expenses of the islands we include, for the purposes of the statement now made, the establishment and maintenance of an efficient police system for the preservation of good order and of necessary means of communication between the islands for transportation of mails, public officials, and revenue-customs inspection. There is no reason why the Government of the United States should ever be called upon to contribute toward the support of the insular government, and, within a comparatively few years after the complete restoration of good order, it is entirely reasonable to anticipate that the revenues of the islands will be sufficient to pay all expenses incurred for troops, native or American, and insular police sufficient to maintain good order throughout the whole archipelago.

In the face of this testimony need gentlemen be disturbed about the cost of government there? Need they howl themselves red in the face about the enormous expenditures of our money there? Need they attempt to hold aloft this expense bugaboo as a scarecrow with which to terrify the timid?

OUR OBJECT PEACE, NOT WAR.

"Oh, but the Army, the Army!" exclaim our demoralized friends. "You are shooting civilization into the helpless Filipino with your Army!"—a highly favored expression invented by carping critics as a substitute for logic and sanity. Mr. Chairman, where there is insurrection it will be put down. [Applause on the Republican side.] It is on our territory and against the sovereignty of our flag. [Renewed applause.] But, after all, by far the larger portion of those islands is to-day under the reign of peace, subject to the methods of civilization I have heretofore described. And, sir, our Bill of Rights is there, too, guaranteeing personal freedom and individual liberty.

In the instructions given by President McKinley to the Taft Commission April 7, 1900, this Bill of Rights was laid down as the ground work, the very basis, of their operations in dealing with the complex problems presented for their solution. I will read it, for it holds within its sentences the very germ of liberty:

In all the forms of government and administrative provisions which they are authorized to prescribe the Commission should bear in mind that the government which they are establishing is designed not for our satisfaction or for the expression of our theoretical views, but for the happiness, peace, and prosperity of the people of the Philippine Islands, and the measures adopted should be made to conform to their customs, their habits, and even their prejudices to the fullest extent consistent with the accomplishment of the indispensable requisites of just and effective government.

At the same time the Commission should bear in mind, and the people of the islands should be made plainly to understand, that there are certain great principles of government which have been made the basis of our governmental system, which we deem essential to the rule of law and the maintenance of individual freedom, and of which they have, unfortunately, been denied the experience possessed by us; that there are also certain practical rules of government which we have found to be essential to the preservation of these great principles of liberty and law, and that these principles and these rules of government must be established and maintained in their islands for the sake of their liberty and happiness, however much they may conflict with the customs or laws of procedure with which they are familiar. It is evident that the most enlightened thought of the Philippine Islands fully appreciates the importance of these principles and rules, and they will inevitably within a short time command universal assent. Upon every division and branch of the government of the Philippines, therefore, must be imposed these inviolable rules:

That no person shall be deprived of life, liberty, or property without due process of law; that private property shall not be taken for public use without just compensation; that in all criminal prosecutions the accused shall enjoy the right to a speedy and public trial, to be informed of the nature and cause of the accusation, to be confronted with the witnesses against him, to have compulsory process for obtaining witnesses in his favor, and to have the assistance of counsel for his defense; that excessive bail shall not be required, nor excessive fines imposed, nor cruel and unusual punishment inflicted; that no person shall be put twice in jeopardy for the same offense or be compelled in any criminal case to be a witness against himself; that the right to be secure against unreasonable searches and seizures shall not be violated; that neither slavery nor involuntary servitude shall exist except as a punishment for crime; that no bill of attainder or ex post facto law shall be passed; that no law shall be passed abridging the freedom of speech or of the press or of the rights of the people to peaceably assemble and petition the Government for a redress of grievances; that no law shall be made respecting an establishment of religion or prohibiting the free exercise thereof, and that the free exercise and enjoyment of religious profession and worship without discrimination or preference shall forever be allowed.

Is despotism possible where such principles prevail? Rather, sir, must wide-extended freedom be the sure result.

NO OTHER COURSE POSSIBLE WITH HONOR.

But, Mr. Chairman, the distinguished gentleman from Missouri [Mr. DE ARMOND], turning his attention to another phase of the question, further says in regard to our occupancy of those islands:

Do we lack the power and the right to take the hand of the spoilsman from off the islands of the far-away seas? Do we lack the power and the right to give liberty to 10,000,000 people who are struggling and dying for it?

Where did the gentleman learn that there are 10,000,000 Filipinos struggling for human freedom? Why, the very best information that can be obtained is to the effect that there are but 8,000,000 of them all told, and so the fertile fancy of my friend has transcended the limits of possibility, and in his eagerness to make out a case against his country he sees 2,000,000 people struggling for human liberty who have no existence save in his imagination.

Not only that, but, Mr. Chairman, what right has the gentleman to say that 10,000,000 of those people are struggling for liberty? I deny it. There is not a solitary thing to show that the insurrection ever extended to many of the tribes. Is not that so? Well-nigh 80 tribes, we are told, have never been in insurrection. Yet the gentleman says 10,000,000 of them are struggling for liberty. Are any considerable portion of them to-day in insurrection? Is it not true, and can we not bring the facts of history to prove, that a comparatively small number of the inhabitants of those islands ever have been in insurrection?

What right would Aguinaldo have to establish a government, any more than we would have to establish one? What right would he have to establish the government that he formulated when sitting in a coffeehouse in Hongkong, whither he had gone after being bought by Spain to desist in his revolutionary schemes? What right would he have to bring that government over and force it upon the people of the Philippine Islands? Would he have as much right as we would have to establish a government after the islands had been ceded to us?

The gentleman says:

Do we lack the power and the right to take the mailed hand from the throats of men who are crying out for liberty and for independent national existence?

Mr. Chairman, if, by his fiat, the distinguished gentleman from Missouri could wholly change history, if by his command he could wipe out the past, would he, could he, obliterate the last four years in our history? Would he again fasten the Spanish yoke upon every Cuban neck? Would he once more place Porto Rico under the imperial sway of despotic Spain? Would he put the Filipinos back under the galling domination of that semibarbarous land?

No, he would not do that. What would he do? Would the gentleman from Missouri advocate the withdrawal of our troops, the withdrawal of our Commission, the withdrawal of our teachers, the withdrawal of our schools, the withdrawal of our fellow-Americans, the withdrawal of our investments, the withdrawal of our civilization, the withdrawal of all we have and are and represent there, and have us abjure any allegiance to or touch with the people of the Philippines? Would he do that?

Mr. Chairman, has there been a time when we could, with honor to ourselves and with safety to those people, have withdrawn from the Philippines?

When Dewey sailed into Manila Bay it was not only because he sought the Spanish fleet, but also because he had nowhere else to go. It was an exigent necessity. War having been declared between the United States and Spain, he could not remain in a single Asiatic port, because all were neutral. He was compelled to go somewhere. He could not sail for America, for he was without a sufficient supply of coal to cross the ocean. There was but one port open to him, and that was flanked by batteries, protected by forts, strewn with torpedoes, and held by a hostile navy. Therefore, when the message of President McKinley to George Dewey went sweeping under the waves of the sea, "Find the Spanish fleet and destroy it," it was dictated not alone by the policy of war, but also by stern necessity.

Does the gentleman from Missouri regret that Dewey sailed into Manila Bay? Would he with ruthless hand tear out that glorious page in American history? Was there one pang of regret felt by anyone within the confines of the Republic because of that unparalleled triumph? No, sir; unbounded gratification and delight rather.

Could Dewey have withdrawn just after his immortal achievement? Is the gentleman sorry that he did not? Did it occur to him then? Was it at that time suggested by a single citizen of this or any other land?

Shortly after Dewey had won that great victory he sent home stating that he was compelled to have troops before he could take Manila; and troops were sent. Was there a single lisping syllable against that proposition? Not one was heard here on either side of the House or at the other end of the Capitol. What were those troops sent for? Manifestly to take Manila, and for no other purpose. Was there a soul in this nation that objected to taking that city at that time? Not one. There were 13,000 Spanish soldiers in that city and they had to be conquered before Manila could come into Dewey's possession. Dewey could have reduced the city at any time, but he could not hold it because he lacked troops, and these troops were sent to him that he might hold it.

It was a strategic act to find the enemy and strike him wherever you can find him; and finding the enemy at Manila it was necessary to have troops. From a military standpoint it was necessary to take possession of Manila and dislodge the enemy. Does anybody dispute that plain proposition? Then when could we have withdrawn? The gentleman says we could have withdrawn immediately after Dewey achieved his victory. Why did not he suggest it then? Did his wildest fancy lead him to think of such an act at that time?

But I say that we could not then have withdrawn without losing our self-respect and forfeiting the esteem of every other nation on earth. There were in the city of Manila at that time Germans, Frenchmen, Englishmen, Italians, Spaniards, and people from all the civilized nations of the world. Would we have had any right to turn them over to the cruel mercies of those gentlemen lying just outside the walls waiting for an opportunity to loot the great city of Manila? We should not forget the fact that the chief of staff of Aguinaldo, the future ally of the Democratic party, in obedience to his leader's commands, issued this cruel order to his heartless followers:

Filipino families only will be respected. They should not be molested. But all other individuals, of whatever other race they may be, will be exterminated without any compassion after the extermination of the army of occupation.

Gentlemen, could we then have withdrawn and permitted these looters to have gone into the city of Manila; could we have turned

the English, the Germans, the French, and all others over to the tender mercies of Aguinaldo and his allies with such an order as that trembling on their lips? If in such an hour of appalling peril we had abandoned those people to the pitiless terrors that awaited them at the hands of these inhuman looters, would we not have stood convicted at the bar of civilization of national cowardice and national infamy? Would we not have been subject to the charge that we were partners with the Filipinos in these nameless atrocities? No, no, my friends, there is not a voice in this House but would cry out against that. I still say we could not have withdrawn. [Applause.]

If there ever was a time when we could have withdrawn, it was when the treaty of peace was before the Senate of the United States for ratification. While it was pending an amendment was offered by the distinguished Senator from Georgia [Mr. BACON], and I want to read that amendment. Bear in mind that that Senate was a Democratic Senate; that it was organized by Democrats and Populists, because fusion at that time between Democrats and Populists was complete, so complete, in fact, that it amounted to absorption, and the Democratic party was swallowed up by the Populist party; and I will do the Democratic party the credit to say that after that job was completed the Populist party had more brains in its abdomen than it ever had on its shoulders. [Laughter.] What was that amendment?

Resolved further, That the United States hereby disclaim any disposition or intention to exercise permanent sovereignty, jurisdiction, or control over said islands, and assert their determination, when a stable and independent government shall have been erected thereon, entitled in the judgment of the Government of the United States to recognition as such, to transfer to said government, upon terms which shall be reasonable and just, all rights secured under the cession by Spain, and to thereupon leave the government and control of the islands to their people.

What was the proposition that came before that Democratic body? It was that we should treat the people in the Philippines precisely the same as we were to treat the Cubans; that we were to take possession of the Philippines only temporarily. That was the question before that Democratic body. Now, what was the result? By a tie vote they refused to adopt it. I know that more Republicans voted against it than Democrats; I know that more Democrats voted for it than Republicans; but it was a Democratic body, charged with legislation, responsible for legislation, and it can not escape the consequences of that act simply because the Republicans voted against the proposition.

Ah, when the opportunity to escape from responsibility came, if, indeed, it ever did come, the Democratic party would not let us escape, and now by every principle of right they are estopped from denying that we are in the Philippines justly and that, under Providence, we are there to stay. [Applause on the Republican side.] Is not that right? Ah, but Mr. Bryan was present——

Mr. BARTLETT rose.

Mr. WATSON. If the gentleman from Georgia will wait till I get through. Mr. Bryan left his uniform in Florida, or wherever he was—he was so peripatetic that it was hard to find him—anyhow, he finally landed in the capital of the United States, and in answer to a question by the distinguished gentleman from Ohio, General GROSVENOR, touching this point, the gentleman from Missouri, Judge DE ARMOND, used this language:

Mr. Bryan did not believe that the treaty was good.

What an apology for his great leader. What an apology for this wandering applicant for the Presidency of the United States. [Laughter.] He did not believe that the treaty was good. Now, the treaty either must have been good or it must have been bad. There was no middle ground. If Mr. Bryan did not believe the treaty was good, he evidently believed it was bad, and he was, according to the statement of his apologist in this House, seeking to induce the Senate to adopt a treaty that he knew and believed was bad. What an apology for a distinguished statesman that desires to stand at the head of the Republic.

He believed—

Further said Mr. DE ARMOND—

the treaty was not good, that the treaty was not what it ought to be, and he never said anything like that.

Well, he was here, and it is universally conceded and never denied, or doubted, or disputed that the personal interference of Mr. Bryan, his personal influence with the hosts of fusion, brought about the passage of that resolution which ratified the treaty with Spain.

Not only that, but Mr. Bryan was here when the other resolution I have read was offered and under discussion, and influenced by his counsel that Democratic Senate voted not to keep the Philippines temporarily; they voted not to adopt the Bacon resolution, and on the very next day they voted for the other resolution that we should take the Philippines. On one day they voted not to take them temporarily, and on the next day they voted to take them. What is the irresistible and inevitable conclusion? That they voted to take them forever. Is not that true?

Mr. BARTLETT rose.

The CHAIRMAN. Does the gentleman from Indiana yield to the gentleman from Georgia?

Mr. WATSON. I can not yield.

Mr. BARTLETT. The gentleman is making a statement of history, and he ought to be willing to make it correctly.

Mr. WATSON. I can not read history through Democratic eyes, Mr. Chairman, and I am very fortunate that I can not [applause on the Republican side], because I can only see things in a straight line and not around a corner. [Laughter on the Republican side.]

Mr. BARTLETT. Mr. Chairman——

The CHAIRMAN. The gentleman from Indiana declines to yield.

Mr. WATSON. By and by I will yield to my friend from Georgia, if he will permit me to conclude.

CAN NOT NOW WITHDRAW.

But the gentleman insists that we could have withdrawn once, and that we can withdraw now. Hear him:

And what we ought to have done then, we still can do. The door is not closed. Who bars us? What fell agency stands between the great American Republic and the right? What is across our pathway leading as honor points to where glory may be won by the doing of a just and generous deed? Point it out. Where is the goblin? Where is the opposing force?

* * * * * * *

Not a nation upon the earth to oppose, not an obstacle in our path, not a power but our own greed and vanity and selfishness to stand in the way of a grand achievement by a grand Republic—the crowning by grand and glorious deeds of a grand and glorious war undertaken for liberty and humanity. There is no difficulty in the way except our own perversity, no difficulty in the way except the juggling with the Constitution which some of the gentleman's friends are doing.

How gleefully the gentleman chides his countrymen! With what sweet unction he assails his native land! How free his wing in the poisoned air of truthless invective! How he delights in sarcasm at the expense of his Government! How he revels in the dear privilege of saying mean things about those in authority! How he fairly rolls in the luxuriant richness of his scathing rhetoric! But is it true?

Mr. Chairman, I have never believed that it was possible for us to have concluded a treaty of peace with Spain without accepting the Philippines. The more I have studied the three courses open for us at that time with reference to that archipelago the more firmly I am convinced that we adopted the only one we could have adopted with honor to ourselves and safety to those distant peoples. What were they? First, to permit Spain to retain her sovereignty there. Would our people have ratified that choice? Would the Democratic party have acquiesced in that policy?

The citizens of this country had, but a few months before, been inexpressibly shocked at the untold cruelties practiced upon the helpless people of Cuba by Spain, and we rushed to arms to snatch them from her barbarous rule. Could we, then, have turned the Philippines back to her—ten times as many people as inhabit Cuba—without incurring the just censure of all mankind? The Democratic party, desperate as it is for an issue, would not dare even now to advocate such a policy of infamy and shame.

Again, it was demanded in certain quarters at that time that we should compel Spain to relinquish sovereignty over those islands the same as she did over Cuba. But, sir, that was a demand to which Spain, even in the hour of her humility, would not have acceded. We could not justly have made such a demand. Cuba was the cause of the war. We went into the strife for her sake and we had a right to demand that she should be free, especially in view of our previous declaration that we did not desire her territory. We had a right to demand Porto Rico, and Spain yielded to our demand. We had a right to demand the cession of the Philippines, but we had no right to ask that they should be set adrift. If we did not want them we had no right to say that Spain should not retain them.

Furthermore, sir, had they been set adrift, with no civilized nation to safeguard them, can anyone doubt that they would at once have been plunged into an internecine strife almost without historic parallel? Aguinaldo would at once have sought to establish his government over the islands. Eighty tribes of varying degrees of civilization would not have submitted to his domination, and the inevitable result would have been a war that must have shocked the world.

Can anyone doubt that while thus unfortunately situated some European nation would have seized them? Or failing in that, and in order to maintain the balance of power in Europe, the powers would have again handed those helpless people over to Spain for further cruel extortion, for further heartless exploitation? So, sir, there was but one remaining alternative, and that we adopted; and, considering the untoward conditions which have confronted us from the day we received them to the present moment, we have accomplished there some of the most marvelous achievements of history—achievements possible only to a nation whose sole object is liberty, whose sole aim is freedom. [Applause.]

Sir, have conditions so changed that we can do now what we

have not heretofore been able to do? Do not the same circumstances exist at this time which have all along forbade our withdrawal? The foreigners are yet in Manila. We have assumed charge and they look to us, and have a right to look to us, for protection. If we withdrew at this time, would not rebellion break out afresh in every part of that archipelago? Would not those foreigners be subject to the same dangers that beset them when Aguinaldo's looters were howling for their blood?

If we withdrew now, would not internal dissensions spring up on every hand? Would not those islands speedily become the scene of a ghastly carnival of disaster, wreck, and death? Mr. Chairman, I believe that we are in the Philippines to stay [applause]; at least we can not now withdraw. We must remain; we must face our duty; we must discharge the debt we owe to those people, to humanity, to civilization, to liberty. [Applause.]

OUR ARMY SHOULD BE UPHELD.

But what other charge did the gentleman make against his country? And this is a splendid text:

> Do we lack the power and right to take the mailed hand from the throats of men who are crying out for liberty and for independent national existence?

Whose is the mailed hand that is held at the throat of the Filipino? Manifestly the boys in blue, fighting under the rippling folds of our beautiful banner over the Pacific, across the ocean, 7,000 miles away. Is this a mailed hand? Shall we sit patiently by while the soldier boys of the Republic, gallantly contending for the honor of the country and the glory of the flag, are assaulted and aspersed on the floor of this House?

Sir, no more singular devotion to the flag has been known than theirs. They left their country's shores, they climbed over the ridge of the Western sea, to plant their country's banner in a strange land and under new skies. Clad in their uniform of blue and beneath the emblem of their nation's power, they have never faltered in their devotion to their country's cause. They are to-day struggling for the supremacy of republican principles and the equality of all men. [Applause.] In the desert sands, in the mountain fastnesses, in the tangled forest, in the treacherous swamp, they have not ceased to contend, not for power, for conquest, for territory, for spoils, but for the eternal principles represented by their flag. [Applause.]

Is theirs a mailed hand? Can it be withdrawn at this time and in justice? No; it can not be. And it is not a mailed hand. It is the helping hand that rolls back the clouds, that disperses the mists, that brings the sunshine of hope and liberty into the human heart. [Applause on the Republican side.]

And shall these boys go unprotected? Will the Democracy vote against the proposition here involved? Will they refuse shelter to and withhold protection from the defenders of their country's flag?

Are they subject to the unjust censure of the gentleman from Missouri? They who rushed to arms "when the judgment drums beat to quarter in 1898," and who have since borne steadily aloft the sacred banner of the free?

Men of the North, your sons are there. When you came back from Appomattox you brought an unsullied banner. Every star was shining on the spangled flag, and there was neither master nor slave beneath its folds.

While they were yet children you placed it in their keeping, under your watchful care, and they are guarding it with a jealousy worthy the sacred trust. They are your sons and they can no more help being what they are than the sunset can help being glorious; than the rose can help being fragrant; than the bird song can help being sweet; than the rainbow can help leaping from the jeweled raindrop. They were bred in an heroic mold. They are the sons of the men who went singing up the steeps of Mission Ridge; who rolled up their sleeves and calmly lighted their pipes before they rushed into the leaden storm at Fredericksburg; who shouted the national air as they swung into battle at Chancellorsville.

Men of the South, your sons are there, too, for, thank God, to-day there is but one uniform and one flag. [Loud applause.] Sons of the men who wore the Confederate gray; sons of the men who rushed into the leaden hell of battle as to a banquet; sons of the men who followed Lee and Jackson, and Johnston, and Hood, and Bragg, upon a hundred gory fields of strife. They are heroes to the manner born, and are entitled by right of birth to a place among the bravest and the best.

These boys are true to their immortal heritage. Catching the spirit of universal freedom, they are contending for the enfranchisement of a race beyond the sea. Amid thick dangers and hidden perils they have been true to their country's cause. They have conquered, they have overcome. And behold! The flag of the Western land is to-day unfurled in everlasting triumph above those distant islands of the sea, uplifting in its rise a race from bondage and a nation to triumphant hope. [Loud applause.]

Can the sun refuse to shine? No more could we confine the spirit of liberty which gave us a nation to our own shores. We could not rot in our own selfishness. We could not mold in our own greed. The Maine was exploded at an opportune time to call us from ourselves, to fix our gaze once more upon our high ideals, to summon us to an imperial participation in the affairs of the world. Who doubts that all peoples will be the better for it? Who doubts that the Filipino's freedom will be greater under our banner than under the shifting flag of Aguinaldo? Who doubts that the realm of civilization will be extended and the sphere of peace enlarged by our occupancy of those islands? Who doubts that our own flag will continue to symbolize wherever it may wave, on land or sea, the perfect liberty of man?

I for one do not. I believe that so long as the rivers run to the seas; so long as altars are erected to liberty; so long as the Rockies upon whose bald summit the ardent Fremont planted the flag of freedom shall rear their snow-capped peaks toward heaven, just so long will that flag continue to mean what it means here and now; just so long will it represent the only land where liberty is regulated by law; just so long will that banner, with the commingled colors of the sunset and the sky, typify the land of liberty, equality, fraternity, three of the sweetest words in all the languages of men, and which

> Upon the sacred altar stairs,
> Which slope through darkness up to God,

humanity under it has attained. [Loud applause.]

ONLY A REPETITION OF DEMOCRATIC ASSAULTS.

Why, Mr. Chairman, we have heard these speeches before. I well remember that when Mr. McKinley, the gentlest memory of our day, was President of the United States, these same epithets were used, these same arguments were employed. I remember that these gentlemen exhausted the dictionary in order to amplify their vocabulary of epithets. We all remember what they said. How distinctly we recall it now. How they hurled their maledictions at his head, and how the doleful prophet from Missouri predicted unutterable woe if we persisted in our course.

Why, sir, the stately and mournful stanzas of Isaiah, the deep and melancholy reflections of Jeremiah, the sharp and exclamatory maledictions of Malachi, are but as the murmurous river of breath compared with the woe-laden and sorrow-burdened prophecies of the gentleman from Missouri. [Laughter and applause.] But, behold, they have not come to pass.

And we well remember what our Democratic friends then had to say about these momentous questions and about that gifted man.

They did not hesitate to charge that the hands of our great chieftain, now gone, that we now know to have been ever clean, were dripping with the warm, fresh blood of his fellowmen. They did not hesitate to charge that his heart, that we now know to have been ever pure, was a nesting place for tyranny and hate. They did not hesitate to charge that his breast, that we know in its aim embraced humanity and humanity's cause, was a spawning place for oppression and all oppression's breed. They did not hesitate to charge that his brain, which we now know never gave birth to any other thought than the good of his fellow-man, was filled with schemes for gain, for riches, and for self-advancement. We vividly remember that they tipped their arrows with malice and steeped their spears in hatred and hurled them in showers at his head. But they found no flaw in his armor. The powder of calumny was all burned by his defamers, but it left his name untarnished.

Mr. Chairman, but a few short weeks ago, in the city of Buffalo, the poisoned bullet of the assassin sped on its cruel mission and executed the fell purpose of him who fired it. It was the most dastardly deed that has ever disgraced the annals of our civilization. But before the great man fell, as if to place a fitting crown on all his noble work, his lips had but given splendid utterance to the favored theme of his life, revoicing the song the angels sang above Judea's hills, "Peace on earth, good will to men."

A nation wept, a people mourned, the earth was wrapped in gloom, and men in all their busy marts stood still. And as I looked upon the calm and noble features once instinct with life and reflected upon all the high purposes, the firm resolves, the generous impulses, the lofty sentiments, and the world-embracing thoughts that had stimulated him to word and deed, I could not help but wonder how, in such an hour of universal woe, those men felt whose only thoughts of him were born of malice, whose only feeling for him was conceived in hatred, whose only words concerning him were words of contumely and reproach.

Sir, what high purpose animated him from the inception of this great controversy? Permit him to answer in his own measured words—words that spoke his lofty object in dealing with these people in the distant seas. On the 8th of January, 1899, he sent a message to Admiral Dewey and General Otis which for breadth and sentiment has never been surpassed. Hear it, you who charged him with murder and tyranny.

Time given insurgents can not hurt us and must weaken and discourage them. They will come to see our benevolent purpose and recognize that, before we can give their people good government, our sovereignty must be complete and unquestioned.

Tact and kindness most essential now. Am sure you both, having full knowledge of situation, can be trusted to accomplish purposes of this Government with least discord and friction. *We accepted the Philippines from high duty in the interest of their inhabitants and for humanity and civilization. Our sacrifices were with high motives.* We want to improve the condition of the inhabitants, securing them peace, liberty, and pursuit of their highest good.

Was ever nobler object voiced? Was ever broader platform stated? Over and against the pessimistic plaints of the opposition, over and against the oft-repeated charges of tyranny and oppression, over and against the carping criticism that we want the Philippines for our enrichment and not for their good, I set the noble words of our departed chief, every syllable of which we have been trying to execute and bring to pass up to the present hour. [Applause.]

And now that William McKinley stands immortal, it does seem remarkable to me that our Democratic friends should loose the tongue of vituperation, of slander, of aspersion, of vilification in speaking of the Republican party and of the boys fighting over yonder in the Philippines under the shadow of the American flag. [Applause.]

But, sir, there need be no trouble about this after all, for the Republican party is at the helm, and that means safety for the Republic and liberty for the Philippines.

DEMOCRATIC PARTY CAN NOT BE TRUSTED.

Oh, what a strange thing this old Democratic party is anyhow! [Loud laughter.] What has been their attitude on this question from its beginning till this hour?

Denunciation, criticism, complaint. Negative always, positive never. Pessimistic always, optimistic never. Doubting, disputing, quibbling, objecting. Self-constituted sentinels upon the watchtower of liberty, they ever cry out against dangers which do not exist, and ever warn us of impending calamities which can not occur.

What do you believe now, gentlemen of the Democracy? Can anybody tell? For what great national principle are you contending? Does anybody know? Can you agree among yourselves on a single question that now demands solution at the hands of the American people? If so, what is it? What policy do you propose for the Philippines? Gentlemen of the Democracy, you have none. Your attitude on this great question is that of the dog in the manger—you will do nothing yourselves and you are doing your utmost to prevent us from aiding these new wards of the nation.

What has your party ever done to warrant the people in restoring you to power? And to-day, as you look back over your history, are you not really glad that you have had but little to do with governmental affairs since the Republican party was born? Has there been one solitary page of history written in the last forty years that you have had anything to do with writing save as a party of opposition?

In 1860 your party sought to destroy this Union, and every man upon that side to-day rejoices because you did not succeed.

You sought to tear the Stars and Stripes into shreds and from its tattered fragments to construct the stars and bars; you sought to overthrow the Republic and upon its ruins to rear an oligarchy whose foundation should be the stooping and lacerated backs of 4,000,000 human beings. Are you not to-day more than glad that the Republican party would not let you do it?

In 1864 you met in convention and declared the war a failure, just as you are here and now declaring the Philippine war a failure, and you sought to prevent the reelection of Abraham Lincoln, with whose great name you now profess to conjure. Are you not to-day glad that you were unsuccessful in that effort?

And after the war was over you looked upon the national debt, you saw that it was piled mountain high and its immense proportions carried terror and dismay to your souls. In that trying hour you demanded a policy of repudiation. But the Republican party said:

No! Every dollar of that debt is as sacred as our soldiers' blood, and every penny of it shall be paid in the best money known to the nations of the earth.

And under the matchless leadership of Ulysses S. Grant the Republican party sustained its principles at the polls. Are you not happy to-day, gentlemen of the Democracy, that you did not succeed in that contest? [Applause.]

And in 1888, in seeking for an issue, as you ever are, you again unfurled the faded banner of free trade. You demanded that our tariff system should be at once repealed, and that we might have free and unrestricted trade with all the world. In the battle of the ballots which ended that campaign you were again vanquished. In the light of all you now know on that subject, do you not this hour rejoice that Benjamin Harrison was triumphant in that conflict?

And in 1892 we had the same candidates and the same issue, and you were successful in the struggle. Are you not everlastingly sorry, my Democratic friends, that you did win in that fight? [Laughter and applause on the Republican side.]

And in 1896, when the sanity of our monetary system was assailed, you discovered a new Moses, and climbed with him upon the rickety Populistic platform of 16 to 1. But the Republican party again flung itself across your pathway as you were plunging along toward national repudiation and national dishonor and said, "No! We have promised to make every dollar of our money as good as the best known among the nations of the world, and we propose, in the name of justice and in their presence, to redeem that promise and make every dollar as good as gold." We waged a momentous conflict upon that question, such as shook this great Republic from circumference to center, and we won. Are you not glad in your heart of hearts, my Democratic friends, that we did win in that historic conflict?

In 1900, when we were again lined up on opposing sides of political questions, when the Republican party stood for honor at home and for honor in the Philippines, and for the honor of our country everywhere; when we said we wanted to place our hands gently beneath these people and lift them up, by development, by evolution, to the exalted plane whereon we stood, the Democratic party said, "No; the Republic will be overturned, an empire will be established upon its ruins, and we are in the throes of disintegration and dissolution as a Republic." We fought upon that issue and we won a tremendous victory. Really, my Democratic friends, down in the inmost recesses of your souls, are you not glad that we did win in 1900? [Applause on the Republican side.]

And, Mr. Chairman, in the days of the Republic that are yet to be, when our eyes will be gladdened by the vision of all the people of the Philippines redeemed from barbarism and glorified by the manifold blessings of peace, of civilization, of liberty; when we behold the white sails of our commerce dotting every sea, entering every port, and encircling every land; when we look upon our flag as the one most honored among all the flags of earth because of what it stands for and what it represents; then will not those of you who are yet alive, and will not your children and your children's children, rise up and thank God that the people of the United States paid not the slightest attention in the world to anything the Democratic party thought or said or did in the year of our Lord 1902? [Loud laughter and applause on the Republican side.]

Now, Mr. Chairman, the Republican party will handle this question, will solve this problem, will grandly rise to the occasion just as it has always done for the last forty years of our country's history. If our Democratic friends will come along and be good, we will be glad to have them in the neighborhood; but if they propose to object, if they propose to nullify, if they propose to obstruct, if they intend forever to stand off and criticise and propose nothing and oppose everything, then we had just as soon they would not be around us to bother and distract, because we propose to solve these questions anyhow and do it right, under the fear of God, who has opened up a shining pathway for this great Republic. [Prolonged applause on the Republican side.]

APPENDIX.

COMPARISON OF RECEIPTS AND EXPENDITURES, WITH SYSTEMS OF TAXATION IN THE PHILIPPINES, UNDER SPANISH AND AMERICAN ADMINISTRATION, JANUARY, 1902.

Receipts of the General Government in the Philippines for the year 1894–95 were as follows:

1. Direct taxes	$6,659,450
2. Indirect taxes	4,565,000
3. Receipts from monopolies	1,112,850
4. Lotteries	875,000
5. From state property	195,500
6. Estimated petty receipts	174,100
Total	13,579,900

1. Of the "direct taxes," $4,586,250 was derived from the "cedulas," or certificates of identification, one of which every Filipino was required to secure annually, the cost ranging from $1 to $25 each. Other direct taxes were that on commerce and industry, netting $1,323,000; the poll tax on Chinese, $482,000; tax on urban property, $110,400; tribute from unconquered tribes, $12,000; a 10 per cent tax on railway tickets, $35,000; a 10 per cent tax on salaries, $70,000.

2. Of the "indirect taxes," or customs receipts, $3,800,000 were duties on imports; $430,000 duties on exports; $300,000 from clearance dues, and $35,000 in fines, etc.

3. Of the "receipts from monopolies," $602,300 was from the opium contract and $510,550 from stamps and stamped paper.

4. Of the receipts from "lotteries," all but $4,000 was from sale of tickets.

5. Of receipts "from State property," $122,000 was from sale of forest products; $45,000 from sale of lands; $25,000 from sale of buildings.

6. Of "petty receipts," $100,000 was from coinage of money; $40,000 from sale of supplies, etc.

In all municipalities taxes were laid, strictly for municipal uses, as follows:

1. On persons selling their products in market, according to amount sold.

2. On slaughterhouses, whether animals were killed there or not, average rates being 50 cents for a sheep, $1.50 for a cow, 25 cents for a pig, 25 cents for a goat.

3. On permits to fish, ranging from 20 cents to $2.50.

4. On ferries and bridges, ranging from 1 to 20 cents.

5. Certificates of ownership of animals, costing 15 cents each.

6. On billiard rooms, theaters, horse races, cock fighting, deeds, inclosures for animals, etc.

7. On rural property, for roads, carriages, carts, horses, weights and measures, etc., as the municipal tribunal may direct.

Expenditures of the General Government in the Philippines for the year 1894-95 were as follows:

1. General obligations	$1,380,506.53
2. State	65,150.00
3. Church and courts	1,687,108.88
4. War	4,045,061.84
5. Treasury	823,261.95
6. Navy	2,450,176.77
7. Government	2,220,120.98
8. Public works and institutions	628,752.46
Total	13,280,139.41

1. Of the "General obligations," $118,103 was for the colonial department in Madrid; $70,822.73 for the colony at Fernando Po, on the coast of Africa; $718,000 on pensions and retired pay; $367,000 for interest.

2. Of the "State" expenses, nearly the whole $65,150 was used to pay cost of Spain's diplomatic and consular service in China, Japan, and other oriental countries.

3. Of the expenditures for "Church and courts," $1,226,793.64 was spent on the church—the two largest items being $625,860 for the parochial clergy (four bishops receiving $6,000 each, and the archbishop $12,000) and $419,680 for material for ecclesiastical establishments.

4. Of the "War" expenditures, $771,043.25 was for salaries of officials of the administrative bureau, while $1,334,484.32 was for army material.

5. Of the "Treasury" expenses, $232,796 was for the central offices of the intendancy-general, the central treasury, and comptroller, and $216,244 for provincial administrations of the public treasury.

6. Of the "Navy" expenses, $1,147,540.42 was for material and $1,349,504 for services.

7. Of "government" expenses, $272,606 was for salaries of the governor-general, who received $40,000 and allowance, and for provincial governors and commanders, who received from $3,000 to $4,500, with at least half as much more in allowance; $843,755.91 for the civil guard of 3,482 persons; $969,921.92 for postal and other communications, and $88,555 for the "general directorate of the civil administration."

8. Of expenses for "public works and institutions," $141,175.50 was for special institutions of instruction, chiefly in Manila; $109,690 for public works, mostly in salaries; $142,365 for "general inspection of mountains;" $15,575 for mines; $103,570 for agricultural school and stations, and $37,462 for navigation and light-houses.

This system of taxation took from the Filipinos their substance in the form of taxes and contributions and gave no equivalent in return. The revenues were swallowed up by salaries, pensions, the church, and the colonial office at Madrid.

Receipts of the General Government in the Philippines for the fiscal year ending June 30, 1899, were as follows:

Customs	$3,097,864.15
Postal	42,954.87
Internal revenue	240,378.27
Miscellaneous	130,131.03
Total	3,511,328.32

The expenditures for the same period were as follows:

Customs	$29,177.16
Postal	30,410.75
Other expenditures	2,337,810.80
Total	2,397,398.71

Receipts of the General Government in the Philippines for the fiscal year ending June 30, 1900, were as follows:

Customs	$5,535,952.49
Postal	104,282.54
Internal revenue	522,509.01
Miscellaneous	361,195.58
Total	6,523,952.49

The expenditures for the same period were as follows:

Customs	$134,685.83
Postal	89,149.51
Other expenditures	4,994,545.78
Total	5,218,381.12

TAXATION IN THE PHILIPPINES—SPANISH TAXES BEFORE AMERICAN OCCUPANCY.

Under Spanish rule in the Philippines there were ten classes of taxes imposed. They were: (1) Industrial tax, (2) urbana tax, (3) stamp tax, (4) cedula tax, (5) capitation tax on Chinese, (6) vassalage tax, (7) discount of 10 per cent on Government salaries, (8) lottery tax, (9) monopoly tax, (10) provisional and transitory taxes.

1. The industrial tax was in the nature of a license to do business. Professions were classified, and practitioners were taxed on their general standing; merchants, on the line and class of business conducted. These were again loaded with "surtaxes," which in the aggregate amounted to about 27.05 per cent of one's profits.

2. The urbana tax was levied on the income of buildings and improvements. The owner was allowed, say, 25 per cent of his income for insurance, repairs, and general expense of maintaining his estate. On the remaining 75 per cent a tax amounting to about 20 per cent was levied (including surtaxes of, say, 15 per cent).

3. The stamp tax was similar to our "internal-revenue stamp tax." In addition to requiring stamps to be placed on all deeds and other documents for record, on checks, receipts, and other similar papers, the Government supplied "stamped paper," upon which all legal papers, pleadings, and the like must be prepared to entitle them to be recognized.

4. The cedula tax was a vicious one. Every man was required to have constantly on his person a receipt showing that he had paid a "cedula" varying from $1 to $25, as he might be arbitrarily assessed. If not paid, it became in the nature of a perpetual lien, in fact, a bar to his enjoying any public benefit. If a party could not produce his "cedula" he could not file in or otherwise make use of a public record of any kind—could not procure a marriage license; a body could not be buried if a death should occur in the home of the poorest citizen until his pending and all unpaid cedula taxes were paid.

5. The capitation tax was in the nature of an immigration fee, imposed on all Chinamen arriving or attempting to land in the islands.

6. The vassalage tax was one imposed on the "non-Christian" tribes. It was rather a dangerous one to collect, and no attempt was made to enforce it except where tribal relations existed, and they were collected in groups. In addition to the element of revenue, it served as an evidence of allegiance of the tribes to the authority of the Spanish Crown.

7. Discount of 10 per cent on Government salaries. All persons who received a salary from any department of the Government were compelled to submit to having 10 per cent thereof deducted and placed in the treasury of the Government.

8. Lottery tax. Lotteries were permitted, and a very heavy tax was assessed both on the enterprise itself as well as upon those who dealt in lottery tickets if conducted for a foreign enterprise.

9. The monopoly tax was composed of two elements. First, the Government itself for many years claimed all the tobacco raised in the islands. They compelled all landowners in rural districts to raise a certain quantity of tobacco to be turned over to the State. So rigid was this exaction maintained that a farmer would be subject to imprisonment if known to make a cigar of the tobacco he might be raising until the share belonging to the Government had been segregated and delivered. Tobacco and cigar factories were conducted also by the Government, in which persons were employed at nominal rates. The profits arising from the tobacco so received and manufactured were placed in a fund known as the "monopoly fund."

There was another element of monopoly recognized. Certain parties were granted exclusive privileges of selling and handling particular kinds of merchandise—for instance, opium. For this exclusive privilege, amounting to a monopoly, they paid a special tax, which was also placed in the "monopoly fund."

10. Provisional and transitory taxes were certain levies made by the arbitrary decree of the Government to meet urgent or special expenses. There was no limit to them, either in amount or frequency. During the war, conditions prevailing for many years, they were made regularly and were extremely burdensome. (Under Spanish rule there was no system of land taxation.)

TAXES AFTER AMERICAN OCCUPANCY.

Among the instructions of the President to the major-general commanding the army of occupation of the Philippines was the following:

"The taxes and duties payable by the inhabitants to the former Government become payable to the military occupant unless he sees fit to substitute for them other rates or amounts of contribution for the expense of the Government."

Under these instructions the following taxes have been continued, modified, abolished, or new ones substituted, as follows:

1. The industrial tax is maintained in a modified form. Corporations and individuals engaged in manufacturing or mercantile pursuits pay a tax of 5 per cent of their "net income." There are seven different tariffs or schedules and four classifications of tariffs based upon population of cities and towns. There are 62 classes of industries entirely exempt.

Salaries of directors, managers, superintendents, and other higher officials pay an income tax of 5 per cent; subordinates, employees receiving 600 pesos and upwards, pay 2½ per cent; all salaries (other than government employees) less than 600 pesos are entirely exempt.

All sur-taxes are abolished.

2. The urbana tax was maintained after abolishing the "sur-tax," which reduced it to 5 per cent of 75 per cent of the income of buildings and improvements, until January 1, 1902, when it was abolished entirely.

3. The stamp tax was continued similar in character to the laws of the United States. The stamped-paper feature was abolished. Poor people are allowed to prosecute and defend without costs, and in that way they are exempt from any considerable hardship from this class of tax, whereas large corporations and transactions involving large sums of money continue to contribute to the expense of government through this medium.

4. The cedula tax was practically abolished. The hardship was obliterated, and in place of exacting a sum varying from $1 to $25, a sum not exceeding 20 cents (estimated cost of maintaining registry) is charged for what all desire as the protection which they all believe exists in having their "cedula" paid.

5. Capitation tax on Chinese. This tax has been maintained.

The other five taxes—viz, vassalage, discount of 10 per cent on government salaries, lottery, monopoly, and the provisional and transitory taxes—have never been maintained since American occupancy.

The above taxes, with the exception of the capitation tax on Chinese, are, when collected, divided equally between the provincial and municipal governments. The general government must depend mainly for its support on export and import duties.

Jury Rights Denied in Philippine Islands and Hawaii—Slavery in Both Territories.

SPEECH

OF

HON. JOHN W. GAINES,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, January 23, 1902.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 9515) making appropriations to supply urgent deficiencies in the appropriations for the fiscal year ending June 30, 1902, and for prior years, and for other purposes—

Mr. GAINES of Tennessee said:

Mr. CHAIRMAN——

Mr. CANNON. I will ask unanimous consent that after the gentleman has had his five minutes and my colleague such portion of five minutes as he may desire, that we can have a general agreement that the visiting statesmen to the Philippines [laughter] will take some other bill to tell their experiences, and that we may go on.

Mr. GAINES of Tennessee. Ah, Mr. Chairman, I am surprised at my distinguished friend from Illinois——

Mr. CANNON. I will ask if we can have that agreement.

Mr. GAINES of Tennessee. I am perfectly willing.

Mr. GREEN of Pennsylvania. I object.

Mr. GAINES of Tennessee. I am surprised, Mr. Chairman, that the gentleman from Illinois should so lightly look on this matter in these islands. Why, gentlemen, what is the trouble in addition to the conditions that I have alluded to. It is that there is not simply one slave in the schoolroom, but Wahab, the

teacher, told me that the Sultan of Jolo was selling people every day, and especially, as this school-teacher, Wahab, said to me, "on his side of the island"—that is, over in the territory contiguous to the Sultan's residence, and this, too, Mr. Chairman, in the face of the Constitution, which prohibits slavery throughout the domain of the United States in the following words:

Neither slavery nor involuntary servitude, except as punishment for crime, whereof the parties shall have been duly convicted, shall exist within the United States, nor any place subject to its jurisdiction.

If the Philippine Islands are not a part of the United States, and I contend they are, they are clearly a place, a territory, "subject to the jurisdiction of the United States," and this amendment says: "Neither slavery nor involuntary servitude * * * shall exist within the United States or any place subject to its jurisdiction."

Mr. Chairman, both military and civil officials, so far as I have been able to ascertain in the past, up to this period of imperialism and colonialism, have felt bound and were bound by an oath to enforce this provision of the Constitution in every spot of American territory, and they have done so; and yet it seems that in the Philippines it is held by military officials at Jolo, at least one of them, with whom I talked, whose duty it is to uphold the Constitution, that this contract or treaty made by and between President McKinley and this little Sultan not only prohibited him from acting in the matter of this slave boy, but that this contract was the superior law—the law of that land—and if the Constitution was or was not there his idea was that this contract was superior to the Constitution that prohibits slavery.

Why, Governor Taft, just before I arrived at Manila, explained in the Manila papers, which I read on arrival, the reason why officers in the Philippines were not required to take an oath to support the Constitution of the United States in the Philippine Islands.

This marks a new era in the administration of our Constitution and our Territorial laws. Heretofore our officials have been required to not only take an oath to support the Constitution, but Congress has even gone so far as to say—though unnecessarily, as the Supreme Court said in the Maynard case, reported in 125 United States Reports—that nothing could be law or become law in our Territories that was contrary to the Constitution; and yet we find now that contracts can be entered into which are contrary to the Constitution, and that oaths to support it are unnecessary—are useless—that men have become so good, so just and unselfish, that all the strong and proper restraints of the old days of the Republic need not be thrown around them; that they need not be reminded of their full duty and bound up by oath so that all danger of doing wrong officially may be eliminated as far as possible.

I do not know what effect the opinion of Governor Taft had upon the Army officers, or upon this particular officer, but the fact is that this officer said that by reason of this contract with the Sultan he had no right to intervene and demand the liberty of or give liberty to this schoolboy, and that, too, after I called his attention to the fact that this provision of the Constitution prohibited slavery within American domain, and that this contract, regardless of what it said, was in derogation of the Constitution, and was null and void as to slavery at least; but this had no effect upon the official, who planted himself firmly upon this contract and declined to act. What was done with this case after I left I do not know. I have given the substance and the conversation had.

JURY RIGHTS DENIED IN PHILIPPINE ISLANDS.

Let us see what rights are denied in the Philippine Islands to the natives and Americans there that are enjoyed by the people in the United States. They are denied their rights we enjoy under the fifth amendment of the Constitution that:

No person shall be held to answer for a capital or otherwise infamous crime, unless on a presentment or indictment of a grand jury.

They are denied the rights we enjoy by amendment 6 of the Constitution, that "In all criminal prosecutions the accused shall enjoy the right to a speedy and public trial by an impartial jury," and all rights under amendment 7 to the Constitution, that "In suits of common law, where the value in controversy shall exceed $20, the right of trial by jury shall be preserved." Time and again, Mr. Chairman, the Supreme Court of the United States has held indictments for crime in our Territories are illegal unless found by a grand jury.

Time and again the Supreme Court of the United States has held that the sixth amendment gave to the people of the Territories the right of trial by twelve jurors, "neither more nor less;" that the jury alluded to in this amendment meant a jury of twelve men. Time and again the Supreme Court has held that the seventh amendment secured a unanimity in finding a verdict, and that a verdict by jury must be a verdict of all the jurors and not a part, and that "Congress could not impart the power to change this constitutional rule."

Yet, Mr. Chairman, the people in the Philippine Islands, both natives and Americans, are denied any jury rights whatever. They are indicted there without a grand jury. They are tried without a jury. Yet the Filipinos submitted a constitution for the island of Negros to President McKinley which provided for jury trials, but the President denied them. They are tried by judge. Their property rights are adjudged by judge without a jury. Both natives and Americans are hanged without a jury trial, and this, too, in the face of the fact that our Supreme Court has repeatedly said that these jury rights were guaranteed to the people of the territory by the Constitution, and that Congress could not take away or give these rights, being already rights guaranteed to the high and low alike in our Territories.

Time and again the courts have said that it is the duty of the "courts to be watchful of the constitutional rights of our people" and especially those "for the security of persons and property," and that to do this they should be "liberally construed." But the courts in the Philippine Islands are created by a lawmaking power, the Philippine Commission, and that Commission says by the laws they make that the jury rights which we enjoy in the United States shall not be enjoyed there by natives or Americans, and they so made the law.

So they created the court and enacted the law to suit themselves. The members of this Commission will tell you it is not safe to intrust the trial of cases to juries in that island; yet we turn to the official records of that country and find the Filipinos (excluding 10,000 white people who are there who are capable of being jurors) have planned and written and are administering many of the laws of that island and are holding a high place, as well as low ones, by appointment of this Commission.

I remember distinctly that I was instrumental in causing an amendment, which became law, giving the people of the Territory of Alaska the right of a trial by jury—a jury of 12, although the bill, which was reported, provided a trial by jury of six; and I was informed, only a few days ago, the law is working well; and in the course of the debate it was agreed, after I had challenged the matter to the attention of the House, that by virtue of the Constitution the people of Alaska had the right of jury trials, and 12 jurors at that, and more, that their verdict must be unanimous.

And I remember, further, that there were distinguished members on the other side of the House who ably supported my contention, who have since, I regret to say, weakened in their convictions and claim that the Constitution does not follow the flag.

CONSTITUTIONAL RIGHTS DENIED IN HAWAII.

But conditions are not much better in the Territory of Hawaii. On returning from the Philippines I stopped there and found that slavery existed there, and that three Republican judges, appointed by President McKinley, had held that the fifth, sixth, seventh, eighth, and thirteenth amendments to the Constitution did not apply to Hawaii; that a conviction on indictment found without a grand jury was valid; or that a conviction by a majority of a jury of twelve was valid, and that the thirteenth amendment did not apply to that Territory or reach a system of slavery under what is known as the masters and servants' act, which "makes imprisonment for life," as the court said, "a possible punishment for its violation."

The court further held that the eighth amendment to the Constitution did not apply, which requires that—

Excessive days shall not be required, nor excessive fines imposed, nor cruel or unusual punishments inflicted.

The act under which the defendant was convicted reads as follows:

If any person lawfully bound to service shall willfully absent himself from such service without the leave of his master, any district magistrate of the Republic, upon complaint made under oath by the master, or by any one on his behalf, may issue a warrant to apprehend such person and bring him before the said magistrate; and if the complaint shall be maintained the magistrate shall order such offender to be restored to his master, and he shall be compelled to serve the remainder of the time for which he originally contracted.

If any person shall refuse to serve according to the provisions of the last section or the terms of his contract, his master may apply to any district magistrate where he may reside, who shall be authorized, by warrant or otherwise, to send for the person so refusing, and if such refusal be persisted in to commit such person to prison, there to remain at hard labor until he will consent to serve according to law. And in case such person so bound as aforesaid shall have returned to the service of such master in obedience to such order of such magistrate, and shall again willfully absent himself from such service without the leave of his master, such district magistrate may fine such offender for the first offense not exceeding $5, and for the second offense not exceeding $10; and in default of payment thereof such offender shall be imprisoned at hard labor until such fine is paid; and for every subsequent offense thereafter the offender shall be imprisoned at hard labor not exceeding three months, and at the expiration of any such imprisonment such magistrate shall order such offender to be restored to his master to serve for the remainder of such original term of service.

Laborers are enslaved and can be imprisoned under this law, and one was in this sugar company's case.

I rejoice to state that about a year ago there was placed on the same bench a Mr. Justice Galbrith, from the good State of Indiana, who utterly repudiates, in the dissenting opinions that he writes,

these Republican adjudications and holds, as he should, that the Constitution follows the flag. [Applause.]

I know of no cases but these which I have cited—the one in Hawaii and the other in Jolo—where an Americon judge or official, civil or military, has ever held that the thirteenth amendment did not prohibit slavery within the limits of American domain. It applied and destroyed the system of peonage in the Territory of New Mexico; it was applied in Alaska, and an Indian slave was given his freedom in an opinion found in Thirty-first Federal Reporter, written, as I remember, by Justice Dawson, and the question has never been presented to the Supreme Court of the United States, so far as I recall, that that court did not hold that the thirteenth amendment applied throughout the territory of the United States, and that the jury rights that were denied in this case in Hawaii were rights which the people in each and all of our Territories were entitled to have as rights guaranteed to them under and by virtue of the Constitution.

I am glad to state that in a recent case, in writ of habeas corpus proceedings, Mr. Justice Estee, of the Federal bench, has reversed the opinion of the Supreme Court in the Hawaii case which I have been discussing, and holds that the opinion of Mr. Justice Galbrith, a Democrat, is correct. An appeal has been prosecuted in the Hawaii case, and it stands now for trial soon before the Supreme Court of the United States. But no right of appeal is given in the cases in the Philippine Islands to the Supreme Court of the United States.

We find here, Mr. Chairman, that question, that we thought had been settled for all time to come, is now an "open one;" questions that the Supreme Court said, I believe in the Hoff case (reported in 174 United States Report), one of the recent cases arising in the District of Columbia, a Territory of the United States, to wit, the right of trial by jury in our Territories, was "no longer an open question." But the imperialists of to-day, the colonialist, now doubts and denies and seeks to overthrow these ancient and recent decisions and rulings of that great court, and are seeking to set up by such contentions a system of tyranny and oppression that has always followed where the right of trial by jury has been denied the people.

The imperialist contends that these rights do not obtain in our Territories by virtue of the Constitution. That before such rights do, Congress must pass a statute and either "extend" the Constitution there or enact jury rights by statute for the particular Territory. Such a statute, of course, as all statutes are, could be repealed in a week after its enactment. And such a policy places the personal liberty and inalienable rights of the Americans—excluding the natives, if you please—places the Americans at the mercy of each recurring Congress, although our forefathers, or such American's forefathers, framed our Constitution for the protection of themselves and their "posterity," and declared in the face of that great document that "this Constitution is the law of the land."

With such insidious invasions of our constitutional rights in our new possessions, how long before they will take root and begin to pull down these fundamental rights at the very door of every American citizen in our great Republic? Little by little evil influences attack righteous principles, and soon, like a great banyan tree, they spread over the country and become so powerful as to demand recognition in society, and later in legislation generally. At the very beginning of such evils I protest, and shall continue to protest as long as I remain in this honorable body and after I have retired to the walks of private life. [Applause.]

Urgent Deficiency Appropriation Bill.

Should a wise man utter vain knowledge and fill his belly with east wind? Should he reason with unprofitable talk or with speeches wherewith he can do no good?—*Job xv, 2, 3.*

SPEECH

OF

HON. HENRY W. PALMER,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 21, 1902,

On the bill (H. R. 9815) making appropriations to supply urgent deficiencies in the appropriations for the fiscal year ending June 30, 1902, and for prior years, and for other purposes.

Mr. PALMER said:

Mr. CHAIRMAN: The House, having under discussion a deficiency appropriation bill, has wasted two days in useless debate, principally over the acquisition of the Philippine Islands; useless because there is no practical disagreement among men of sense on the subject of what shall ultimately be done with those islands. I believe all such are in favor of establishing for them a stable government, and when they are fit of allowing their people to govern themselves. If a difference of opinion exists, it is as to how that kind of a government can be established, and when the people of the islands shall be left to administer it.

On this side of the House the opinion seems to be that the first necessary step that must be taken before any kind of a civil government can be established is to reduce to submission those who are in armed rebellion against the authority of the United States. If this can not be done, evidently civil government of any kind, stable or unstable, can never be established. Having undertaken the work, we do not believe the United States can afford to give it up and confess defeat.

Whether the acquisition of the islands was wise or unwise is not an open question. When it was decided by the treaty-making power to acquire the Philippines, that question was settled and settled forever. It ought to be closed to debate. Whatever the opinions of gentlemen of the opposition, they are of no consequence at this stage of the case. The time to object has gone by, and objections are not now signs of superior wisdom, but of unwise contumacy. The duty of those who regard patriotism as above party is to join in an honest, united effort to make the best of the situation, and to hasten the happy day when the government of the Philippine Islands shall concern us no more.

Further discussion of the question whether the United States did well or ill in acquiring the Philippine Islands, whether we hold them by conquest or purchase, whether Spain had the sovereignty to sell, whether the $20,000,000 paid was the consideration for their purchase or the price paid for peace, whether the inhabitants are citizens or subjects, whether the United States may lawfully own and govern them under the Constitution, is idle and unprofitable. These questions were submitted to the people at the last general election and then decided. The people declared no backward step should be taken. They decided to keep the flag flying and manfully shoulder the responsibility, and go forward in the plain path of duty and honor, with confidence that no principle of liberty had been or would be violated. It may be a costly and tedious task, but in the end, when the blessings of civil and religious liberty shall be enjoyed by the inhabitants of these islands, when education and civilization shall take the place of bondage and ignorance, as they must, those who delay the work and make the task more difficult will confess their error and be ashamed of their actions.

The reasons that justified the Spanish treaty were sufficient to secure its adoption; it was not a partisan measure; without a considerable Democratic support it never could have been ratified. That support came from those who at the time were in command of the Democratic forces; it is now too late for privates in the ranks to carp and criticise. Every obstructive speech inspires new hope in the ranks of those who vainly resist the authority of the United States. The war in the Philippines would have been over long ago but for the false hope raised by those who place partisan advantage above patriotic duty. The evidence in support of this assertion comes from the officers and men who are facing the bolos and bullets of the enemy.

The country has had enough and more than enough of this profitless discussion. Perhaps it is too much to hope that a party which has not been right upon any public question in fifty years should now learn wisdom. In the best of books it is said:

Though thou shouldst bray a fool in a mortar among wheat with a pestle, yet will not his foolishness depart from him.

The Democratic party has not been right in half a century; it was wrong when it repealed the Missouri compromise and reopened the question that had vexed the country from a time before the Constitution was adopted. It was wrong when it encouraged the South to undertake the most wicked, wasteful, and unnecessary civil war that the world has ever seen—a war that cost $7,000,000,000 and 400,000 precious lives.

It was wrong when, during the darkest days of the rebellion, it discouraged enlistments, encouraged desertions from the Army, impeded the progress of the war, and gloried over Union defeats and rebel victories. It was wrong when, in its national convention upon the eve of a final collapse of the rebellion, it declared that the war was a failure and demanded that our troops should be withdrawn from the field. It was wrong when it opposed a reasonable plan of reconstruction that would have left the domestic affairs of the South in the hands of her people. It was wrong when it opposed the resumption of specie payments and the redemption by the Government of the pledges it made to its friends at home and abroad, that the money loaned to aid in suppressing rebellion should be repaid according to the letter and spirit of the contract.

It was wrong when it advocated an unlimited issue of greenback currency, and in opposing the national banking system which delivered the country from a flood of depreciated or worthless

paper money. It was wrong in reopening a tariff discussion, which ended in the passage of the Wilson bill, which cost in actual cash more than the great rebellion, filled the country with idle mills and factories, and the streets of town and country with idle men who begged for work while their families begged for bread. It was wrong in advocating the free and unlimited coinage of silver, which was an unparalleled scheme of confiscation and robbery of rich and poor alike. Doubtless it is too much to hope that this party, once great and led by great men, but now fallen into a state of "innocuous desuetude," should ever again rise to the height of a patriotic conception or the execution of a patriotic deed.

Can the Ethiopian change his skin, or the leopard his spots? Then may ye also do good that are accustomed to do evil.

I beseech you, gentlemen of the opposition, give up gazing into the dead past and look forward to the living future. Join hands with the party of progress and constructive statesmanship in one supreme effort to keep our country where she is and where she belongs—at the head of the procession.

The extent of the commercial invasion of Europe by the United States is graphically described by Mr. F. A. Vanderlip, recently Assistant Secretary of the Treasury, who spent some months abroad investigating the subject. He says:

American locomotives, running on American rails, now whistle past the Pyramids and across the long Siberian steppes. They carry the Hindu pilgrims from all parts of their empire to the sacred waters of the Ganges. Three years ago there was but one American locomotive in the United Kingdom; to-day there is not a road of importance there on which trains are not being pulled by American engines. American bridges span rivers on every continent. American cranes are swinging over many foreign moles. Wherever there are extensive harvests there may be found American machinery to gather the grain. In every great market of the world tools can have no better recommendation than the mark "Made in America."

We have long held supremacy as a producer of cotton. We are now gaining supremacy as makers of cloths. American cottons are finding their way into the markets of every country. They can be found in Manchester, as well as on the shores of Africa and in the native shops of the Orient. Bread is baked in Palestine from flour made in Minneapolis. American windmills are working east of the Jordan and in the land of Bashan. Phonographs are making a conquest of all tongues. The chrysanthemum banner of Japan floats from the palace of the Mikado on a flagstaff cut from a Washington forest, as does the banner of St. George from Windsor Castle. The American typesetting machines are used by foreign newspapers, and our cash registers keep accounts for scores of nations. America makes sewing machines for the world. Our bicycles are standards of excellence everywhere. Our typewriters are winning their way wherever a written language is used. In all kinds of electrical appliances we have become the foremost producer.

In many European cities American dynamos light streets and operate railways. Much of the machinery that is to electrify London tram lines is now being built in Pittsburg. The American shoe has captured the favor of all Europe, and the foreign makers are hastening to import our machinery, that they may compete with our makers. In the Far East, in the capital of Korea, the hermit nation, there was recently inaugurated, with noisy music and flying banners, an electric railway, built of American material, by a San Francisco engineer, and now it is operated by American motormen.

One might go on without end, telling in detail the story of American industrial growth and commercial expansion. In the list of our triumphs we would find that American exports have not been confined to specialties nor limited as to markets. We have been successfully meeting competition everywhere. America has sent coals to Newcastle, cotton to Manchester, cutlery to Sheffield, potatoes to Ireland, champagnes to France, watches to Switzerland, and "Rhine wine" to Germany.

In the year 1900 the output of open-hearth steel in the United States, for the first time in our history, exceeded that of Great Britain. The total production of pig iron was 13,789,242 gross tons in the United States, whereas that of the United Kingdom was 8,908,570 tons. Of Bessemer steel in the same year our output was 6,684,770; of the United Kingdom, 1,745,000. Of open-hearth steel we made 3,398,135 tons, while the quantity credited to Great Britain was 3,156,050 tons.

There is great anxiety among British iron masters and steel makers. They see the day approaching, and near at hand, when the supremacy of English shipbuilding, which is due largely to the lead of the English in the production of open-hearth steel, will pass across the Atlantic. Reasonable legislation, which will place American shipping on terms of equality with that of other countries, will almost immediately restore the American flag to the seas and save to the country not less than $200,000,000, which is annually paid to owners of vessels sailing under foreign flags for carrying our exports abroad.

Unite with us in perfecting a just and necessary law on the subject; give up for a brief space the illusive hope that the people of this country will ever intrust the Democratic party with the administration of the Government until it has repented of its false doctrines and "brought forth fruits meet for repentance."

Let this unnecessary and hopeless agitation, kept alive for purely political purposes, cease. It serves only to unsettle what has been settled by the untiring labor of a nonpartisan commission in the Philippine Islands. It revives insurgent activity, stimulates false hopes, inculcates mischievous notions, and keeps in the field, in active hostility, bands of guerrillas who, ignorant of the laws of civilized warfare, ambush and treacherously slaughter American soldiers, and thus measure the mischief that flows from this idle and unpatriotic talk in American blood.

The War in the Philippines—Reconcentrado Camps—Human Slavery in the Mohammedan Islands—Enormous Expenditures, Past and Prospective.

Should a wise man utter vain knowledge and fill his belly with east wind? Should he reason with unprofitable talk or with speeches wherewith he can do no good?—*Job xv, 2, 3.*

SPEECH

OF

HON. C. F. COCHRAN,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 22, 1902.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 9315) making appropriations to supply urgent deficiencies in the appropriations for the fiscal year ending June 30, 1902, and for prior years, and for other purposes—

Mr. COCHRAN said:

Mr. CHAIRMAN: Concerning the proposal to place at the disposal of the President, to be expended as he may direct in the erection of barracks in the Philippines, I have only a few words to say. It is not to the expenditure that I object. Millions more will have to be expended for the same purpose if we conclude, as a finality, to maintain perpetually in the Philippines a hybrid government, part military and part civil, of the carpetbag variety. The people over there will never submit to such a government except under compulsion. We must expect to keep there a large army, scattered through the archipelago. The troops must have barracks, and while I shall avail myself of every opportunity to insist upon withdrawing the hand of force which now compels subjection to our authority, while our soldiers are there I shall vote for every reasonable measure for their support. I will never again, however, vote for any bill which places at the disposal of the President a large sum of money to be disbursed outside the usual channels of public business. At every session of Congress since the first appropriation for the defrayment of the expenses of the Spanish war we have made appropriations of this kind. Anxious to make provisions for the support of the Army, fearful that opposition to this vicious practice would be perverted into seeming opposition to appropriations instead of opposition to a growing evil in the administration of the Government, many members of this House have voted for bills containing provisions like this. I never will do it again.

Mr. Chairman, in view of the extraordinary performance of the gentleman from Indiana [Mr. WATSON] and its exhilarating influence upon the members of the opposition, it is perhaps not unadvisable to refresh the recollection of the House as to some matters that have passed into history. It is true that the Philippine Commissioners have reported that in 600 towns in the Philippine Islands schools have been established. They have reported also that in a number of towns in the island of Luzon courts have been organized. It is equally true, however, that all this has been done by our representatives in a country and among a people who claim the right to govern themselves and who have stubbornly and amid incalculable horrors resisted our occupation of the islands. The achievements of which the gentleman from Indiana [Mr. WATSON] so eloquently boasted are the achievements of a conqueror. Furthermore, it is undoubtedly true that in accomplishing the ghastly work so eloquently applauded we have been compelled to resort to the course pursued by the English in South Africa and by the Spaniards in Cuba. Undeniably we are now making war upon noncombatants—men, women, and children—just as Weyler did in Cuba and as Kitchener is now doing in South Africa. Within a month general orders have been issued by our commanders which are indistinguishable from those promulgated by the Spaniards during their last days in Cuba, and which were by us denounced as violative of the usages of civilized warfare, and these orders are now being enforced against the people of the Philippine Islands.

And, Mr. Chairman, what are we to gain in the end by this unholy crusade? In the attempt to forcibly impose an alien government upon the Filipinos, we have expended enough money to build the Nicaragua Canal and build a hundred first-class war ships with which to defend it, and we are no nearer to undisputed sovereignty in those islands than we were when the first blow was struck.

In addressing the House upon this subject nearly three years ago, before a shot had been fired, I said that the army had never walked the earth and never would that could conquer and pacify the Philippine Islands under alien rule. Three hundred years of history attest the correctness of this statement. From the date of Spanish occupation down to our invasion of the Philippine Islands recurring revolts and attempted revolutions compelled Spain to defend her pretensions scores of times at an enormous

expense in treasure and blood; and it is actually true that since their occupation by Spain the islands have had a larger number of their people killed in battle than any of the great States of Europe or the United States. To the gentlemen who so hopefully predict that in a little while the war in the Philippines will be over I recommend the careful study of the history of Spanish occupation of the country and equally diligent inquiry as to the racial peculiarities of the people against whom we are waging a war of conquest. History warrants the statement that the Filipinos are far superior to the South Americans, the Mexicans, or the Cubans. They are in some respects wonderfully gifted. When the Spaniards took possession of the islands, the people were barbarians, but they did not acquire the vices and reject the virtues practiced by their conquerors. The appearance of the European upon their shores was not precursory of the destruction and disappearance of the sturdy islanders, who, throughout the centuries during which they have served cruel taskmasters, have been remarkable for sobriety, morality, and the observance of a code of ethics which has preserved sacredly the strict observance of those duties the performance of which guarantees the honesty of men, the virtue of women, and the happiness of the household.

As barbarians, long before the Spanish invasion, the Filipinos had invented a written alphabet and written numerals. Their chiefs, called "headmen," were elected, and the "headmen" of each tribe exercised such functions as were necessary to the conduct of government, simple in form, essentially democratic, and ample for their purposes.

And, Mr. Chairman, it seems to have escaped the attention of the President and of the majority in Congress that during the entire term of Spanish sovereignty this simple, democratic, municipal government was not interfered with. The Spaniards never undertook to uproot the simple institutions which, throughout the Catholic islands, made life, property, and civil rights as secure as they are in any oriental country—I think I might safely say, as secure as they are anywhere,

Throughout the controversy precipitated in this country by the acquisition of these islands the supporters of the policy of imperialism have grossly misrepresented the people of the Philippine Islands, and I have no doubt a majority of the American voters are of the opinion that the people of Luzon are mere savages—worse than our Indians—no better than the naked natives of African jungles.

Mr. Chairman, at the outbreak of the revolt against Spain which was in progress in the Philippines when our forces went there 800 native students were attending the university at Manila. The Filipinos had schools of their own and scholars equaling in attainments the graduates of Cambridge and Yale. They have a literature of their own, for instead of using the Spanish language, as many believe, the native tongue is taught in schools and seminaries and is used almost exclusively by the natives.

Mr. Chairman, the gentleman from Indiana says that only the Tagalogs, a single tribe, are in revolt against our authority; that the remainder of the inhabitants of the islands are enthusiastically in favor of American rule. This pretense is threadbare, and the fact that the gentleman from Indiana has repeated it here to-day is sufficient to discredit his eloquent defense of the misguided policy of his party as valueless. Does not the gentleman know that the term Tagala applied to a single Philippine tribe has precisely the significance that the term Missourian or Vermonter or New Yorker applied to a citizen of a State has in this country? There is no difference between the Tagala as an individual and any other inhabitant of the islands. Meeting members of different "tribes" on the street, you would not know one from the other. This wicked tribe, so long abused by the Republicans on this floor, belong to Luzon. How about Samar, the scene of the recent tragedies? No Tagalas live down there.

The civilized people of the Christian islands are a homogeneous people, and are united in the desire for the independence of their country. Regardless of tribal names they are of the same race—all of the same nationality and of the same color.

Mr. Chairman, outbursts of eloquence will not put an end to the horrible conditions prevalent in the Philippine Islands. Our army has been there for about three years. For over two years war has been raging. We have lost thousands of lives, mostly from disease, and our soldiers have desolated the country and killed thousands of the natives. During every month of this protracted struggle the people of the United States have been solemly told that there would soon be peace throughout the islands. Indeed, two or three times this reassuring intelligence has been conveyed to this body through the medium of President's messages.

Mr. Chairman, there is to-day no prospect of peace. Why, the newspapers announced only two or three days ago that 5,000 fresh troops are to be sent to the islands to take the place of a similar number who are to be brought home, and it is undoubtedly true that the Administration knows by this time that we must maintain in the Philippines for an indefinate period an army of at least 50,000 men in order to hold the natives in subjection.

Mr. Chairman, Weyler, "the butcher," the Spanish general whose brutal disregard of the rules of civilized warfare so horrified American sympathizers with Cuba a few years ago, will go into history in very respectable company. His orders concentrating noncombatants of all ages, and of both sexes, in camps near fortified towns, there to die by hundreds and thousands of diseases unescapable under such conditions were justly regarded as so cruel, so unnatural, so monstrous that his name became the synonym of "murderer." Precisely the policy of Weyler is being practiced by the British in South Africa and by our generals in the Philippine Islands

General Bell, in command of our forces in southern Luzon—an island in which our army has been marching and countermarching for over two years, and in which we are told only one "tribe" is in revolt—recently promulgated an order, and a circular urging its enforcement, which I desire to put into the CONGRESSIONAL RECORD.

The Washington Times of recent date published a summary of General Bell's order, which I will incorporate as part of my remarks:

Brig. Gen. Franklin Bell, commanding the department of southern Luzon, recently issued a reconcentrado order which may compare in a way with that of Weyler in Cuba or of Kitchener in South Africa. Copies of it were received by the War Department and made public to-day.

Examination of the order shows it to be the most completely frank document of an official character put out in a long time.

THE INNOCENT MUST SUFFER.

General Bell discusses the situation without dissimulation and candidly declares that the peace in his district, such as it is, is only seeming, and that measures causing the innocent to suffer with the guilty are absolutely necessary.

General Bell says in his order: "In order to put an end to forced contributions now levied by insurgents upon the inhabitants of sparsely settled and outlying districts by means of intimidation and assassination, commanding officers in the provinces of Batangas and Laguna will immediately specify and establish a plainly marked boundary surrounding each town, bounding a zone within which it may be practicable to exercise efficient supervision over and furnish protection to inhabitants (who desire to be peaceful) against the depredations of armed insurgents.

LIABILITY AND DANGER.

"Commanding officers will also see that orders are at once given and distributed to all the inhabitants, informing them of the danger of remaining outside of these limits and that unless they move by December 25 from outlying districts with all their movable food supplies, to within the limits of the zone established at their own or nearest town, their property found outside of said zone at said date will become liable to confiscation or destruction.

"The people will be permitted to move houses from outlying districts should they desire to do so, or to construct temporary shelter for themselves on any vacant land without compensation to the owner, and no owner will be permitted to deprive them of the privilege of doing so."

NOT VERY ANXIOUS FOR PEACE.

In explaining and elaborating upon this order, General Bell, by means of a telegraph circular to his subordinate officers, says a general conviction which the brigade commander shares appears to exist that the insurrection continues because the greater part of the people, especially the wealthy ones, pretend to desire, but in reality do not want, peace. He adds that "when all really want peace, we can have it promptly."

"Under such circumstances," General Bell continues, "it is clearly indicated that a policy should be adopted that will, as soon as possible, make the people want peace, and want it badly. It is an inevitable consequence of war that the innocent must suffer with the guilty. The short and severe war causes in the aggregate less suffering than benevolent war indefinitely prolonged.

SYMPATHY SHOULD BE SUBORDINATED.

"Natural and commendable sympathy for suffering and loss and for those with whom friendly relations may have been maintained should therefore take a place subordinate to the doing of whatever may be necessary to bring a people who have as yet not felt the distressing effect of war to a realizing sense of the advantages of peace."

He urges commanding officers to take the initiative, saying: "Subordinate commanders and young officers of experience should not be restrained or discouraged without excellent reason, but should be encouraged to hunt for, pursue, and vigorously operate against armed bodies of insurgents wherever they may be found."

General Bell advises that every chance be taken to get into action.

CIVIL ELECTIONS DENOUNCED.

The election of civil officers in Batangas and Laguna is denounced as having been dictated by Malvar and other insurgent leaders. He continues: "It can be adopted as a rule without danger of error that whenever an insurgent sympathizer writes a letter or takes any action under pretense of opposition to the insurrection he will immediately secretly convey to insurgent officials the information that he was compelled to do it or did so to mislead Americans. The loyalty of persons should not be judged by such acts or by words alone.

"Another dangerous class of enemies are wealthy sympathizers and contributors who, though holding no official positions, use all their influence in support of the insurrection, and while enjoying American protection for themselves, their families, and property, secretly aid, protect, and contribute to insurgents.

CHIEF OF THE DISLOYAL CLASSES.

"Chief and most important among this class of disloyal persons are native priests. It may be considered as practically certain that every native priest in the provinces of Batangas and Laguna is a secret enemy of the Government and in active sympathy with insurgents. Those are absolutely our most dangerous enemies—more dangerous even than armed insurgents because of their unequaled influence. They should be given no exemption whatever on account of their calling. On the contrary, whenever sufficient evidence is obtainable they should be brought to trial. Should a suspicion rest against them, in the absence of competent evidence they should be confined and held as a necessary military precaution against further activity or bad influence on their part. The same course should be pursued with all of

this class, for to arrest anyone believed to be guilty of giving aid or assistance to the insurrection in any way, or of giving food or comfort to the enemies of the Government, it is not necessary to wait for sufficient evidence to lead to conviction by a court, but those strongly suspected of complicity with the insurrectionists should be arrested and confined as a military necessity, and may be held indefinitely as prisoners of war."

Mr. Chairman, what is the difference between the reconcentrado orders issued by Weyler when he was commanding the Spanish troops in Cuba and this order made by one of the commanders of our forces in the Philippines? If Weyler was guilty of inhumanity, are we innocent?

If it is true, as the gentleman from Indiana [Mr. WATSON] has just said, that the war is about over—if only a single tribe is in revolt—there was no necessity for such an order, and it is therefore doubly reprehensible. If means so obnoxious must be resorted to in order to subdue opposition to our sovereignty, who can safely predict how long the bloody work of conquest will last?

But, Mr. Chairman, this is not the only unusual expedient resorted to by our generals in order to create a reign of terror in the Philippines. Another general order, still more extraordinary, stands to our discredit—an order for which there can be found no precedent in the history of the world except in Great Britain's bloody wars upon the Irish peasantry.

General Smith, commander of our forces in Samar, requires each and every combatant to furnish information as to the whereabouts of belligerent forces, as to the whereabouts of arms, or other information such as will facilitate the operation of our army against the insurgents, and in the general order requiring this serves notice on the inhabitants that nothing else will be accepted in proof of loyalty to the American Government. This general order says to a man under suspicion, "Have you any information to give against the enemy?" If the answer be, "I have no information on the subject," whether true or false, the victim is branded as an enemy, and although a noncombatant he is banished from home and family, and his helpless dependents are driven into the wilderness to starve. "Shoot him on the spot" is what this general order means. I desire to put it in the CONGRESSIONAL RECORD:

HEADQUARTERS SIXTH SEPARATE BRIGADE,
Tacloban, Leyte, November 1, 1901.

The commanding general of this district, comprising the islands of Samar and Leyte, in assuming command announces to the people under his jurisdiction that his object is now, and ever will be, to secure a permanent peace under which all may freely pursue their ordinary avocation. He is well aware of the fact that certain persons are engaged in insurrection against the lawfully constituted authority and that this insurrection has no justification in law or reason.

Furthermore, he is informed and believes that this insurrection is not only countenanced by but is receiving the active support of influential natives, who are living in the various pueblos and barrios of these islands, apparently friendly to the American authorities.

He desires to announce to all natives in the district, and especially to those in the island of Samar, that those who have arms of any kind in their possession can present them to the nearest military officer, who is authorized to pay 30 pesos for each and every serviceable rifle that is thus presented.

He desires to announce to all the influential natives of the district, and especially to those in the island of Samar, that up to and including the 10th day of November, 1901, those who desire to establish the fact that they are friendly to the American Government can do so in any one of the following ways:

First. By giving information as to the location of any guns used for the purpose of insurrection.

Second. By giving information as to the whereabouts of persons in insurrection.

Third. By inducing persons in insurrection to present themselves, with their rifles or other arms, to the nearest American official.

They can not establish the fact of their friendship by protestations of any kind.

Those who fail to avail themselves of the opportunity presented will be regarded as distinctly unfriendly to the American Government, and will be treated accordingly.

The Manila Times, in which this general order was printed the day it was issued, says that—

In explanation of the last paragraph, General Smith says that all influential citizens of Samar who have not presented evidence—of the kind mentioned—of their loyalty to the American Government by November 10 will be deported from Samar to Guam or some other island, their wives and children sent into the mountains, and their towns destroyed. There will be no postponement or delay in fulfilling this promise.

Mr. Chairman, I refrain from further comments. As long as we have a soldier in the Philippines I stand ready to support him and to loyally sustain my country. But, sir, this war is wrong. The methods that are being used are disgraceful to our arms and our flag. The people have a right to know these things, and when they shall have been fully informed concerning them, they will refuse to go further in an enterprise so revolting.

I am one of the number who thought that a fatal mistake was being made when the Spanish treaty was ratified by the Senate. I believe also that a fatal mistake was made when, in this body, in the Senate, and at the White House, the project of revolutionizing the Government was entered upon. The enactment of laws for the government of colonies outside of the Constitution was distinctively revolutionary. It made our President the emperor of the Philippines just as Edward VII is Emperor of India.

The gentleman from Illinois [Mr. CANNON] a day or two ago, in the course of a magnificent outburst of eloquence, said that the Constitution goes to the Philippine Islands, and in the next breath he said that in dealing with the people over there our Government could do anything that the Czar could do in dealing with conquered peoples. Ah, yes. The soldiers of the Czar in China tossed murdered babes from bayonet to bayonet. Thank heaven, our soldiers were guilty of no such atrocities. But when China shall have been dismembered the despoilers will uphold their authority, as England upholds her authority in Ireland and India, by violence. Conquered peoples can not be held in subjection without substituting force for justice. A constitutional government in the Philippines is impossible. As long as our flag remains there force alone will compel the natives to respect it, and every act of violence and injustice practiced by the representatives of our Government will intensify popular hatred of our country.

It would be better if, instead of outbursts of oratory about our mission as savior of the Philippines, gentlemen on the other side would look the facts squarely in the face and recognize the solemn fact that if we are to retain permanent sovereignty in the Philippines, we must desolate and depopulate them with fire and sword. This is the undisguised purpose of the British in South Africa, and no matter how eloquently gentlemen may discourse about manifest destiny, no matter how bland may be the pretense that our sole purpose is the upbuilding of civilization in the Philippines, the plain truth is that we must either go on butchering the natives and burning their homes or grant them independence.

Besides being wrong, the war in the Philippines can not fail to be unprofitable. We have expended there over $300,000,000, and if our Army is to remain in twenty-five years from now we will have expended considerably over a billion dollars. How are you going to get even? Out of the trade of the islands?

We give every other nation an "open door" to trade there, without let or hindrance, and since the termination of the war with Spain the English, the Germans, and the Spaniards have increased their trade in the Philippines in greater ratio than ours has increased. Our consular reports show that we have gained everywhere else on our competitors except in the Philippine Islands, and there they have gained on us. But this is not all. Unquestionably the exports that go from this country to the islands are sent there, largely, to be sold to our own soldiers; and if we deduct from the aggregate exports of this country to the Philippines the things sent there to be paid for by money paid out of the Treasury to our own soldiers the discrepancy would be still more noticeable.

The minority in this House would apply to the momentous questions raised by the Philippine situation the only safe measure of duty—the Constitution, interpreted by the sense of justice and principles of right which inspired the patriot founders of the Republic and guided the hand which wrote the creed of universal democracy—the Declaration of Independence. The inhabitants of the Philippines are, and of right ought to be, free and independent. [Loud applause on the Democratic side.]

The Isthmian Canal.

SPEECH
OF
HON. WILLIAM P. HEPBURN,
OF IOWA,
IN THE HOUSE OF REPRESENTATIVES,
Thursday, January 9, 1902.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 3110) to provide for the construction of a canal connecting the waters of the Atlantic and Pacific oceans—

Mr. HEPBURN said:

Mr. CHAIRMAN: After so extended a debate as this, after it has taken the great range that it has taken, after so many statements have been made and such varied arguments have been used, it is right and proper that there should be some words of review.

Nearly all gentlemen have said that if modified in accordance with some one or other of the propositions that have been suggested they would aid in the passage of this bill. I believe but one or two gentlemen only who have discussed the bill have failed so to declare themselves.

Now, let us look for a moment at the propositions that are made. The one in the nature of a substitute reads:

That the President of the United States be, and is hereby, authorized to acquire for and in behalf of the United States the control of such portion of territory now belonging to any foreign "states" as may be desirable.

And so forth. What is there in that proposition? There is but one location that is owned by more than one State, and that is the

one provided for in this bill. What does the gentleman mean? Certainly there is some discrepancy about it that is inconceivable, except he has in his mind the one route that is owned by two States, which is the Nicaragua route. Whatever other route there is that has been discussed at all, save the Tehuantepec route, which is wholly within the State of Mexico—all other routes are in the State of Colombia. Let me call your attention to the proposition of the gentleman from Massachusetts:

That the President of the United States be, and is hereby, authorized to acquire from the States of Costa Rica and Nicaragua, or the United States of Colombia, for and in behalf of the United States, control of such franchises and of such portions of territory now belonging to Costa Rica and Nicaragua as may be desirable and necessary.

And so forth.

So that all of these gentlemen instinctively gravitate back to the state as provided for in the bill now pending. Let us look for a moment at the proposition that the gentleman from Illinois announces that he would vote for. He wants clearness; he wants distinctness; he wants no possibility of construction that may in any possible way be disadvantageous. We are not informed as to where his proviso is to come. It is to be considered when we consider this bill by sections. Is it a proviso to the first, to the second, to the third, or to the sixth section? Where is it to be put? If to the sixth section, it may be a very important matter.

Provided, however, That if the Panama Canal, so far as constructed, and the property, rights, privileges, and franchises of all the corporations or persons interested therein can be acquired by the United States, free and clear of all incumbrances, for a sum not exceeding $40,000,000, and in addition thereto equally desirable political and territorial rights and privileges as in case of the Nicaraguan route, and at no greater expense, within six months from the passage of this act, then the President of the United States, if the Isthmian Canal Commission, or a majority thereof, shall so recommend, is hereby authorized to purchase the same, and to complete the construction of said Panama Canal, subject to all the conditions, provisions, and limitations aforesaid.

What does "aforesaid" refer to? That which we see in this proviso or that which we see in the bill? Who is to determine that? The gentleman does not want a bill that is subject to or necessitates construction.

And the sum of $50,000,000 is hereby appropriated, out of any money in the Treasury not otherwise appropriated, toward the project herein contemplated.

What project? The project in this proviso or that contemplated in the bill of which this proviso is to be a part? The gentleman wants distinctness, certainty!

Mr. MORRIS. Will the gentleman permit me?

Mr. HEPBURN. I would rather not be interrupted, if the gentleman please. But look again:

For a sum not exceeding $40,000,000, and in addition thereto equally desirable political and territorial rights and privileges as in the case of the Nicaraguan route.

Who is to weigh the differences of the political rights and the territorial rights and the franchises? Who is to determine that? The gentleman wants "certainty." Who is to say whether this political right secured from Nicaragua is equal to this political right secured from Colombia? The territorial right, the franchise right? Who is to determine these questions about equality? This is an important matter to the stickler for that which is "definite," that which is "certain," that which leaves "nothing to construction." But gentlemen will see how easy it is to criticise; and yet I understand him to be committed to this proposition, not by what he said to-day, but what he said two days ago. And now I understand why it was that the gentleman was so solicitous about the notes of the speech of "the gentleman from Iowa." This was a colloquy more than a speech, and what the gentleman said was embodied in the speech; and it is altogether natural that the gentleman from Illinois wants to know what he said two days ago before he commits himself to-day. [Laughter and applause.]

Mr. Chairman, I have not in the least in this debate imputed bad motives to any man. I have contented myself with showing the kind of measure in my judgment the substitute was. I believe it now, as I did when I uttered the statement. I have not impugned the motives of any man; and when the gentleman from Illinois says that he is in favor of an isthmian canal, in the parliamentary sense I am convinced; and yet it is only the obligations of the parliamentary law that could force my mind to such a conclusion when we remember how invariably and at all times he has been a stickler for delay. The gentleman has had the privilege of descanting upon the duties of committees and of their chairmen, and of their relations to this House. We will thank him at least for one thing: It has apparently come to his knowledge that the committees are not the masters of the House. I thank God for that modicum of intellectual growth. [Laughter and applause.]

Mr. Chairman, let me suggest to the gentleman a very old maxim, that actions speak louder than words. In the face of this great sentiment of the American people, which, I say to him and to the gentleman from Missouri [Mr. DE ARMOND], in my judgment is the only thing affected here in this consideration—the will of the people; and when he recognizes the necessity of not attempting to thwart that in a way that can be seen, I think that his declarations of friendship, his declarations of desire for this great work, ought to be contrasted with his uniform course of hostile delay.

Nearly seven years ago the gentleman, then as now, was at the head of a great committee, or a member of it. Then as now he knew something, I take it, of the ethics that control the committees of this House. Then as now he knew that the House determined what subject shall be committed to its servants, its committees, and with what subjects they shall deal. He knew then that this subject had been committed to another committee than his, and yet in defiance of the rules, and in defiance—I had almost said of decency, but I will leave that word to the sole monopoly of the gentleman from Illinois—in defiance of all this, the gentleman usurped jurisdiction over this proposition and introduced in violation, not only of the rule that I have referred to but of another well-known rule of this House, a proposition for a commission to examine that which had already been examined.

Not content with that, two years afterwards, under the same rules and with the same obligation to decency—I quote again—the gentleman again injected a proposition in violation of the rules of the House whereby this matter was again postponed, in order that he might have, as he afterwards explained, more light and more information, and it was postponed for two whole years.

Information came and it was within the reach of every member of the House save the gentleman from Illinois. Evidently he did not get it. And then two years ago another committee usurped the functions of the Committee on Interstate and Foreign Commerce, and in pursuit of light and more information another commission was appointed, with two years more delay.

Now, the gentleman wants more light and more information. He wants to know what it is going to cost to condemn the property along the line of this canal. That no man, I take it, can tell. Who can tell? I remember that here in this enlightened city that a proposition was made to the Secretary of the Treasury of an informal character for the sale of all of the property that is now covered by the Post-Office Department building at an average cost of a little more than $2.50 a foot. And yet when that was secured under the process of condemnation the Government paid more than four times that. I remember that when we were discussing the propriety of establishing the great park near this city it was said that the property could be had at an average price of $100 an acre, and some of it as low as $25 an acre. Yet those who are familiar with those proceedings know that the Government paid thousands of dollars an acre for a part of it, and witnesses were secured who stated under the solemnity of an oath that certain parts of it were worth $35,000. And for the purpose of that inquiry some of the good people of this city absolutely discovered gold mines and worked them for a time while the condemnation proceedings were pending. [Laughter.]

Who can give information in regard to a subject of that kind? The records of the court of the county in which the gentleman from Illinois lives assert that he is a lawyer, and he ought to know that it is absolutely impossible that information of a definite character on a subject of this kind should be within the limits of inquiry of any commission of this House.

I understand, Mr. Chairman, that the gentleman from Illinois is favorable to the purchase of the rights of the Panama Canal Company. Yet while he was so insistent that other men should be so accurate and detailed and comprehensive in their efforts to inform the House, why did he not inform the House as to which Panama Canal Company had the right to sell? Why did he not inform us as to what we should be able to buy? Why should we pay $40,000,000? The Commission say that the work that has been accomplished that would be of use to us would cost us $27,000,000. Where is the other $40,000,000? In the property that they have there?

Aside from the railroad the Commission tell us that it is utterly valueless to us, with the exception of the excavation and the railroad valued at $6,800,000. They say they can duplicate railroad with heavy iron, with heavy locomotives, with modern equipment for one-half of the sum, yet that item goes to make up the $40,000,000. The estimate of $2,000,000 we find includes their survey. But we have our own surveys. Our Commission refused to rely upon theirs, for they were found in many instances utterly valueless. We have changed the location of the greatest piece of work on the whole route.

They are valuable to us. And then there is the amount of $3,000,000 and some hundreds of thousands for something or other that has not been enumerated. Oh, the gentleman wants a "business proposition." He is a business man, and yet he proposes to offer $40,000,000 for that which our Commission says is worth to us not more than $27,000,000 to $30,000,000. Why, in this burst of economy, did not the gentleman think of this when in the generosity of his heart he proposes to give to the virtuous Panama Canal Company $40,000,000?

The gentleman is disturbed by the fact that at some future day—no, not in the day—"in the soft moonlight." [Laughter.] See how easy it is for the gentleman, with that fertile mind of his, to effect transitions from the most serious business to beautiful poetic thought. "In the soft moonlight" will come these trooping hordes of New Yorkers and will want compensation for something that they may have had or may not—that they may have lost or may not—in the old venture of the Maritime Canal Company. And the gentleman, in his apparent anxiety for his business venture, suggests this in the face of the declaration of the Commission, whom he extolled, and in the face of the clear statement of the report which he says he has "dog-eared." They tell us that all these rights of every nature and character have been swept out of existence, that they are absolutely and completely forfeited. The Commission tells us there is no property that we would have. It is like the plant and appliances owned by the Panama Canal Company. It is obsolete; it is worn out; it has been in disuse now for nearly a decade. Yet that is the property that the "business" representative of the House—I think that is the position to which the gentleman has elected himself [laughter]—wants us to buy. [Laughter.]

Mr. Chairman, I want to call attention now in a few words to a portion of the report of the Isthmian Canal Commission:

The canal concession is to be continued, according to its latest extension, for ninety-nine years from the date on which the canal shall be wholly or partially opened to public service, and the date fixed for this contract is October 31, 1910.

Now, will gentlemen listen:

Should it fail, and the concession be forfeited, the company will still have exclusive control of the territory through which the line extends until 1966, under the railroad concession.

That is an important matter. The "business" manager of this House is going into a dicker for this canal. Has he ascertained that in the opinion of the Commission there are four parties that have to be dealt with? There is the new Panama Canal Company, that has only a conditional right. It is bound to complete this canal so as to protect the rights of its grantors. Then there is the old Panama Canal Company, with its 200,000 stockholders, representing $246,000,000 of stock. In addition to and back of that are bondholders of such amounts as make the aggregate of stock and bonds $436,000,000.

Now, that property is in the courts of France. It has not been adjusted. There is a liquidator who has the property in his control. An arrangement has been made by which for a time the New Panama Canal Company has control of this property for the purpose of construction of the canal, and, if constructed, then the ownership. But there is to be annually paid a rental of not less than $250,000 a year to the Government of Colombia—a percentage ranging from 5 to 8 per cent, but never to be less than $250,000 a year. That is perpetual, or so long as the grant runs; and if we get their rights we get them encumbered with that obligation. Then there is an agreement with the liquidator on behalf of the stockholders of the old concern that after the payment of certain dividends and certain interests on new stock and bonds, then of the balance of the net earnings 60 per cent is to be set apart for the benefit of the old stockholders.

This $245,000,000 of stock is a subsisting lien upon this property. Yet the gentleman invites us to that kind of a business "dicker." A foreign court, on foreign soil, with foreign people—no interest in common with ours of any kind! Then after all that has been done we are to deal with the closest neighbors of the Nicaraguans—people of the same blood, belonging to the Latin races, who, in the language of the gentleman, have learned something of Yankee civilization—a people who the gentleman fears will rob us on every hand, will take every advantage of us, will so impose upon us that this appropriation of an indefinite character may assume the huge volume of $500,000,000. Why will not the Colombian be as careful of his rights and his interests as the Nicaraguan? Oh! the gentleman was making an argument, and it being a business argument, it was only necessary to take one view of the question.

Mr. Chairman, it is my belief that we ought to pass this bill as it is. I do not assume to say that it is perfect. It is not as it would have been if written by the gentleman from Illinois.

Mr. CANNON. You are right in that.

Mr. HEPBURN. I well know that it is not. And I do not take great pride in the authorship of the bill. All I can say is, that it is the best that I could get. If I had known that the gentleman from Illinois had the criticism to make that he has made, I would long ago have sought his counsel and would have tried to eliminate all the imperfections in the light of that benefit which would come to me from his inexhaustible wisdom. But, Mr. Chairman, the gentleman himself did not give me an opportunity. He has not been fair. He did not have his new bedfellow until one night or two nights ago. He had not discovered these enormities in the bill; they are novelties to him. And if I had gone to him two days ago, or three, the probabilities are that he at that time could not have given me any light, because at that time, with many opportunities, he had never discovered these difficulties, although if they are such, they have been patent to the eye of this House for a period of nearly four years.

Mr. Chairman, there is a little bit of literature to which I want to call the attention of my Democratic brethren. It is a good thing once in a while to get back to the sources of power and to the instructions of the master, and I want to recall the wavering memory of some of you to what has been authoritatively spoken. I am reading from the platform of the Democratic convention assembled in Kansas City, Mo., July 4, 1900. It is the latest announcement, gentlemen. [Laughter.]

We favor the immediate construction, ownership, and control of the Nicaraguan Canal by the United States——

[Applause.]

and we denounce the insincerity of the plank in the Republican platform for an isthmian canal, in the face of the failure of the Republican majority on this subject to pass a bill in the last Congress.

[Applause and laughter.]

Gentlemen, it is my solemn conviction that that is the most respectable utterance that ever came from a Democratic convention. [Laughter and applause.] But, gentlemen, I want you to remember the emphatic words in that paragraph—"the immediate construction."

And not content with using a word of such solemn import, they have given it new and additional emphasis by criticising the delay of their political opponents. Now is the time, gentlemen. [Laughter and applause.] Now is the time to carry out the will of the people. [Cries of "Vote!" "Vote!" on the Democratic side.] And although I am not authorized by partisanship, yet in the name of honor and of political integrity, and in the voice of the democratic people, I summon each and all of you to the discharge of your duty. [Applause and laughter.]

Mr. Chairman, I have but a word or two more to say upon this subject. Two years ago, by an overwhelming majority of 9 to 1, we passed a bill authorizing the President of the United States to begin negotiations with a view to the ultimate construction of this canal. We did that in the face of an old treaty that forbade our so doing. Some gentlemen have gone so far as to make obeisance profound, and to yield new loyalty to-day to that old treaty. I have not believed for many years that it had any binding force whatever upon us. I believed with Secretary of State Cass, James Buchanan, Secretary Frelinghuysen, Secretary Blaine, President Grant, President Hayes, President Arthur, as those statesmen and scores of others have declared since 1855, that that treaty had no binding force upon us—some putting it upon the ground of its previous violation by Great Britain; others putting their faith upon the ground that it was for a specific purpose that both Governments had abandoned; others putting it upon the ground that in 1867 both Great Britain and the United States had formed treaties with the State of Nicaragua which would have been prohibited if the terms of that treaty had had binding force upon this Government.

From all of these sources from which the beliefs of men may be formed I believed and urged that we should act independently even of that treaty. But did it not have its useful purpose? Suppose that we were wrong. What a moral spectacle it is to any deliberative body or to any people when a great deliberative assembly like this, backed by the will of the whole people, declare themselves as we did then. What was the influence that that action of this House had upon another body in getting rid of even the seemings of impediment? So to-day I would act. Gentlemen tell us, the newspapers tell us, talk tells us that in another body there is to be found a rocky road for any isthmian canal, that there is a sentiment on the part of some persons of potency against such enactment. What will be the moral effect, what will be the resultant political action if this House determines, by a vote well-nigh unanimous, as nearly so as two years ago, that it is our purpose to carry out the will of the master, that it is our purpose to do as the people demand we shall do?

Gentlemen say that we are only waiting for a period of six months. Ah, gentlemen, let us start now, and if during the next six months, during the present session of this body, a definite proposition can be made, based upon certainties of fact, then how easy it will be for us, and how willing we all will be to bring about that modification that will secure speedy action.

I want an isthmian canal. If it is not the one for which I have some preference, then I want another one. Any one, in my judgment, is better than none. I do not believe it worth our while to strive to secure anything east of the Panama Canal. The reports tell us that if one is constructed there it must be at enormous expense. They tell us that they have formed an estimate, and yet they warn us that it is a minimum.

And yet the cheapest of these sea-level canals would cost $263,000,000, and the one that they regard as the most expensive will cost $320,000,000. So that the Commission have wiped them

all from their contemplation, but not before careful examination, not before minute survey, not before estimates of the cost. It is not a mere hazard. They give us the price of cost of construction, and tell us of sums which are so enormous they exclude them from their consideration. There are but two routes that I believe to be at all practicable. Some gentleman has thought that if we got an isthmian canal—or I judge it from the statement the gentleman made—that for the sum of $184,000,000 we could have a sea-level canal. That is not so. There is a difference of nearly 90 feet elevation between the proposed Panama Canal and a sea-level canal.

A gentleman yesterday took up the statement that $1,300,000 more would be expended for maintenance of the Nicaraguan Canal than the other, and thereupon capitalized it, and he made an immense sum. Yesterday I saw in a newspaper the capitalization of another item. Here is the saving of two days between the Southern ports and the Pacific coast in favor of the Nicaragua Canal. Suppose you estimate the cost of a 6,000-ton vessel for a day. It is more than a thousand dollars, nearly $1,500. Add to that the cost of repairs and the percentage for decay. Suppose that three only passed that route; there you have a sum approaching $5,000 a day. Capitalize that on the other side, will you not? Deduct that from the cost of the Panama Canal. It is not fair. And you will see that the Nicaragua Canal, by that process of reasoning, will cost almost nothing if you let the bonds run long enough. That is not a fair way, I submit. You must remember that the distance of a voyage, when computed, is from port to port. That is the consideration and not the time that will be expended on any particular portion of the route. A New Orleans man is interested in the shortest consumption of time between New Orleans and San Francisco, and if there be two days in the course of a voyage, and computing it with reference to all our vast commerce, it is an item to be considered—at least I commend it to a business man. [Applause.]

Mr. Chairman, this subject that is proposed by the gentleman from Minnesota is not without difficulties. His proposition is, briefly, that if the foreign right can be secured and concessions from Colombia can be obtained that are equal in value to those secured from Nicaragua, and if one man or a majority of the Commission shall so determine, then the President is authorized to build the canal on the Panama route. I submit to the lawyers of this House the import of the word "authorized" in that connection. In my judgment, it is mandatory and not permissive. There is a pretense of discretion in the Commission and the President, but that discretion, with that word in that connection and in the interest of that duty, is mandatory upon the President of the United States.

Mr. MORRIS. Will the gentleman permit an inquiry?

Mr. HEPBURN. I would rather not. I know that the gentleman does not agree with me or he would not rise.

Mr. MORRIS. Yes; I do. I stated on yesterday that there might be some verbal inaccuracies or ambiguity in the amendment; and I will state to the gentleman in the final draft as it will be offered the words "in the discretion of the President" will be inserted.

Mr. HEPBURN. At all events, Mr. Chairman, it involves the responsibility of selection upon one man—one man of the nine composing the Commission. Mr. Chairman, it is not desirable that any man should be placed in such a situation. Here is the Panama Canal Company playing for a stake of $40,000,000. It is forty millions from us or nothing. If we do not take this property all is lost to them. Here is the chance of $40,000,000 and the chance of nothing. There will be inconceivable temptations thrown in the way of men, and that seems to me ought to have presented itself to the mind of a business man!

But again, Mr. Chairman, just one moment. Who has taken into account the multitude of stockholders—of the 200,000? If we build this canal and it is a success, they who have lost all will come to us, as the French spoliation claimants did a few years ago, and the speculators will buy these claims as the speculators did those, and perhaps the unseemly spectacle may be presented a hundred years from now of the successors of those claimants, the class of men who so excited the sympathy of the gentleman from Pennsylvania, demanding that our Government make good their losses through the acquisition that we have made.

Mr. ADAMS. Will the gentleman permit me?

Mr. HEPBURN. I can not yield to the gentleman.

Mr. ADAMS. These were American and not French claims.

Mr. HEPBURN. Everybody but you knew that. [Laughter.]

Mr. ADAMS. Except yourself.

Mr. HEPBURN. They were insurance claims.

Mr. ADAMS. They were American claims and not French claims, and the gentleman's knowledge of history is not sufficient to know it.

The CHAIRMAN. The time of the gentleman from Iowa has expired. [Loud applause.]

Eulogy on Death of the Late Robert E. Burke.

REMARKS

OF

HON. ARIOSTO A. WILEY,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 8, 1902.

The House having under consideration the following resolutions:

"*Resolved*, That the business of the House be now suspended in order that an opportunity may be given for tributes to the memory of Hon. ROBERT E. BURKE, late a member of the House of Representatives from the State of Texas.

"*Resolved*, That as a particular mark of respect to the memory of the deceased, and in recognition of his eminent abilities as a distinguished public servant, the House, at the conclusion of these memorial proceedings, shall stand adjourned.

"*Resolved*, That the Clerk communicate these resolutions to the Senate.

"*Resolved*, That the Clerk be, and he is hereby, instructed to send a copy of these resolutions to the family of the deceased"—

Mr. WILEY said:

Mr. SPEAKER: If there be one privilege dearer to us than the rest it is to do honor to the dead; to wreathe a bright chaplet about the broken urn as a tender expression of that sympathy too delicate for human utterance.

Death has invaded our ranks so often that scarcely a session of Congress convenes we are not called upon to render funeral honors to some one of our body.

How true it is that "One by one the heavy laden sink beneath the noon-tide sun;" one by one we step smiling into the ferryboat which is to carry us, as we vainly think, for a little while across the narrow river; one by one we waive our hands and say to those who watch us from the familiar shore, "To-morrow." But alas! alas! before we are even aware of it, the shore is out of sight, the stream is a sea, the ferryboat is the boat of Death, and "to-morrow" is Eternity.

Solon, the Athenian lawgiver, is said to have offended Crœsus, the munificent Lydian King, by telling him to "count no man happy who had not seen the end of life," and his reason was that it is impossible to form any correct estimate of another's character until after his death. Now that ROBERT EMMETT BURKE is no more, we can appreciate his many virtues and contemplate with something like certainty what "manner of man" he was.

It is natural that the death of one so highly respected should cause profound sorrow in our hearts, We feel proud to claim him as an Alabamian. He was born upon the soil of my native State. He loved his home and the people amongst whom he lived and toiled in his boyhood days, and they in turn appreciated his warm-hearted, generous, and manly nature. He had the courage of his convictions and the heroism to perform his duty even before he attained to man's estate.

While yet in his teens, a mere stripling, he went forth to the bloody fields of war, in obedience to the sovereign command of his native State, under a glorious leadership, and 'neath "the stars and the bars," wearing the proud title of a Confederate soldier, he was ready, if needs be, to go down for God and country into the dark valley of death. As long as the Southern cross gleamed out amid the wild light of battle he fought bravely for "Dixie." Returning to his desolated home when that fratricidal conflict was ended, he found the wolf of hunger and want standing on the doorstep, and devastation on every hand. With ruin staring him in the face he left Alabama and removed to Texas, where conditions were more favorable, to begin anew the struggle of life. Service in the Confederate army having deprived him of early educational advantages, far away from home and kindred and friends, "a stranger in a strange land," he was compelled, in the first instance, and as a necessary preliminary, to seek knowledge and mental discipline in order to equip and fit him for his chosen profession—the law. Genial, brave, loyal, and true, it is no marvel that he soon won the confidence and esteem of his newly formed neighbors and friends.

It is a Talmudic maxim that there are four crowns with which mortals can be invested. The crown of the king, which is the crown of power; the crown of the priest, which is the crown of holiness; the crown of the scholar, which is the crown of learning; "but the crown of a good name, which is far better than riches, exceedeth them all in value." Lord Bacon said the power to do good is the true end of aspiration. While the ambition of the distinguished dead was lofty, he did not forget that morality is the basis, sound-fixed principle the superstructure, and common sense the capstone of true greatness. There is a faith that works silently but mightily, because it loves fervently, and never worries because it never fears. Such was his faith and courage. As a lawyer, I am informed, he was always considerate, courteous, and just. As a judge he was painstaking and conscientious.

Gentle in nature and amiable in disposition, he was lion-hearted in courage, mental as well as physical. He held the scales of justice evenly balanced at all times. He dared to do the right and was "not afraid of the face of man."

We are told in a beautiful allegorical poem that Abou Ben Adhem, awakening from a dream, found an angel writing in a book of gold the name of those whom the love of God had blessed. "And is mine there?" he asked. The angel answered, "Nay." He said: "I pray thee, then, write me as one who loves his fellowmen." The angel wrote and vanished. The next night the angel came again with a great wakening light and showed the names whom love of God had blessed. And lo! Ben Adhem's name led all the rest. At the head of the list of those "whom the love of God had blessed" the recording angel has written in everliving, radiant characters of gold the name of him who loves his fellowmen.

Full of humanity himself, a reciprocating people delighted to honor him. Thrice elected to Congress, he served his constituency faithfully and well. His life filled the measure of lofty aspiration, of a high and honorable ambition. His influence will work on silently for good long after we have passed away. The virtues of such a good man are the common inheritance of us all. His bones are interred in the soil of his adopted State, but Alabama, loving him as a son and still claiming him as her own, craves permission to drop a tear upon his grave and to bring here, as a tender tribute, the white flowers of her abiding love.

Oleomargarine Bill.

SPEECH

OF

HON. A. S. TOMPKINS,

OF NEW YORK,

IN THE SENATE OF THE UNITED STATES,

Tuesday, February 4, 1902.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 9206) to make oleomargine and other imitation dairy products subject to the laws of the State or Territory into which they are trapsported, and to change the tax on oleomargarine—

Mr. TOMPKINS of New York said:

Mr. CHAIRMAN: Representing a district containing large agricultural and dairy interests, I deem it my duty to support the measure reported by the majority of the committee. Not only because a large number of my constituents are interested in the bill do I support it, but also because it seems to me the only effective measure of preventing or punishing fraud and deception by the manufacturers and dealers in oleomargarine and the imposition now practiced upon the people of the nation. Thirty-two States, representing four-fifths of the population of our country, have enacted laws absolutely prohibiting the manufacture and sale of oleomargarine when made or colored in imitation of butter. But in spite of these laws, and in spite of the penalties imposed for their violation, these manufacturers have gone right on manufacturing, and the wholesale and retail dealers have continued to sell this fraudulent butter, coloring it to deceive the people, and producing in the year ending June, 1900, 107,000,000 pounds, manufacturing it at a cost of about 8 or 10 cents per pound, practically all of which, certainly 85 per cent of it, being sold as pure butter and at a price for which pure butter is sold, all in defiance of the laws of the States and in competition with the farmer and dairymen, whose real, genuine product costs, on an average, about 17 cents per pound to produce, and all in deceit and fraud upon the rights of the consumers.

These violations of the State laws have not been and apparently can not be effectively dealt with by the State authorities. The States have been quite impotent to enforce their own penal statutes on this question. Of course the Congress has no constitutional right to invade the States and legislate to prohibit or restrict the manufacture of any necessary, useful, and healthful article of food, or to prevent or restrict or interfere with commerce therein, or to unreasonably exercise its legislative power to affect commerce between the States. Yet it undoubtedly has the power to impose revenue taxes upon the product of any State or States, whether it be for the sole purpose of raising revenue only, or in connection with that, and as one of the objects to be accomplished thereby, the "general welfare of the nation." Such power is expressly conferred by the Constitution.

The existing law, enacted in 1886, imposes an internal-revenue tax upon all oleomargarine manufactured or sold of 2 cents per pound. The constitutionality of that law has been passed upon, and it has been upheld by the courts. It has been held that Congress had power to enact and the internal-revenue officers to enforce that statute.

In answer to the argument of gentlemen who insist that this measure is unconstitutional, I simply suggest in passing that if the law of 1886, imposing an internal-revenue tax of 2 cents per pound, is constitutional, then Congress must have the power, in the exercise of its legislative discretion, to impose a tax of 10 cents per pound.

The bill reported by the majority of the committee and now under consideration, in substance provides that on and after July 1, 1902, the tax upon oleomargarine shall be one-fourth of 1 per cent per pound when the same is not made in imitation of butter, but when made in imitation of butter the tax shall be 10 cents per pound, to be paid by the manufacturer thereof. The law is not designed to and does not prohibit or restrict the manufacture and sale of oleomargarine as such. It does not stifle or interfere with any honest or legitimate industry, as has been charged by gentlemen during this debate. Rather it is an advantage and a benefit to the manufacturers of and dealers in genuine and pure oleomargarine because it reduces the present tariff tax from 2 cents a pound to one-fourth of 1 cent per pound. This measure is a concession to rather than an imposition upon the true oleomargarine interests. It will not in any wise affect the free and open manufacture and sale of butterine or oleomargarine. It places no restriction whatever upon it, but as I have already stated the effect of it will be either to increase the profit to the manufacturer 1¾ cents per pound, or reduce by that amount the cost to the buyer. But I take it there is no objection to that part of the measure to which I have just called attention. I have heard no gentlemen during this debate complain of the concession which has been made to the oleomargarine interests, or deny that such concession is made by this bill. The objection and opposition is to that provision of the bill which imposes of a tax of 10 cents per pound upon oleomargarine or butterine when it is made in imitation of butter.

It is a notorious fact that for years this article called butterine or oleomargarine, made from fats and oils and colored to resemble butter, has been put upon the market and sold and used as butter, being produced and made ready for the market at considerably less than the cost of the production of butter made from cows' milk. It is to prevent the continuance of these fraudulent practices that this provision of the bill is urged. It is claimed that this provision is designed to destroy a legitimate industry. It is not. Its purpose is to prevent the continuance of the fraud that has been practiced upon the people by the use of this colored oleomargarine. It is to stamp out and destroy this unjust, dishonest, and unequal competition with the farmers and dairymen of the land.

It is further urged in opposition to this provision that oleomargarine is conceded to be a pure and wholesome article of food; that it can be produced cheaply and sold at a low price, and thus become for the poor man a cheap and wholesome substitute for butter. In the first place, it is not conceded that all oleomargarine as manufactured in this country is a pure and wholesome product.

But conceding it to be all that, it should not be sold for something or under the name of something that it is not. Let the manufacturers of this article make and sell all they can, let the retail dealers who put it on the market sell it at the best possible price, and let those who want to use it as a substitute for butter use it and altogether and entirely discard butter if they choose to, but let us insist that it shall be honestly and openly sold for what it is. Let us insist that it shall be sold in the market in its original and natural color, so that people who want butter may not be deceived into taking and using oleomargarine. It is well known that there have been many violations of the State laws and abundant proof has been furnished in such cases showing that grocers and retail dealers of butter have sold and delivered to customers butterine or oleomargarine when butter was asked for and paid for.

In such a case a double fraud was perpetrated, one upon the purchaser and another upon the manufacturer and producer of genuine butter. In other instances butterine or oleomargarine has been actually stamped and labeled as a certain well-known brand of butter. There was a triple fraud perpetrated, first, upon the buyer; second, upon the manufacturer of honest butter, and third, upon the concern of real butter manufacturers, whose name was used with which to label the oleomargarine. All these violations of the State laws and frauds upon the public can be prevented by the enactment and enforcement of this measure, which requires that the manufacturer at the factory shall pay a tax of 10 cents per pound. This tax the retail dealer will also have to pay in addition to the market value of the article, the payment of which will remove the temptation and incentive to the continuance of these fraudulent practices.

The farmers of the land have some rights which Congress should consider and respect. They get but small return at the best for their labor and the capital invested. They produce and supply to the world in one form or another nearly all of its necessities and

luxuries. Their life is the hardest and their pay the smallest of all who produce. Butter in many parts of our country is one of their principle products, and the unlawful and fraudulent imitation of this product by the manufacturers of oleomagarine has been to them a serious loss and injury, in the year ending June, 1900, 107,000,000 pounds of oleomargarine being put on the market and sold in competition with their genuine butter. The farmers have asked for but little from Congress and the State legislatures, and have received less. Let Congress now grant unto them the relief which this measure will afford, thus protecting the great dairy interests of the land and in no wise interfering with or injuring the honest oleomargarine interests.

The coloring which is put into the oleomargarine is not put there for the purpose of improving the quality of the article; it is not a necessary ingredient of oleomargarine; it is not one of its constituent parts. It is put there simply for the purpose of making the product look like butter, and thus deceiving and defrauding the people and injuring the farmer.

The friends of oleomargarine—at least its honest friends—concede that this giant fraud must be stopped, but they say it will be sufficient to stamp yellow oleomargarine with the word "oleomargarine." What pitiful simplicity, Mr. Chairman! How much trouble will it be for dishonest dealers to erase the stamp or to take off the wrappers and throw them away? No, sir; the only safety lies in forbidding the manufacture or sale of yellow oleomargarine, save at a tax which will make it unprofitable for it to be offered to the public as butter. Let it be manufactured and offered to the public freely as oleomargarine, in its natural white color, or in any color except yellow, so that the public may know what it is buying and using.

This bill, I have said, is due as a protection to the farmer and dairyman, but it is needed still more as a protection for the public at large, for the hundreds of millions of persons in this and other countries who consume American butter daily, and pay butter prices for what they suppose and desire to be the pure product of cow's milk, and millions of whom are being daily swindled and cheated by paying butter prices for a lot of oleomargarine colored yellow and sold as butter. This is one of the most monstrous frauds ever heard of. The adulterations of coffee, of sugar, of milk, of spirits, about which we hear so much, fade into insignificance beside it. In those and similar cases a genuine article is deteriorated or weakened by the infusion of some foreign substance. But in this case a wholy spurious article is fashioned so as to imitate exactly in taste and appearance a genuine article, and is sold as such genuine article. This is not mere adulteration; it is actual counterfeiting. It is not mere petty cheating; it is absolute knavery and robbery.

One of the chief arguments which the advocates of the minority report have urged against the contentions of the majority consists in distorting the position as taken by the latter. They have misinterpreted—perhaps not designedly—the words employed by some of the witnesses in favor of the Grout bill as implying a purpose avowed to crush out altogether the butterine or oleomargarine industry, and not addressed to the suppression of the wholesale counterfeiting of genuine butter which has been going on under the guise of its substitute—oleomargarine. Nothing could be more foreign to the thought and purpose of the majority. We fully recognize that oleomargarine and butterine per se, as a manufactured product, when offered for sale as such and not colored to counterfeit the genuine butter, have their distinct place in the industries and marts of our commerce.

We do not lose sight of the well-known fact that many of the very States which are most zealous in their legislation to prevent the fraud pointed out are themselves raising the greatest number of cattle and hogs, which, with the cotton-seed oil and other constituents, make up the oleomargarine. It is a significant fact, as stated, that these latter States, as well as the Southern States most interested in protecting the cotton products or cotton-seed oil, or most of them, have joined in rigid legislation looking to the suppression of the fraud and counterfeiting of the dairy products. This in itself demonstrates there is no disposition to favor one industry or product at the expense of the other, as charged by the minority; but really such legislation is essentially aimed at the flagrant fraud and counterfeiting which the manufacturers of oleomargarine or, if not the manufacturers, those who distribute their product, are daily practicing upon the consumer.

The question of constitutionality has been finally and definitely settled by the supreme courts of New York, of Missouri, of Minnesota, of Massachusetts, and the question of constitutionality of such legislation has been carried on appeal from the supreme court of Massachusetts to the Supreme Court of the United States in the Plumbley case, which held that it is a proper exercise of the police power of the State, for the purpose of preventing fraud, to prohibit the manufacture of any food product which shall be so complete a counterfeit of some other and more valuable product that the average purchaser is likely to be deceived when he buys it.

To sum up, what more eloquent proof may we offer as evidencing the uniform sentiment of the country in favor of the legislation proposed under the Grout bill than to cite the following indisputable facts: The bill passed the House by the decisive majority of 104, or 12 more than two-thirds, at the last session of the Fifty-sixth Congress, was favorably reported by the Senate Committee on Agriculture, and conceded a two-thirds majority in the Senate; and the people of the country at large, as voiced by and through the legislatures of more than two-thirds of the States, with more than four-fifths of the population of the United States, all have thus emphatically signified their hearty approval and indorsement of this measure. [Loud applause.]

Oleomargarine Bill.

SPEECH

OF

HON. CHARLES W. THOMPSON,

Wednesday, February 12, 1902,

On the bill (H. R. 9206) to make oleomargarine and other imitation dairy products subject to the laws of the State or Territory into which they are transported, and to change the tax on oleomargarine—

Mr. THOMPSON said:

Mr. CHAIRMAN: In view of the extended arguments which have already been submitted against this bill, I deem it unnecessary for me to consume any further time of the House. But I can not content myself to be silent upon a question of such great importance to the people I represent and to the future welfare of our whole country. I beg, therefore, to place myself on record against this unjust and vicious class legislation.

Leaving aside for the moment all considerations relative to the comparative merits and claims of the two articles of food involved, the principle on which this bill is based is enough to condemn it in the opinion of any true citizen of the Republic, provided he realizes the principles at stake. This is, in reality, the most barefaced and tyrannical instance of class legislation that I can remember in the whole history of our country. The various high tariff bills have had for their excuse the necessity for providing revenue, and the same pretext has served to float many other bad or doubtful measures. But in this case there is not even this excuse. The bill pretends to propose a tax, it is true, but not a single human being has any idea that it would yield any revenue. The proposed levy of a tax of 10 cents on oleomargarine colored any shade of yellow is simply designed to kill the oleomargarine industry. It could not support such a tax, and its advocates know that it could not. That is what they are trying to levy it for. But, aside from the amount of the proposed tax, the whole principle of the bill is wrong. You have no right to levy any tax whatever on oleomargarine, any more than on butter. To do so is to be guilty of class legislation, which is contrary to democratic principles and hostile to the basic idea of our Government—the Government of the people, by the people, for the people—for the whole people—not for some particular class or classes or some particular section or sections.

This bill puts a special tax on one single commodity in favor of another single commodity. It discriminates against oleomargarine and in favor of butter. Is not that so? And is not that really all there is to it? What right has this House to discriminate against one commodity and in favor of another? What right have we to assist the butter makers at the expense of the oleomargarine makers? Such a proceeding is undemocratic, unjust, and unconstitutional. Why not tax butter 10 cents a pound, too? You have just as much right to tax butter as to tax oleomargarine, and no more right to tax the latter than the former. Since when has butter enjoyed the privilege of special legislation and special privileges? They say that oleomargarine must be crushed and throttled because it competes with butter. You might as well say that butter must be taxed out of existence because it competes with oleomargarine. Oleomargarine does compete with butter, and it has a perfect right to do so—and on an even basis, too, on the same even, untaxed basis—just as much right as wood has to compete with coal, or electricity with gas and steam, or different kinds of breakfast foods with each other, or different kinds of cod-liver oil, or skates, or shoes, or any other similar articles. But no, Mr. Chairman, butter is a sacred thing; everything else must take its chances in the market, but butter must be protected by a prohibitory tax. Why, sir, the whole contention of the butter interest would be perfectly ridiculous if it were not so perfectly monstrous.

But they say that oleomargarine must be suppressed because it is colored yellow to resemble butter in looks. By what right has butter a monopoly of that color? Why have not the oleomargarine people a right to color their goods yellow if they choose to

do so? The butter people color their product yellow, too, whenever it does not come out of the churn yellow enough to suit them and their customers. What is sauce for the goose is sauce for the gander. It is no more unjust to color oleomargarine yellow than to color butter yellow. Have the butter people taken out a patent on the color of yellow?

But they say, again, that in coloring oleomargarine yellow its manufacturers are taking a fraudulent advantage of butter. Not unless oleomargarine is fraudulently sold as butter, Mr. Chairman; and such fraudulent practices as that, whether they be numerous or rare, it is the precise purpose of the minority substitute bill to prevent. That bill is perfectly fair, perfectly honest, perfectly constitutional, and that is the bill which ought to be passed. Its passage would amply protect the dairy interests so far as they have any right to protection, namely, against counterfeiting and the fraudulent sale of oleomargarine as butter. On the other hand, the pending majority bill is the rankest kind of unjust legislation, openly and brazenly essaying to benefit one industry by shackling and ruining another rival industry, and to create a monopoly in an article of common food, to facilitate the formation of a butter trust, and to put the screws of higher prices for butter onto the people of this land, both the rich and the poor. What can we be thinking of, Mr. Chairman and gentlemen, to dream of passing such a bill? If we do pass it, there will be a day of reckoning with the people very soon for those who are responsible for this outrage.

I beg to submit the following preamble and resolutions, which were adopted at the meeting of the legislative committee of Alabama Cotton Seed Oil Mills, held at Montgomery, Ala., January 24, 1902:

Whereas in the last Congress the Grout antioleomargarine bill passed the House but was defeated in the Senate; and

Whereas this bill, as we know, was the most glaring and insolent piece of class legislation ever proposed in Congress; and

Whereas the advocates of this iniquitous system of legislation, encouraged by their partial success in the past Congress, are urging and lobbying several other bills looking to the same end, endeavoring to employ the taxing power of this Government for the purpose of the destruction of a legitimate and harmless competitive industry; and

Whereas the said advocates are especially urging the measure commonly known as the Tawney bill, because it is the most radical and destructive in its effect of all the measures pending; and

Whereas the law of 1885 imposing a revenue tax and requiring a revenue stamp, which is sufficient for the purposes of inspection and identification of cotton-oil products, and providing heavy penalties for the violation thereof; and

Whereas every dealer, wholesale and retail, is required by law to pay a license for the privilege of engaging in the sale of any of said goods; and

Whereas *in no other* country is this industry taxed, but, on the contrary, receives governmental encouragement; and

Whereas it is not claimed or shown that oleomargarine is unwholesome as food or deleterious to the public health; and

Whereas a further tax of this industry is not necessary for governmental revenue, and no additional taxation thereon is needed, statistics showing that the taxes and licenses derived from this source are more than sufficient to defray the entire expenses of the Bureau of Internal Revenue, economically administered; and

Whereas oleomargarine is cleanly, healthy, keeping well in and adapted to all climates, is cheaper than butter; therefore additional taxation placed thereon is taken from the pockets of the poor, who are compelled to use it because it is cheaper and healthier than butter; the additional tax threatened will, therefore, tax out of existence "the poor man's butter;" and

Whereas said additional tax will crush out of existence an industry using exclusively products which come from the farmers of this country; and

Whereas the manufacture of oil from cotton seed is one of the greatest industries of this great liberty-loving country and furnishes a ready and high price for farm products: Therefore be it

Resolved, That we, the legislative committee of the Alabama cotton-seed oil mills, in meeting assembled, believe that the farm products of our land, including those from cotton seed, should have just, fair, and impartial consideration of the Congress, without regard to section, territory, or occupation, and that the hand of the Government should not be raised to strike down and crush a legitimate private industry, which pays thousands of dollars directly into the hands of the farmers for their products; and

Resolved further, That a copy of these resolutions be forwarded to each of the Senators and Members of the House of Representatives from the State of Alabama, and that they be, and are hereby, requested to use all fair, honorable, and just measures to defeat all of said pernicious bills introduced in opposition to the oleomargarine or butterine interest; and

Resolved further, That we condemn all measures having for their purpose the placing of an additional tax upon said industry or its products.

In witness whereof we have hereunto affixed our signatures.

J. W. Black, district manager Southern Cotton Oil Company, Montgomery, Ala.; Ernest Lamar, president and manager International Cotton Seed Oil Company, Selma, Ala.; C. S. Boles, manager Alabama Cotton Oil Company, Montgomery, Ala.; W. J. Montgomery, vice-president Alabama Cotton Oil Company; O. C. Wiley, president Troy Fertilizer Company, Troy, Ala.; E. B. Nuzum, secretary and treasurer Tuscaloosa Cotton Seed Oil Company, Tuscaloosa, Ala.; George P. Ide, presdent Jacksonville Oil Mill, Jacksonville, Ala.; M. T. Trawick, member firm Trawick & Jernigan, proprietors oil mill, Opelika, Ala.; F. H. Vernon, manager Birmingham Oil Mill, Birmingham, Ala.

Mr. Chairman, this document represents most fairly and forcibly the prevailing sentiment of the people of Alabama, and, I believe, of the whole Southern section of the country. There is no opposition in the South to butter, of course, nor is there any opposition to oleomargarine. The predominant feeling is a desire that there should be justice and fair play for both interests, and there is a strong feeling of indignation over the injustice shown toward oleomargarine by the champions of this iniquitous bill. This indignation on the part of the Southern people is justified, Mr. Chairman, inasmuch as oleomargarine, which has been pronounced a pure and healthful food by the highest scientific authorities and authorized as a proper article of commerce by the Supreme Court, draws largely upon Southern farms for some of its ingredients, and becomes thus an important source of revenue and support to the Southern farmers.

The preamble and resolution just quoted state the case with admirable strength and precision. It is true, as is therein alleged, that the pending bill is the most insolent piece of class legislation ever proposed in Congress, and I can not believe that this Congress will actually and finally sanction it and deliberately vote to "employ the taxing power of this Government for the purpose of the destruction of a legitimate and harmless industry." It is true, as stated, that the present licenses and revenue taxes on oleomargarine are much more than sufficient for the legitimate expenses of inspection, and that in no other country is the industry taxed at all, nor should it be taxed here. Least of all should it be subjected to the proposed ruinous tax proposed by the jealous and selfish butter interests, solely to crush the legitimate oleomargarine industry, which is so beneficial to our farmers and laboring classes, and to force the poor man to pay butter prices or go without either butter or oleomargarine.

The butter interest is undoubtedly a great interest, but so is the cotton-seed oil interest a great interest. The one has as much right as the other before the law, and no more. Why should the cotton-seed oil interest be taxed and burdened and crippled for the benefit of the butter interest? The cotton-seed oil interest asks no special favors from the Government, as the butter interest is so impudently asking. All that is asked by the friends of oleomargarine is a fair field and no favor—a just, equitable, impartial treatment at the hands of the law-making power. The people of Alabama consider it outrageously unjust that the farm products of the South should be discriminated against for the benefit of the farm products of New York or Wisconsin or Iowa, or that the power of the General Government should be made use of to ruin a business which provides such a large source of income for the hard-working agricultural community.

Mr. Chairman, I sincerely hope that the sober second thought of the members of this House may come to the rescue and save us from the disgrace of legalizing this oppressive and unjust measure. There is no warrant nor excuse for passing it. There is no sense or justice in it. The bill is a barbarous bill—unconstitutional, undemocratic, inequitable, a gross piece of favoritism, and more suitable to an autocratic despotism than to the free Republic of the United States. It ought to be buried out of sight, and I can not and will not believe that it can ever become a law in this civilized free country and in this enlightened age.

Oleomargarine Bill.

SPEECH

OF

HON. T. J. SELBY,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 11, 1902,

On the bill (H. R. 9206) to make oleomargarine and other imitation dairy products subject to the laws of the State or Territory into which they are transported, and to change the tax on oleomargarine.

Mr. SELBY said:

Mr. CHAIRMAN: I desire to say a few words on this greasy subject. I am a friend to the cow. I am a friend to the woman that milks the cow. I am a friend to the man who stands by and watches his wife while she milks the cow, for is she not his helpmeet? I love to see the woman churn the foaming cream until the butter cometh. I love the nice fresh buttermilk, and love to see the busy housewife wallop the butter about in her hands into shapely rolls. I love to see the butter come, and then I love to make the butter fly.

Memory goes back to the happy times when the cows came home, and to the less happy times when I had to make them come home. Any man who has been raised with a cow will never lose his friendship for her, nor go back upon her, nor upon her back, when adversity strikes her business.

The gentleman from Virginia [Mr. LAMB] paid the Virginia cow a beautiful and eloquent tribute, but let me say to him that the Virginia cow can not be compared with the big fat cows of the Mississippi Valley and beyond. I am well aware that Virginia is entitled to the proud distinction of having been the

"mother of Presidents," but she was not the mother of the cow. The Mississippi Valley cow is a marvel of wonder and the pride of every home. She never goes dry. It generally takes an hour to milk her, and if she is not milked on time she will milk herself. She is kind and gentle, and has such maternal affection that she often licks the milker instead of her calf.

I have the honor, sir, to live in the land of the blooming cow. If I fail to vote for this bill, I shall feel that I can not go home and ever again look an honest cow in the face. The cows in my country are Democratic cows. They give Democratic milk, which accounts for the everlasting big Democratic majorities in my district. They never "water" their milk nor kick the bucket over in a fashion that causes the milkmaid to say "durn it," nor the milkman to swear. They are honest, innocent cows that have not heard of the tricks of ye cunning dairyman or of the slippery ways of ye oleo man. They are not yet aware, sir, that there is such a thing as oleo in any part of their anatomy. Why, sir, even our hogs have not learned that their greasy in'ards contribute to the greedy work of building up a great anticow-butter monopoly. If the peaceful hog knew it he would grunt in shame.

The cow in my country lives in Acadian simplicity. She dwelleth amidst green pastures and looketh dubiously at the Republican politician as he passeth by on his mission to hoodoo the honest voter.

Frolicsome calves gallop about with tails erect, rejoicing in the fullness of democratic freedom that is theirs. The cow is contented and happy out in my district in her benevolent work of giving milk for young Democrats. Little does this patient cow know that the honest product of her toil is being counterfeited so successfully by cunning men that the butter eater knoweth not any more what he eateth when he buttereth his bread. Little does the lazy hog know that a substance called butter contains 34 per cent of his grease "in'ards," to say nothing of "hair in the butter" from other sources. And our honest cow—what would she do—how would she feel, if she knew that the ingenious Yankee, when she should die—on call, or violently—would use 27 per cent of her tallow and mix it up into a mess with hog fat and cotton-seed grease and palm it off on mankind for honest butter? Her grief would become so intense that her milk would turn to water.

And this honest workingman of whom the oleo angels sing—this son of toil and his little family, or big family, as the case may be, and about whom gentlemen seem so solicitous for fear he will not get cheap butter—what about them? Why should you be such strenuous advocates of a cheap stuff, a counterfeit butter for this honest son of toil and his family that you denounce Democrats here in the great name of oleo? Are you really for the poor man or for the oleo fellow? Why should you desire to feed him and his family on hog lard, steer fat and cotton-seed grease, and leave them in the innocent belief that they are filled up on butter, delicious butter, "wholesome food," and all that sort of stuff!

This "wholesome food product" called oleomargarine you say is such a fine counterfeit of genuine butter, such a delicious substitute, that the honest son of toil can not tell whether he is eating pure butter or this fraudulent compound of hog lard, steer fat, and cotton-seed grease. To such perfection hath swindling come at last under Republican rule and misrule. Why should you not be as earnestly and eloquently advocating an honest thing for the honest workingman as you are earnestly and eloquently advocating this substitute, this compound of mysterious fats, for him? I tell you the honest son of toil is entitled to have the honest product of honest labor, the best and not the poorest, the genuine and not the counterfeit. We should take off our hats to these honest sons of toil, for we are here by their votes, by their kind permission. They expect us to prevent fraud, not to protect it. They expect us to give an honest vote for an honest measure. This bill is an honest measure to protect an honest industry.

The country is now filled with so many gigantic food-product swindles and other swinding frauds everywhere, in everything, that State and national legislation is now demanded to suppress them.

Corporation swindles and trust combine swindles have been fostered and fattened and allowed to grow in such gigantic forms since the reign of Republicanism began that they overshadow the country with their vampire wings, until the people can scarcely distinguish honesty from dishonesty, the genuine from the counterfeit. These vast institutions have become the pets of party. And so, behind these oleomargarine concerns stand great influences and active agencies, because there is money in the business. The frauds they perpetrate upon the country are overlooked, because there is money in overlooking them. States laws have been ignored, because there is money in ignoring them. The wheels of these concerns run fast, while the wheels of justice run slow. There is money in the fast wheels—there is none in the slow ones.

This great oleo fraud has reached that stage when legislation is necessary to expose its fraud, to check it, to suppress it, to destroy it. The legislation provided in this bill is necessary. More than 200 leading agricultural publications, representing millions of readers, demand it. The Patrons of Husbandry demand it. The honest dairy interests of this country demand it. The honest butter makers everywhere demand it. Then, why should we hesitate to vote for it? Should we hesitate because 357 cotton-seed oil mills stand opposed to this measure? The product of these mills last year is reported at 93,000,000 gallons, of which 49,000,000 were exported and 44,000,000 left for home consumption, to be used for "pure olive oil," soap grease, and this oleo-butter compound. A very small portion of this product really goes into the oleo mixture. Only about 5 per cent in the make-up of oleomargarine is cotton-seed oil. Hence, this favored industry will not be crippled if this bill becomes a law.

The hog-fat man is not kicking against this legislation, yet the hog-fat man furnishes 34 per cent of this compounded fraud. But the steer-fat man is kicking; the stock-yard fellows that have steer fat to sell are kicking. They feel so distressed over the prospect of a butter famine, if this bill should pass, whereby, as they claim, the poor man will be deprived of cheap butter, that they start the report that a great butter trust is forming, with headquarters at Kansas City, as the result of this proposed legislation. This report starts too close to the Kansas City stock-yards to have the trade-mark of honesty upon it. Is it the poor man these fellows are thinking about or the steer fat they want to sell? It is not the butterless man they care for; there is no money in that, but there is money in steer fat. And when the hog fat, the steer fat, and cotton-seed grease are mixed up with a lot of other stuff "there's millions in it," not for the honest sons of toil, but for the oleo man—the counterfeit-butter-making man.

We are told that no Jeffersonian Democrat can consistently vote for this bill! The Democracy does not stand on a platform 34 parts hog fat, 27 parts steer fat, and 5 parts cotton-seed grease. Such an assumption would be an insult to the memory of Jefferson and a slander on the intelligence of Bryan. The oleaginous gods of the Republican party—and there are lots of them—would not for a moment blaspheme Democracy by accusing it of standing on an oleomargarine platform. No party could stand long on such a platform without slipping "away back" and sitting down hard, with its face to the wall.

Gentlemen, let us stand by the honest cow, and verily we shall have an abundance of genuine butter for our bread, and milk for our babies—and the earth and the fullness thereof shall be ours. [Loud applause.]

Oleomargarine Bill.

I believe that at the root of this bill and this proposition lies a menace to the liberties of this country and an assault upon personal rights and freedom. It is a proposition to introduce into the forum of Congress a measure to permit the taxing power of the United States Government (when there is no necessity for raising funds) to be used for the purpose of destroying a great industry, and by consequence building up another industry. It is a simple attempt of the strong to crush the weak. It is a misdirection of Government power and purpose that may be used in the coming years for the overthrow of any other industry of this country. There is not an industrial right enjoyed by a citizen of the United States that may not be in this way assailed and overthrown by a merciless, corrupt, and wicked purpose.

SPEECH

OF

HON. CHARLES H. GROSVENOR,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 4, 1902.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 9208) to make oleomargarine and other imitation dairy products subject to the laws of the State or Territory into which they are transported, and to change the tax on oleomargarine—

Mr. GROSVENOR said:

Mr. CHAIRMAN: My contribution to this debate will not be made in the expectation that any good will come of it so far as the passage or defeat of this bill is concerned. A mighty power has gotten its shoulder to the wheel, and the faint-hearted and fearful are going to execute the decree of that influence. A mighty special industry in the United States has found another industry in its pathway. It was on the highway to the complete overthrow of fairness and justice in the dealings with its fellow-men, and it has invoked the power of this Congress to rid itself of that obstruction. The power is great enough to force this measure through. Not one single argument has been made here that has not been based upon a false and fraudulent assumption; and if I believed that the manufacture of oleomargarine was as faulty in the integrity of its ingredients as have been these arguments for

the passage of this bill faulty in their citation of authorities and their appeals to precedents, then I would vote for this bill. Not one argument thus far made could stand for one moment in any court of the country or in the forum of common sense or common fairness.

We have one gentleman coming here to invoke the shade of John Marshall to prove that it is a just and legitimate act of government to use its taxing power to "destroy" an industry; and John Marshall, here on this floor, where a few short months ago he was eulogized by the most eloquent men in the nation, is denounced as a judge who announced that taxation is a proper weapon to fight competition. If that statement were true, John Marshall—John Marshall, who gave tone and direction to the great principles of equal justice and civil rights in this country—is dragged from his tomb and brought in here with a garbled statement of what he has uttered in order to justify the demand that one legitimate industry shall be permitted to destroy another legitimate industry.

I had read this opinion only about a year ago, and I was amazed that anybody who was a lawyer, and apparently a good lawyer, could have thus attempted to distort such an opinion as this one. Why, this opinion of John Marshall has been quoted in the United States for a hundred years or less by every statesman and every lawyer who has attempted to protect the people of this country against unjust taxation. It is the very thunder of the Mount Sinai of denunciation against such a bill as the one presented here by the majority of this committee. It is the very foundation stone upon which the people of the United States have stood and hurled their anathemas against the men who have attempted to take the power of the Government in one hand and to destroy the rights of men by an enactment. It has been the basis of appeal for justice and fairness in taxation in all these years.

The gentleman quoted just this much of John Marshall's declaration:

> The power of taxation is the power to destroy—

and used that here on this floor in the presence of lawyers familiar with these cases, to argue with the people that it was held by John Marshall that it was a legitimate use of the taxing power to destroy one article of industry in the interest of another.

Now, let us see what these decisions are. I read from the opinion in Loan Association *v.* Topeka (87 Supreme Court Reports, Wallace), and I want to read about a page and a half of it to show you how you may don the livery of justice and truth, don the livery of the court of justice, to serve the devil of greed in. [Applause.]

I read from the opinion of the court:

> Of all the powers conferred upon government that of taxation is most liable to abuse. Given a purpose or object for which taxation may be lawfully used, and the extent of its exercise is in its very nature unlimited. It is true that express limitation on the amount of tax to be levied or the things to be taxed may be imposed by constitution or statute, but in most instances for which taxes are levied, as the support of the Government, the prosecution of war, the national defense, any limitation is unsafe. The entire resources of the people should in some instances be at the disposal of the Government.
>
> The power to tax is therefore the strongest, the most prevailing of all the powers of the Government, reaching directly or indirectly to all classes of the people. It was said by Chief Justice Marshall, in the case of McCulloch *v.* The State of Maryland—

And the gentleman read just that much of it—

> that the power to tax is the power to destroy. A striking instance of the truth of the proposition is seen in the fact that the existing tax of 10 per cent imposed by the United States on the circulation of all other banks than the national banks drove out of existence every State bank of circulation within a year or two after its passage. This power can as readily be employed against one class of individuals and in favor of another, so as to ruin the one class and give unlimited wealth and prosperity to the other, if there is no implied limitation of the uses for which the power may be exercised.
>
> To lay with one hand the power of the Government on the property of the citizen and with the other to bestow it upon favored individuals, to aid private enterprises, and build up private fortunes is none the less a robbery because it is done under the forms of law and is called taxation. This is not legislation. It is a decree under legislative form.

That is law that justice smiles on, and any distortion of it for a base purpose and justifying robbery justice will condemn some day.

> Nor is it taxation. "A tax," says Webster's Dictionary, "is a rate or sum of money assessed on the person or property of a citizen by government for the use of the nation or state."

No court will hold that this 10 cents per pound to be decreed against a useful and wholesome article is a tax. It is a decree of confiscation. It is penalty so large that it will prevent the carrying on of one industry and the increase of the monopoly of another.

These gentlemen come right in here and say they do not need this money; they do not want this money. They only want to do it to put it as a burden upon an industry and break that industry down by it. You might just as well do it by prohibitive laws as to do it by taxation.

> Coulter, J., in Northern Liberties *v.* St. John's Church, says, very forcibly: "I think the common mind has everywhere taken in the understanding that taxes are a public imposition, levied by authority of the Government for the purpose of carrying on the Government in all its machinery and operations; that they are imposed for a public purpose."

Do not call this taxation any more; call this a power to levy a contribution. Call it what it was called when the rebel army marched up to Gettysburg and Chambersburg and demanded a ransom. Call it what the brigands of Bulgaria call the demand that they are making upon the missionaries over there, and then you have got the right name for it. [Loud applause.] Never again, I hope, will I ever hear such a proposition as this called taxation.

> We have established, we think, beyond cavil that there can be no lawful tax which is not laid for a public purpose. It may not be easy to draw the line in all cases so as to decide what is a public purpose in this sense and what is not.
>
> It is undoubtedly the duty of the legislature which imposes or authorizes municipalities to impose a tax to see that it is not to be used for purposes of private interest instead of a public one, and the courts can only be justified in interposing when a violation of this principle is clear and the reason for interference cogent.

Now, the gentleman from Vermont [Mr. HASKINS] stood here yesterday and undertook to show that by the decision of Chief Justice Marshall he had held that it was competent in this country and a thing to be advocated, to take the taxing power of the Government for no public purpose, not in any way to benefit the public directly, and use that taxing power for the purpose of the destruction and annihilation of a great industry engaged in the manufacture of a wholesome food product. If he did not mean all this, what did he mean? For what purpose did he quote Marshall? Well, I have defended Judge Marshall.

Nobody can be made to believe that the object of the promoters of this bill is in the interest of the public or for any interest in the world except the most sordid and cold-blooded. It is the purpose of the promoters of the oleomargarine bill to destroy the manufacture of the article.

Mr. Adams was the leading exponent of the doctrine underlying this whole measure; he was not hot-headed and vindictive as was a certain other gentleman who led in the fight, and here is his language:

> There is no use beating about the bush in this matter. We want to pass this law and drive the oleomargarine manufacturers out of the business.

Then, on the 18th of May, 1900, Mr. *Knight*, secretary of the National Dairy Union, wrote as follows:

> Now is the time for you to clip the fangs of the mighty octopus of the oleomargarine manufacturers.

And Governor Hoard himself stated before the House Committee on Agriculture, speaking officially for the National Dairy Union:

> In plain words, this is repressive taxation.

Later on, when Governor Hoard was asked what he would do if it turned out that the bill which he was advocating failed to reduce and destroy the manufacture of oleomargarine, he said:

> In that case, I would come before Congress and demand a still higher tax.

So, Mr. Chairman, there is no use to be "beating about the bush." It is a deliberate purpose upon the one hand to take the taxing power of the Government and say to the manufacturers of oleomargarine, "You shall not make this article;" to say to the people of the country who to-day buy this article in competition with butter, "You shall not buy this article; you shall not eat it. We will drive the manufacturers of it out of the country, and you shall not have it, no matter how anxiously you seek for it; it shall not be yours to have." This is the whole doctrine, and it may just as well be faced one time as another, and let us know whether, in this country of equal rights and freedom, one set of men, because they have the power and can by clamor excite the multitude, can destroy a valuable industry in the interest of another.

It will be seen that the advocates of this bill in the end will refuse to vote for a measure intended to protect the public against the poisonous article known as "process butter." What is "process butter?" Hundreds of thousands of tons of butter in the United States, in the market places, in the great cities, in the small cities, and in the towns become rancid and unfit for use. This butter is collected together, and a set of creameries have invested their money in a process that takes this butter and puts it through a chemical process—not heat, so as to destroy the vermin of its poison—and manufactures it into a compact ball of butter which no man can tell by mere sight from the best May or June butter, and this is forced upon the market.

And you will find, Mr. Chairman, when the proposition comes up to inspect that butter and to prevent its sale and to prevent its deleterous effect upon the public health of this country that these same people will resist it, and the creameries engaged in the business will telegraph to their members of Congress to vote down any amendment of this character. This is the animus of the whole procedure.

Now, Mr. Chairman, I want to refer briefly to the history of this legislation or the legislation on the subject of oleomagarine

and kindred questions. I was in Congress when the first oleomargarine bill was introduced. It was brought here at the demand of the American Dairy Association. I may not have the name just exactly right, but whatever name it was, it was the same organization. It was brought here and introduced into this House by one of the ablest advocates of this scheme of legislation that ever appeared here. It was brought to this House by the gentleman from Missouri.

Mr. COOPER of Texas. Mr. Hatch.

Mr. GROSVENOR. Mr. Hatch. I heard his first argument in favor of the passage of the bill in the committee, and he brought to its support every argument that could be made in favor of that sort of legislation. What was that legislation? It was simply a bill that provided for the proper marking and selling of oleomargarine as the product thus described, and it did not attempt to go one step further. No man at that time had ever heard in the United States that it was to be tolerated for one moment that one industry should be allowed to crush another industry by the mailed fist of the law.

And Colonel Hatch came before the committee and made an argument, and what do you think it was based upon? What was the whole sum and substance of it? It was that oleomargarine was a deleterious product. And the predecessor of the distinguished gentleman who argued here yesterday from the State of Vermont, Mr. Grout, made the same argument, standing right there, hour after hour, in season and out of season. He told of the horrible effects upon the health of the people of the United States.

As the hearings before the committee progressed, medical gentlemen, chemists, men of high distinction in their specialties, came before the committee and testified that there was not one single particle of truth in any of the allegations that had been made. We sent to the Agricultural Department and brought the analysis of the article itself and discovered what is now stated to be true, that there is not one single ingredient in oleomargarine that is not in the butter of the cow; not one; not one article of anything in its last analysis that is not a component part of the butter of the cow; and the evidence showed that there was not any truth in the statement that there was anything deleterious, and therefore the whole argument as to public health fell to the ground.

From that day to this, this sort of legislation has been progressing onward and upward, and finally I have lived, and held a position on the floor all the time, to see the exponents of the bill come forward and in a manly, straightforward manner, as the gentleman from Vermont [Mr. HASKINS] did yesterday, admit that there was no objection to the manufacture of the article; that it was lawful; that it was nutritious, and a valuable article of food product.

Now, it is something to have had a manufacturing industry in the country that taught the people that much, that moved the whole people of the United States away from the argument of Colonel Hatch, made with the utmost sincerity and believing it to be true, and coming here armed with the arguments of the association, and going forward to the testimony we have had here from every source whatever that this is an article unimpeachable in its character, both for nutrition and wholesomeness and everything else that appertains to butter.

Now, the next step in this direction was filled cheese. I ought to say that I voted for the oleomargarine bill. The provision of taxation in that case was only sufficient in amount to provide a police espionage of the manufacture and sale. It did not intend and was not intended to in anywise limit the manufacture, or to prevent anybody from buying it, or in any way interfering with it, except as everybody insists upon to-day that the article ought to be sold for what it is. Nobody denies that. That was the sole purpose of the legislation in 1885 for which I voted, and for which I would vote again.

Mr. BARTLETT. Will the gentleman from Ohio allow me a suggestion?

Mr. GROSVENOR. Yes.

Mr. BARTLETT. Did not the President of the United States when he approved the bill of 1886, in a message to Congress, say that if its purpose was to destroy an industry for the benefit of another, he would have vetoed it?

Mr. GROSVENOR. Certainly; that was admitted by everybody who supported the bill, and it was urged that a small tax upon it was not going in anywise to interfere with the production of the article. I voted for it, as I said, and I would continue to vote for it under like circumstances and under like conditions. And I would vote for a good deal of other legislation. I would vote for legislation to have pure butter, the product of the cow, if I could get it. But this same phalanx that stands here breathing out threatenings and slaughter against the manufacturers of oleomargarine would not vote to-morrow, under the five-minute rule, for a provision prohibiting the introduction of strychnine into cow butter. [Laughter.] Try it and see. Just try it.

While they stand here admitting the purity and beneficial character of oleomargarine, they know perfectly well that thousands of tons, millions of pounds of butter, are shipped from the country districts of this country into the great cities, and after it has become rancid and utterly unfit for human food is daily being reconstructed, remanufactured, treated with chemicals, put up in beautiful cakes of butter, sent everywhere, and not one of them will vote to prevent it. [Laughter.] From the day when the great manufacturers of fraudulent coloring in the city of Burlington, Vt., taught the farmers of New England to color their butter, there has been no effort to prevent dishonesty in the manufacture of butter of the country. [Laughter and applause.]

I remember very well that I once heard a colloquy between a distinguished Senator from Kansas, the late Mr. Ingalls, and the great Senator from Vermont, Mr. Edmunds, in which Mr. Edmunds eulogized the butter makers of Vermont and declared that under no circumstances would they ever be guilty of any fraud upon the people by coloring their butter; and Mr. Ingalls reached down under his desk and, in a dramatic manner, pulled out a bottle holding about a quart of a preparation that had been made in the city of Burlington, Vt., with which the farmers of that State might change the appearance of the white butter of winter so that nobody could tell the difference between that and the butter of May and June. [Laughter.]

But I can tell you something that will be curious to some of you. They have abandoned that coloring; they do not use it any more. That was a clumsy article. They are now using the article the base of which was first introduced into the United States and first used by the manufacturers of oleomargarine. [Laughter.] I refer to annotto.

Mr. SLAYDEN. They are imitating oleomargarine! [Laughter.]

Mr. GROSVENOR. They are imitating oleomargarine to all intents and purposes. They never used this coloring article in all the history of butter making until, Japanese-like, they learned how to use it from seeing it used in the oleomargarine factories of the United States.

Mr. HASKINS. Allow me to say that the preparation made by Wells, Richardson & Co. does not contain any annotto, but, as shown by chemical analysis, is composed purely of vegetable matter.

Mr. GROSVENOR. That is what I am saying. So is annotto a vegetable substance. But the article formerly used by the butter makers was a clumsy article, not a product of skill, as is the article now being used. And I venture to say to my friend from Vermont that the article which he speaks of, manufactured at Manchester, in his State, has no sale to-day because the butter makers are using our article.

Now, the next measure that came into Congress undertaking to deal with a food project related to filled cheese. The bill on that subject was reported from the committee of which I was a member. I wrote the report; I championed the bill on this floor; it passed and became a law. That bill proceeded upon the theory which was established beyond a reasonable doubt that the ingredients out of which filled cheese, as it was called, was made were an inferior article and made a species of cheese that was proven to be deleterious to the public health.

It was shown, also, to our satisfaction that the commingling of that article with the pure cream cheese of our country had broken down our market in foreign countries for this product of the farm. And so we provided in that bill just about what is provided in the minority bill here—only not in so good form as the minority bill puts it. We provided that filled cheese should be stamped and branded in such a way that it could not be a fraud upon the public. And there has been, so far as I know, no trouble or difficulty in protecting the real cheese of the United States against the spurious article known as filled cheese.

But we went forward. Thirty-two States of the Union passed laws against oleomargarine. I want to say to the gentleman from New York [Mr. TOMPKINS] that when he speaks of the 32 States of the 45 launching their criminal statutes against the commodity, while the manufacture, sale, or use of the commodity is growing at a rapid rate, unaffected by that sort of a statute, there is presented a consideration that may well induce us to call a halt as intelligent legislators.

Here are 32 States with their power of constabulary enforcement of criminal and civil statutes, with all the machinery to carry them into effect, with their grand juries and their prosecuting attorneys; yet we are told that this commodity, the object of invective and denunciation as criminal, is growing stronger and stronger and mightier and mightier in this country. Why is this? Is it because the article is as good as, if not better than, its competitor, and because there is a public demand for it that defies legislation—just exactly as the public demand for whisky in the State of my friend here, Mr. POWERS, simply does not repeal the law, does not amend it, but just laughs at it—just as has been

the case with the law in the State of New Hampshire, where it has been the fact, as exploited not very long ago, that the city of Manchester has erected a great public building and supported the city government, and carried on a magnificent line of improvements, all of which came out of the fact that there was a violation of the law going on in that State.

Mr. CURRIER. I wish to make this suggestion, that however true the statement of the gentleman may have been in the past, it is not true to-day. There is no violation of the prohibitory liquor statute in our State that the authorities can possibly learn of to-day.

Mr. GROSVENOR. Well, my friend, I will say this to you: If you should be passing over the State of New Hampshire, I do not think you need to carry a large supply of liquor in order to get through comfortably. But I admit that it is my information that the system under which the public building at Manchester was erected and the civil government run there for several years has been put an end to. How long that will continue I do not know. Probably they will get along very well, now that they have the building, without any increase of taxation.

Mr. RICHARDSON of Tennessee. They have not sold out the building and given the proceeds to the poor, have they?

Mr. GROSVENOR. Not that I have heard of.

Mr. CURRIER. The gentleman is mistaken in regard to the building. There has been no new city building constructed in years in Manchester.

Mr. GROSVENOR. I am glad to hear that, and gladly correct any false impression made by the published accounts. It shows that sometimes newspapers will be mistaken, even in a godly city in a godly State, but we all know that that is the true and just criterion in this country. When a law is unenforced, when 32 States come here apparently saying to the Congress of the United States, "We have an enactment in our State as wisely framed as it is possible for human ingenuity to frame it; it relates purely to a police regulation; it goes only to the question involved in that definition of law, and yet we can not enforce it, and there are flagrant violations of it all over the country," when you see that condition of things, the wise man stops and says, "Possibly we may be going a little too far in trenching upon the liberties and rights of the people of this country." That is what I have to say upon that branch of the subject.

So far as I know, there has been no difficulty in the enforcement of the filled-cheese law. I have heard no complaint about that. There is no complaint from our consular service in Europe, where our market is or has been, although our consular reports teemed with complaints before the passage of the filled-cheese law. And if this bill had been framed here with an argument to Congress saying, "The law is defective in that we have not the machinery for its enforcement," and suggesting a wiser plan, suggesting some amendments that would be beneficial, I would have gladly voted for that bill, and I will do so now if the opportunity is afforded me to vote for the minority bill.

Now, what have we got? I am going to give you a few instances, and ask the members of this committee if you will strike down an industry that has that sort of effect in this country. I know you will. I am only speaking to justify myself; that is all. I can produce evidence here that not only private individuals, but the managers of creameries, have been found to be engaged in this kind of a business, buying the milk from the farmer, manufacturing it into butter, and selling the butter in the cities; buying the oleomargarine from the cities and selling it to the farmers from whom they bought the milk. [Laughter.]

Now, I will tell you where you can get the evidence, and if it is not a significant circumstance, then I do not understand the significance of anything. Go to the Internal-Revenue Department, and you know we have a law on the statute books under which every manufacturer of oleomargarine is known. He is compelled to show his books and the places to which he ships his product—to the intermediate man, the middleman—and the Department follows it down. Strangely enough, in one of the counties of Ohio it was discovered that two of the largest patrons of the Chicago oleomargarine factory were two creameries, and the Department thought there must be some mistake about that and followed down the stream and came to the creamery and said, "What are you doing with oleomargarine?" Then they exposed the whole thing and told the story: "We are selling it to the farmers at a cheap price per pound, and we are buying their milk and making it into butter and sending the butter to Chicago."

Over here in the institution known as St. Elizabeth's, the great insane asylum, you will find by reference to its report to Congress that after full experiment the superintendent of that institution ordered that there should be no further purchases of butter, and that the entire institution, including the table of the superintendent, should be supplied with oleomargarine. He states that the quality is better than the butter that he had bought, that itis more healthful, and that he saves to the institution $6,000 a year. And you are to put a stop to that?

And now comes my friend the gentleman from New York [Mr. KNAPP], who spoke in the time of the gentleman from Vermont [Mr. HASKINS], and says that they do not do this for any purpose of limiting the supply, that they do not do it out of any purpose to benefit the producers of cow butter. Oh, not at all! They only just want to get rid of an article that in a single public institution has saved to the Government $6,000 a year, and they say "we have nothing but the most platonic interest in the whole subject."

Gentlemen, when did a man who bought a pound of butter for the use of his family ask you to vote for this bill? Where is the man who was ever instigated to vote for this bill by a single human being who was a buyer of butter? There are 25 men in the United States who buy butter where there is one who makes it. And confessedly you propose to make the manufacture impossible.

It is not worth while for gentlemen to talk to me here and say they do not intend the destruction of this article. We have their admission right here, of record, that their purpose is to make it impossible that this commodity shall be manufactured and sold in the United States. Do you think the creamery interests of the country are here carrying on this war, filling the lobbies of this House with paid lobbyists, and filling the mails of the country full of literature, all because they love a country where they have pure butter, and that no pecuniary advantages is to come to anybody, not one soul on earth. Nobody would ever stand up here and solemnly make those declarations.

The gentleman from New York says he advocates the passage of this bill in the interest of the people of this country. What people of this country? Who asked him for it? Go to the district that I have the honor to represent in this House, where there are 10,000 men engaged in the business of mining coal, and tell these men after this bill becomes a law, "We did not pass this bill to take a single cent out of your pockets; no, not at all." The answer will be, "There is 15 cents a pound added to the pound of butter that I wanted to buy;" and you will answer to the people of this country, that are not easily fooled, by declaring that they have no pecuniary interest in the passage of this bill.

I repeat what I said the other day, and I have nothing further to say about this whole measure. This bill is founded upon bad principles of law. It is founded upon the development of injustice and outrage. It is a bill that in the hundred and odd years of our country's life never had its equal or parallel in the House of Representatives before. In all the years that this Government has stood no man before this ever dared to come into the Congress of the United States and say: "I am the producer of Article A, and Article B has got in my way. I want you to tax out of existence Article B, so that I can make money on Article A." These virgins are corrupt and wicked virgins, without any oil in their lamps. [Laughter and applause.]

Do you think the gentleman from Connecticut is interested that the people of my Congressional district shall eat pure butter or interested in the men who stand behind him, a small minority of his constituents, who put money in dairies, who shall have laws in their interest passed under an act of Congress of the United States? [Loud applause.] That is all there is of it.

Mr. HENRY of Connecticut. As the gentleman seems to refer to me, I would state that I am interested that the gentleman's constituents shall know what they buy and eat, and if they buy a substitute for butter that they shall know that it is oleomargarine.

Mr. GROSVENOR. What about wooden nutmegs? [Great laughter.]

Mr. HENRY of Connecticut. Nutmegs are supposed to be cheap.

Mr. SPERRY. The gentleman should not cast an imputation against the State of his birth.

Mr. GROSVENOR. The gentleman has been here a long time. There are thousands of products in this country that are filled with adulteration. There are hundreds of products in this country that you can not say, as the gentleman from Vermont said yesterday, this is a clean, a nutritious, wholesome article; but you can say of them they are vicious and unwholesome and deleterious. This is the first time that gentlemen have got up a raid against the production of any article.

Mr. HENRY of Connecticut. One word. As a native of old Connecticut, I would not suppose that the gentleman from Ohio would cast a slur upon the wooden nutmeg.

Mr. GROSVENOR. As a native of Connecticut, "the gentleman from Ohio" understands the game. [Great laughter and applause.] I was saying that in a hundred years of legislation in this country nobody ever before presented a bill and in support of it said that he desired to destroy, as two witnesses said in these hearings, an industry recognized and now in force, compelling

the destruction of this valuable product of the people of the United States.

Mr. BURKE of South Dakota. Will the gentleman permit me to ask him a question?

Mr. GROSVENOR. Certainly.

Mr. BURKE of South Dakota. I would like to ask the gentleman, as a matter of fact, is it your opinion should this bill become law that oleomargarine will no longer be manufactured?

Mr. GROSVENOR. I am coming to that in a moment if my friend will permit me to do so in the proper place.

Mr. SPIGHT. The gentleman seems to have given the subject a great deal of consideration. What does the gentleman think of that class of argument made by Governor Hoard, the chairman of the National Dairy Union, that one of the elements that enters into the manufacture of oleomargarine is from the bodies of dead animals that have died of disease and from the refuse of slaughter-houses?

Mr. GROSVENOR. Governor Hoard knows there is not a word of truth in that statement. I do not know that he ever made such a statement. I hope he did not.

Mr. SPIGHT. He made that statement in his testimony.

Mr. GROSVENOR. I will put the gentleman from Vermont against him. He says that it is a "pure, wholesome article." That is one of the extremes to which men are driven. Driven from every other position, they have to come at last to the naked proposition that they wanted to destroy one industry for another by the use of the taxing power of the Government. It is the means by which the strong desire to prevail over the weak.

I heard the speech of the gentleman from Missouri [Mr. COWHERD] this afternoon, when he put forward in such an eloquent manner that we could not afford to establish any such precedent as this. No man has answered that speech. No man will ever answer that speech. That speech was the ringing battle cry of warning to the people of the United States, and I indorse every word of it, and to say it is in the interest of the people that you are granting these powers to let the strong crush the weak, that we are to permit somebody in New England or Wisconsin or somewhere else to dictate what food the people of my State and my district shall eat, and having made their decision, come to Congress to enforce, as this court says, "a decree" that they shall not eat that which they want to eat and shall eat the other thing.

Why not carry out the instances and illustrations the gentleman from Missouri so eloquently referred to? Why not crush out the use of coal, or why not take any product that is strong and represented by an enormous number of people and crush its rivals? I presume that on this floor there are a greater number of coal representatives than there are of oil representatives. What is the difference? Oil is a good product, and coal is a good product.

Why permit oil to be put into cakes and deceive the engineer when he shovels it into the furnace? Why not by law say you shall not put things of a similar form and similar use on to the markets of the country, and do it by force of law, by the overpowering force of greed, by the petition of men confessedly admitting that it is for the purpose of direct pecuniary benefit of their own constituents? Why not permit them to come and dictate the kind of clothing that we shall wear? There are more people in this country that raise cotton than raise wool. Why not prohibit the use of wool, because sometimes we can not tell the difference between the woolen article and the cotton article?

Mr. CLAYTON. Will the gentleman from Ohio allow me a suggestion?

Mr. GROSVENOR. Certainly.

Mr. CLAYTON. Why should not Congress legislate so as to prohibit the manufacture of Attleboro jewelry in imitation of gold jewelry and thereby break up a New England industry along with the industry of making wooden nutmegs? [Laughter.]

Mr. GROSVENOR. The gentleman from Missouri illustrated his splendid speech by an act of Congress prohibiting the making of plated spoons or plated forks because it was liable to deceive somebody who wanted to buy the sterling silver forks. Now, the utmost that any nation ever went in the history of the world is that of the English people, who have a law that there shall be no silver sold that has not the Hall mark on it, which indicates that it is sterling silver; and it is the Hall mark that the minority measure favors here, a law that puts the Hall mark on oleomargarine.

Mr. SLAYDEN. The stamp of honesty.

Mr. GROSVENOR. The stamp of honesty. I should like to have gentlemen go with me on some Saturday night, and have them witness the purchase by thousands of the laboring men of the Hocking Valley as they march into the stores to buy oleomargarine with the sign up, and a wrapper on it, while butter is lying over on the other side. The people of this country do not need any protection of that character. They do not need to have guardians appointed for them. The time has not come yet when the Government of the United States shall put itself in loco parentis of the people of the United States, and surely not when there is a sordid interest that is driving them forward.

Why, there is no limit to where this principle may go. Take the subject of jewelry. I was told night before last by a gentleman that he saw in the possession of a lady a string of pearls which he supposed, judging by his observation and experience, was worth from $15,000 to $25,000, at least. He told me that it was manufactured, as he afterwards found out, in one of the little States of New England, and was sold for $75.

Why not interfere and stop the manufacture of jewelry? Why allow the people of the United States to buy something which they do not know anything about? Why not compel the man that has got a horse that will "stand just as well without hitching as he will hitched," under the doctrine of David Harum—or a horse that a "woman can drive as well as a man." [Laughter.] Why not forbid him to raise, keep, or sell such a horse as that? You are entering here upon a field unexplored, with danger marks all along the line, and outrage and wrong and ultimate revolt at the other end of the dark passage through which you are traveling.

Mr. McCLEARY. Will the gentleman allow me an interruption?

Mr. GROSVENOR. Certainly.

Mr. McCLEARY. Am I correctly informed that the gentleman from Ohio had introduced a bill or advocates one in relation to shoddy as a substitute for wool?

Mr. GROSVENOR. I have.

Mr. McCLEARY. Will the gentleman explain the difference?

Mr. GROSVENOR. It is upon the theory of the minority bill here that the manufacturer of woolen goods shall put the word "woolen" on them and that if he mixes cotton with them he shall put on the word "mixed."

Mr. SLAYDEN. And that is all you ask for?

Mr. GROSVENOR. That is all we ask for. We ask for nothing more. There is no tax on it. If anybody finds me attempting to destroy the manufacture of a valuable article by legislation, I hope he will brand me here and elsewhere as a violator of my promises. [Applause.] It is a bill introduced at the suggestion of the Live Stock Association of the United States to prevent the fraud in mixed goods.

And it is exactly in line with the original oleomargarine law; exactly in line with the filled cheese; exactly in line with the minority report here, and is justifiable under all circumstances. But there is not one cent of taxation imposed. I think that is the defect of the bill, because I believe under all the circumstances there should be a tax sufficient at least to defray the expenses of the police regulation.

Now, Mr. Chairman, we are at the opening door of this class of legislation. We are entering upon the threshold of a dangerous precedent. We are saying to the people of this country, "It is a question of power and not right." We are saying to the people of this country "It is a question of your ability to organize in behalf of a given interest, and the rightfulness or wrongfulness of your competitor makes no difference in the minds of the people that are to vote upon the subject."

I appeal—hopelessly, uselessly, I know—to the men of this House of Representatives, do not make this record. It will be the sowing of seed that will bring a harvest of legislative dragon teeth that shall rise up in the pathway of the nation if this be established as a precedent. It is a blow at the rights of men. It is a blow at competition. It is an attempt to build up a power upon the simple merit that there is such a power, and to crush out another instrumentality because it is weak.

One word more, and I will not trespass further upon the House. Do not imagine, gentlemen, that you are going to strangle and stifle the people of the country upon this question. Oleomargarine will be produced and eaten as food when you and I are forgotten. And you have advertised this product beyond any other advertisement that was ever given to it. [Laughter.] You have done this article more good than everybody else ever did in the history of this country.

Mr. BURKE of South Dakota. I presume that is the gentleman's answer to the other question which I asked?

Mr. GROSVENOR. No; I am coming to that in a moment.

Mr. BURKE of South Dakota. If the gentleman's statement that he now makes is true, that oleomargarine will continue to be manufactured and used, will it not, when sold on the market and used as oleomargarine, be cheaper than it is now, when it is sold in imitation of butter?

Mr. GROSVENOR. There is no doubt about that.

Mr. BURKE of South Dakota. Then would it not be true that after the passage of this bill St. Elizabeth's Hospital, which, according to the gentleman's statement saves $6,000 a year by the use of oleomargarine, would save several thousand dollars more because oleomargarine would be cheaper?

Mr. GROSVENOR. That may be, but that does not amount to anything in sustaining the principle underlying this bill. If I should go to the gentleman and tell him he should stop using real coffee and go to using chicory because I wanted to break down the manufacture of coffee, would it be a very good argument for me to say, "If you get rid of coffee, chicory will be cheaper than it is now?"

Mr. BURKE of South Dakota. I understood the gentleman to say that he is opposed to this bill largely because it has a tendency to destroy one industry in order to build up another.

Mr. GROSVENOR. It has exactly that effect. But for that there would not be one vote here in favor of it, and the gentleman knows it.

Mr. BURKE of South Dakota. I do not know it.

Mr. WADSWORTH. Let me say that physicians now recognize the fact that oleomargarine in its manufacture is subjected to such heat as to destroy all germs of disease.

Mr. GROSVENOR. I should like to have the "germs" in a good piece of well-made oleomargarine sized up in comparison with some of the butter that I have seen.

Mr. BURKE of South Dakota. The gentleman has stated that originally the butter makers used a coloring that was manufactured, I believe, in Vermont?

Mr. GROSVENOR. That was a coa rse article which was somewhat used in the East, but when it got West nobody would use it.

Mr. BURKE of South Dakota. And the gentleman said that the butter manufacturers are now using "our" coloring. Will he please state what he meant by "our?"

Mr. GROSVENOR. I mean the article which the manufacturers of oleomargarine were the first to use, but which is to-day the coloring matter of the creameries of the country, as has been fully established in the evidence taken a year ago, now made and sold in Vermont in great quantities.

Mr. DAHLE. Is there any difference between the coloring used by the manufacturers of oleomargarine and that used by the butter makers?

Mr. GROSVENOR. Not that I know of.

Now, I want to make one prediction, and I want my friend from Connecticut to hear it. You can not destroy the manufacture and sale of oleomargarine——

Mr. HENRY of Connecticut. We do not want to.

Mr. GROSVENOR. That is what you are trying to do; you have no other purpose. There was never any power in any civilized country great enough to dictate to any people what they should eat or drink. That being the case, this law, after it is placed upon the statute book, can not have any effect in suppressing this article.

It will be cheaper by a half than the price of your butter is, and it will be manufactured in quantities beyond the dream of the supporters of this bill. And then comes this proposition: Throughout the whole civilized world outside of Ohio—outside of the United States [laughter]; it happens very often that under the pressure of heated discussion I use synonyms [laughter]—outside of the United States there is no such thing as colored butter used.

There are scores of gentlemen here now who will bear me witness that from the moment you get upon a great ship in the harbor of New York until you return to it, if you go to Paris, or London, or Vienna, or Berlin, or anywhere else in Europe, in the very highest price hotels and restaurants you see no colored butter. It is all white. Go to the city of New York to-day, and in the leading places where men are fed you will find much of the butter is white.

You will only have to wait until a change takes place in the taste of the people for white butter instead of the yellow butter, and then your constituents will come and ask, if you are living at the time, and I hope and pray you may be, for you will be unfit to die with such a responsibility as this upon you [laughter]—your constituents will come to you and ask you. "Why did not you understand that question when you were voting to advertise oleomargarine in this country?" [Laughter.]

Mr. HENRY of Connecticut. Mr. Chairman, when the gentleman is through with his personal talk to me, I should like a very brief word in reply.

Mr. GROSVENOR. The gentleman will have plenty of time.

Mr. HENRY of Connecticut. I should like it right now.

The CHAIRMAN. Does the gentleman yield?

Mr. GROSVENOR. Oh, I do not want to publish the gentleman's speech in the bowels of mine.

Mr. HENRY of Connecticut. If the gentleman heard what I said yesterday, I did not claim that the manufacture of oleomargarine would be destroyed. I believe it will increase under this bill. I believe the manufacture of colored oleomargarine will become a permanent industry, paying 10 cents a pound tax, and that the manufacture of the uncolored oleomargarine will very materially increase. We do not expect to destroy a legitimate industry. And now let me say just one word more. We are very proud of the gentleman down in old Connecticut, proud that he is a native of the State. If he was representing a Windham County constituency, the county that loves and honors him, he would take a very different view of this legislation from that which he takes representing a district of Ohio.

Mr. GROSVENOR. I have more agricultural production in the district that I represent than there is in the whole State of Connecticut put together. [Laughter.]

Mr. HENRY of Connecticut. Possibly.

Mr. SLAYDEN. When the change in fashion comes which the gentleman predicts, and the taste of the public turns to white butter, will our friend from Connecticut come and ask to have a law to compel the manufacturers of oleomargarine to color it yellow?

Mr. GROSVENOR. Of course he will. Why should he not? But let me give you now the force and effect of it. The gentleman from Connecticut [Mr. HENRY] now says, everybody having admitted on all hands that the product is a good one, that it is a healthful food product; now he says that he expects the production of it will very largely increase. I should like to know what he is here for just now?

Mr. HENRY of Connecticut. In the interest of honest butter and honest oleo.

Mr. GROSVENOR. How in the interest of it? If the use of oleomargarine largely increases, its customers must come from some of the people who are using cow butter to-day. Now, your theory is that having driven the manufacturer of oleomargarine to making it white, it will at once become an aggressive force, and that its production and sale to the people will largely increase. Then, my friend, if I represented the creamery interests and wanted an advocate I would employ some other gentleman besides yourself. [Laughter.]

Mr. OLMSTED. Will the gentleman allow me to interrupt him?

Mr. GROSVENOR. Yes.

Mr. OLMSTED. I hold in my hand a copy of the bill (H. R. 6565) introduced by the gentleman from Ohio. I find that it provides that all articles not made of pure wool shall be labeled "mixed goods," and that there shall be a Federal officer to inspect the goods. I find that any person purchasing goods, any purchaser of such goods, not properly tagged shall be guilty of a misdemeanor and subject to a fine not exceeding a thousand dollars. That is imposed on the purchaser.

I also find that the manufacturer who shall make his goods with intent to deceive, so as to be calculated to deceive and mislead the purchaser, shall be guilty of a misdemeanor and subject to a fine not exceeding $5,000. I simply want to ask the gentleman from Ohio if he does not think that is going a little further in the protection of pure wool than the friends of butter are going in this bill to protect pure butter?

Mr. GROSVENOR. No; it is not.

Mr. OLMSTED. And whether he would be willing to apply to oleomargarine the limitations, restrictions, fines, and penalties provided in this bill for those who use and manufacture mixed wool products?

Mr. GROSVENOR. Absolutely. I would vote for it cheerfully. I will vote for any measure that will put up the barriers so as to defy cheating in the sale or the manufacturs of any article in this country of common use among the people.

Mr. HEPBURN. And use the taxing power?

Mr. GROSVENOR. Not at all. I would not use the taxing power; that is the distinction. The gentleman knows I did not draw the bill; but in that bill we did not go that far. We did not raise a tax to enforce the measure. There is not a cent or a particle of taxation involved in the bill.

Now, one thing further in the bill; and I want to show the committee the artfulness of this bill under consideration.

This bill is drawn for the purpose of preventing fraud, and because the man who wants to buy butter ought to be able to buy what he wants. I call your attention to the third page in this bill, beginning at the fifth line:

> And any person that sells, vends, or furnishes oleomargarine for the use and consumption of others, except to his own family and guests thereof without compensation, who shall add to or mix with such oleomargarine any ingredient or coloration that causes it to look like butter shall also be held to be a manufacturer of oleomargarine within the meaning of said act and subject to the provisions thereof.

As I have said already, there is not a single ingredient in oleomargarine that is not in butter; there is not a single ingredient in butter that is not in oleomargarine. Now, this bill provides that if you take 99 per cent out of pure milk and cream and put in 1 per cent of oleomargarine you are liable to the pains and penalties of this legislation.

That shows what there is in this whole performance, Having gotten an analysis of the article, and knowing this fully, they have undertaken to bar the way to any distinct or possible ad-

mixture of oleomargarine in 99 per cent of pure butter fat. It shows what the purpose of this bill is. It is a craftily contrived scheme to prevent the possible manufacture of oleomargarine; and that would do it. But the gentleman says he expects oleomargarine will yet be manufactured. It can not be manufactured under that provision of the bill if there is any ingredient that is put into it that in any way affects its color.

Mr. Chairman, this is dangerous legislation. Greed is always fed and grows more voracious by the thing that it is fed upon; and the time to turn around and stop and prevent the long train of evils that will follow this legislation is to stop it now. [Loud applause.]

War-Revenue Taxation.

SPEECH

OF

HON. JACOB RUPPERT, JR.,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 17, 1902,

On the bill (H. R. 10530) to repeal war-revenue taxation, and for other purposes.

Mr. RUPPERT said:

Mr. SPEAKER: I congratulate the House and both political parties and the country at large on the opportunity now offered to us for relieving the country of a large amount of taxes which have been quite burdensome and which are certainly no longer necessary. In such a case as this partisanship is out of place, and partisanship, I am sure, will not be manifested. The special taxes which we now have an opportunity to discontinue were imposed under the stress of special need. Although they bore too heavily on some interests and too lightly on others, and although they were consequently not equitable in their arrangement or operation, they were accepted by all as a temporary necessity. As all parties and cliques and sections united patriotically in support of the Spanish war in the field and on the sea, so all united in providing the "sinews of war," as represented by these special taxes. And now, when the war is over, with such a glorious triumph for the American arms, and when the expenses of the war have been terminated, all parties can and certainly should join joyfully in annulling these war taxes and thus relieving the people of a very considerable burden.

It is our plain duty to our constituents to repeal these war taxes at once, as recommended by the Ways and Means Committee. The criticisms upon the manner in which the bill has been brought in are perfectly just, and I should have much preferred that opportunity for amendment and debate thereon had been freely given, as usual. But the Republican managers are responsible for the management, and must take the consequences of any errors they may have made. The members on this side of the Chamber have nothing to do with that. If shut out from the privilege of amendment by the ruling powers, we must submit to that as unavoidable, but that does not change our obligations in regard to the main question at issue. It still remains our duty, and the duty of all here present, to repeal these remaining war taxes.

A very large amount of money, amounting to something over $77,000,000 annually, will thus be saved to the people of the country. So long as the money was needed for the specific purpose for which it was appropriated the people of the country, always patriotic as they are, cheerfully paid it. Never within my knowledge has there been a more general popular agreement on any subject than there was in this country at the outbreak of the Spanish war. We all remember how that event served to bring together again the veterans and the sons of the veterans of the North and the South. Never can it be forgotten how inspiring, how pathetic the spectacle was. And while our brave soldiers from all parts of our solidly reunited country stood shoulder to shoulder once more and marched in step together against the foe, at home the people willingly raised the money requisite for carrying on the war in a proper manner.

The war, though short, was expensive, but there was no complaint of the cost, nor has there been any complaint on that score since the end of the war, except as to the expense of the Philippine occupation, concerning which there is a division of opinion. But there would soon be a complaint, and a justifiable complaint, if the war taxes were longer continued. So in the greater and much longer continued civil war, when the taxes and other expenses connected with the struggle were very much larger, and when the financial as well as other resources of the country were well-nigh exhausted, there was very little complaint heard as to the expense so long as the war lasted, and it was only in the years after the war, when the war taxes still continued to be levied and collected, that complaint became loud and general.

The people will applaud us now for relieving them of the remainder of the Spanish war taxes, as they applauded a year ago when a portion of the taxes was taken off. The taxes have been imposed somewhat irregularly upon articles usually exempt, or heavy additional duties or imposts have been laid upon some articles already taxed, and on this account, and also because the taxes were levied for a purpose which has long since been accomplished, Congress is now under a moral obligation to rescind the entire war tax. It is none the less true that there is a pressing need and justification for still further reducing the burden of taxation at present borne by the American public. But it would seem best under the circumstances, and under the conditions which have been imposed upon the House by the Committee on Rules, and for which the rest of us are of course not at all responsible, that nothing should be done which could in any way imperil the passage of this bill. Let it be passed by all means, and then let efforts be made for further tax reduction separately.

The reduction bill which was passed a year ago took off the war tax on several articles and interests, including bank checks, certificates of deposit, promissory notes, money orders, express receipts, telegrams, telephone messages, certificates, life, marine, and accident insurance policies, leases, mortgages, powers of attorney, warehouse receipts, patent medicines, perfumery, and a few other articles, and reduced somewhat the tax on beer and tobacco. The pending bill, if adopted, will take off the remainder of these special taxes, including the taxes on beer, banks, brokers, theaters, tobacco, stock certificates, sales on margins, bills of exchange, custom-house entries, mixed flour, tea, legacies, and the rest.

I have alluded to the tax on beer, and I have no hesitation, Mr. Speaker, in characterizing this tax as by far the most unjust feature of this war-revenue measure. When the measure was originally framed the contemplated doubling of the beer tax by raising it from $1 to $2 was vigorously protested against by the brewing interests and by others not connected with those interests as not only an exorbitant additional tax in itself, but also a very disproportionate addition in comparison with the other items contained in the measure. The protests against this grossly burdensome and unprecedented tax upon beer were vigorously presented before the committees and before both Houses of Congress, and the subject led to extended debate, in which the injustice fo this proposed tax was clearly brought before the attention of Senators and Representatives. Nevertheless, the 100 per cent addition to the beer tax was levied, and it remained in full force until last year, when the tax was reduced from $2 to $1.60. At that time another vigorous effort was made to have this extra tax repealed, but it was unsuccessful, and the tax remained on beer at $1.60 a barrel, or 60 per cent in advance of the original tax—not as bad as 100 per cent advance, but still an unwarranted, unreasonable, and altogether disproportionate and unjust tax, as I shall proceed to show directly.

As I have already more than once stated, I can not see how Congress can fail to pass this repeal measure of national importance and national relief. And yet I have heard in some quarters, and other gentlemen have heard, doubtless, whispers of impending opposition to the measure among certain statesmen, some of whom are not directly connected with this particular body. It is said that this opposition is based on the theory that several measures of importance are pending, and many of them very expensive measures, and that a great deal of money will be needed to carry out these expensive measures, provided they become laws, and, accordingly, that it would be better to keep these taxes going for this purpose. Now it is not my province nor my intention to command others as to their duty, but it seems to me, most decidedly, that it would be wholly wrong and indefensible to proceed on this principle with these measures of new legislation. Even granting for the sake of the argument that all these proposed new measures are desirable, I must protest that it would not be at all proper to secure the funds for executing these measures out of the Spanish war tax.

No, Mr. Speaker and gentlemen; let the ship-subsidy bill and the interoceanic-canal bill and the river and harbor bill and the Pacific-cable bill and the bridge bills and the public-buildings bills and all the other expensive bills stand on their own merits, and if they are passed let them draw for their support in the usual and regular manner and not depend on money raised by a special tax for a war which was finished nearly four years ago.

The tax of $1 a barrel on beer was itself originally a war tax—a tax imposed in the great civil war—and although all other taxes of that war were long ago removed or greatly reduced, the beer tax has remained unchanged ever since, until it was doubled to $2 at the outbreak of the Spanish war. That fact might have

been fairly taken into consideration in formulating the Spanish-war taxes, and might have availed with fair-minded, reasonable men as an argument against any great increase in the beer tax. Instead of that, a greater increase was made in the beer tax than in any other, and to make the injustice still more striking, while the tax on beer was doubled, the tax on distilled liquors was not increased at all.

Another aspect of the case is this: The beer tax was not only increased disproportionately with relation to other taxed articles, but the amount of the increased tax was in itself and absolutely far too great. It amounted to nearly half the actual value and market price of the article taxed—a perfectly monstrous rate of taxation. The brewers' price of a barrel of beer is now $5, and out of that they have been compelled, since 1898, to pay $2, or during the last year $1.60, for taxes, which has simply wiped out all their profits, and in many cases has thrown them in bankruptcy. In former years, when the old $1 tax was first imposed, the brewers used to get $12 a barrel for their beer, and the tax was levied with that fact in view, and it was apparently considered by the lawmakers an equitable tax under those circumstances—although very high, nevertheless. But the increase of the tax to $2, or even to $1.60, was glaringly unjust, especially considering that the price of beer has fallen from $12 to $5 a barrel. In fact, such a tax amounts to a measure of confiscation. Contrast this increase of 100 per cent or 60 per cent, Mr. Speaker and gentlemen, with the increase of only 15 per cent in the English beer tax on account of the Boer war—a longer and much more expensive war than our Spanish war.

Another reason for grievance on the part of the brewers is that they are being impoverished and their business ruined by the payment of a burdensome and exhausting war tax, while other interests and businesses have had no war-tax burden whatever. I have already spoken of the liquor interests in this connection; but there are many others that might be mentioned—the iron and steel interests, the oil interests, sugar interests, glass interests, and all the other tariff-protected interests and trusts—why should the beer interests have to pay a double and exorbitant tax for carrying on the war, and all these other interests pay nothing at all?

Again, this ruinous and exorbitant war tax is still being paid, although the war is over, and when the tax was levied the assurance was solemnly and repeatedly given by the leaders of the dominant party that the tax would be repealed as soon as the emergency which necessitated it should cease. And not only has the emergency ceased, but the beer tax, which amounts to $60,000,000 annually, even since the reduction to $1.60 a barrel, is being poured into a Treasury that does not need it and does not know what to do with it—a Treasury overflowing with a tremendous and increasing surplus. In other words, the brewing interest is being cruelly taxed and ruinously depleted, not to help carry on a war, not to help sustain the Government, but for no purpose whatever, and to the advantage of nothing and nobody under the sun!

In view of these facts, in view of the unjust discrimination against beer in the levying of the extraordinary war tax, in view of the destructively large rate of the beer tax as compared with the market value of the article taxed, in view of the disastrous effect which the tax has had on the brewing industry, utterly destroying nearly a hundred and fifty breweries and throwing nearly a hundred and fifty more into the hands of receivers, thereby bringing disaster to nearly 300 out of the total of 1,800 breweries in the country, or to one-sixth of the entire brewing business of the United States—in view of all these considerations and of many others that I might adduce, the beer war tax certainly ought to have been repealed a year ago, the first of all the taxes to be repealed. This act of justice was denied, however, and now the least that can be done in the way of reparation is to repeal the tax at once, so as to enable the industry to begin the work of recuperation without further delay.

In this connection I should not fail to point out that the reduction of the tax from $2 to $1.60 a year ago was a reduction only in name. The so-called reduction was coupled with a repeal of the previous rebate of 7½ per cent for revenue stamps lost through leakage, etc. This made the net reduction amount to only about 25 cents a barrel, and during the last year the prices of all brewing materials have advanced to such an extent that this margin of 25 cents has been also wiped out.

I have dwelt more particularly upon the item of beer in my discussion of the repeal measure, not merely because I am especially familiar with the facts and arguments in the case of beer—as I am, being interested in the brewing business myself—but because the beer tax appears to me, as it must appear, I think, to all persons who will consider the matter in a calm and judicious spirit, the most unjust and inequitable tax on the list, and the one which calls the most loudly for repeal. Of course I am aware that there are good arguments for the repeal of all the other details of the war taxes, and that if the bill passes all the different articles taxed will be relieved together. I am glad of it, Mr. Speaker. And I repeat most emphatically that the brewers are as patriotic as any other set of men in the country. They never have objected to paying their full share of the ordinary or extraordinary expenses of the Government, but they do object to paying such an unjust proportion.

There are many here who would like to have a chance to amend this pending bill so as to diminish still further the tariff in some particular. They would like to be able to get a vote on an amendment on the lines of the proposition lately mooted by the member from Wisconsin. I would like very much to vote on that question myself, but under the rule framed for this case by our Republican friends in their emergency, I can not so vote at this time, and I am content to wait until the time comes when I can, as it surely will.

The reason for my belief that such a time will come lies in the fact that we have now a large surplus in the Treasury. Of course we might go on and spend this surplus in all manner of expensive appropriations, but I have too much confidence in the good sense and good faith of the people and of their Representatives in Congress to believe that such a course will be pursued.

There is now in the Treasury an idle cash balance, a surplus, of $175,000,000. If the war revenue be deducted, there will still remain a surplus of $100,000,000. This amount will be larger rather than smaller by next July, when the war revenue, if cut off, will cease. This surplus really belongs to the people. We have no right to spend it just because it happens to be available for spending. There is always a great temptation to spend such a surplus, but the national appropriations should be arranged on the same lines of necessity, economy, and propriety when there is an abundance of surplus money as when there is not. A surplus is no excuse for extravagance. But of course we can not take this hundred millions out of the Treasury and hand it back to the people pro rata. What can we do then as an equivalent? Everybody, of course, knows the alternative. Get square with the people by reducing tariff taxation. The people have been paying considerably more than enough to support the Government lately; let them pay a less amount henceforth, at least until it becomes necessary for them to pay more again. As Andrew Jackson said:

> The surplus money of the United States is nowhere deposited to such good advantage as in the pockets of the people.

I believe that the time is ripe for a considerable reduction in our present tariff schedules. Our surplus will continue to increase and accumulate, though of course not at so fast a rate as hitherto, after our war taxes have been discontinued. The appropriations ought not for that reason to be made any larger than they would normally be. If we make some considerable reductions in the tariff, we shall evidently still have income enough for all the proper and legitimate expenses of the Government. I am not disposed to have this Government attend to its affairs in a niggardly spirit, but public extravagance is even worse than that. We all remember and know what harm has been wrought in this country at various times in the past by extravagance running riot. Besides, the people have a right to a voice in the matter, and they are indicating plainly that they wish to restrict somewhat the enormous outgo of recent years—made enormous necessarily by the incident of the Spanish war.

I do not take it upon myself to indicate just where or to what extent the tariff schedules should be revised. I have my own opinions in regard to some branches of trade and some classes of commodities with which I happen to be familiar. I have no doubt that the proposition to reduce the duties on iron and steel ware is founded on justice, and that such reduction would be wise and entirely practicable. We have arrived now at a point where we can turn out steel products as good in quality as the British output, if not better, and at as low a price, if not lower. That being so, wherein is the use of keeping up the present rates on steel, with reference to the foreigner? And, with reference to the home market, it is charged, and I have not seen it successfully denied, that our steel manufacturers have been systematically selling their products to English buyers at much less rates than they are selling them to American buyers.

If so, they are sheltered in so doing by the high tariff rate, which tends to give an artificially high market price to steel as to everything else that is protected by the tariff. And if the price of British steel should fall again below our own nominal price, as it very likely might do at any time, our people ought to be enabled to take advantage of that lower price, especially after it has been shown that the American manufacturers can make and sell their goods at a lower price than they are generally quoting to American buyers.

This is only one instance. I believe there are many other cases where the present rates could be lowered without doing injustice

or injury to anyone, and, indeed, where the continuance of the present rates works injustice to the American purchaser.

But all this can come later. The first thing to do is to wipe out the old score—to repeal the remainder of the war taxes. I do not wish to keep harping on what might have been—on what ought to have been. But it is now evident that the whole of the taxes might have been repealed with perfect safety to the country a year ago, when a part of them were repealed. The arguments for total repeal at that time, which were urged with so much force, are now seen by all to have been amply justified. There was a surplus in the Treasury then, and that surplus has kept on swelling and swelling all through the past year, until it now amounts to $175,000,000; and every dollar of the war tax extracted from the brewers and other interests during the past year has merely gone to augment this enormous and useless surplus. No practical use has been made of a single penny of it. Every dollar of it has lain idle in the Treasury. This useless and unjust and debilitating tax is still being collected, and is pouring millions of dollars into the Treasury every month, forming thus a tremendous temptation to reckless and extravagant appropriations. In other words, the few industries and interests which are paying this tax—and the brewing interest is paying nearly one-half of the whole amount—are practically putting up the money to back up the ship-subsidy bill and the canal project and the cable proposition and the river and harbor bill and all the other big expensive schemes now before Congress.

This is not right, Mr. Speaker. Brewers and tobacco manufacturers and tea merchants and brokers and bankers are as patriotic and as liberal as any other classes of citizens, and they are perfectly willing, as I have already said, to do their proper part as taxpayers, but they do not consider it their duty to submit to this unnecessary drain upon their resources any longer. The tax ought to have been wholly repealed a year ago; in fact, events have proved that this ought to have been done two years ago. So far as this House is concerned, Mr. Speaker, I hope that before another day has passed there will be an end made of this injustice. Its further continuance, under the present circumstances, would be nothing short of outrageous.

War-Revenue Taxation.

SPEECH

OF

HON. WILLIAM H. RYAN,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 17, 1902,

On the bill (H. R. 10530) to repeal war-revenue taxation, and for other purposes.

Mr. RYAN said:

Mr. SPEAKER: The repeal of the war-revenue taxes is a measure that has been too long delayed. This burden, placed as it was in July, 1898, was met patriotically by the people of the United States, as it was for the purpose of raising revenue to carry on the Spanish-American war, a war that was declared in the interests of humanity to free the island of Cuba from the oppression of cruel Spain. This war was only of one hundred days' duration, but there is still collected in round numbers $77,000,000 annually under the war-revenue act. Last year the reduction bill took off a number of these special taxes, but did not go far enough, and the burdens have been borne by American industries long after the purposes for which this tax had been levied have been accomplished. These oppressive taxes had been borne in a large measure by the beer-brewing interests of this country. The tax on their product being doubled by the act of 1898, increasing it from one to two dollars per barrel, and under the act passed last year this tax was reduced to $1.60.

This tax on beer, Mr. Speaker, is arbitrary and unjust and is not in proportion to other items contained in the measure. The Republican majority of this House has been appealed to in this matter for fair play, and proofs have been submitted that these taxes are oppressive and have not only checked the output but have been the cause of forcing many out of business. At the hearing of the Ways and Means Committee it was shown that—

During the civil war the internal-revenue system included every available and legitimate source of revenue. In 1866 the income from this source reached its highest point, amounting to $310,906,984; of this total, the sum of only $5,115,140, or 1.64 per cent of the aggregate internal-revenue receipts, was derived from malt liquors; cigars and tobacco in all its forms and distilled spirits yielded $45,014,737. Hence the revenue derived from these three articles (spirits, tobacco, and malt liquors), amounted to $50,129,877, or about 16 per cent of the total internal revenues. The remaining sum of $260,777,107 was derived from other sources, which, in our opinion, should all have been utilized again before the war tax upon malt liquors was doubled. A comparison of the revenues for 1866 and 1900 will show more clearly and incisively the correctness of this contention.

Year.	Total internal-revenue taxes.	Aggregate amount of taxes upon spirits, tobacco, and malt liquors.	Aggregate amount of taxes from other sources.
1866	$310,906,984	$50,129,877	$260,777,107
1900	295,316,107	242,754,655	52,561,452

Since 1866 the population of our country has increased a hundredfold and our manufactures have been quadrupled. If this fact be taken into consideration, in conjunction with the further fact that in 1866 the revenue from special taxes (licenses) and from manufactures alone amounted to $196,394,759, it will be readily perceived that fully four-fifths of the nation's revenue sources remain unproductive, while the tax upon beer has been doubled.

The full import of this will appear still more clearly if we compare the tax rates, the price of beer, and the total revenue derived from this industry.

Year.	Tax rate.	Price of beer per barrel.	Amount of beer tax.
1866	$1.00	$12.00	$5,115,140
1900	2.00	5.00	73,550,754

In 1866 the tax amounted to less than one-eighth; in 1900 to two-fifths of the market value of beer.

In 1866 the brewing industry paid not quite 2 per cent of the total internal revenue; tobacco, spirits, and beer paid 16 per cent, and all other manufactures and productions 41 per cent.

In 1900 malt liquors alone paid about one-fourth of all internal-revenue taxes, while nine-tenths of the manufactures taxed in 1866 remained untaxed. The injustice of doubling the old war tax upon malt liquors, at a time when the price of beer had dwindled to $5 per barrel, becomes still more manifest in the light of the following official statement submitted to Congress in 1867 by the Special Revenue Commission, who thoroughly investigated the subject of internal taxation, viz:

"As the present rate of tax upon fermented liquors, viz, $1 per barrel of 31 gallons, is in excess of the rate imposed by any States of Europe (Austria excepted), and as the present rate, moreover, in the opinion of the Commission, after full consideration, is believed to be fully up to the revenue standard, and as such is all but unanimously acquiesced in by the brewing interest of the country, they would, therefore, recommend that the existing rate be neither increased nor diminished."

At that time the price of beer was, as we have stated, $12 per barrel; hence the present tax of $2 upon a barrel of beer, costing $5, exceeds by over 200 per cent that revenue standard which a competent Federal revenue commission declared to be fair, just, and equitable.

A few years after the civil war all internal-revenue taxes, except those upon malt liquors, distilled liquors, and tobacco, were repealed. The two latter taxes were reduced; that upon spirits was at first reduced from $2 to 50 cents; then frequently increased or decreased, the rate fluctuating between 50 cents per gallon, the lowest, to the present rate of $1.10, the highest since 1865. The war tax upon malt liquors alone remained unchanged from 1863 to 1898. In the latter year very few of the old civil war taxes were revived; the tax on tobacco, an article of luxury, was increased; the tax upon distilled liquors remained unchanged; native wines, in bulk, and cider remained wholly untaxed; but the tax upon beer, an article of diet to the great mass of the people, was doubled.

If, Mr. Speaker, the profitableness of commercial and industrial enterprises is to be the gauge by which the amount of taxes to be imposed upon each is to be measured, may it not reasonably be asked why all the many immensely wealthy, protected industries and the vast trusts-like combinations who control the entire market and can dictate prices, bear no share of the nation's tax burden, while the brewers (who are not organized as a price-regulating trust, and produce a staple article, the retail price of which can not be increased) are compelled to pay this new war tax superimposed upon the old war tax? A single example will suffice to illustrate this feature of the question. It appears to be a well-established fact that three men engaged in the iron industry reap an annual profit of $60,000,000 from their business. This is a sum almost twice as large as the entire American brewing industry (about 1,800 brewers in all) would have yielded if the tax had remained at $1 per barrel.

These 1,800 breweries paid to the Government in 1900 $73,550,754, while their profits were either wiped out entirely or reduced to a mere pittance. Now, how much of the nation's internal-tax burden do the three men bear whose annual profits amount to $60,000,000? I quote these words because, excepting the aggregate of the beer tax, they are as true to-day as they were one year ago, and ten years or thirty years ago.

If you consider, gentlemen, that before the Spanish-American war the average profit on a barrel of beer amounted to less than 75 cents, you will admit that the imposition of an additional tax of $1 amounted to something worse than confiscation. Now, the idea that the entire profits of a business should revert to the nation's treasury is a sound communistic doctrine; but even from that peculiar point of view its soundness will not be admitted, unless it be applied to the profits of all industries as well as to those of agriculture and commerce.

Mr. Speaker, that part of the additional war tax which is still

being exacted from the brewing industry amounts in the State of New York alone to over $6,000,000 annually, a large sum of money which is thus withdrawn from circulation and locked up in the Treasury only to swell a surplus already exceeding all previous accumulations of public funds in the hands of the Federal Government.

The injustice, sir, of this war tax, an injustice which is rendered all the more glaring in view of a superabundance of revenues and a constantly increasing surplus; and that these facts, considered in conjuction with the official declaration that the taxes imposed for war purposes should and would be considered and treated exclusively as war taxes and be repealed as soon as the emergency which called them into existence had ceased, and as the tax upon malt liquors is the highest and most burdensome of all taxes imposed under the war-revenue act, amounting to over 40 per cent of the market value of the article taxed, it should have been repealed as soon as the war was over and peace declared.

However, I am pleased that the House will now take this action and bring relief to the brewer and retailer, both of whom have patiently waited for this day to come.

Oleomargarine Bill.

SPEECH

OF

HON. CHARLES H. GROSVENOR,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 12, 1902,

On the bill (H. R. 9206) to make oleomargarine and other imitation dairy products subject to the laws of the State or Territory into which they are transported, and to change the tax on oleomargarine.

Mr. GROSVENOR said:

Mr. CHAIRMAN: I beg to call the attention of the committee to a few responses to the debate now in progress on this bill. The following is from a great representative body known as the National Live Stock Association of the United States:

HELENA, MONT., *February 5, 1902.*

Hon. CHARLES H. GROSVENOR,
House of Representatives, Washington, D. C.:

I have been directed to transmit the following resolution adopted to-day:

"Whereas Congressman C. H. Grosvenor, of Ohio, has championed the cause of the live-stock men of the nation by declaring himself in favor of the passage of H. R. 6565, otherwise known as the 'shoddy bill:' Therefore, be it

"*Resolved*, That the Pacific Northwest woolgrowers, representing the industry of Oregon, Washington, Idaho, Utah, Wyoming, and Montana, in convention assembled at Helena, Mont., February 5, 1902, hereby express their appreciation of the valuable aid rendered them by this distinguished member of Congress; and be it further

"*Resolved*, That the president of this organization is hereby instructed to wire Congressman Grosvenor over his official signature the thanks of this association for his noble work in behalf of the shoddy bill; also the following

"Whereas there is pending in Congress a bill to compel the manufacturers of oleomargarine butter to refrain from putting coloring matter in the compound so that it looks like butter under penalty of paying a heavy tax that would be practically prohibitory; and

"Whereas if the said bill should become a law it would practically abolish the manufacture of this healthful and desirable substitute for butter; and

"Whereas the use of oleomargarine among stockmen on the plains and in the mountains has been almost universal and is the only butter that is practicable for such use because of its keeping qualities; and

"Whereas we believe that the addition of coloring matter to the oleomargarine in its manufacture is harmless and adds greatly to its appearance, and consequently makes it more palatable; and

"Whereas the proposed legislation is vicious, uncalled for, and class legislation of the worst kind, as it builds up one industry for another equally as meritorious: Therefore,

"*Resolved*, That the Pacific Northwest Woolgrowers' Association most emphatically protests against the passage of said bill, and the members of this association are urged to write their members of Congress and Senators demanding that they use their efforts to prevent the passage of such obnoxious legislation."

THOMAS C. POWER, *President.*

The following from similar interests covering the great West and Northwest is significant:

DENVER, COLO., *February 5, 1902.*

Hon. C. H. GROSVENOR,
House of Representatives:

On behalf of the United Live Stock interests of this country I congratulate you for your speech on the oleomargarine bill. We all favor Wadsworth substitute, but denounce unreservedly reported bill as unjust, unconstitutional, and absolutely indefensible.

NATIONAL LIVE STOCK ASSOCIATION,
JOHN W. SPRINGER, *President.*

This from the Pacific Northwest Woolgrowers' Association:

HELENA, MONT., *February 5, 1902.*

Hon. C. H. GROSVENOR, *Washington, D. C.:*

Pacific Northwest Woolgrowers' Association, representing Oregon, Washington, Idaho, Montana, Utah, Wyoming, adopted resolutions thanking you for your noble speech against oleomargarine bill yesterday and your stand regarding shoddy bill.

C. F. MARTIN.

The following letters all reflect upon the demand for oleomargarine and the manner of its sale:

BUCHTEL, OHIO, *February 7, 1902.*

Mr. GEORGE SNOWDEN, *Buchtel, Ohio.*

DEAR SIR: In reply to your inquiry of this date as to the percentage of butter we sell compared to our sales on oleomargarine, we beg to advise that we sell very little butter; suppose our sales would be about 600 pounds oleomargarine to 25 pounds butter. We pay 25 cents per pound for all the country butter we can get. Do not see how the working people could live without the oleomargarine.

Yours, respectfully,

STRATTON BROS.

BUCHTEL, OHIO, *February 7, 1902.*

Capt. GEORGE SNOWDEN, *Buchtel, Ohio.*

DEAR SIR: In reply to your inquiry of this date as to the sale of oleomargarine, will say that we sell 800 pounds of oleomargarine to 25 pounds of country butter, and I don't see how the people could get along without oleomargarine.

Yours, respectfully,

A. K. SCHENZ.

BUCHTEL, OHIO, *February 7, 1902.*

Capt. GEORGE SNOWDEN, *Buchtel, Ohio.*

DEAR SIR: In reply to your inquiry of this date as to the percentage of butter we sell compared to our sales on oleomargarine, we beg to advise that the percentage is so small that it is hardly worth while mentioning.

At several of our stores we do not have any demand for and can not sell butter. However, we are safe in saying that for every 25 pounds of butter we sell we will sell 1,000 pounds of oleomargarine.

In our fifteen years' experience in the merchandise business, in which we have handled hundreds of thousands of pounds of oleomargarine, we have as yet to have one single pound returned to us, while a large percentage of the butter we sell is returned with the declaration from the customer that it is unfit to use. To deprive them of oleomargarine would be a hardship imposed upon the laboring class that in our opinion would be both unjust and unwise.

Yours, respectfully,

THE NEW PITTSBURG COAL CO.,
Per GEO. WELLS, *Store Manager.*

THE DEPARTMENTAL COOPERATIVE
INVESTMENT ASSOCIATION,
Riverdale, Md., February 7, 1902.

Hon. C. H. GROSVENOR, M. C., *Washington, D. C.*

DEAR SIR: I was born and raised a dairyman. Have made, bought, and sold dairy products for more than fifty years. I built and operated the first cheese and butter factory west of the Mississippi River, and could have told your committee lots which I have not seen in print and which your committee (of course excepting yourself) do not seem to have learned. Oleo is undoubtedly as wholesome as butter and much more cleanly made than the butter upon which the great mass of the American people are fed, and, as cleanliness is said to be next to godliness, it must be more conducive to good morals and piety than common butter.

I have used it daily upon my own table for several years, and no human being living enjoys better health than I do. All factory butter of the Elgin type is colored. Why not stop or tax that color also? Call oleo imitation butter, or whatever name you please, I do not care what label you prescribe, but do not tax it as proposed by the bill under discussion. If you do, it will actually be worse for the common people who are able to buy it, but who can not buy 30 to 40 cent creamery butter, than was the Democratic slogan of some years ago about "taxing the poor man's dinner pail," when the McKinley bill laid a tax upon tin plates. A tax on oleo is the entering wedge of sumptuary legislation, and would literally snatch a healthy food from the mouths of thousands of the American people. Do not do it. Do not do it.

Respectfully,

J. F. SIMONDS, M. D.

BROOKLYN, N. Y., *January 5, 1902.*

General GROSVENOR.

DEAR SIR: I saw an account in this morning's Journal of Commerce that you were defending oleomargarine from a great injustice, hence I take the liberty of writing you.

I was one of the first to introduce the product into this country in 1871, having seen it in Paris in 1869, when it was in its infancy, but am pleased to say it has become quite a child. Starting in 1872 in a small way, the next year, in connection with Hon. J. J. Toffey, the ex-State treasurer of New Jersey, I sent a quart sample to friends in London. They sent to Messrs. Perkins to come to London, and on seeing the sample, which was crude compared with the perfection of to-day, they ordered 10 tierces, then 10 tons, 100 tons, then 300 tons, 2,100 tierces, and now the weekly export to almost every country, including Egypt—last week 300 tierces—is about 6,000 tierces weekly for butterine abroad. In 1887 the tax was paid on 47,000 pounds; 1890 increased to about 87,000 pounds; 1891 increased to about 114,000. Compare this with cotton seed, 1891. Oil produced, 2,200,000 tierces; exported, about 460,000, the balance manufactured here in cottolene, with many millions of foreign stearin imported, as not enough produced here. Fairbanks used nearly 700,000 tierces of cotton oil alone, and the big packers the balance, which made a purer article than the natural. Take butter, the milk is the only impure article that enters into its manufacture, and is the impurest of the impure.

Take the human and animal. When the mother has a child at the breast and she should be pregnant again, that instant her milk becomes deadly poison to the child. What does the farmer do? The calf is hustled out of the way as soon as possible, and we are fed on the impregnated milk the year round that would even kill its animal offspring. In 1884, Governor Cleveland signed the color law, and in so doing said: "It is unconstitutional, but let them fight it out in the courts."

I have made as high as 38,000 tierces of oil in the year, and 6 tons of butterine a day, and did not have any trouble to sell it as such. Am going to put up a very large plant in London on March 8. Should you think my person necessary before the Senate committee, I would readily spare the time.

Yours, truly,

C. D. MOULTON,
179 Lafayette Avenue, Brooklyn.

LANCASTER, Pa., *February 5, 1902.*

Hon. C. H. GROSVENOR, *Washington, D. C.*

DEAR SIR: The citizens of Honorable Brosius's district admire your truthful and courageous remarks against the infamous oleo bill. It is the belief here that not a man who spoke in its favor had faith in his remarks; the ridiculous idea that the bill will cheapen the butter is too thin for a sane man to utter. The bill was supported for political gain. It takes bread and butter out of the poor man's mouth. There are now half a dozen statutes against

oleo. How many more are desired by the greed of the butter sharks? A license from $25 to $800 to deal in it is simply outrageous. Will the Supreme Court indorse such damnable acts? As you have truly said, greed is at the bottom of all the persecution of oleo. Is invention of artificial food to be interfered with and progress blocked to please a set of so-called pure-butter saints? Let pure butter take its chance in competition with oleo, and if oleo be detrimental it must go down. Cowardice, fear of a rival, is the matter at the bottom, and the advocates of the bill know this, but stultify themselves by hypocritical sentiment to please a faction.

I am not interested in oleo.

Truly, yours, in justice,

WM. H. RAY,
555 W. Chestnut.

The following is the platform of principle announced by the Pacific Northwestern Woolgrowers:

AGAINST THE OLEO BILL.

Resolutions passed by Pacific Northwest Woolgrowers' Association:

"Whereas there is pending in Congress a bill to compel the manufacturers of oleomargarine to refrain from putting coloring matter in the compound, so that it looks like butter, under penalty of paying a heavy tax that would be practically prohibitory; and

"Whereas if the said bill should become a law, it would practically abolish the manufacture of this healthful and desirable substitute for butter; and

"Whereas the use of oleomargarine among stockmen on the plains and in the mountains has been almost universal, and it is the only butter that is practicable for such use, because of its keeping qualities; and

"Whereas we believe that the addition of coloring matter to the oleomargarine in the manufacture is harmless and adds greatly to its appearance, and consequently makes it more palatable; and

"Whereas the proposed legislation is vicious, uncalled for, and class legislation of the worst kind, as it builds up one industry for another equally meritorious: Therefore, be it

"*Resolved*, That the Pacific Northwest Woolgrowers' Association most emphatically protests against the passage of said bill, and the members of this association are urged to write their members of Congress and Senators, demanding that they use their efforts to prevent the passage of such obnoxious legislation."

Mr. Chairman, there will be more expressions of the people if Congress decides to make an effort to prescribe by law what the people shall eat and who may make and sell wholesome food products.

On the Proposition to Increase the Tax on Oleomargarine, and the Present State of Public Revenues.

SPEECH

OF

HON. HENRY S. BOUTELL,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 5, 1902.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 9206) to make oleomargarine and other imitation dairy products subject to the laws of the State or Territory into which they are transported, and to change the tax on oleomargarine—

Mr. BOUTELL said:

Mr. CHAIRMAN: In listening to this discussion, which has already consumed over two days, it has struck me that it has proceeded very largely on the assumption by each side that every member of the opposition was animated solely by the desire to prevent a break in the continuity of the representation of his Congressional district in this House. The learned and eloquent gentleman from Iowa [Mr. HEPBURN], whose logic illuminates every subject upon which he turns it (I regret exceedingly that he did not illuminate this subject), said yesterday in his remarks:

The truth is, gentlemen, that a great deal of the opposition to this bill is fabricated. The premises upon which the opposition rests are fabricated premises. They have no place in truth.

I suppose, Mr. Chairman, he meant by that to intimate that the opposition to this measure—"fabricated," as he said—was manufactured—colored, as it were—in imitation of the real thing, and that in the opinion of the distinguished gentleman the real thing is the zeal of the advocates of this measure; that the zeal of the opposition bears the same relation to the zeal of the advocates of the measure that oleomargarine does to butter; but it is apparent, from the evidence taken before the Committee on Agriculture and from the admission of the advocates of this bill on this floor, that it is impossible to distinguish oleomargarine from butter by the sense of taste, the sense of sight, the sense of smell, the sense of touch, or by its ultimate effect upon the human system, and that you can only tell one from the other by bringing in the services of an expert chemist. And so I may suggest that you can only distinguish between the zeal of the opponents of this measure and the zeal of its advocates by bringing in the services of the expert psychologist from Iowa. Is it not possible—I do not say that it is—but is it not barely possible that the zeal of the gentleman from Iowa has been colored, tinged, tinctured, as it were, just enough to make his February argument in the House of Representatives take on the fine, warm, rich glow of a June harangue to the electors of the Eighth district of Iowa? [Laughter.]

Some other gentleman in advocating this bill said that its opponents have been encouraged by the bellowing of the Texas steer. Well, now, I never saw a man from Texas that was not entirely able to take care of himself; and without either denying or agreeing to this proposition, I would simply like to suggest whether it is not within the realm of possibility that some of the advocates of this measure who are rushing, hurrying, jostling to the support of this bill are being lured along the path which they are traveling by the gentle, seductive lowing of the Jersey kine. Far be it from me, Mr. Chairman, to intimate that any of these advocates of the measure are conscious of any impelling impact from the rear from the polished horns of the harmless domestic cow.

One of the most interesting pictures that I ever saw was that of the Pied Piper of Hamelin leading the children of that ancient burgh away from their homes and out of their city by the magic sounds of his flute, with a leer on his face and a wink in his eye. What a magnificent historical painting for this Chamber would be a pictorial representation of the vote on this bill. In the foreground, at the left, a heifer rampant—regardant, as the heralds say—with a leer on her face and a wink in her eye, followed by the profound constitutional lawyers of this Chamber—the ardent enemies of monopoly, the fierce and truculent opponents of trusts, the earnest, philanthropic advocates of a uniform tax, and the enemies of discriminating revenues—gazing apprehensively behind them to escape the propelling force from the rear as they rush wildly to the support of this measure confessedly monopolistic and of doubtful constitutionality. [Laughter.]

Well, Mr. Chairman, between the steers on the one side and the cows on the other, it is almost impossible for one who is under obligations to neither to determine from the arguments that have been brought forward what his attitude on this bill ought to be.

Mr. JETT. May I ask my colleague a question?

Mr. BOUTELL. I yield with great pleasure.

Mr. JETT. Does my colleague know the position of the present governor of Illinois in relation to this bill since the express company has refused to permit him to frank his cow from one point to another? [Laughter.]

Mr. BOUTELL. Well, I should say, from the question of my distinguished colleague, which I think is based on a false report, that the governor of Illinois is in favor of the cow.

Mr. JETT. What is the governor's opinion on this bill? That is what I want to know.

Mr. BOUTELL. You will have to apply to the chief executive of our State to obtain an answer to that question, but in my opinion both the legislature and the governor of Illinois are able to enforce the criminal jurisprudence of the State without invoking the taxing power of the Federal Government.

Now, it seems to me, Mr. Chairman, that the man who represents such a district as I do, in which there are no cows and no steers, no dairies and no oleomargarine factories, must make up his opinion on this measure from something which appears in the bill itself, and from the fundamental principles which ought to underlie our system of legislation.

As I look at this measure, Mr. Chairman, putting aside for the present the question of its constitutionality and its economic and fiscal features, the first thing that strikes me is its violation of a law that is higher than the Constitution in its ultimate results upon those who will feel the final effects of the measure. Let us suppose that this bill becomes a law, and that it is declared constitutional, what will be its ultimate effects?

This is a point which has not yet been considered in this discussion. As I look at it, this is what will happen: When this bill becomes a law, and a man who has a firkin of uncolored oleomargarine which he can manufacture and sell without a tax, or with a merely nominal tax, divides that up, leaving in the one firkin the uncolored oleomargarine, and prepares the remainder in molds and colors it to suit the taste and fancy of his customers, then the strong arm of the Federal Government reaches out and takes that man by the throat and holds him up and says: "You may manufacture and sell that white oleomargarine without a tax, but if you manufacture and sell this product, colored to meet the taste and fancy of the public, you must pay a fine into the Treasury of the United States of 10 cents a pound."

Ah, but you say, the manufacturer or the seller simply adds the 10 cents a pound to the price, and it is paid by the consumer. Granted. So much the worse, so much the more abominable. What then is the result? The long, clinging fingers of the Federal Government wind themselves about the collective throat of the American people and say to every man, "You may eat white oleomargarine free, but if you eat oleomargarine colored to suit your taste and palate you shall pay a penalty of 10 cents a pound into the Federal Treasury."

That will be the final effect of this bill. And let me say to the advocates of this bill, when you go home to your constituents and explain this bill to them, you will have to explain also the

principle on which this bill was based, a principle that has no parallel in any legislation since tne sumptuary laws of the Middle Ages, laws which said to a man with a certain income, "You may clothe yourself in such and such apparel, and you may partake of such and such viands;" and said to a man with a lesser income, "You must put on plain clothes, and you must eat coarse food, or you pay a fine into the imperial coffers."

Mr. Chairman and gentlemen, that principle of legislation is repugnant to our ideas of personal liberty and equality under the law. That principle of legislation is not in harmony with the spirit of generosity and fair play of the American people. And, Mr. Chairman, let me add, I do not believe that this principle of legislation squares itself with the ideals treasured in the hearts of every member of this body.

Mr. SPIGHT. I should like to ask the gentleman a question, if it will not interrupt him.

Mr. BOUTELL. Certainly.

Mr. SPIGHT. The gentleman from Illinois is a Republican, and I assume that he is in favor of Republican policies, and especially of the protective policy. I should like to ask him how he can reconcile the policy of this bill with the Republican policy of protection? I do not agree with the policy of protection, but the Republican policy of protection looks to the building up of home industries without bringing them into competition with foreign industries of the same character. In this bill a distinction is made between home industries, striking down one to build up another in our own country. I want to ask the gentleman to discuss that proposition.

Mr. BOUTELL. I will say to my friend from Mississippi that I am in favor of the Republican protective policy, and I am opposed to the principle of this bill, and before closing I will endeavor to make some comparison between the two principles.

I was saying, Mr. Chairman, that the bad principle involved in this bill is not so much the discrimination between one product and another as it is the discrimination between two kinds of the same product. And when you go home to your districts, my friends, and explain to your constituents that you have passed this measure which you think will benefit them, tell them, if you tell them the whole truth, "We passed this bill in accordance with a principle under which the Federal Government has the power to tax colored butter and to exempt white butter; to tax colored oleomargarine and to exempt white oleomargarine; to tax crude sugar and to exempt refined sugar; to tax beet sugar and to exempt cane sugar."

My friends from Michigan and from California, how do you think your constituents will like that principle? How will you justify your support of a principle under which you can tax crude oil and exempt refined oil, tax the Baldwin apples from the State of Connecticut and exempt the Rhode Island greenings, tax bay horses and exempt white horses, tax white turnips and exempt rutabagas, tax sweet potatoes and exempt Irish potatoes, a principle by which you can tax the gig of the farmer and exempt the brougham of the banker, tax the sewing machine of the seamstress that is driven by pedal or hand and exempt the electric or steam machine of the manufacturer, tax blue-fish and exempt white-fish?

I do not believe it would tax the ingenuity of the advocates of this bill to find some way, under this principle, to tax colored men and exempt white men. There is no escape from your responsibility. You are trying to do good in the wrong way. This is the principle of sumptuary laws. It is not so much taxing oleomargarine and exempting butter that is bad. The evil lies in taxing one kind of oleomargarine while exempting another. That is the vicious principle in this bill. That is what you must explain to your constituents. But you say with a great show of magnanimity, "This bill is in the interest of the man who wants to consume oleomargarine. We have reduced the tax to one-fourth of 1 cent a pound."

Oh, my friends who advocate this measure, do not delude yourselves. The American people will not be deceived, and least of all the American farmer. When you slap the poor people of the United States in the face with one hand, you can not make them think somebody else did it by patting them on the back with the other and then delude yourselves with the complacent dream that with both hands you are distributing prizes to the American farmers. [Applause.] Never. The American farmer, when you come to him and tell him what a beneficent measure this is, will be the very last man in the world to be deceived by such an argument. The American farmers, the rugged yeomen of this country, are the men who from 1776 to 1898 have fought for the establishment and support of a government which gives equal rights to all and special privileges to none. Now, if the ultimate effects of this bill upon the consumer will be as I have described them, does not the measure violate a higher law than even the Constitution? Is it not contrary to all our American, all our Anglo-Saxon ideas of justice and equality?

If this bill should become a law, it would also work a great injustice in another way. Under section 2 if a retail dealer should buy white oleomargarine and color it for his customers to suit their tastes and sell it honestly for what it is, he would be held to be a manufacturer and compelled to take out an annual license at an expense of $600. But this is not all. The wife of a mechanic, keeping house for her husband and children, who takes one or more boarders to help support and educate her children, is by this bill made a manufacturer if she works over the oleomargarine which she has bought, coloring it to suit the fancy of her family.

The license required, of course, precludes her from so coloring the food, or if, without knowledge of the existence of the infamous law, she does color it, she becomes liable to the fines and imprisonment specified in the bill. Is it possible that the American people will submit to such tyrannical laws? It seems incredible that such a panic should seize upon this House as would lead any great number of its members to favor legislation of this inquisitorial nature.

Passing now to the consideration of some of the legal features of this bill, it seems quite clear that it violates that provision of the Constitution which aims at securing uniformity in taxation.

Can it be said that a law is uniform which taxes bay horses all over the United States and exempts all other horses? Without entering, Mr. Chairman, into any discussion of whether the Constitution follows the flag to the Philippines, I think it can not be denied that the Constitution follows butter and oleomargarine *ex proprio vigore* into every State in the Union in which they are manufactured and sold, and when the Constitution says that "all duties, imposts, and excises shall be uniform throughout the United States," it means, in effect, that, and when you tax some horses, you must tax all horses; and when you tax some cows, you must tax all cows; that you can not tax the brindle cow of the cottager and exempt the well-kept herd of Jerseys of the rich experimental farmer. You can not tax white butter and exempt colored butter. You can not tax colored oleomargarine and exempt white oleomargarine. This would be contrary to the uniformity clause of the Constitution. This bill places a prohibitive tax on oleomargarine prepared in one way and virtually exempts oleomargarine prepared in another way. For this manifest violation of the plain letter of the Constitution this measure should receive the prompt condemnation of this House.

But, sir, this bill imposes a tax which, it is said, is to prevent fraud. It is to prevent fraud by crushing out an industry. If the bill does not do it, the advocates of the measure will bring in a bill, as the gentleman from Minnesota has admitted, to make the tax on oleomargarine 25 cents a pound. The intention of this bill is to prevent, if possible, the honest manufacture of oleomargarine which looks like butter and its open sale as oleomargarine. That is no fraud. There is no fraud in making any article that looks like another article; and the advocates of this measure, who say that it is necessary to prevent fraud in the production of oleomargarine, have been led away by their zeal from the paths of reason.

There is no fraud in the manufacture of oleomargarine of any color or appearance; there is only fraud in the sale of the article for what it is not. This legislation is designed to overthrow the industry of making oleomargarine and selling it honestly for what it is, colored to suit the taste and fancy and palate of the consumer. That is the plain design of this bill. Now, I emphatically deny that the Federal Legislature can constitutionally prevent in my State of Illinois the production and sale of a product which the legislature of my State authorizes.

If the legislature of Illinois should incorporate a company with power to manufacture and sell oleomargarine of any form and color, the effect of this bill, if carried out, would be to overthrow the legislation of my State. Are we prepared to admit the constitutional right of the Federal Government to nullify State legislation by evasive enactments in the guise of revenue laws?

In the fourth place, to hurry briefly over the more important objections to this measure, and granting for the moment, for the sake of argument, that it is constitutional, there is, it seems to me, a very serious ground of opposition to this measure, which we, as members of this House, ought to consider most carefully. If there is any one sign of the times which we can see plainly, it is the tendency to concentration in all departments of human activity. The concentration of governmental powers, which is so apparent to-day, is something that should receive the resistance of every member of this body.

I think that perhaps the two most serious tendencies in our present political development are these: First, the concentration in the hands of the executive, State and National, of the powers that the framers of our Constitution designed should be left to

the legislative branches of the Government. I may simply allude, for illustration, to the Executive's influence on the legislative branch of this Government. We hear it often stated on the floor of this Chamber that such and such a measure should commend itself to our judgment and receive our unquestioning support because it is recommended or asked for by one of the Executive Departments. Has it come to pass that we must simply sit here without consideration and deliberation, like a cash register, to ring up what is asked of us by the Executive Departments? [Applause.] This is a very serious tendency that ought to be vigorously checked.

But there is another tendency that I think is still more serious. I always supposed I was as ardent a Hamiltonian Federalist as could be found in the borders of the United States, but I must confess that the principle embodied in this bill shocks even my Federalism. Perhaps the most serious sign of radical change in the workings of our system is the usurpation by the Federal Legislature or by the other branches of the Federal Government, of those powers which should be left, as our fathers left them, with the local State legislatures. I have more confidence than many of my distinguished friends on this committee in the legislature of my own State. If there is fraud in the sale of any commodity in Illinois, I believe that the legislature of Illinois has the power, the strength, the wisdom, and the ability to deal effectively with this matter, which should be left exclusively to its control.

I believe that our State executive, the man who presides over the executive department in the State of Illinois to-day, has the strength, the vigor, the determination to carry out all laws enacted by the State. I believe that every one of the 45 States in the Union is able to administer its own criminal jurisprudence without Federal intervention, and that the sort of legislation typified by this pending bill, this usurpation of the powers of the State legislatures, is degrading those bodies. It lowers them in the opinion of the people; it is a departure from the original scheme of our Government. I venture to say, Mr. Chairman, that if in 1787 it could have been foreseen that under the Constitution Congress could, by the exercise of the taxing power, usurp the criminal legislation of one of the independent States, you would not have found twelve men on the continent who would have voted to adopt the Constitution.

Now, it has been said that this bill is in form a revenue measure, and that the Supreme Court will not go behind its form. Let me read to my friends who will be called upon to explain and justify this bill a few words from the scholarly argument of one of the most learned constitutional lawyers in either branch of this Legislature, Hon. GEORGE FRISBIE HOAR, Senator from Massachusetts. I quote from a speech delivered on January 16, 1893, in the United States Senate, on a question involving the very point we have under discussion. It was a question in reference to imposing a Federal tax upon dealing in futures. The Senator said:

> It is said that the people are helpless in this matter; that the court will not go behind the form of the law, which purports to be a tax, to look at the substance, which is to prohibit domestic contracts in the States. On the contrary, it seems to me if there is any one doctrine embedded in the Constitution of this country, any one authority which the courts have exercised and will exercise, it is the authority to do this very thing—to go behind and unmask any legislative pretense, State or National, and look at its substance, and not its form.
>
> Chief Justice Marshall settled that very early in the history of our jurisprudence. He says:
>
> "Should Congress, under the pretext of executing its powers, pass laws for the accomplishment of objects not intrusted to the Government, it would become the painful duty of this tribunal to say that such an act was not the law of the land."
>
> He does not say that "if Congress avows a purpose to exceed its powers," but he says that if under the pretext of executing them it passes a law which in substance and effect is unconstitutional the court would interfere.

And so, notwithstanding the skillful way in which this measure is framed, I feel confident that when it comes before the Supreme Court that tribunal will tear aside the mask and find that this is not a revenue measure, but a measure which invades in disguise the rights of the separate States.

These, in brief, are, it seems to me, some of the principles which the advocates of this measure will have to explain to their constituents. And, right on the first point, I want to state to my friends from Virginia—and I am glad to see so many of them here—that they will either have to treat the views of Thomas Jefferson sub silentio—as he once advised his friends to treat the Constitution—in presenting this matter to their constituents, or they will have to explain to them these words of Jefferson on the subject of taxation, which are very significant when considered in connection with the pending measure.

Listen to these words of the father of Democracy in reference to discrimination in taxation:

> The government which steps out of the ranks of the ordinary articles of consumption to select and lay under disproportionate burthens a particular one because it is a comfort, pleasing to the taste, or necessary to the health, and therefore will be bought, is in that particular a tyranny.

I like to linger on that word "tyranny" in reading this language of Thomas Jefferson. When you try to explain to our farmers, not the effect of this law, but the principle underlying it, read these words to them and tell them, "The founder of a great party, Thomas Jefferson, the author of the Declaration of Independence, of the statute of religious liberty in the Old Dominion, and the father of the University of Virginia; Thomas Jefferson, your idol, said that this kind of legislation was tyranny."

Mr. LAMB. Will the gentleman allow an interruption?

Mr. BOUTELL. With pleasure. I wish it were Thomas Jefferson himself who makes the request. [Laughter.]

Mr. LAMB. I am glad to know that a gentleman who represents, as the gentleman from Illinois has to-day said he does, the school of thought of Alexander Hamilton comes out and quotes Thomas Jefferson so strongly. In answer to that Virginia will quote the declaration along that line of the first jurist of America, John Marshall.

Mr. BOUTELL. Whenever I take off my hat to the political sagacity of Alexander Hamilton I only regret that I have not two more hats on my head, that I might take off one to the versatility of Thomas Jefferson and another to the wisdom of John Marshall. [Laughter.]

Then Mr. Jefferson continues:

> Taxes on consumption—

Mind you, he is not discussing the constitutional question; he is discussing the first point that I made, and to which I return for a moment for the benefit of the disciples of Jefferson, that a measure of this kind violates a law above the Constitution—violates the moral law. He said:

> The taxes on consumption, like those on capital or income, to be just—
>
> Not constitutional—
>
> to be just must be uniform.

And when you tax oleomargarine of one color you ought to tax all oleomargarine; and if you came in here with a bill based on the principles of Thomas Jefferson, you would do what you do not dare to suggest, even in a whisper—make a 10-cent tax on all oleomargarine. It is your sop to the poor of the country when you make a reduction to one-quarter of 1 cent on the white oleomargarine. You do not dare to bring this bill to square with the principles of the great and illustrious founder of the Democratic party.

And so, when you go home to your constituents, go home to your thoughtful farmers and tell them the prize that you have brought in your bag you also will have to tell them by what a sacrifice of principle you captured the prize. You will have to tell them, as I say, that you got this prize on the principle that you can tax a portion of any article, that you may tax a part of any product, and exempt the rest. And when you have explained honestly to the farmers, not what this bill brings to them, but what it cost, by what a sacrifice of principle it was obtained, then, my friends, you advocates of the bill will not need the services of an expert chemist. You will not need the services of the erudite psychologist from Iowa to square yourselves with your constituents. They will be of no avail. When you make the people understand this abominable principle—this principle of the sumptuary laws that underlies this bill—all that you will need will be the special services of an experienced political undertaker and embalmer. [Applause and laughter.]

Mr. SIMS. May I ask the gentleman a question right there?

Mr. BOUTELL. Certainly.

Mr. SIMS. Do you believe that the men who support this bill, on either side of the House, are voting their honest convictions and beliefs in this matter?

Mr. BOUTELL. Well, I intimated in the beginning of my remarks that I thought that possibly all their arguments were tinged or tinctured, as it were, in imitation of the real thing, and possibly their votes will be colored in the same way. [Laughter.]

Now, Mr. Chairman, we must, of course, take this bill as it is, and on its face it is a revenue measure. As a revenue measure of course it must go to the Supreme Court. This bill imposes a tax of 10 cents a pound on oleomargarine made in imitation of butter. It is true there is great confusion as to how much revenue this would produce; but I want to call attention to one thing: If oleomargarine, colored, continues to be honestly sold—and they say that this is not to suppress its sale—if oleomargarine, colored as butter, continues to be sold, there will be a large increase in the revenues of the country. Now, we must look at it just as it is on its face, as a bona fide revenue measure, a bill brought in here to bring additional money into the now bursting vaults of the Federal Treasury.

Now, I want the country to understand this striking coincidence in connection with the consideration of this measure. I do

not know that there was any premeditation in it. When the gentleman from Connecticut [Mr. HENRY] moved to go into Committee of the Whole to consider this so-called revenue bill, putting a 10-cent tax on oleomargarine that looks like butter, the leader of the House, the distinguished gentleman from New York [Mr. PAYNE], the chairman of the Ways and Means Committee, asked leave, pending that motion, to report a bill reducing the revenues of the Federal Treasury about $77,000,000 a year. [Laughter.]

Under those circumstances the solemn declaration that this bill is a revenue measure has no parallel for grotesque absurdity except in the whimsicalities of Alice in Wonderland or in the vagaries of opera bouffe.

What is the condition of the Federal Treasury to-day? What need have we for additional revenue? Why inflict on the workingman a penalty of 10 cents a pound for eating what he likes the looks of? We have in the Federal Treasury to-day $375,000,000 in free cash. That is, we have $175,000,000 over and above the $150,000,000 gold reserve. We have $175,000,000 available cash balance over and above all our immediate liabilities. And instead of wanting more money, either from the poor man or from the rich man, what we want is to get this money back where it belongs, for it is in the wrong place. As the great philosopher Bacon tersely said three hundred years ago, "Money, like muck, is no good unless it be spread." Or, as the illustrious son of the State of Tennessee, that ardent old Nationalist, that grand sound-money man, Andrew Jackson, said:

> The surplus money of the United States is nowhere deposited to such good advantage as in the pockets of the people.

[Applause.]

Now, then, with this $175,000,000 of free cash in the Treasury, what are we going to do with it and the surplus that is constantly flowing into the Treasury? Are we going to get it back where it belongs by putting an additional tax on oleomargarine? Our surplus is accumulating at the rate of over $7,000,000 a month, and the only way in which we keep down the cash balance is by buying bonds. Certainly we do not want to keep this $175,000,000 in the Treasury. In these days of extended international credit we have no use for a Government hoard. If we do not intend to keep on hand such a large balance, what is the wisest way in which to reduce it? Shall we follow the precedent established in 1836 for the distribution of the surplus? Let us trace briefly the history of the national debt. It is an interesting story. The bare naked statement of the figures of our national debt and its reduction should stir the pride of every American. The bald figures of the contracting and payment of our national debt are like the clear distinct outlines of some familiar picture, by whose aid the imagination fills in the lights and shades and all the other details.

Let us glance, then, rapidly at the rise and fall of our national debt, and see how it comes to pass that three years after the close of an expensive war we have $175,000,000 of cash balance in the Treasury. The United States at her birth inherited a national debt, and here we have the origin of the sentiment, "a national debt is a national blessing." The assumption of the debt of the colonies became a national blessing, because it established our national credit. Alexander Hamilton and Thomas Jefferson together carried out the scheme by which we assumed the debt of $75,000,000 incurred by the colonies, and established the seat of the Federal Government on the Potomac. As Webster said of Alexander Hamilton:

> He smote the rock of the national resources and abundant streams of revenue gushed forth. He touched the dead corpse of public credit and it sprung upon its feet.

So by assuming this indebtedness of $75,000,000, which our ancestors considered the "price of liberty," we established our credit abroad and placed this Government on a firm and sure foundation. Alexander Hamilton's sinking-fund scheme, adopted in 1790, had made little reduction in the debt when he handed over the Treasury to Albert Gallatin, who remained at the head of the Treasury a longer time than any other Cabinet officer in the history of the country. Albert Gallatin, modifying the sinking-fund measure of Hamilton, was able to reduce this debt gradually year by year, so that at the outbreak of the second war with England our credit was established at home and abroad and we had no difficulty in raising the sinews of war to carry on that struggle. By 1812 the debt had run down to $45,000,000, and it then went up to $128,000,000, where it stood in 1816 at the close of the war. In twenty years thereafter, Mr. Chairman, this Government had paid off the entire national debt contracted in two foreign wars and in the purchase of half a continent. This is one of the most magnificent achievements in the financial history of modern nations.

As we have seen, the national debt on January 1, 1791, was about $75,500,000. In forty-four years it had been paid in full. It remained nearly stationary until 1806, when it began to diminish, sinking gradually to $45,000,000 on January 1, 1812. It increased again during the war with England, reaching $128,000,000 on January 1, 1816. It then steadily decreased until, on January 1, 1835, it had been practically extinguished. At that date the outstanding indebtedness matured but unclaimed amounted to about $300,000, and the balance in the Treasury in excess of this sum was about $9,000,000. On January 1, 1836, the surplus was nearly $27,000,000, and it was then evident from the rapidly increasing revenues derived from the tariff and the sale of public lands that the balance on January 1, 1837, would be much larger. The question therefore arose, what should be done with the surplus.

The account of the disposition of this surplus in 1836–37 forms the most curious chapter in the history of our financial legislation. In those days it was considered unconstitutional to appropriate the national revenues for internal improvements. Such a river and harbor bill, for example, as to-day forms a convenient and seductive medium for reducing the surplus, even if it could have been passed by Congress, would have been vetoed by President Jackson. Two propositions for disposing of the surplus were discussed in Congress. The first was to distribute the money to the States according to their representation in Congress, including one share each to the Territories and the District of Columbia. This, however, was thought to be unconstitutional. The second proposition was to deposit the surplus with the treasurers of the different States, to be repaid to the National Government on demand. This latter proposition became a law as sections 13 and 14 of the act approved June 23, 1836, entitled "An act to regulate the deposits of the public money." These sections provided that the balance in the Treasury on January 1, 1837, after reserving $5,000,000, should be deposited pro rata, according to their representation in Congress, with those States which should by law authorize their treasurers to receive the deposits and give a receipt therefor pledging the faith of the State to repay the same at any time upon the demand of the Secretary of the Treasury. These deposits were to be paid in four installments, on the first day of January, April, July, and October, 1837.

On January 1, 1837, the balance in the Treasury over and above the $5,000,000 reserve was $37,468,859.97. All the 26 States accepted the deposits under the conditions above stated, and the first three installments were paid in full. Through the courtesy of the Treasurer of the United States I have recently examined the original receipts given by the States, and the book in which the stubs of the original drafts are preserved. The book still contains a sufficient number of blank drafts with which to pay the fourth installment, now sixty-four years overdue. The draft, called "State transfer draft," is made by the Treasurer of the United States on the cashier of one of the State banks, and orders the money to be paid to the State named "to be placed to my credit by that State, payable on demand." The receipts are on double-page printed forms. On the first page is the receipt signed by the treasurer of the State; on the third page are instructions in reference to repayment.

This obligation on the part of 26 States of the Union to pay into the National Treasury over $28,000,000 has been so completely lost sight of in recent years that it may be interesting to recall the fact that each State participating in this division of the surplus is bound by its agreement to repay the amount received upon demand of the Secretary of the Treasury.

The withdrawal of the $28,000,000 from the State banks that were the depositories of the public funds helped to bring on a financial crisis. By May 1, 1837, 82 out of 86 of these banks had suspended specie payments. A simultaneous falling off in the public revenues occurred and a financial panic swept over the country.

It became evident even before the payment to the States of the third installment that on October 1 the Secretary of the Treasury would have no funds with which to make the fourth payment. A special session of the Twenty-fifth Congress met on September 4. On October 2 an act was passed providing—

> that the transfer of the fourth installment of deposit directed to be made with the States under the thirteenth section of the act of June 23, 1836, be, and the same is hereby, postponed until the 1st day of January, 1839: *Provided*, That the first three installments under the said act shall remain on deposit with the States until otherwise directed by Congress.

On January 1, 1839, the Secretary of the Treasury had no funds with which to pay the fourth installment, and it is still unpaid. The table following shows the representation of the 26 States in Congress, the total amount to which they were entitled under the act of 1836, the amounts actually received, and the amount of the fourth installment still unpaid.

State.	Number of electoral votes.	Total amount which was to have been deposited with the States.	Amount of three installments deposited, subject to call by Congress.	Amount of fourth installment still unpaid.
New York	42	$5,352,694.28	$4,014,520.71	$1,338,173.57
Pennsylvania	30	3,823,353.06	2,867,514.78	955,838.28
Virginia	23	2,931,237.34	2,198,427.99	732,809.03
Ohio	21	2,676,347.14	2,007,260.34	669,086.78
North Carolina	15	1,911,676.53	1,433,757.39	477,919.13
Kentucky	15	1,911,676.53	1,433,757.39	477,919.13
Tennessee	15	1,911,676.53	1,433,757.39	477,919.13
Massachusetts	14	1,784,231.43	1,338,173.58	446,057.86
South Carolina	11	1,401,896.12	1,051,422.09	350,474.03
Georgia	11	1,401,896.12	1,051,422.09	350,474.03
Maine	10	1,274,451.02	955,838.25	318,612.75
Maryland	10	1,274,451.02	955,838.25	318,612.75
Indiana	9	1,147,005.92	860,254.44	286,751.48
Connecticut	8	1,019,560.81	764,670.60	254,890.20
New Jersey	8	1,019,560.81	764,670.60	254,890.20
New Hampshire	7	892,115.71	669,086.79	223,028.93
Vermont	7	892,115.71	669,086.79	223,028.93
Alabama	7	892,115.71	669,086.79	223,028.93
Illinois	5	637,225.51	477,919.14	159,306.38
Louisiana	5	637,225.51	477,919.14	159,306.38
Rhode Island	4	509,780.41	382,335.30	127,445.10
Mississippi	4	509,780.41	382,335.30	127,445.10
Missouri	4	509,780.41	382,335.30	127,445.10
Delaware	3	382,335.31	286,751.49	95,583.83
Arkansas	3	382,335.31	286,751.49	95,583.83
Michigan	3	382,335.31	286,751.49	95,583.83
Total		37,468,859.97	28,101,644.91	9,367,214.67

It is worthy of note that in this distribution of the national revenues the Territories and the District of Columbia were ignored.

By act approved August 13, 1841, Congress repealed all of the act of June 23, 1836, except the thirteenth and fourteenth sections, which, as we have seen, provided for the distribution of the surplus with the States in four installments and for its repayment on demand. In 1883 the treasurer of the State of Arkansas made a demand upon the Secretary of the Treasury for the payment to the State of the fourth installment. The Secretary replied that he must follow in the path of his predecessors, who in recent years had considered the law obsolete. In 1884 the State of Virginia filed in the Supreme Court of the United States a petition for a writ of mandamus to compel the Secretary of the Treasury to pay to the treasurer of that State $732,809.03, the amount of the fourth installment.

Jutice Harlan delivered the unanimous opinion of the court on March 17, 1884, holding that the Secretary of the Treasury had no authority, without further direction from Congress, to pay the fourth installment out of any surplus that might have accrued since January 1, 1839. In the course of this opinion. Justice Harlan thus speaks of the situation of the States with reference to the amounts deposited with them:

> Congress has permitted the thirteenth and fourteenth sections of the act of 1836, as modified by the act of October 2, 1837, to stand for the purpose, as we infer, of showing not only the terms upon which the States received the first three installments of deposit, but that those installments are held by the States subject to be recalled in the discretion of the United States.

The question of the constitutionality of that part of the act of October 2, 1837, which requires an act of Congress to recall the three installments was not before the court. It is difficult to see how that provision can be sustained. The original deposit act strained to the breaking point that clause of the Constitution which says, "No money shall be drawn from the Treasury but in consequence of appropriations made by law." It could be justified only on the theory that the deposits were still in the Treasury of the United States so long as they were subject to the demand order of the Treasurer of the United States. As a matter of fact, these funds have always been carried on the books of the Treasury as assets of the Government, and appear on page 47 of the last report of the Treasurer of the United States as "Unavailable funds of the General Treasury." But under the act of October 2, 1837, which provides that these funds shall remain on deposit with the States until otherwise directed by Congress, they can not be held to be, even technically or constructively, in the Treasury. For how can funds be in the Treasury—out of which they can not be drawn except in consequence of appropriations made by law—if a preliminary act of Congress is necessary to make them available for appropriations made by Congress?

If these funds are constructively in the Treasury, then they are subject to recall by the Treasurer in the same way that funds of the Government deposited in the national banks, but constructively in the Treasury, are subject to recall by the Secretary of the Treasury. If these funds are not in the Treasury—if they are on perpetual deposit with the States—then they were taken out of the Treasury in a manner not warranted by the Constitution. This is a technical legal question; but, in my opinion, the provision above referred to in the act of October 2, 1837, can not be sustained, and the three installments, now on deposit with the States, are subject to recall in accordance with the provisions of sections 13 and 14 of the act of June 23, 1836. On the other hand, in view of the rapidly increasing surplus in the Treasury, it would not be surprising if some member from one of the twenty-six deposit States should bring before Congress the claim of his State for the unpaid fourth installment.

As no limitations or restrictions were placed by Congress on the uses which should be made by the States of these deposits, it would be interesting to ascertain what disposition was made of the money received by them, and how readily they could comply with a demand for repayment. A glance at the foregoing table suggests the great changes that have taken place in the population, wealth, and relative importance of these States in two generations. In 1837 Virginia, the third State in the Union, had a population of 1,200,000, and received, as her share of the deposits, $2,198,427.78, while Michigan, with a population of about 150,000, received only $286,751.49. To-day Michigan has a population of 2,400,000, while the population of Virginia is only 1,800,000. Where the principal of the fund received by the State has been kept intact, the deposit could be repaid without serious difficulty; but where the principal has been expended, as is the case with some of the States which received the largest amounts, the repayment would cause serious embarrassment.

Do we want to repeat at this time the financial folly of 1836? I trust not.

In 1837 a new public debt was begun. The panic of 1837 compelled the contracting of new loans, and from that day to the present time we have never been without a debt. The debt ran down to about $15,000,000 just before the Mexican war and rose to $68,000,000 in 1851. In 1856 we had a considerable balance in the Treasury. Then came the folly of 1857, when an injudicious cut in the tariff brought on the panic of that year and financial paralysis and suspension of business all over the country. Do we want to attempt to get rid of our present surplus by such unwise and injudicious legislation?

Mr. GAINES of Tennessee. Will the gentleman allow me an interruption?

Mr. BOUTELL. Certainly.

Mr. GAINES of Tennessee. The gentleman alludes to the panic of 1857 and the era from 1846 to 1860 as an era of panic, distress, and commercial failure. Does not Mr. Blaine, in his Twenty Years in Congress, allude to that and say it was the most prosperous era of the country, and did not Senator Allison in this very House, about 1874 or 1875, say that the tariff of 1846 was the best tariff we ever had in this country?

Mr. BOUTELL. The gentleman from Tennessee, lacking his usual acumen, failed to catch the point of my remark. I said that prior to 1857 we had had this era of great prosperity and that we had a surplus in the Treasury which Congress attempted to dispose of by an injudicious cut in the tariff.

Mr. GAINES of Tennessee. My question covered the period from 1846 to 1860, which the two gentlemen I have named alluded to as the most prosperous era of this country.

Mr. BOUTELL. The era from 1846 to 1857 was, as I have said, one of great prosperity, but the period from 1857 to 1860 was one of the darkest periods in the history of our country. At the outbreak of the civil war the public credit was at a lower ebb than it was when Hamilton took charge of the Treasury.

Mr. GAINES of Tennessee. Did not those gentlemen make in substance the statement I have alluded to?

Mr. BOUTELL. I was not in the House with Mr. Blaine or with Mr. ALLISON. But I have no doubt the gentleman is correct, as he often is.

Mr. GAINES of Tennessee. I was not in the House either at that time; but I am familiar with what those gentlemen said.

Mr. BOUTELL. As I was saying, we had about $60,000,000 of indebtedness at the outbreak of the civil war. And then came one of the greatest exhibitions of national strength that the world has ever seen. From 1861 to 1865 the interest-bearing debt alone mounted up to $2,300,000,000!

Now I ask this question: Are we to use this available $175,000,000 surplus in the Treasury in buying bonds issued on account of the civil war and issued since then? What has been the history of the debt since that time? From 1865 the indebtedness gradually ran down until in 1892, ten years ago, our interest-bearing debt has been reduced to $585,000,000, with an interest charge of $23,000,000. Under President Cleveland, as gentlemen will remember, we issued $262,000,000 more of bonds to carry on the expenses of the Government, and during the Spanish war we issued about $198,000,000 more bonds.

The official statement of the interest-bearing debt on the 31st of January last is as follows:

Interest-bearing debt.

Title of loan.	Authorizing act.	Rate.	When issued.	When redeemable.	Interest payable.	Amount issued.	Outstanding Jan. 31, 1902.		
							Registered.	Coupon.	Total.
Consols of 1930	Mar. 14, 1900	2 per cent	1900	After Apr. 1, 1930	J., O., J., and A.	$445,940,750	$435,373,550	$10,567,200	$445,940,750
Loan of 1908–1918	June 13, 1898	3 per cent	1898	After Aug. 1, 1908	A., N., F., and M.	198,792,660	48,401,060	49,131,880	97,532,940
Funded loan of 1907	July 14, 1870, and Jan. 20, 1871.	4 per cent	1877–1879	After July 1, 1907	J., A., J., and O.	740,923,200	186,843,600	51,128,000	237,971,600
Refunding certificates	Feb. 26, 1879	do	1879		do	40,012,750			32,190
Loan of 1925	Jan. 14, 1875	do	1895–96	After Feb. 1, 1925	F., M., A., and N.	162,315,400	106,385,800	31,504,700	137,890,500
Loan of 1904	do	5 per cent	1894–95	After Feb. 1, 1904	do	100,000,000	10,798,800	8,927,550	19,726,350
Aggregate of interest-bearing debt.						1,687,984,760	787,802,810	151,259,330	939,094,830

I believe in a steady annual reduction of the public debt, but until our national banking laws have been revised we can not reduce much further the amount of the bonded debt without impairing thereby the efficiency of our national banking system. The national banks are now using over $434,000,000 of bonds as a basis of circulation and to qualify as public depositories. The amount of bonds so used has doubled in the last four years.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. HENRY of Connecticut. I ask that the gentleman's time be extended for five minutes.

Mr. FLEMING. Why not let the gentleman proceed until he concludes?

The CHAIRMAN. The gentleman from Connecticut [Mr. HENRY] yields to the gentleman from Illinois five minutes.

Mr. BOUTELL. I thank the gentleman and the committee for their courtesy. I was just discussing the policy of using the present surplus and taxes in buying bonds, and was reading from a table showing how closely we were encroaching upon the present demand of the banks for bonds. This table, prepared by the Comptroller of the Currency, is as follows:

Statement of number of national banks, with their circulation.

[Number of banks designated as public depositories, with the amount of United States bonds held by them as public deposits at periods named.]

Date.	Number of banks.	Circulation on bonds.	Circulation on lawful money.	Number of United States depositories.	Bonds for deposits.
July 1, 1891	3,662	$126,871,090	$40,706,184	185	$26,349,500
July 1, 1892	3,765	145,425,782	27,000,828	159	15,852,000
July 1, 1893	3,846	157,565,194	20,812,773	160	15,247,000
July 1, 1894	3,775	180,098,270	26,784,660	155	14,736,000
July 1, 1895	3,722	185,786,698	25,628,937	160	15,278,000
July 1, 1896	3,698	205,094,903	20,461,617	160	16,928,000
July 1, 1897	3,619	205,916,688	24,751,347	168	16,930,500
July 1, 1898	3,590	197,078,091	30,822,085	172	30,851,500
July 1, 1899	3,589	205,264,095	36,086,776	357	78,564,540
July 1, 1900	3,816	274,115,551	35,524,892	442	107,253,580
July 1, 1901	4,178	323,890,683	29,851,503	448	105,765,450
January 1, 1902	4,337	325,009,306	35,280,420	471	110,844,650
January 20, 1902	4,358	322,679,446	36,476,791	472	111,389,650

A glance at this table shows how rapidly our national banks have multiplied in the last few years. Until our present banking system has been remodeled it seems to me that it would not be wise to make further large purchases of bonds.

Some one may say, however, that we ought to comply faithfully with our sinking-fund laws, no matter what the result of such a compliance may be. But a brief examination of the history of our present sinking-fund laws will show that they have never been considered as conferring anything but discretionary power upon the Secretary of the Treasury. These laws are contained in section 5 of the act of February 25, 1862, authorizing the issue of United States notes and 6 per cent bonds, and provide:

> That all duties on imported goods shall be paid in coin or in notes payable on demand heretofore authorized to be issued and by law receivable in payment of public dues, and the coin so paid shall be set apart as a special fund, and shall be applied as follows:
>
> First. To the payment in coin of the interest on the bonds and notes of the United States.
>
> Second. To the purchase or payment of 1 per cent of the entire debt of the United States, to be made within each fiscal year after the 1st day of July, 1862, which is to be set apart as a sinking fund, and the interest of which shall in like manner be applied to the purchase or payment of the public debt, as the Secretary of the Treasury shall from time to time direct.
>
> Third. The residue thereof to be paid into the Treasury of the United States.

This sinking-fund law, codified in the Revised Statutes as section 3694, is still in force. The language of the law is plain and the intention of the legislature clear, with the exception of the fiction concerning the interest on the purchased debt. Enough of the coin received from duties on imports to pay the interest and purchase or pay before maturity 1 per cent of the principal of the debt was to be annually withheld from the Treasury and applied by the Secretary to such payments or purchases. Only the "residue" was to be paid into the Treasury. Every year the interest and 1 per cent of the principal of the debt were to be paid, no matter how small the balance that would go to the Treasury for the support of the Government.

This is the plain language of the law and the interpretation placed upon it by those who were instrumental in its adoption. As late as 1870 Mr. Sherman said in the Senate, in speaking of this law: "These particular revenues are pledged, mortgaged. You have no more right to take them for any other purpose than the public debt than you have to take my property." No one has yet been able to determine whether the legislature intended that the interest on the purchased debt should also be considered a prior lien on the customs receipts.

At the close of the war it was estimated that the operation of the sinking fund would discharge the debt in about thirty-five years; but the law has been variously interpreted at different times by the financial officers of the Government, and, under any interpretation that has been given to it, has never been fully complied with. Strangely enough it is under Mr. Sherman's administration of the Treasury that we find the smallest annual debt reduction in the history of the sinking fund. In 1879 the total amount credited to the sinking fund was only $18,500. So much easier is it to make and interpret the laws than to execute them.

From 1865 to 1869 large amounts of floating and matured indebtedness were "paid," but it was not until May, 1869, that any purchases of the debt were made for the sinking fund. It is with this date that the sinking-fund account, as kept by the Treasury, begins. During the last thirty-two years the annual purchases for the sinking fund have ranged from $18,500, in 1879, to over $74,000,000, in 1881, and the total amount of securities redeemed for the sinking fund up to July 1, 1901, was $962,000,000. On that date there was a balance due the sinking fund of over $343,000,000; that is, if the requirements of the law had been fully complied with since 1869 over $343,000,000 more of securities would have been redeemed and credited to the fund.

But the sinking-fund account by no means shows the full amount of the debt that has been canceled since 1865, or even since 1869. The interest-bearing debt in 1865 was $2,300,000,000, and additions have been made to it since that time. However, the outstanding interest-bearing debt is now less than $950,000,000. We must look, therefore, to some other account for an item of $800,000,000 of canceled debt.

The refunding act of 1870 contained this provision, codified as section 3696 of the Revised Statutes:

> In addition to other amounts that may be applied to the redemption or payment of the public debt, an amount equal to the interest on all bonds belonging to the sinking fund shall be applied, as the Secretary of the Treasury shall from time to time direct, to the payment of the public debt.

The authority vested in the Secretary of the Treasury by this law was extended by the act of March 3, 1881, section 2 of which provides:

> That the Secretary of the Treasury may at any time apply the surplus money in the Treasury not otherwise appropriated, or so much thereof as he may consider proper, to the purchase or redemption of United States bonds: *Provided*, That the bonds so purchased or redeemed shall constitute no part of the sinking fund, but shall be canceled.

These enactments confer upon the Secretary of the Treasury powers similar to those given to the old sinking-fund commissioners by the act of 1830.

What is the practical operation of the sinking-fund law in connection with these later statutes? How have these laws been interpreted and administered by the Treasury Department?

The sinking-fund law has not been regarded as mandatory. No coin has been set aside to meet the requirements of the law. The interest on the sinking fund has not been considered a permanent annual appropriation. All purchases and redemptions of bonds have been made out of the surplus funds in the Treasury. Whenever in any year the demands of the sinking fund for that year have been complied with, additional purchases of bonds which may be made in that year are carried in another account. This

method of separating into two accounts transactions belonging to the same subject is illogical and confusing.

Besides those already mentioned two other transactions are now carried in the sinking-fund account. Under the law of 1890 money deposited by national banks with the Secretary of the Treasury to secure their circulation is carried as part of the public debt. Redemptions of bank notes are now credited to the sinking fund. The financial act of 1900 provides that the premiums paid by the Secretary of the Treasury in exchanging 2 per cent bonds for outstanding securities shall also be credited to the sinking fund.

During the fiscal year ending June 30, 1901, the disbursements on the sinking-fund accounts amounted in round numbers to $56,000,000. The official statement for the year shows the manner in which the account is kept:

Sinking-fund account, fiscal year 1901.

DR.		CR.	
To balance from last year ..... July 1, 1900—	$345,998,471.37	June 30, 1901— By principal of bonded debt redeemed in 1901.	$36,088,120.00
To 1 per cent on the principal of the public debt on June 30, 1900, less coin and currency certificates, Treasury notes, and cash available for reduction of the debt, viz, $1,263,416,912.67...	12,634,169.13	By accrued interest thereon	147,682.79
June 30, 1901— To interest on redemption prior to fiscal year 1901	40,962,389.79	By fractional currency and notes redeemed in 1901	3,428.78
To interest on $36,091,548.78, amount of debt "paid" during fiscal year 1901	564,924.50	By accrued interest thereon	125.35
		By national-bank notes redeemed	5,743,569.00
		By premium on bonds purchased	1,841,120.77
		By excess of present worth over par value of bonds exchanged for 2 per cent consols of 1930	12,808,452.18
		By balance	343,527,455.92
Total	400,159,954.79	Total	400,159,954.79

An analysis of this account will show some of the departures from a literal interpretation of the law. The law says that 1 per cent of the "entire debt" shall be discharged in each fiscal year. The official statement of the "entire debt" on June 30, 1900, shows that it was $2,101,445,225.67. But the computation for the sinking fund is made on the net debt, or the entire debt less the cash in the Treasury. Even on the basis of the Treasury computation the sinking fund last year called for $54,000,000, exclusive of the bank notes and 2 per cent bond premiums. The purchases, however, were less than $38,000,000. The first item in the foregoing account, of over $345,000,000, shows the deficit in the sinking fund up to the beginning of the fiscal year 1901.

Again, the law directs that 1 per cent of the debt shall be paid or purchased in each year, not that an amount equal to 1 per cent thereof shall be disbursed. To carry out the intent of the law, therefore, the premiums paid on purchases of 1 per cent of the debt, if credited to the sinking fund, should also be carried as a charge against the account. Further illustrations are unnecessary to show that the operation of the sinking-fund laws which have been on the statute books for forty years is not uniform, certain, or automatic. These laws are simply a system of bookkeeping. Their operation depends, as the operation of all such laws must depend, upon the condition of the Treasury and the discretion of the financial officer of the Government.

As no one could justly criticise the Secretary of the Treasury for a full compliance with these laws, to the extent at least of applying the surplus thereto, it is interesting to consider what effect such a compliance would have in the next few years upon the public debt. At the close of business on December 1, 1901, the aggregate debt was, in round numbers, $2,100,000,000. Of this sum $811,000,000 consisted of certificates and Treasury notes secured by cash in the Treasury, $7,000,000 of fractional currency, little of which will ever be presented for redemption, and $35,000,000 held for the redemption of national bank notes. This leaves the debt unsecured except by cash in the Treasury $1,300,000,000, consisting of $347,000,000 of United States notes, or greenbacks, bearing no interest, and $950,000,000 of bonds. This interest-bearing debt is made up of $20,000,000 in 5 per cent bonds, due in 1904; $240,000,000 in 4 per cent bonds, due in 1907; $98,000,000 in 3 per cent bonds, due in 1908; $140,000,000 in 4 per cent bonds, due in 1925, and $446,000,000 in 2 per cent bonds, due in 1930.

From the above analysis it will appear that there are $358,000,000 of bonds maturing within the next six years. Now, the present annual demands of the sinking fund are something over $55,000,000, and, of course, these demands increase as the capital of the sinking fund increases. It is apparent, therefore, that, if the sinking-fund laws could be made to work automatically and with precision, the entire amount of the debt maturing on or before August 1, 1908, would be discharged by their operation.

The outstanding interest-bearing debt would then consist of $140,000,000, due in seventeen years, and $446,000,000, due in twenty-two years. But the annual demands of the sinking fund would, in 1908, be about $67,000,000 a year. A compliance with these demands would redeem the $140,000,000 in three years, so that in 1911 there would be outstanding only the $446,000,000 of 2 per cent bonds. In 1911 the requirements of the sinking fund would be over $71,000,000 a year. A compliance with these requirements would, therefore, extinguish our interest-bearing debt by 1917. It was after this fashion that the framers of the law of 1862 intended it to work. But in its practical operation the Secretary of the Treasury is restricted to a judicious use of the balance remaining in the Treasury each year "after an adjournment of Congress."

The following is a statement of the sinking-fund account for the first six months of the fiscal year beginning July 1, 1901:

Sinking-fund account, fiscal year 1902—six months.

DR.		CR.	
To balance from last year	$343,527,455.92	July 1, 1901, to Dec. 31, 1901— By principal of bonded debt redeemed in 1902....	$43,934,460.00
To 1 per cent on principal of the public debt on June 30, 1901, less coin and currency certificates, Treasury notes, and cash available for reduction of the debt, viz, $1,221,572,244.89.....	12,215,722.45	By accrued interest thereon	225,739.42
To interest on redemptions prior to fiscal year 1902.....	41,980,309.17	By fractional currency and notes redeemed in 1902....	4,199.75
To interst on $43,938,659.75, amount of debt "paid" from July 1 to Dec. 31, 1901.....	1,484,686.85	By accrued interest thereon	442.32
		By premium on bonds purchased..	11,399,471.48
		By balance.....	343,643,861.42
Total.....	399,208,174.39	Total.....	399,208,174.39

This statement shows that the principal of the bonded debt has been reduced $8,000,000 more in the first six months of this year than it was in the whole of the preceding year.

In the foregoing estimate of the reduction of the debt that would take place if the sinking-fund laws were carried out no account has been taken of the bond purchases which the Secretary is authorized to make by the act of 1881 in addition to the requirements of the sinking fund. If the rate of reduction during the first six months of this year should be maintained throughout the year, the reduction of the principal of the bonded debt alone would amount to over $87,000,000. A continuance of this annual rate of reduction would extinguish the entire interest-bearing debt in about eleven years.

The outstanding bonds bearing interest at 3, 4, and 5 per cent can be readily converted as they mature into long-time 2 per cent gold bonds, under the act of 1900. We have in the Treasury an available cash balance that, as we have seen, has stood at between $160,000,000 and $190,000,000 during the last four months. The Secretary estimates that the surplus for the year ending June 30, 1902, will be $100,000,000. This would produce a Treasury balance on that date of about $230,000,000, if no future purchases of the debt should be made.

Congress ought, therefore, to determine whether the policy of reducing the debt should be continued or a plan for converting the bonds adopted. If our ordinary expenditures are not increased and the purchases of the debt are discontinued, a greater reduction in taxation can of course be made than if we adhere to the policy of reducing the debt.

I have no faith, however, in the supposed benefits of a national debt; neither do I believe in the policy of national deficit financiering or in the efficacy of the restraining influence of such a system. We can not tell what national trials the future may have in store for our country, and we should not selfishly transfer to posterity any burden of debt which the present peace and our abundant resources enable us easily to discharge.

In closing his extremely able report to Congress the Secretary of the Treasury suggests that this is a most favorable time "to enter upon judicious measures to eliminate such elements of financial weakness as experience has brought into view, and to perfect, if possible, our now imperfect system of currency." In accordance with his suggestion this would seem to be a good time to repeal the obsolete sinking-fund law of 1862, whose inefficiency experience has effectually demonstrated.

We are now in a position to revert to Gallatin's policy and make a permanent annual appropriation of a sum that will be sufficient, in connection with the occasional use of the annual surplus, to discharge the outstanding bonds as they mature. Such a policy, definite in its terms and certain in its action, would enable us to adjust more nearly than we can now do our annual receipts to our annual expenditures. With such a permanent appropriation we should still be justified in making a considerable reduction in our present revenues. Such a reduction should, however, be made with caution. While a large surplus in the Treasury offers a tempting invitation to extravagant appropria-

tions on the one hand, it presents, on the other hand, an attractive inducement to an inconsiderate curtailment of the revenues. Congress is now given an excellent opportunity to shun the folly of 1836, avoid the blunder of 1857, and demonstrate for the first time its ability to deal successfully with a large and increasing surplus.

In 1817 $2,000,000 was considered a sufficient working balance for the Treasury. In 1837 $5,000,000 was held to be ample. At the present time $50,000,000 would undoubtedly meet all ordinary demands. There is now in the Treasury a sum of one hundred and twenty millions over and above a reservation of fifty millions. In the present condition of the public credit the accumulation of money in the National Treasury is not only of no benefit to the Government, but it is a positive injury to the business interests of the country.

I think it is clear, however, from the foregoing review of our sinking-fund laws, that in considering the question of disposing of the present surplus we need not feel bound or at all hampered by the provisions of these laws.

This would seem to be a most opportune time for retiring the United States notes. Issued originally as a forced loan, they constitute to-day the worst part of the public debt. They are a constant menace to the stability of our monetary system. The total amount of greenbacks issued was about $450,000,000. There are now outstanding $346,681,016.

Against these notes we are holding in the Treasury $150,000,000 in gold.

If the greenbacks should be called for redemption in gold and permanent withdrawal from circulation, probably not over $200,000,000 could be retired in the first two years. It would undoubtedly take ten or fifteen years more to get in the remaining $146,000,000. By adding $50,000,000 from the available cash in the Treasury to the gold reserve we should have a fund of $200,000,000 with which the redemption of the greenbacks could be safely undertaken at the present time without any reduction in the volume of money in circulation.

The suspension of specie payments during the civil war and the issuing of United States notes, which were both caused by the lack of an adequate banking system, cost the Government not less than $500,000,000, through the sale of bonds for depreciated notes and their payment in gold. Now that the condition of the Treasury warrants the use of the necessary funds, ought we not to destroy this dangerous form of currency before it works further harm to the country?

It seems to me that the application of a portion of the present available cash in the Treasury to the retirement of the greenbacks would be a most judicious method of reducing the surplus.

Our experience in dealing with a surplus shows the dangers into which we are liable to fall. It is an easy matter to dissipate a surplus, for a full Treasury is an invitation to extravagant expenditures. We can easily get rid of the balance in the Treasury by increasing our ordinary appropriations and by entering upon new and unusual expenditures.

Ought we not, however, in determining what we shall do with the present surplus, to consider the sources from which it has been derived?

It does not result from a decrease in our normal expenditures, for there has been during the last few years a steady increase in our expenses over and above the cost of the war with Spain.

Our expenses will always keep pace with the growth of the nation in wealth and population. The present surplus is the direct result of the large income derived from the war-revenue act of 1898.

The following table, prepared from the records of the Treasury Department, shows in detail the receipts and expenditures of the Government, by months, from July 1, 1891, to January 1, 1902:

[a] Includes $2,122,841.24 realized from sale of Government's claim against the Sioux City and Pacific Railroad.
[b] Includes $432,895.93, account of Central Pacific R. R. indebtedness.

In 1892, toward the close of President Harrison's Administration, we had reached a very satisfactory condition financially. The principal of our interest-bearing debt was less than $600,000,000. Our annual interest charge was under $23,000,000. The annual expenses of the Government fell below $400,000,000, and we had a small annual surplus. We were on a thoroughly normal basis.

Now, mark what happened when the Democratic party came into power. A glance at the following summary of annual receipts and expenditures will show the great change that came about under President Cleveland:

Under the destructive influence of the Wilson tariff every year of Mr. Cleveland's Administration showed a deficit ranging from $18,000,000 to $69,000,000.

During the fiscal years 1898 and 1899 the war with Spain caused a deficit of $127,000,000.

From July 1, 1899, to January 1, 1902, the surplus of receipts over expenditures was $200,000,000.

Annual receipts and expenditures of the United States from July 1, 1891, to July 1, 1901, and for the six months from July 1, 1901, to January 1, 1902.

a Surplus. b Deficit.

Cleveland was compelled to issue $262,000,000 of bonds to carry on the Government in time of peace. McKinley issued $198,000,000 of bonds for the prosecution of a war, and subsequent events have shown that we did not need the proceeds of those bonds.

In the last two years we have reduced the principal of the debt $105,000,000 and we have a balance of $175,000,000 in the Treasury. So great is the difference between Democratic and Republican methods in national financiering!

As I have said, the war-revenue act of 1898 is the source of the present surplus in the Treasury. Under that act we had realized up to the 1st of last January over $377,000,000, as the official Treasury statement shows:

Statement showing receipts from war-revenue acts only, from June 13, 1898, to June 30, 1901; also the first six months of the act of March 2, 1901, from July 1 to December 31, 1901.

	Receipts from June 13 to July 1, 1898.	Receipts during the fiscal year 1899.	Receipts during the fiscal year 1900.	Receipts during the fiscal year 1901.	Act June 13, 1898. Total.	Receipts from July 1, 1901, to Dec. 31, 1901. (Act Mar. 2, 1901.)	Gross total from both acts.
Schedule A	$724,073.94	$38,618,081.20	$36,416,082.11	$34,998,836.30	$110,757,073.55	$6,925,145.27	$117,682,218.82

Receipts from tea	41,322.00	4,812,607.00	8,008,637.00	8,259,354.00	21,121,920.00	3,830,410.00	24,952,330.00
Total	3,451,764.51	107,172,225.36	115,382,864.95	115,905,567.05	339,912,421.87	37,982,872.18	377 895,294.05

We should, of course, always keep in the Treasury an available cash balance sufficiently large to meet all ordinary emergencies. We should also put the Treasury on such a basis and give such discretionary power to the Secretary as will justify keeping this balance at a low figure. Every dollar hoarded in the Treasury is a dollar drawn from the channels of productive industry. We often hear a large Treasury surplus spoken of as a desirable thing, and as a mark of general prosperity. This opinion proceeds from an erroneous conception of what constitutes sound national financiering. There is a wide difference between private and public financiering.

It is the aim of the man engaged in private business to accumulate as large an annual surplus as possible. Successful public financiering, on the other hand, consists in adjusting as nearly as possible annual receipts to expenditures. It should aim to avoid a constantly increasing surplus as well as a frequently recurring deficit. A large surplus, therefore, simply indicates a failure to wisely adjust revenues to expenses, and the larger the surplus becomes the greater becomes the danger of disturbances in the business of the country resulting from the concentration of money in the Treasury.

The revenue act of 1898 contains one clause that should be retained permanently on the statute book. I refer to section 32 of the act, which is as follows:

SEC. 32. That the Secretary of the Treasury is authorized to borrow from time to time, at a rate of interest not exceeding 3 per cent per annum, such sum or sums as, in his judgment, may be necessary to meet public expenditures, and to issue therefor certificates of indebtedness in such form as he may prescribe and in denominations of $50 or some multiple of that sum; and each certificate so issued shall be payable, with the interest accrued thereon, at such time, not exceeding one year from the date of its issue, as the Secretary of the Treasury may prescribe: *Provided*, That the amount of such certificates outstanding shall at no time exceed $100,000,000; and the provisions of existing law respecting counterfeiting and other fraudulent practices are hereby extended to the bonds and certificates of indebtedness authorized by this act.

With this wise provision in force, $25,000,000 should be a sufficient average amount to keep in the Treasury as a working balance. If this sum should be considered ample, we now have in the Treasury $150,000,000. That should be returned as soon as possible into the pockets of the people. Unless we keep down the surplus by further purchases of bonds, the cash in the Treasury above the sum needed for a working balance will, at the end of the fiscal year, amount probably to $175,000,000.

Whatever disposition we may decide to make of the present surplus, one thing is certain, that it is our duty as representatives of the people to reduce at once the present taxes by $75,000,000 or $80,000,000 a year. How shall this reduction be made? I think that a little reflection on the circumstances under which the taxes of 1898 were imposed and the pledges which were then made to the people will lead to the inevitable conclusion that the remaining war-revenue taxes should be repealed without delay. These taxes were hurriedly imposed and patriotically acquiesced in to meet the sudden demands of war.

When the act was passed, we made the solemn pledge that as soon as the war was over it would be repealed. A year ago we repealed about one-third of these taxes, giving as our excuse for retaining the balance that the expenses resulting from the war necessitated such a course.

To-day, however, all the expenses of the war with Spain so far ascertained and payable, estimated at $500,000,000, have been paid and we have a surplus of $175,000,000 in the Treasury. A reference to the tables which I have given shows that during the first half of the current fiscal year from July 1, 1901, to January 1, 1902, the surplus of receipts over expenditures largely exceeded the sum realized from the war taxes during the same period.

The surplus of receipts over expenditures was	$42,625,927.65
The war taxes amounted to	37,982,872.18
Excess of surplus over war taxes	4,643,055.47

It will be seen that if our revenues and expenses continue on the present basis the repeal of all the remaining war taxes will still leave us an annual surplus of over $9,000,000. Under this showing it seems to me there is no question as to what is our present duty.

Some members of this House have said to me in conversation that they were not in favor of repealing all the war taxes until all the expenses of the war, including the Spanish war bonds, had been paid. Their position is based upon a misapprehension of the facts. All of our public debt, except the bonds, may be regarded as a fixed quantity. The condition of the Treasury at any given

time depends, therefore, upon the amount of bonds outstanding and the available cash balance in the Treasury.

I have prepared a table which shows the capital of the interest-bearing debt, the annual interest charge, and the available cash in the Treasury at the beginning of each fiscal year since 1891, and on January 31, 1898 and 1902:

Statement of interest-bearing debt, annual interest charge, and available cash, including gold reserve.

	Interest-bearing debt.	Annual interest charge.	Available cash, including gold reserve.
July 1, 1891	$610,529,120	$23,615,735.80	$153,893,808.83
July 1, 1892	585,029,390	22,893,883.20	126,692,577.03
July 1, 1893	585,067,100	22,894,194.00	122,462,230.38
July 1, 1894	635,041,890	25,394,385.60	117,584,466.13
July 1, 1895	716,202,060	29,140,792.40	195,240,153.51
July 1, 1896	847,363,890	34,387,265.60	267,432,096.70
July 1, 1897	847,365,130	34,387,315.20	240,137,626.76
July 1, 1898	847,367,470	34,387,408.80	205,657,570.76
January 31, 1898	**847,365,810**		**223,871,786.26**
July 1, 1899	1,046,048,750	40,347,872.80	281,380,468.73
July 1, 1900	1,023,478,860	33,545,130.00	305,705,654.78
July 1, 1901	987,141,040	29,789,153.40	326,833,124.92
January 1, 1902	943,279,210	28,037,313.30	321,603,278.63
January 31, 1902	**939,094,330**		**324,796,646.42**

From this table it appears that on January 31, 1898, before one dollar had been spent on account of the war, the debt was $847,365,810. The available cash was $223,871,786. The debt, less cash, was $623,494,024.

On January 31, 1902, only three years after the close of the war, the debt was $939,094,330. The available cash was $324,796,646. The debt, less cash, was $614,297,684.

That is, the net debt to-day is $9,196,340 less than the net debt three years ago. So that, while it is true that there are still outstanding $97,000,000 of the $198,000,000 Spanish war bonds, it is also true that we have the money in the Treasury with which to retire them if we so desire.

All the accrued expenses of the war with Spain have been paid, and we are over $9,000,000 better off than we were when the war began, and our annual interest charge has been reduced over $6,000,000.

This splendid record of wise national financiering has no parallel in the history of any nation. In the glow of victory and pride in the valor of our arms we are apt to forget the honor that is due to the financial officers of the Government who have conducted the nation with safety and honor through the vicissitudes of an expensive foreign war.

To President McKinley and Secretary Gage belong the largest share of the honor due to the successful management of the national finances during the past four years.

It now remains for us by a reduction in taxation through the repeal of the war-revenue act, and by wise and economical appropriations, to return, to restore the normal condition of receipts and expenditures that existed before the war. The erection of public buildings, the improvement of rivers and harbors, the construction of the isthmian canal, the granting of ship subsidies, the enlargement of the Navy, should all be considered from the plane of our normal revenues. We should not allow ourselves to even contemplate the use of emergency war taxes for carrying out in time of peace these great national enterprises, however praiseworthy they may be.

There are some who fear that a reduction of $80,000,000 or even $70,000,000 in our annual revenues, even on our present basis of expenditures, will result in a deficit. But even if it should so result a deficit is not an unmixed evil. It certainly is not a thing to be feared, especially with a balance of $175,000,000 in the Treasury. There are many statesmen and economists who, recognizing the difference between private and national financiering, believe that an annual deficit is better than an annual surplus. Professor Henry C. Adams, of Michigan University, whose opinions have often been quoted with favor on this floor, has summed up the arguments in favor of national deficit financiering in his excellent work on Public Debts. I read a few extracts from pages 79 to 82:

It seems, then, that both convenience and economy justify the use of temporary debts whenever estimates fall short of actual expenditures or when some change in public policy presents new demands to the Treasury Department that must be immediately met.

But the real question that lies at the bottom of the policy of temporary loans goes deeper into the science of finance, and suggests itself only when we inquire respecting the alternative presented to the administration, supposing the policy of temporary debt to be discarded. The alternative is to overestimate expenditure and underestimate revenue, in order that such discrepancies in the budget as may arise should always be on the side of a surplus. The question, then, reduces itself to this: Since perfect harmony in the budget can not be expected, do sound rules of finance require the error to fall on the side of surplus or of deficit? According to the maxims of domestic economy, a constantly recurring surplus is accepted as evidence of good financiering; but it is doubtful if such maxims are applicable to national affairs.

There are three reasons, as it appears to me, why a constant deficit should be chosen rather than a constant surplus.

In the first place, the moral effect of a deficit upon the electors as well as upon the legislatures is good. The people will be more careful to exercise their constitutional prerogative in the control of expenditures if the minister of finance is obliged to use the language of poverty than if they are made to feel rich by the portrayal of an ever-increasing surplus; the legislative body, also, will be more careful as to appropriations if deficits stare them in the face than if their deliberations are carried on in the presence of an overflowing treasury.

* * * * * * *

But in the second place, a deficit at the close of a year brings for a second time before the legislative body the appropriations of the year previous. A revisionary study of all expenditures is in this manner rendered necessary, and this tends to secure a stricter control over future appropriations. The laws of many States provide for temporary loans, sometimes in the form of a loan from one appropriation that is in excess to another in which there occurs a deficit, sometimes the Government is authorized to appeal directly to the market; but in either case the action of the minister of finance must come up for approval or disapproval when his report is presented to the legislative body.

The third claim in favor of deficit financiering is of a somewhat different nature, since it brings to our notice the commercial distress which may be occasioned by adopting the competing policy. It is a well-known principle that the value of money is inversely as its amount; and if, through a constant excess of revenue over expenditure, large sums are withdrawn from circulation, or if, through any considerable excess in the revenue of one year, the average amount of money in the hands of the people be reduced, the country will suffer the inconvenience which always attends falling values.

I can not agree fully with Professor Adams, but I must admit that there is great force and wisdom in what he says in favor of deficit financiering, especially when a nation is out of debt. But while we have any debt outstanding we ought to provide an annual surplus to be used in extinguishing the debt.

From the best estimates that can be made the repeal of the war-revenue act would still leave us an annual surplus of over $9,000,000. But if, through any unforeseen changes in the business world, our other revenues should decrease and a deficit should result from the repeal of these war taxes, we need have no apprehensions of disaster and should have no hesitation in promptly repealing these taxes. The present surplus in the Treasury could be put to no better use than making up such annual deficits as might result from a repeal of the war taxes and a return to our ordinary revenues. There is, however, not the remotest prospect of such a deficit, and the surplus must be used in some other way.

Finally, the repeal of the war taxes will in no way embarrass us in making just concessions to Cuba. We have given to the island political independence and a stable republican government. With the magnanimity that has always characterized the Republican party, let us at this session of Congress do all in our power to give to the people of Cuba commercial independence and industrial prosperity.

Mr. Chairman, after reviewing with some care the financial history of the country and taking into consideration the present condition of the Treasury and the probable demands upon our resources in the future, it seems to me that we shall be false to our trust as representatives of the people if we do not decide at once to repeal these war taxes.

I trust that the bill reported by the gentleman from New York, the Chairman of the Ways and Means Committee, last Monday will be passed without amendment. It should be considered by itself and without being complicated with other questions. It simply restores the taxes that existed before the war with Spain. It should be passed without delay and ought to receive the vote of every member of this House.

We have already delayed too long in this matter. Further delay may be fatal. Emergency taxes, if retained too long after the emergency has passed, become permanent taxes.

Legislative, Executive, and Judicial Appropriation Bill.

SPEECH

OF

HON. E. J. BURKETT,

OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, February 7, 1902,

On the bill (H. R. 10847) making appropriation for the legislative, executive, and judicial expenses of the Government for the fiscal year ending June 30, 1903, and for other purposes.

Mr. BURKETT said:

Mr. CHAIRMAN: I desire to avail myself of this opportunity to address the House upon an important measure now pending before the Invalid Pensions Committee, and which has not yet been by them reported upon. I address the House at this time that the committee may have before them in their deliberations some figures and data that I have collected, and some deductions that I shall make therefrom, which, to my mind, argue very strongly for the passage of the bill, or some similar bill. And let me say now that I have no undue proprietary pride in this bill to the ex-

clusion of any other. I shall support any bill or anybody's bill that will relieve the complaint that is now being made in pension matters.

The bill I refer to is H. R. 3098, and is intended to amend section 2 of the act of June 27, 1890, of the pension laws. This law is commonly known as the new law, and under its provisions those soldiers who are incapacitated from the performance of manual labor and are yet unable to establish the origin of their disability as of Army service are pensioned. As the law now stands, a soldier drawing a pension under it is rated at $6, $8, $10, or $12 per month, according to the degree of his inability to earn a support by manual labor.

The section which this bill proposes to amend is that part of the 1890 law which prescribes the several ratings, and, if passed, its effect will be to establish a flat-rate pension under this law of $12 per month.

No other provisions of the 1890 law are changed, nor are any other of the pension laws affected. No soldier's right is abridged, but, on the other hand, veterans who are drawing less than $12 per month under the law of 1890 will be increased to $12 by virtue of this amendment.

The proposed legislation is not of hasty conception, nor have I introduced the bill until considerable thought had been given to it, much counsel taken from veterans and Grand Army of the Republic posts, and very much computation made. The idea is suggested from experience in calling up and attending to many hundreds of claims for constituents. Most of us have common experiences in this particular branch of our work, and accordingly I shall not go into very minute detail as to what has suggested the bill, but, rather, shall devote my time to showing why the bill should pass.

We are all well aware that the present laws and their administration are unsatisfactory to the soldiers. Indeed, most of us probably, from time to time, have been wont to criticise what seemed an injustice to some worthy veteran. With so much of machinery (and under the law as it is that machinery seems necessary) for the adjudication of claims, there is little wonder that somewhere, every once in a while, it skips a cog, or fails to do its full duty. I am not persuaded that this amendment will adjust all the complaints and satisfy all the complainants, but, sirs, it will satisfy two-thirds of them; for the Commissioner's last report, at page 94, shows that out of a total of 155,165 claims for original and increase of pension filed during the last year two-thirds of them, or 108,559 claims, were under the very identical law that this bill seeks to amend, and to overcome the very identical things that this bill removes from it.

During the same time there were allowed by the Pension Bureau, according to the report at page 73, 653 original claims under the old law, and 19,319 original claims under the new law. There were also allowed of increases under the old law 12,693, and under the new law 22,765, while of reissues, restorations, and renewals there were allowed under the old law 3,577, and under the new law of the same class of cases there were allowed 8,379.

Summarizing, we find that during the last year affirmative action has been had in the Department under the old law in 16,923 cases. and under the new law in 50,463 cases.

Those claims under the new law—two-thirds of all filed and representing three-fourths in allowances—were every one of them filed for exactly the same purpose that this amendment is intended to accomplish. They were filed for an increase, or a twelve-dollar rating. This law precludes all such by making a minimum as well as a maximum rate.

It is the indefiniteness of the 1890 law that has made it such a source of trouble. Its unending offer of inducement; its tantalizing more; its inviting bid to try again, is the "why" of so many claims under it. Every increase or rejection under that law is a specific invitation to try again. In fact, that is the soldier's only chance. He must do it. He will do it. In fact, he is directed to do it.

Only one-third of the soldiers under the 1890 law have had a final settlement of their claims. Two-thirds of them know their case is unfinished. Sixty-five per cent of all the claims hitherto allowed under the 1890 law are incomplete and unfinished, and hence are worked over and upon constantly. This is only in favor of a continued large force of clerks in the Pension Department. One medical examination after another is ordered. A case came under my observation where three examinations had been taken by a soldier in a single year. One review of the case after another is made. The papers are worn out in the much handling. Untold expense is made both to the claimant and to the Government by this doling out of pensions under the "installment plan."

The object of this bill is to settle all of these claims at once; to have a final and complete verdict rendered now; in short, to close up and file away as completely adjusted two-thirds of all the claims now before the Department; to discharge three-fourths of the medical examining boards, or, rather, save three-fourths of their fees and expense; to discharge one-half of the clerks in the Department, and to save one-half of the postage and stationery and miscellaneous items of expense of the Pension Bureau.

But, sirs, best of all, it will smooth the path of 280,000 heroes of the Republic. It will send a tiny ray of sunshine into 280,000 homes and make a million happy hearts. It means a little more to eat to some hungry mouths, a little more clothes to some shivering form, and a little more of school, and a few more books, a better education and better opportunities, higher thoughts, nobler ideals, better men and women, more patriotic and devoted citizenship.

Then, too, the opportunities for inequalities among the pensioners have made the 1890 law an object of contempt. It is difficult to make comparisons satisfactory to all parties compared. It is impossible to say that one soldier in a community is entitled to $12, another $10, another $8, and another $6, according to the degree of ability to perform manual labor, and make any of them, except the $12 man, satisfied.

Human nature is so constructed that comparisons against interest are odious even when they are absolutely right. In short, everybody knows his own troubles, his own diseases, his own disabilities better than he knows anybody's else and better than anyone can know his; and, do as he may, he is unable to appreciate another's troubles as he does his own. To the heroic veteran, gray and grizzled by patriotic service to his country, as the shadows of declining years fall about him, there is no just comparison but his own infirmities with the robust vigor and extravagance of health that he gave to his country.

Ratings under the old law are more certain and more easy of interpretation. Their correctness may be established. Degree can be measured with mathematical precision in most instances. An arm off at the shoulder has a certain rating, and off at the elbow has another rating. There can be no uncertainty. But to measure a man's ability to perform manual labor and then pension him according to that judgment could not possibly result other than in error and complaint and dissatisfaction. Then, too, sirs, all the more so when the man who rates has never seen the soldier he is rating, and, while pretending to base his ratings upon the compromised opinion of three other men who have made an examination, absolutely refuses to follow their recommendations.

A more absurd proposition I can not imagine. There is little wonder that injustice is complained of, and yet how could it be otherwise? Doctors from all over the country are sending in reports. These doctors are from different schools of medicine; they are differently educated; they are of different temperaments, and they differ in their attitude toward the whole plan of the pension system. Some of them are able not only to diagnose a disability, but to describe it minutely and intelligently; others may possess neither of these qualifications.

That you may fully appreciate the difficulties under which the Department labors in this particular, let me quote to you from the Commissioner's report the words of the medical referee, Mr. J. F. Raub. He says:

> After more than three years' effort to improve the work of examining surgeons it has been found that such effort has not been crowned with the measure of success hoped for and reasonably expected. It is to the credit of some boards that take an honest pride in their work that they are giving fairly satisfactory reports. * * *
>
> Too many, however, apparently regard their duties and obligations to the Bureau in the slightest imaginable manner, their certificates bearing evidence of work done in a slipshod, haphazard manner. This faulty work is most frequently apparent in the inaccurate descriptions of disabilities and in the use of practically the same phraseology in describing a disability. For instance, one board in 20 examinations found valvular disease of the heart and described it in practically the same words in each case. Test examinations failed to confirm these reports. No amount of advice, with special instructions, has effected any material improvement.
>
> Many boards apparently have no conception or appreciation of the importance of their duties, and quiet their consciences by submitting machine-made reports that are in the highest degree unreliable and unsatisfactory.
>
> One board regarded its duties as fully performed when the secretary, having examined the claimants at his office, merely conferred over a telephone with the other members, after which they all certified that they were present and participated personally at the examination. * * *
>
> Taking into consideration all the complaints, real and imaginary, against the office, the knowledge of the Bureau that reports of examining surgeons are unreliable, the failure to secure intelligent, thorough, and complete certificates, notwithstanding the efforts of the Bureau during thirty years—efforts growing more and more insistent year by year—it is surprising that no change has been made in the system.

Is it to be wondered that exasperating comparisons are made? Is it to be wondered that the new law rating in many cases not only does not establish even approximately the soldier's disability, but rather his blind fortune, in making the board of rating understand he is debilitated.

The rating part of the law is the part complained of. It is the part that causes the trouble. Soldiers do not complain, so far as my experience teaches me, when they feel that they are drawing what the law allows them and what their Congress intended they should have. But it is the uncertainty and indefiniteness of the 1890 law that condemns it as applied to practice. Then let us do away with the uncertainty; let us take from it the part that makes the trouble. Let us have no sliding table to be speculated upon by a board of rating 3,000 miles, perhaps, from the soldier affected

thereby. Let the soldier know in the fewest possible words, and in the plainest language, just what Congress intends to give him. Take away the power of any man to work up or down the rate, according to his whims or his fancy, his ignorance or his prejudice.

Eleven years ago Congress said that a soldier who was incapacitated from earning a support by manual labor should have of the bounties of the nation $12 per month—

and not less than $6 per month proportioned to the degree of inability to earn a support.

The war then was only removed twenty-five years. To-day it is thirty-six years since the last soldier was mustered out. In all that great army of veterans few, comparatively, are under 60 years of age. Much the larger proportion are probably above 65 years old.

With the infirmities of age stealing on them, with the toils and cares of life burdening them down, with the years of war and bloodshed that they experienced taken into consideration, it is my judgment that none of them are able to earn a support by manual labor; at least that may be said of the great majority of them; and for one, if it is necessary, in order to do away with all the examinations and the evidence and the parleying and the jockeying to establish inability to perform manual labor, I am in favor of establishing that fact by law. Suppose some one of them has retained his health and his vigor, and really does perform manual labor, I shall rejoice in the fact, rather than begrudge him the benefits of the law, if this bill should pass.

The pension system should be a comfort to the old soldier rather than a worry. Its benefits should be obtained in the easiest possible manner consistent with the safety of the nation against frauds. What the Government is going to do, it ought to do generously and magnanimously, and not niggardly and begrudgingly. To make a pension rate of $12, or any other rate, and then throw around it such barriers as to make it impossible to be attained, is ungenerous and un-American. If you want the old soldier to have $12 per month, say so, and strike down every barrier that stands in his way of securing it.

I hope, as far as I have gone, that my words have fallen on sympathetic ears. I believe this House is in sympathy with the propositions that I have laid down so far. I believe the experience of its members confirms what I have said. There may be those here who whould give even larger ratings. I believe that the time will come when we shall have a properly adjusted service pension that will more correctly respond to the demands of justice to the soldier. But it has not been my object at this time to undertake any revolution of the pension system, or to call forth the attack that would necessarily come to new pension legislation. I am only anxious that the laws that we now have shall be more equitable, more easy of application, and more satisfactory to the great army of patriots in their declining years.

There is another side of this question that will concern each of us, and that each of us are bound as guardians of the national purse to investigate before this bill is passed. I confess, sirs, that I have given no little time to this side of the question. What each of you want to know is, What is the amendment going to cost the Government? How much additional will it carry in the pension appropriation bill? I might say here, however, that the American people are generous, they are fraternal, they are charitable, they are patriotic, and they rejoice that the nation is big enough and rich enough to be generous to its heroes.

But it is our duty to protect the National Treasury. There is not a soldier in the land to-day, I believe, who would wish us to do otherwise. Patriotism that sent a man to the front to fight the battles of his country would spurn the depleting of its Treasury, even if he should profit thereby. But I have looked into this question, and it is my opinion that it will not require to exceed $6,000,000 per year in addition to what we have appropriated for the past several years. Surely this is not exorbitant nor too much if this amendment will do better justice for our national heroes.

Last year we appropriated $144,000,000 for pensions, and I believe that the figures will demonstrate that $150,000,000 or $151,000,000 will prove abundantly adequate if this bill should pass. Let me also suggest that this amendment will save money in many particulars. I shall therefore give you first the additional cost of such a bill, and then give you the saving that will accrue to the Government under it.

First. In addition to what we are now paying in pensions it will cost as much more as it will take to bring every man under the new law who draws less than $12 up to that rate. From the report of the Commissioner of Pensions, I find that under the law there are pensioned—

	Per month.
104,834 at	$6.00
138,293 at	8.00
24,452 at	10.00
156,217 at	12.00

By computation, it would require $1,259,100 per month or $15,109,200 per year to bring all up to $12 per month. Similarly figuring, the honorable Commissioner of Pensions estimates that it would require $6,313,708.20 to bring all under the old law up to $12, provided they choose to apply under the new law as amended. This makes a total of $21,422,908.20 required to bring every man now on the pension rolls, under any law, who draws less than $12, up to that rating. From this we may legitimately deduct the savings to the Government by reason of the law. Last year practically $900,000 was paid out for medical examinations. By making a careful estimate it can be said that of this there was paid for new law cases, which would all be saved under the proposed amendment, $600,000.

On page 73 of the report of the honorable Commissioner of Pensions may be found Table No. 1, showing the number of pensions allowed and increased during the year, with the annual value of such issue and increase. This table shows what additional burdens are brought to the Pension Bureau in the natural course of business with the laws as they are at present—that is, that the pension roll and its value increases every year under present laws.

If any of those would be obviated by this proposed amendment, or rather if any of the natural increases to pension expenses and outlay under the laws as they are have already been included in the estimate under the proposed amendment, then it is fair that they should be deducted from the sum total necessary to carry into effect the amendment, for the reason that such increases would occur anyway under the law as it is, and hence are not properly chargeable to this amendment. The total value, as therein shown, of civil-war claimants, by allowances, and reissues, and restorations, and additional, and increases, and changing classes, was $4,114,851. Of this, $2,879,983 is directly traceable to allowances and increases, etc., under the new law, or the act of June, 1890.

It is but fair, then, in calculating the increase in the pension disbursements by reason of the proposed amendment, to deduct from the estimated amount the amount that we can reasonably expect the pension roll will increase under the present laws which have been duplicated in our estimates under the amendment. There is no better way to estimate the future, perhaps, than by the figures of the past. It is fair, then, to say that from the estimated increase by reason of this bill there should be deducted the amount that the roll will increase under the present laws.

Therefore, all of the amount which the roll will be increased under the law of 1890 as it is should be deducted. It is hard to tell just what proportion of the increase in the pension allowances by reason of the old-law claims should be deducted. Someone may say that the increase each year is offset to a considerable extent by depletion of the rolls by death, failure to claim, etc. But to this the answer is, that the same depletion would occur under the amendment, and the same decrease can be depended upon.

We find from the table that I have just referred to that on account of allowances, increases, reissues, etc., under the old law the pension roll was increased last year $1,234,868. Some of these allowances of course were to claimants already drawing more than $12 and some to claimants drawing less than $12. If we could figure just what proportion of these claimants were drawing less than $12, that amount should be deducted, as is deducted the entire amount of the increases, etc., under the new law, for in the computation that we have submitted we have contemplated the increase up to $12 of every soldier under both laws.

It is safe to say, perhaps, from observation and from the best estimates that can be made from the Commisioner's report, that one-half of the increase under the old law has been on account of pensioners drawing a rate less than $12. Therefore, if this is correct, from the estimated increase on account of this proposed amendment giving a flat rate of $12 there should be deducted the additional sum of $617,434 that we may expect persons under the old law, drawing a rate less than $12 per month, will increase their total pensions during any year with the law as it is now.

Table No. 3 of the report of the Commissioner of Pensions, page 76, shows the amounts of the first payment on every class of certificate during the last fiscal year. This represents the amount of back pay paid to the soldiers duriug the year, and if the present amendment should pass a great amount of this back pay would be saved to the Government by reason of the pensions being raised by virtue of the law, the same as in all other cases of this sort in the changing of the pension laws. This enormous item would be distributed among the soldiers in increase of their present ratings.

While the amount as shown by the report would probably not represent anywhere near the amount that would be saved each year hereafter, at least the amount that is shown to have been paid under the 1890 law would be saved, and also a considerable portion of that paid under the general law, for the reason that many claimants who are prosecuting their claims under the general law and who draw less than $12 per month, if they should

present their claims and draw $12 under the 1890 law, would drop their claims under the general law.

We find from this table that there was paid out last year in first payments, or in back pension, under the new law, $4,309,502.46, and under the general law, or the old law, they have paid out $1,604,028.22. It would not be too much to estimate that one-third of this latter amount would be saved by reason of the passage of this amendment, which would amount to $534,676.07, or a total saving of $4,944,178.53.

Table No. 11, page 85 of the Report of the Commissioner of Pensions, shows that the total expense of running the Pension Bureau, outside of disbursing agencies and examining surgeons, during the last fiscal year has been $2,498,639.90. This, of course, includes the salaries of officers and clerks, stationery, printing, postage, etc.

It is quite possible that during the first year after this amended law should go into effect that the clerical force could not be reduced; that the postage and stationery and printing account might not be reduced; but when the claims had been adjusted to this new law, then certainly the force of clerks could be reduced at least one-half, and the postage and miscellaneous expenses could be reduced the same, for the reason that two-thirds of the claims that are filed in the Department, being under this law—if these claims are satisfactorily adjusted, as they will be by this amendment—then certainly we can expect that one-half of the force and one-half of the printing, etc., would attend to the other one-third.

At page 61 of the Commissioner's report we find that last year there was paid in attorneys' fees $591,245.22. I believe it is safe to say that two-thirds of this amount, or $394,163.48, was paid on account of the new-law claims. An amendment of this sort would save this almost entirely to the soldiers. To be sure it would make no saving to the Government, and thus could not be legitimately considered to reduce the additional appropriation necessary to carry into effect this proposed amendment. But, being in favor of the soldier, it is a matter worthy of our consideration in this connection. The old veteran is annually paying that much out in his vain struggle to obtain what he believes his rights to be under the new law. This amendment saves that amount to him.

The Commissioner reports to us that of the money which Congress appropriated for pensions, $5,471,985.17 remained unexpended at the end of the fiscal year. Accordingly, there was $138,528,014.83 expended for pensions last year. If to this we add the $21,437,847 necessary to bring all up to the $12 rating, we would have a total pension roll of $159,965,861.83, and from this deducting the savings, as I have heretofore set out, would leave $149,774,946.35, the amount actually necessary to carry into effect the provisions of this amendment. This is $5,775,946.35 more than the appropriation for the last fiscal year, and within the amount that I stated at the beginning the bill could be put in operation for. Or, to summarize:

Additional cost to raise all now drawing under new law to $12		$15,109,200.00
Additional cost to raise all now drawing under old law to $12		6,328,647.00
Total additional cost		21,437,847.00
Saved by reason of this amendment:		
Account of medical examination fees	$800,000.00	
Account of increase under new law as it now is	2,879,983.00	
Account of increase under old law as it now is	617,434.00	
Account of back pension under new-law claims	4,309,502.46	
Account of back pension under old-law claims	534,676.07	
Account of saving expense of Bureau	1,249,319.95	
Total saving		10,190,915.48
Net increase of cost		11,246,931.52
Present expenditure		138,528,014.83
Total amount necessary, with law amended		149,774,946.35
Present appropriation		144,000,000.00
Additional appropriation necessary		5,774,946.35

It may be argued against the passage of this bill that even if this law would pass, and a $12 rating was given to the soldier under the new law, he would still prosecute his claim under the old law, but he certainly would not do it unless he had rights under that law. This he can do now. The pending measure neither adds to nor takes from his rights under other laws. But the time has passed for proving up claims under the old law. Only 543 were able to do so last year. Forty years of time is too long to go back through and find witnesses. Death has thinned the ranks of comrades; age and long intervening years has made uncertain memories.

The present system of proof has outlived its usefulness. It is ridiculous to ask a man to remember details of things that happened nearly half a century ago. Yet, supremely ridiculous as is the asking of it, even more unjust is the requirement of it from the pensioner as a condition precedent. But suppose somebody did apply under the old law after this amendment goes into effect, he has done no more than he will do with the law as it is now. They have their old law right now, and this amendment gives them nothing additional in this respect, nor should it take anything away in that respect.

During the last fiscal year there were filed of original applications under the new law, or the act of June, 1890, 7,571, and of these 1,335 had claims pending under the general law, while 4,240 had claims admitted or were drawing pension under the old law. Of course, those persons who had claims admitted and applied under the new law were drawing less than $12 under the general law. This shows the determination of the old soldier in procuring the rating of $12; after his claim has been adjudicated under the general law and he has not reached a $12 rating, he has applied under the new law; while the figures also show that while the claimant was still hopeful under the old law, even though actually drawing nothing, that of some 7,000 applications only 1,335, or less than one-fifth, had claims pending under the old law.

On the other hand, we find that last year there were filed original claims under the old law, 943, and of these 943 there were 476 who had new-law claims pending and 647 that had new-law claims admitted. This, of course, represents men who are either drawing no pension or who are drawing less than $12 per month, and rather than being a reflection upon the old soldier, it only shows the fruitless effort and the work that is necessary to draw a pension at all.

A case that has come under my own personal observation is perhaps in point in this particular. The veteran served four years and six months in the civil war. He was a good soldier—not a blot upon his record. He was at the front, and the fact that he was at the front, together with the additional fact that he has not a line of hospital record, probably prevents him from drawing a single cent of pension. He has only six teeth in his head. He is totally deaf in one ear and nearly so in the other. He is bowed down with years. He carries, plainly visible, the marks of a veteran. To a layman it is easily apparent that he is absolutely unable to earn a living by manual labor; yet this decrepit old veteran, after four years and a half of patriotic service to his country, is denied a penny of pension by the Government he served so long and faithfully. He is caught between the machinery of the two laws. While he has had applications in under both laws, and this counts for two claims, yet he would be satisfied if he could draw $12 per month under either.

His claim under the old law is based upon scurvy. Evidence enough to satisfy any jury to the effect that he had scurvy in the Army has been introduced. There is not a single syllable of testimony to dispute that fact or to contradict the evidence in his behalf. Several witnesses, together with some of the officers of his regiment, testify as to his affliction. One comrade, who knew him before he enlisted, messed with him during his service, and who testified that he knew him like a brother, makes affidavit as to the disease.

Another comrade, who did not know him until after he enlisted, testified as to his disease in the Army, that claimant states brought on his disability. The medical examining board say that there is history of the disease which the claimant and his witnesses testify that the soldier had in the service, yet, under the old law, the claim is rejected, for the alleged reason that there is insufficient evidence to prove the continuance of the disease during all the years intervening between his discharge and the present.

Under the new law the claim has been rejected on the ground that loss of hearing and loss of teeth did not incapacitate him from earning a living by the performance of manual labor. Thus, I say, between the machinery of the two laws this claimant, old and broken in health, bearing the marks of his service, in his declining years is yet unable to partake of the bounties which this Government has so generously intended for her national heroes.

This is a single case of why a law of this sort should be passed. Take it out of the hands of the medical board, or the board of review, or the rating board, or any other board, to say what disables a man and what does not disable a man, or to what degree a man is disabled or is not disabled, and let this Congress of the United States, the Representatives of the people, say, in words so plain that they may be understood, that the soldiers of this country who followed its flag in times of sore distress shall be protected.

Again I repeat that in my judgment the trouble with the pension system is its uncertainty, its incomprehensible incongruities. The soldiers are not complaining for higher pensions so much as they are for their rights as the laws now are. Let Congress make the rate. Let it be a certain, definite, fixed rate, conditioned in the law of 1890, only upon patriotic service to the country and an honorable discharge.

This is not liberality; it is only justice. It is little reward, indeed, to compensate the fighting and the dying, the suffering and

the privations that those men went through. I wish we could do more. They did a patriotic duty, and performed it as only a hero could. They marched into the jaws of death and brought out Old Glory without a star missing. They charged the best and most determined foe that men ever went against, and brought as the victories of war a reunited nation, with all misunderstanding obliterated.

Let us pass this bill. It is only a little thing, but it means much to many men and many homes. It will not be operative long. Father Time has made old men of the boys of "'61," and the silent call of death is mustering them out after a life well spent in patriotic service of their country. Let us help them now, while we may, for we may not when we would.

Eulogy on Death of the Late Robert E. Burke.

REMARKS

OF

HON. CHARLES W. THOMPSON,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 8, 1902.

The House having under consideration the following resolutions:

"*Resolved*, That the business of the House be now suspended in order that an opportunity may be given for tributes to the memory of Hon. ROBERT E. BURKE, late a member of the House of Representatives from the State of Texas.

"*Resolved*, That as a particular mark of respect to the memory of the deceased, and in recognition of his eminent abilities as a distinguished public servant, the House, at the conclusion of these memorial proceedings, shall stand adjourned.

"*Resolved*, That the Clerk communicate these resolutions to the Senate.

"*Resolved*, That the Clerk be, and he is hereby, instructed to send a copy of these resolutions to the family of the deceased"—

Mr. THOMPSON said:

Mr. SPEAKER: In the death of ROBERT EMMET BURKE Alabama sadly notes the close of the noble career of one of her most distinguished sons. His adopted State of Texas is justly proud of him, but not more proud than his native State of Alabama. He was born of honest and humble parents in a county adjoining my own, and one of the counties of my Congressional district. It was not my pleasure to know him personally, but I am proud to add a testimonial to the many already offered in memory of such a grand life, so full of usefulness to his people and his country.

Alabama has contributed a large number of useful and distinguished men to the national councils, and not a few have come out of Mr. BURKE'S native county, Tallapoosa. That county furnished the Lone Star State with another eminent and highly honored gentleman, Judge David B. Culberson, whose eldest son, also a native of Tallapoosa County, now fills a prominent position in the United States Senate in a manner worthy of his ancestry.

But we have no cause to be prouder of any man who has gone out of our State than of the lamented ROBERT EMMET BURKE. He was an honest, unpretentious, unselfish, conscientious, courageous man. Prompted by the same patriotic motives that carried so many of our noble sons to the battlefield, he entered the military service of the Confederacy at the early age of 16 years, conceiving it to be not only his duty but also a privilege to offer his life in defense of the principles animating the South in the terrific struggle of 1861–1865. And although I did not go with him through the bloody conflicts of that war, being much younger than he was and far too young to act as a soldier, I know full well the brave record he made in the army, and the history of his subsequent public career—the splendid services he rendered to the State of Texas and to the United States. I know well the confidence which he won from the community in which he lived and the community at large. The esteem and honor bestowed upon him by his fellow-countrymen all along the journey of his life demonstrate to me his loyal devotion to his country and to what he considered to be right and his faithful performance of every duty that was intrusted to him.

I have alluded to some of his characteristics—his bravery, as shown in the war, his honesty, simplicity, and unselfishness, all of which were attested by the everyday acts of his life, and for which he became noted among all his friends and acquaintances. I might also dilate upon other characteristics—the sturdy perseverance and will power which enabled him to grapple with the hard conditions which confronted him at the end of the war, and the thoroughness and conscientious care which he bestowed on everything which he undertook. He found himself in 1865 without any money, without any profession, and without a sufficient education. Nevertheless, he determined to overcome all these obstacles. He determined to get an education and to become a lawyer; and in spite of his poverty he did get an education, and a good one, and did become a lawyer, and a very good one. In his new home in Texas, where he located in his nineteenth year, he settled down manfully to work and study, and by the time he was 23 years of age he had been admitted to the bar. Then followed eight years of steady devotion to his profession, during which he won the respect of every citizen of Dallas; and then, at the age of 31, he was elevated to the bench, serving as county judge and district judge for many years, and until he was promoted in 1896 to represent his district in the Fifty-fifth Congress, and afterwards in the Fifty-sixth; and he had been reelected to this present Congress when death snatched him away from his field of usefulness in the prime of life aud at the untimely age of 54.

This is certainly a proud record—the record of a self-made man, triumphant over the most disheartening difficulties, and successful in all essential particulars, socially, intellectually, and morally. And yet none could be more modest and unassuming than he was in relation to his achievements and abilities. For that very reason, all the more did his constituents at home and his associates here delight to honor him. He never boasted or pushed himself into prominence, but his works and deeds spoke for him and made him prominent. The testimony is unanimous as to the sterling character of his work as a lawyer and judge, and his record in Congress was also most honorable and serviceable, as we all know.

The pity of it is that he should have been cut down at the very height of his usefulness and when his race was but half run, at least so it appears to our finite intellects. We must not presume to criticise the decrees of the Almighty, who "doeth all things well," but there are times when human understanding is staggered and the human heart tempted to rebel as we contemplate such untimely deaths as this. However, we know that we must submit, and must at least try to realize that all is for the best. Hapily, Mr. BURKE'S record was complete in one sense of the word. Though cut short, it was complete in quality. It had not a flaw in it, and its value as an example and an incentive to virtue for those of us who remain could not have been greater if he had lived a full century.

Personal fidelity to his duties was a shining quality in Judge BURKE. In this age of hurry and worry there is great temptation to attend to our business by proxy, and far too great yielding to the temptation. Judge BURKE did not delegate his duties to substitutes and subordinates. So far as it was physically possible, he personally attended to the requests of his friends and constituents. Indeed, it is probable that his untiring assiduity and conscientiousness in this respect caused the breakdown in his health which became noticeable in the last session of Congress.

Akin to this trait was his spirit of loving-kindess toward his friends and toward all mankind. The list of the favors and benefits which he had conferred and showered all around him as he journeyed through life would be too long for anyone to undertake to write or to recite. The consequence was that his friends were true friends, and innumerable.

His character shone brightly also in his domestic relations, and sad indeed is the bereavement which has come to the family circle of such a man as Judge BURKE. Above all, he was a true and sincere Christian, and although he loved life, and strongly desired to live longer for the benefit of his fellow-men, when the summons came he was ready to obey it, and to resign his soul to Him in whom he had trusted. Though we who are left behind must sorrow over our great loss, we find unspeakable comfort in the sure belief that all is well with him now and forevermore.

The Oleomargarine Bill.

SPEECH

OF

HON. GEORGE A. PEARRE,

OF MARYLAND,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 11, 1902.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 9206) to make oleomargarine and other imitation dairy products subject to the laws of the State or Territory into which they are transported, and to change the tax on oleomargarine—

Mr. PEARRE said:

Mr. CHAIRMAN: The controversy between the people and the manufacturers and sellers of oleomargarine, which seeks to find its settlement in the provisions of this bill, is not a new one, but has been waged for some years. In order to get a clear idea of the bill and its object, it may be well to review the circumstances which have created the necessity for legislation regulating the

manufacture of oleomargarine. The first animal fat used for the purpose for which butter is now used was butter itself. In its primitive form and its early uses it can not be said to have been a manufactured product, but was a natural product. The milk or cream of the cow was taken, and after being subjected to the simple process of stirring up or churning it became butter. The process itself was not an artificial process, but as nearly a natural process as could well be conceived, and there has been but little departure, excepting slight improvements, from the method originally employed.

Butter so produced was at all seasons of the year of a yellow color, varying from a deep golden in summer to a light yellow in winter. Yellow, therefore, is the natural color of butter not made by artificial process or brought out by the introduction of any foreign material. Nature first gave butter its color, not man. Butter, therefore, has a natural patent on the yellow color. With its natural color and great recognized wholesomeness and palatableness, it held the market undisputed for centuries. It is true that as time went on, as populations increased, and the demand for butter became greater, it began to be made not only on the farm, but in the large creameries, where finally a little harmless coloring matter began to be added to it for the purpose, not of deceiving anyone nor of imitating any other product, but of securing uniformity in color throughout the year.

During the Franco-Prussian war, when the industries of France were paralyzed, its men were taken from the farms to fill the armies of France, food for cows was seized for the use of the armies, and milch cows thus became so few in number that it was impossible for France to procure from the cow butter enough to feed her own people and meet the demands of her armies. In this position of dire extremity the necessity for a cheap substitute for butter became urgent, and the genius of a Frenchman discovered for France and for the world a method of meeting that demand by a process which utilized animal fats other than those contained in the milk or cream of cows. This product was manufactured and sold in the open market for a number of years without complaint until it was discovered that the maker of oleomargarine was manufacturing his product in such manner as to imitate the form, color, taste, smell, and consistency of butter, and was selling it, not as oleomargarine, but as butter.

Then the fight began between the honest product, which had never been sold for aught but what it was, against a fraudulent imitation, which for the last fifteen years, at least, has scarcely ever been sold for aught except what it was not. Then the people complained, because when they went to get butter they were deceived into buying oleomargarine at a butter price. The farmer began to complain because his honest product was being supplanted through fraud by a dishonest product. The manufacturer at the creamery began justly to complain because his market was being stolen from him by a bastard butter. These three classes, composing more than 60,000,000 of the inhabitants of the United States, began to clamor at the doors of the legislatures of the various States until the legislatures of Alabama, California, Colorado, Connecticut, Delaware, Georgia, Illinois, Iowa, Kentucky, Maine, Maryland, Massachusetts, Minnesota, Missouri, Vermont, New Hampshire, New Jersey, New York, North Dakota, Ohio, Oregon, Pennsylvania, South Carolina, South Dakota, Tennessee, Utah, Nebraska, Virginia, Washington, West Virginia, Wisconsin, and Michigan, 32 out of 45 States in the Union, passed laws prohibiting the sale of oleomargarine colored in imitation of butter.

The people thus attempted to reach this spurious butter by what appeared to them to be the most direct method, through the legislatures of their States, and then rested, as they supposed, secure in the efficiency and inviolability of the law. But the laws of the States immediately proved to be ineffective against the persistency of the manufacturers of the oleomargarine. They immediately attacked the antioleomargarine laws of the States on the ground that they were unconstitutional, and a number of cases were taken to the Supreme Court of the United States. This court determined that the State has the power, through its legislature, to control the manufacture and sale of oleomargarine within its own borders. The most recent of these decisions is that of the Capital City Dairy Company, plaintiff in error, *v.* The State of Ohio, ex. rel. attorney-general, decided January 6, 1902.

Among these cases was the Plumley case, which arose under the statute of the Commonwealth of Massachusetts (Plumley *v.* Mass., 155 U. S., 461), prohibiting the sale of any substance made in imitation of yellow butter produced from pure unadultered milk or cream of the cow. Plumley was convicted for violation of this statute and the case was taken to the supreme court of Massachusetts and finally to the Supreme Court of the United States, where in December, 1894, the judgment of the state court convicting Plumley was affirmed. In the case of Scholenberger *v.* Pennsylvania (171 U. S., 1) the Supreme Court has said:

We hold that, in the absence of Congressional permission to do so, the State had no power to interfere by seizure or any action in prohibiting the importation and sale by a foreign nonresident importer.

This decision was based upon the case of Leissy *v.* Hardin (135 United States, 100), usually called the original-package case, in which it was decided that intoxicating liquors shipped from the State of Illinois into the State of Iowa might be lawfully sold in the latter State in the original package in which it was exported or brought within the State, notwithstanding the statute of Iowa forbidding the sale. The Iowa statute was therefore held to be in derogation of governmental control of "commerce among the States" and an unlawful interference of the right of interstate commerce. The Plumley and Scholenberger cases in the decisions of our highest judicial tribunal caused much difference of opinion among lawyers and courts in the enforcement of the antioleomargarine laws of the States, and on account of this conflict and that portion of the Scholenberger case above quoted the necessity for national legislation became apparent. The oleomargarine dealers seemed determined to sell imitation butter in spite of State laws and Supreme Court decisions, and some State judges sustained them in their contentions. Then it was that the people of the various States, foiled in their efforts to suppress this growing fraud by the apparent conflict of the decisions of the Supreme Court of the United States and by the decisions of the courts of the States, applied to the Congress of the United States to enact such legislation as was suggested by the Scholenberger case to be necessary.

The Congress of the United States had taken the matter up in 1886 and passed the act approved August 2, 1886. This bill imposed certain special taxes upon manufacturers and wholesale and retail dealers of oleomargarine and endeavored by such safeguards as occurred to Congress at that time to prevent the fraudulent sale of this product. It also imposed a tax of 2 cents a pound on all oleomargarine which shall be manufactured and sold, etc. This law was presumed to be drastic in its provisions, but proved to be utterly inefficient in suppressing the gigantic fraud at which it was aimed. Notwithstanding this law and the laws of 32 States prohibiting in different forms the manufacture or sale of oleomargarine colored yellow, the manufacture and sale of oleomargarine rapidly increased, until to-day there are 107,000,000 pounds of it manufactured and sold annually, being equal in amount to about one-seventh of the butter that goes upon the market annually. This suggested the necessity for further legislation, and the farmers of the country, 5,000,000 in number, sturdy, honest, fair men, determined that, while they had no objection to the manufacture and sale of oleomargarine uncolored and as oleomargarine, they would fight to the death against the sale of oleomargarine colored in imitation of butter and sold as such. Again they came to Congress and the result of their appeal is the present bill.

Let us take a short review of its provisions. The first section merely designs to subject to the laws of the States or Territories or the District of Columbia all oleomargarine, butterine, and imitation butter, etc., when it comes within the limits of the State, thus avoiding the decision of Leissy *v.* Hardin by adopting the suggestion of the Scholenberger case. While the bill was being considered in the committee it was discovered that there was nothing in the bill to prevent anyone from purchasing white oleomargarine and, by the simplest kind of a process, adding coloring matter so as to give it the yellow hue of butter. This was discovered by the committee in a visit to a butterine factory at Langdon, in the District of Columbia. It was there shown to the committee that white oleomargarine might be taken and a little coloring matter very readily introduced into it without changing the form of the oleomargarine. In order to prevent this and to prevent the sale of colored oleomargarine at any time by hotels, restaurant keepers, and boarding-house keepers, section 2 was added to the bill.

The oleomargarine people had declared that they had been imposed upon. They said that they had no desire to violate the law; that oleomargarine was as pure as butter, would sell on its own merits as oleomargarine, as it was a pure product as they claimed, and they ought to have the right to manufacture it without a tax of 2 cents per pound upon it. In order to give the oleomargarine people an opportunity to prove the honesty of this declaration and to relieve them as far as possible of the tax upon the uncolored product, the committee which reported this bill determined to reduce the 2 cents per pound tax of the act of 1886 on uncolored oleomargarine to one-fourth of a cent per pound. This will enable the honest oleomargarine manufacturer who wants to sell uncolored oleomargarine to sell it with only such tax upon it as is necessary to give the Government supervision over it through the Internal-Revenue Department of the Government, and the committee increased the tax on colored oleomargarine from 2 cents to 10 cents per pound in order to make it unprofitable for manufacturers and sellers of oleomargarine to sell oleomargarine colored yellow to imitate butter.

Section 4 of the bill requires wholesale dealers of oleomargarine

to keep such books and make such returns as the Commissioner of Internal Revenue may require, etc. This is done to enable the Internal Revenue Bureau of the Treasury Department to keep tab on the wholesale dealers or manufacturers.

A great cry goes up from the manufacturers of oleomargarine against this bill. They claim first that it is unconstitutional, because they say oleomargarine is a pure-food product and Congress has no right to tax it, and yet the minority of the Committee on Agriculture, who have never been charged with being hostile to oleomargarine interests, have reported a bill, which is offered as a substitute for the majority bill, by which section 8 of the act of 1886, which imposes a tax of 2 cents per pound on oleomargarine, is not repealed. If it be unconstitutional to tax oleomargarine 10 cents per pound, it is certainly one-fifth as unconstitutional to tax it 2 cents per pound. It seems to have been left to the minority of this committee to discover degrees of unconstitutionality which have never been recognized on earth before.

The next objection is that the whole burden of the tax is placed upon the manufacturer, who complies with the law in every instance, and they claim that the retail dealer, who perpetrates the fraud, escapes unscathed of the law. It is true that the burden of taxation and the penalties of the law fall largely upon the manufacturer, and it is equally true that the manufacturer to-day complies with the law. It is also true, however, that the manufacturer, as has been shown at every hearing upon this subject, encourages the retail dealer to sell his product as butter in violation of the law and furnishes him assurances of assistance in defending prosecutions and the payment of his fines if convicted. At the hearings before the committee public advertisements were shown of the largest oleomargarine firms in Chicago to the effect that if the retail dealers would buy of these firms and sell the product of these firms the firms would protect them as aforesaid, paying all attorneys' fees, conducting all the proceedings, and paying all the penalties.

The experience is of those whose duty it was under the act of 1886 to prosecute for fraudulent sales of oleomargarine discovered that the only way to correct the evil was to get down to the root of it, the manufacturer. They saw that as long as the manufacturer with ample wealth and enormous profits would assure immunity to the retail dealer, he would take the slimmest chance of prosecution on account of the large profit he could make in selling oleomargarine as butter, especially when he knew if ever detected and prosecuted it would cost him nothing. And the retail dealers did take these chances, as will be seen from the fact that in spite of a law in Illinois prohibiting the sale of colored oleomargarine, as much as 18,000,000 pounds have been sold in that State in a year. In spite of the fact that the same kind of a law in Pennsylvania 11,000,000 pounds of oleomargarine have been sold there in a year.

In spite of the fact that the State of Maryland has a law which prohibits the manufacture or sale of oleomargarine made in imitation of butter out of anything but the pure milk or cream of the cow, 1,400,000 pounds of oleomargarine have been sold in Maryland in a year. The latter figures are startling when it is contemplated that less than 3,000,000 pounds of butter are manufactured in Maryland in a year. By this I mean made in creameries or establishments of that sort, while over 9,000,000 pounds of butter are produced by the farmers. These figures must give us cause to pause if the rights and interests of the farmers are to be considered at all. If in a State like Maryland, with a law absolutely prohibiting the manufacture or sale of oleomargarine, 1,400,000 pounds of oleomargarine can be sold in a year, a little over one-eighth of all the butter in Maryland manufactured or produced on the farm, how long would it be without effective laws against oleomargarine before the farmers in Maryland would be absolutely driven out of the butter business?

Mr. Chairman, this bill is neither unconstitutional nor unusual, and its opponents know it. It is not only constitutional and usual, but absolutely necessary. Why, sir, is there any difference in principle between this law and the act of August 12, 1898, against mixed flour? Is it less constitutional or does it differ in principle from the act of June 6, 1886, against filled cheese? No; it is identical in principle with these two acts, whose constitutionality has never been questioned, either in Congress or in the courts, and the necessity of which to prevent the adulteration of food products is admitted by all fair-minded men. In the Plumley case, above referred to, Justice Harlan, in affirming the judgment of the State court, says:

> And yet it supposed the owners of a compound which has been put into a condition to cheat the public into believing that it is a particular article of food in daily use and often eagerly sought for by the people in every condition of life are protected by the Constitution in making and selling it against the laws of the States in which it is offered for sale, because it is in the original package and had become a subject of ordinary traffic.
>
> We are unwilling to accept this view. We are of the opinion that it is within the power of the State to exclude from its markets any compound manufactured in another State which has been artificially colored or adulterated so as to cause it to look like an article of food in general use, and the sale of which, by reason of such coloration or adulteration, cheat the general public into purchasing that which they may not intend to buy. The Constitution of the United States does not secure to anyone the privilege of deceiving the public. The deception against which the statute of Massachusetts is aimed is an offense against society. The States are as competent to protect the people against such offenses or wrongs as they are to protect them against crimes or wrongs of a more serious character, and this protection may be given without violating any right secured by the national Constitution and without infringing the rights of the General Government. A State enactment forbidding the sale of a deceitful imitation of an article of food in general use among the people does not abridge any privilege secured to the citizens of the United States, nor in any just sense interfere with the freedom of commerce among the States.

The oleomargarine people complain that a tax of 10 cents per pound on colored oleomargarine will tax it out of existence and break up a great industry. The answer to this is that the act of 1886 imposed a tax of only 2 cents on oleomargarine. This was thought to be a sufficient warning against the further perpetration of this fraud, together with the other provisions and penalties of that act. The oleomargarine people would not be warned; they openly and defiantly violated the law, and if it be necessary to tax oleomargarine out of existence in order to suppress this monumental fraud of the century, on account of the unwillingness of the manufacturer to obey the milder laws, then it deserves destruction, and the manufacturers can blame nobody but themselves. The people have protested, the manufacturers of butter have prayed, the farmers have besought, the State legislatures have directed by law, and the United States Congress has ordered that the oleomargarine people must sell oleomargarine as oleomargarine and not as butter.

In spite of appeal, in spite of protest, in spite of beseechings, in spite of the laws of the States and the acts of Congress, the oleomargarine people, drunk with their intoxicating successes from fraudulent sales, have turned a deaf ear to all and defied everybody, from the Supreme Court of the United States down, until the day for their complaining has passed and they must abide by the law or suffer its consequences. If this act be too drastic, it is their own fault; if they had obeyed the prohibitions of the State legislatures there would have been no further complaint; if they had obeyed the act of 1886 there would have been no further legislation; but since they have seen fit to set themselves up against the people of the United States and its moral sentiment they must yield and betake themselves to honest dealing.

Mr. Chairman, I have no quarrel with any man who manufactures oleomargarine as oleomargarine and sells it as such, and I would originally have had no objection to his coloring it any color he desired, provided he had sold it as oleomargarine, nor would the farmers and people of the United States; but after the manufacturers of this article undertook to color it for the purpose of perpetrating a fraud, then there was only one thing left to do, and that was to take from them the right to color it in imitation of butter. Colored butter, as the able Secretary of Agriculture, Hon. James Wilson, very tersely said, deceives nobody, but colored oleomargarine deceives everybody. That is a sufficient reason for depriving the oleomargarine manufacturer or dealer of the right to color his oleomargarine.

I have never yet, sir, been able to bring myself to believe that oleomargarine is a wholesome product; certainly not so wholesome as butter. It is well known that the best physicians in the world to-day prescribe large quantities of butter for delicate, dyspeptic, and catarrhal stomachs, but I have never yet known any physician of repute, whatever his views may have been as to the respective wholesomeness of these two articles, who has prescribed the free use of oleomargarine in cases of delicate stomach. It may be true, sir, that oleomargarine can be manufactured in such a way as not to be distinctly unwholesome to a healthy man, but it is equally true that when men are engaged in fraudulent practices, as most of the oleomargarine manufacturers undoubtedly have been and are, the temptation to make butter out of almost any kind of fat by means of oleomargarine inventions is a very strong one, especially when the profits are so enormous and the probabilities of detection so small. It may be made in a cleanly manner and purely, but it also may be made in a dirty manner and impurely.

My hostility to impure and fraudulent food products is not confined to oleomargarine, but extends to every honest food product which is adulterated in any way. If it be discovered that butter is not made in a cleanly fashion, then, too, the manufacturer of butter should be subjected to such regulations and inspections as will insure its purity; and this is true of every other food product.

The suggestion has been made that the laboring men of the country are behind this gigantic fraud. I spurn that suggestion. The laboring men in my district, sir, are as honest and upright and as much opposed to fraudulent practices as any men under the sun, and the manufacturers of imitation butter will get little comfort from the laboring man when he understands that they are trying to hide this fraud behind what they claim is his poverty and necessity. The laboring men in my district want butter

when they pay for it, and do not want to be deluded into paying a butter price for beef fat, lard, and cotton-seed oil.

If the oleomargarine people are honest in their belief that oleomargarine is a pure, wholesome, and palatable article, what objections can they have to the provisions of this bill? The people want the traffic in this article so regulated that when a man buys oleomargarine he will know it, and will pay only for oleomargarine, and that when he wants butter he will not pay a butter price and get oleomargarine.

Mr. Chairman, the minority of the committee have offered a bill of their own as a substitute to the majority bill. A moment's examination discloses the fact that it is not in any sense an improvement on the present legislation. The minority of the committee relies upon section 6 to prevent the abuses in the manufacture and sale of oleomargarine, which it admits. This section provides as follows:

That all oleomargarine shall be put up by the manufacturer for sale in packages of 1 and 2 pounds, respectively, and in no other or larger or smaller package; and upon every print, brick, roll, or lump of oleomargarine, before being so put up for sale or removal from the factory, there shall be impressed by the manufacturer the word "Oleomargarine" in sunken letters, the size of which shall be prescribed by regulations made by the Commissioner of Internal Revenue and approved by the Secretary of the Treasury; that every such print, brick, roll, or lump of oleomargarine shall first be wrapped, with the word "Oleomargarine" printed on the outside thereof in distinct letters, and said wrapper shall also bear the name of the manufacturer, and shall then be put up singly by the manufacturer thereof in such wooden or paper packages or in such wrappers, and marked, stamped, and branded with the word "Oleomargarine" printed thereon in distinct letters, in such manner as the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, shall prescribe, and the internal-revenue stamp shall be affixed so as to surround the outer wrapper of each 1 and 2 pound package: *Provided*, That any number of such original stamped packages may be put up by the manufacturer in crates or boxes, on the outside of which shall be marked the word "Oleomargarine," with such other marks and brands as the Commissioner of Internal Revenue shall, by regulations approved by the Secretary of the Treasury, prescribe.

The act of 1886 provides "that the retail dealer in oleomargarine must sell only from the original stamped packages in quantities not exceeding 10 pounds, and shall pack the oleomargarine sold by them in substantial wooden or paper packages, which shall be marked and branded as the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, shall prescribe." Pursuant to this provision the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, prescribed as follows:

New wooden or paper packages similar to those usually employed in selling butter and lard at retail may be used by the retail dealer in oleomargarine.

Each retailer's wooden or paper package must have the name and address of the dealer printed or branded thereon, likewise the words "Pound" and "Oleomargarine," in letters not less than one-fourth of an inch square, and the quantity written, printed, or branded thereon in figures of the same size (one-fourth of an inch square), substantially as follows:

a ——— ———
b ——— ———
c ——— ———

ONE-HALF POUND OLEOMARGARINE.

The words "Oleomargarine" and "Pound," which are required to be printed or branded on retailers' wooden or paper packages, in letters not less than one-fourth of an inch square, and the quantity which is required to be written, printed, or branded thereon in figures of like size, must be so placed as to be plainly visible to the purchaser at the time of delivery to him. Illegible or concealed marks and brands are not those contemplated and required by the law and regulations. It will not be deemed a compliance with this regulation if the word "Oleomargarine" and the other required words and figures shall be illegibly branded or printed, or so placed as to be concealed from view, by being on the inside of the package, or by folding in the stamped portion of the paper sheet used for wrapping or otherwise. The required words and figures must be legibly printed or branded and conspicuously placed, and no other word or business card should be placed in such juxtaposition thereto as to divert attention from the fact that the contents of the package are wholly oleomargarine.

It will be observed from these regulations, which must be read as the law, that the retail dealer must sell from the original package, in a wooden or paper package, marked with his name and address and the word "Oleomargarine" and "One pound" or "Half pound" marked on the package in letters not less than one-fourth of an inch square, and the package must be so wrapped that all these letters will be clearly visible to the eye of the purchaser. This has been the provision since 1886, and in spite of it 107,000,000 pounds of oleomargarine, or the largest part of this, has been fraudulently sold. Section 6 of the substitute bill prescribes that oleomargarine shall be manufactured in bricks of 1 and 2 pounds, with the word "Oleomargarine" pressed into the bricks, and then covered by a wrapper with the address of the seller and the word "Oleomargarine" and the quantity marked on it, this to be surrounded by the revenue stamp. What protection do these provisions give greater than the act of 1886, which has been violated so many thousands of times? None. It is true that a penalty is prescribed for the retail dealer if he tears off the revenue stamp, unwraps the wrapper, or obliterates the word "Oleomargarine" stamped in the oleomargarine.

a Here give dealer's name.
b Here give street number.
c Here give name of city or town.

So, too, as heavy penalties were prescribed under the act of 1886, if the retail dealer sold any oleomargarine which was not wrapped in the packages as I have shown. He did sell it under the act of 1886 in unmarked packages and in packages with the stamp hidden. He could do it, and he did it. He can, under the substitute provided by the minority, tear off the revenue stamp or take off the wrapper and very readily rub out the word "Oleomargarine" stamped in the brick. He took a chance of the imposition of the penalties under the act of 1886, and he would take a chance of the imposition of the penalties under the substitute. The act of 1886 proved to be inefficient to overcome the temptation presented to the retail dealer by his enormous profits to violate the law. The provisions of the substitute would prove equally inefficient.

Mr. Chairman, the people have spoken not only through their legislatures, but in this Hall through their Representatives, and this bill, as righteous a measure as was ever conceived and as necessary a measure as the undisputed facts demonstrate, will pass this House, and I believe the Senate, by substantial majorities; will vindicate the moral sense of the American people, and declare once and for all to adulterators of food and fraudulent imitators of honest products that they must stand upon the virtues and merits of their own articles and will not be allowed to deceive a worthy and trusting people with fraudulent imitations. [Loud applause.]

Oleomargarine Bill.

SPEECH
OF
HON. SAMUEL S. BARNEY,
OF WISCONSIN,
IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 11, 1902,

On the bill (H. R. 9206) to make oleomargarine and other imitation dairy products subject to the laws of the State or Territory into which they are transported, and to change the tax on oleomargarine.

Mr. BARNEY said:

Mr. CHAIRMAN: When this bill was before the House for discussion during the Fifty-sixth Congress I took occasion to express my views upon it, so what I may now say will necessarily be, in a measure, a repetition of what I then said.

The primary object of this measure is to place a tax upon oleomargarine, the tax upon the natural or uncolored article to be merely nominal—one-fourth of 1 cent per pound—and the tax on the unnatural or colored article to be 10 cents per pound, which the enemies of the bill claim will, in effect, be prohibitory.

Time alone will prove the truth of this prediction, and if it shall prove to be true it is, in my opinion, the great reason why this bill should become a law.

Because this measure will thus be in effect prohibitory is a reason given by many in opposition to it and for the argument that it will be unconstitutional.

At this late day it seems hardly necessary to meet this argument or to say one word in defense of the constitutionality of this measure, and yet, as the contrary position has been taken in evident good faith by many able men on this floor, it may not be out of place to spend a little time in its discussion.

The taxing power of Congress is unquestioned and unquestionable, and is given in the following language in the Constitution:

The Congress shall have power to lay and collect taxes, duties, imposts and excises, to pay the debts and provide for the common defence and general welfare of the United States; but all duties, imposts and excises shall be uniform throughout the United States.

It will thus be seen that the power of taxation is given to Congress for three purposes, viz, (1) to pay the debts; (2) to provide for the common defense, and (3) to provide for the general welfare of the United States; and for these purposes there is but one limitation upon the power, and that is that "all duties, imposts and excises shall be uniform throughout the United States." There are other limitations upon the methods of taxation provided for, but they do not affect this right and are not pertinent to the question under discussion.

In the first place, I think it can well be maintained, both upon principle and precedent, that under the provision "for the general welfare" Congress can impose a tax which will limit and even prohibit the manufacture of any article, being justified by the letter of the Constitution and by the fact that such article is injurious to the public health or morals, is inimical to general prosperity, that it is fraudulent in character, and thus needs public surveillance, or for many other reasons. And from the foundation of this Government under the Constitution Congress has exercised the power of taxation "for the general welfare." The very first

law passed by Congress, and which was signed by President Washington July 4, 1789, stated as one of its purposes that it was "for the protection of American industries;" and no protective tariff law can be justified under the Constitution on any other ground than that it is "for the general welfare."

Almost if not from the very foundation of this Government we have had laws enacted by Congress and upon our statute books entirely prohibiting the importation into this country of certain articles, viz, obscene pictures and literature, certain medicines to be used for immoral purposes, and other like articles.

A heavy tax is now placed by the Federal Government upon all classes of intoxicating liquors and many other articles, one of the objects, or at least effects, of which is, if not to limit the manufacture and sale of these articles, to put them under Federal control, and thus indirectly exercise police power through the power of taxation.

Judge Story in his great work, in discussing this taxing-power clause, uses the following language:

> So that whichever construction of the power to lay taxes is adopted, the same conclusion is sustained that the power to lay taxes is not by the Constitution confined to purposes of revenue. In point of fact, it has never been limited to such purposes by Congress, and all the great functionaries of the Government have constantly maintained the doctrine that it is not constitutionally so limited. (1 Story Constitution, sec. 973.)

Forty years since Congress passed a law imposing a tax of 10 per cent upon the issue of State banks, and this law has remained upon our statute books ever since, and I have never heard of a single dollar having been collected under it, except when it was paid for the purpose of testing the constitutionality of the law in the courts. It was intended to be prohibitory; it was expected to be prohibitory, and it was prohibitory.

The constitutionality of this law came before the Supreme Court of the United States in the case of Veazie *v.* Fenno, reported in 8 Wallace, 548. The tax had been paid by the plaintiff under protest, and he brought this action against the collector for the purpose of securing its return, so that the whole question was squarely raised. The facts in the case were admitted and judgment went for the defendant.

The court in its opinion (Chief Justice Chase) uses the following language:

> It is insisted, however, that the tax in the case before us is excessive, and so excessive as to indicate a purpose on the part of Congress to destroy the franchise of the bank, and is therefore beyond the constitutional power of Congress. The first answer to this is that the judicial can not prescribe to the legislative department of the Government limitations upon the exercise of its acknowledged powers. The power to tax may be exercised oppressively upon persons; but the responsibility of the legislation is not to the courts, but to the people by whom its members are elected.

In the License Tax cases (5 Wallace, 462), where the same question was involved, the court says:

> The power of Congress to tax is a very extensive power. It is given in the Constitution, with only one exception. * * * Thus limited, and thus only, it reaches every subject and may be exercised at discretion.

Also, in Collector *v.* Day (11 Wallace, 113) the following language is used by the court:

> But we are referred to Veazy Bank *v.* Fenno in support of the power of taxation. That case furnishes a strong illustration of the position taken by the Chief Justice in McCulloch *v.* Maryland (4 Wheaton, 316), that the power to tax involves the power to destroy.

To deny the absolute and unlimited power of Congress of taxation under this clause would leave it to the discretion and judgment of the courts to inquire into every taxation law passed by Congress to determine what its purpose was, and thus practically transfer this great power from Congress to the courts. To illustrate this, suppose that Congress should now pass a law imposing a high duty upon the importation of coffee. No one would deny the constitutionality of such a law, as its only object and only effect at the present time would be to raise a revenue, and would doubtless please our free-trade friends. Suppose that in a few years coffee is begun to be cultivated in this country and with this high duty this industry becomes profitable, then it becomes a protective tariff, and hence, in the opinion of many free traders, unconstitutional.

Suppose in the course of time the cultivation of coffee becomes so general and so cheap in this country that this duty, which in its inception was for revenue only, becomes actually prohibitory, so that no more coffee is imported and the law yields no revenue whatever. Then if the argument of my friends on the other side of this question is right, this law, by change of circumstances, becomes unconstitutional, and the courts should so hold. Thus it will be seen, if that view of the taxing power of Congress is sound, it is left to the courts, and not to Congress, to define the object and purpose of any exercise of the taxing power, and all discretion upon this subject is transferred from the legislative to the judicial branch of the Government.

The constitutional right to enact this legislation is beyond question, and it thus becomes a question only of wisdom and necessity.

The evidence introduced upon the hearings when this bill was before the Committee on Agriculture during the last Congress and the present session of this Congress clearly shows that the oleomargarine industry as conducted at the present time is a fraud upon the public. Such being the case, how can it be said that a law is either unconstitutional or unjust which imposes a tax the incidental effect of which is to defend the public from a fraud and a counterfeit?

Upon this point the language of the court in the case of Plumley *v.* Massachusetts (155 U. S., 461) is particularly applicable. Justin Harlan, in delivering the opinion, said:

> And yet it is supposed the owners of a compound which has been put in a condition to cheat the public into believing it is a particular article of food in daily use and eagerly sought for by people in every condition of life are protected by the Constitution in making a sale of it against the will of the States in which it is offered for sale because of the circumstance that it is in an original package and has become a subject of ordinary traffic. We are unwilling to accept this view. We are of the opinion that it is within the power of a State to exclude from its markets any compound manufactured in another State which has been artificially colored or adulterated so as to cause it to look like an article of food in general use and the sale of which may, by reason of such coloration or adulteration, cheat the general public into purchasing that which they may not intend to buy.
>
> The Constitution of the United States does not secure to anyone the privilege of defrauding the public. The deception against which the statute of Massachusetts is aimed is an offense against society. The States are as competent to protect their people against such offenses or wrongs as they are to protect them against crimes or wrongs of more serious character, and this protection may be given without violating any right secured by the National Constitution and without infringing the authority of the General Government. A State enactment forbidding the sale of deceitful imitations of articles of food in general use among the people does not abridge any privilege secured to citizens of the United States, nor in any just sense interfere with the freedom of commerce among the several States.

Why is the manufacture of oleomargarine a fraud? Because it is made and sold in the market for that which it is not—butter. The advertisements of its manufacturers all show that it is colored for the purpose, and the only purpose, of making the purchaser from the retailer believe that he is buying and eating butter. It goes into the market and upon the table of the consumer under false pretenses, claiming to be butter when it is nothing but a conglomeration of soap grease and oleo oil.

It is claimed by those who oppose this measure that oleomargarine is a better article of food than very much of the butter which is sold in the market.

That may be true, and yet it is no justification for this fraud. Bad butter may be a poor article of food, but it at least has the quality of being honest. It travels upon its own merits—or demerits—and deceives no one. If oleomargarine is such a superior article, why does it sneak into the market under disguise? Why does it dishonestly assume the color and appearance of that which it is not, and an inferior article at that? This brings me to a discussion of some things which have been said in opposition to this measure and which I believe are a misrepresentation of the motives of the promoters of this law. It is said in the report of the minority, and has been repeatedly said in this debate, that the object of this measure is to totally destroy the business of manufacturing oleomargarine. That is not the object, and neither will it be the result.

It only seeks to drive from the market that portion of oleomargarine *which is colored and sold in imitation of butter.* It only seeks to drive out of the market that part of this oleomargarine business which is a counterfeit and a fraud, or if it remains it must pay a tax commensurate with its fraudulent profits.

The dairymen of this country and the consumers of this country do not object, and they have no right to object, to the manufacture and sale of oleomargarine if placed upon the market and sold without deception—that is, uncolored to imitate butter. Let it go into the market for just what it is and be sold upon its own merits and no one will have a right to complain or will complain.

In the report of the minority the impression is sought to be conveyed that W. D. Hoard, ex-governor of Wisconsin and president of the National Dairy Union, desires and expects by this measure to destroy the business of manufacturing oleomargarine, uncolored as well as colored. That such is not the case will be seen from his statement before the committee as printed in the hearings, for he says:

> The hoped-for effect of the legislation asked of Congress is not to destroy the oleomargarine industry, but to force it over onto its own ground; to compel it to be made in its own guise and color. Is there anything unjust or unreasonable about this?
>
> With a tax of 10 cents a pound on the counterfeit substitute, we believe the temptation for unjust profits, deceptive sale, dishonorable and dangerous conspiring against law, and fraudulent competition with an honest industry will be greatly modified.

An isolated extract is also given in the minority report from the statement made before the committee by Mr. Adams, pure-food commissioner for the State of Wisconsin, to show that his expectation was the same—viz, to destroy the oleomargarine industry, honest as well as dishonest. That that is not true is shown by

this letter, which I have received from him and which he wrote when his attention was called to that part of the report:

THE RALEIGH, *Washington, D. C., December 8, 1900.*

DEAR SIR: In the report of the minority of the Committee on Agriculture upon the Grout bill I am quoted as having said in my testimony before the committee, March 7, 1900: "There is no use beating about the bush in this matter. We want to pass this law and drive the oleomargarine manufacturers out of the business."

The statement is absolutely incorrect. I made no such declaration. I did say that the purpose of the Grout bill was to stop the coloring of oleomargarine in imitation of butter and to destroy that portion of the oleomargarine business which depended for its success upon the deception of the public.

I have never, at any time or place, thought or said that the manufacture and sale of oleomargarine, when not a counterfeit of butter, should be prohibited.

Respectfully, yours,

H. C. ADAMS.

Hon. S. S. BARNEY,
House of Representatives, Washington, D. C.

It has been said in this debate that the coloring of pure butter by the dairyman is upon the same footing and equally fraudulent as the coloring of oleomargarine in imitation of butter. The incorrectness and even utter absurdity of such an argument hardly needs refutation. Oleomargarine is colored to cheat the purchaser and consumer into believing that he is buying pure butter, while butter is colored to suit his taste, and is not intended to deceive him and does not deceive him as to the kind of article he is purchasing.

Pure butter is not even shaded in color by the manufacturer to deceive the public as to the time when it was made. There is no June butter in the market at this season of the year, or if it was it would not command as high a price as butter made last week. Winter butter, therefore, is sometimes colored, not for the purpose of making anyone believe that it is June butter, for that would depreciate its value, but because some people desire butter of a higher color than others. Woolen cloth is colored all shades of the rainbow, not for the purpose of deceiving anyone as to the material of which it is made, but because tastes differ in the selection of material for clothing. There is no more deception in the coloring of pure butter in the one case than there is in the coloring of wool in the other.

I am heartily in favor of the passage of this measure because, first, it is in the interest of pure food; second, because it is in the interest of the consumer, who has a right to know what he is purchasing and eating, and hence can buy it for what it is reasonably worth, and third, because it is a protection to the great dairying interests of this country against fraud and dishonest competition.

It is claimed by the friends of oleomargarine that this measure will deprive the poorer classes of the privilege of buying a cheap and nutritious article of food, and hence benefit the farmer at the expense of other classes. There is no foundation whatever for such a claim, because the natural and necessary effect of it will be to benefit the consumer of oleomargarine and the dairyman alike. It will injure no one but the dishonest manufacturers and dealers who are engaged in this fraud, and they ought to be injured and driven from the business.

The evidence shows that oleomargarine can be made for less than 8 cents per pound, and yet it is sold by retailers for 25 cents per pound and more, because the purchaser believes he is buying butter.

Let the bill become a law and oleomargarine will be compelled to go into the trade uncolored and for just what it is, and, as a result, can be bought for less than one-half what it costs now.

I say, then, that this bill is not only in the interests of the manufacturers of pure butter, but is equally in the interests of all who wish to use oleomargarine and to purchase it for what it is and for what it is honestly worth. For my part, I wish to see Congress go to the fullest extent of its taxing power for the suppression of fraud in any business, and particularly in the manufacture of what the public eats and drinks.

At the present time there are men engaged in the manufacture of honest—that is, uncolored—oleomargarine, and no one seeks to interfere with them.

In several cities in my own State these manufacturers of uncolored oleomargarine are putting their product upon the market and are selling it for a little more than one-half the price of the colored and fraudulent product. That fact proves that the passage of this bill will benefit the consumers of oleomargarine equally with the dairyman.

It will relieve the latter from dishonest and fraudulent opposition, and the former from dishonest and exorbitant profits.

It has been urged that this is improper class legislation—that is, that it is a measure for the benefit of one class to the detriment of another.

On the contrary, I say it is legislation designed to prevent one class from fraudulently obtaining undue advantage over another; legislation to prohibit the dishonest oleomargarine manufacturer from cheating the consumer directly and the dairyman indirectly.

The millions of dairymen in this country who are interested in this bill are scarcely heard, because of their scattered and necessarily unorganized forces. The other millions of consumers who are interested in pure food and honest prices are not heard, partly for the same reason and partly because they hardly realize the fraud which is being perpetrated upon them.

This is a battle of the honest butter producer and the honest consumer on the one hand against a gigantic combination of grease producers, who by fraud and dishonesty seek to rob both.

Let this bill pass and become a law and it will only benefit those who ought to be benefited and injure those who ought to be injured.

It has been amusing, and at the same time somewhat provoking, to hear in this discussion our Democratic friends, who are so generally opposing this measure, howl about "the great dairy trust," which they claim is lobbying this bill through. What do they mean by "the great dairy trust?" If they mean that 5,000,000 American farmers are "trusting" that this Congress will come to their relief and drive from the markets a fraud which is robbing them and the public, then I concede that they are right.

But if they use the term "trust" as indicating a gigantic corporation engaged in the manufacture of butter, which is urging the passage of this bill, they are indulging in ridiculous misrepresentation. Some of the time, in fact much of the time, these same gentlemen are shouting that the farmers of the country are being ruined by trusts, and now when an opportunity is offered to give them some relief from the fraud of one of these trusts, the farmers themselves are accused of belonging to a trust. The absurdity of this statement is hardly worthy of refutation. The farming industry is about the only business in which men are engaged which it is impossible to organize as a trust.

On the contrary, this is a battle between the great grease producers and manufacturers, who are organized into a trust, on the one side, and the disorganized 5,000,000 dairy farmers on the other. It is a fight between organized and concentrated capital and tillers of the soil, who could not organize themselves into a trust if they would. I believe the American farmer will resent this kind of slanderous "rot," and make up his mind that a party which indulges in it is not entitled to his consideration or support.

The Case of Cuba Stated.

SPEECH

OF

HON. HENRY W. PALMER,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 17, 1902,

On the bill (H. R. 10530) to repeal war-revenue taxation, and for other purposes.

Mr. PALMER said:

Mr. CHAIRMAN: The charge has been freely made that one purpose of this bill is to so reduce the revenues of the Government that no aid can be given to suffering Cuba.

An answer to this charge is unnecessary, as the surplus revenues remaining after the war taxes have been repealed will amount to far more than any probable reduction of duty on Cuban sugar and tobacco.

When the war taxes were imposed the distinct pledge was made that they should be removed when they were no longer needed.

The financial statements from the Treasury exhibit the encouraging fact that the interest-bearing public debt immediately before the Spanish war and before any expenditures had been made on that account was, less the cash on hand, $623,494,624, and that the net debt January 1, 1902, less available cash, was $614,297,684. So the cost of the Spanish war and all its expenses have been paid and the United States is over $9,000,000 better off than before the war; and, furthermore, during that period the annual interest charge has been reduced more than $6,000,000.

Under this state of facts it is useless to continue this unnecessary taxation a single day. If hereafter the benevolent impulses of the people of the United States impel them to benevolent deeds toward Cuba, there will be no lack of means in the hands of charity.

It is my purpose to fairly state the case of Cuba as it appears from the testimony of the witnesses who have been examined before the Committee on Ways and Means. I believe concessions may be made to Cuba, either with or without reciprocal concessions to the United States, without violating the "most-favored-nation clause" in treaties with other countries from which similar articles may be imported. The uniform interpretation of the

United States has always been that the most-favored-nation clause covers only gratuitous favors, and does not touch concessions for equivalents, either expressed or implied. (Wheaton's Digest, Vol. II, p. 38; Opinions of Attorney-General, vol. 21, pp. 80, 82, 83; American State Papers, Foreign Relations, Vol. V, pp. 152, 153, 161, 163; Wheaton's Digest, Vol. II, p. 41.)

In Bartram *v.* Robertson (122 U. S., 116) the court held that the favored-nation clause in the treaty between the United States and Denmark obliged the contracting parties to avoid hostile or discriminating legislation, but was not intended to interfere with special arrangements with other countries founded upon a concession of special privilege.

Furthermore, the exceptional nature of our relations with Cuba are such that no other nation could claim to be "similarly situated," and therefore entitled to demand an extension of favors granted Cuba.

Under the joint resolution of April 20, 1898, the United States intervened for the purpose of expelling from Cuba the authority and government of Spain, which was accomplished by the force of arms, and in the treaty of Paris assumed the duty to temporarily occupy the island, and "agreed to assume and discharge the obligations that may under international law result from the fact of its occupancy for the protection of life and property." Thus the United States undertook the legal obligation to "protect in all appropriate legal modes the lives, the liberty, and the property of all those who submitted to the authority of the representatives of this country." So much was decided by the Supreme Court. (Neely *v.* Hinkel, 180 U. S., 109–121.)

Suitable fiscal regulations necessary for the welfare of the inhabitants are certainly within the obligation so long as it exists. If in performance of this duty the United States accords to Cuba trade privileges not enjoyed by other nations, they can not justly complain, for the reason that they do not stand in like relation.

But the question, what under all the circumstances ought to be done, depends upon a variety of considerations.

Unquestionably the situation in Cuba demands the thoughtful consideration of Congress. If it be true, as averred by public officials and men of business in Cuba, that unless the duty on sugar and tobacco is largely reduced or entirely removed bankruptcy and ruin will be the portion of the island; and if it be true that the United States is under obligations, either legal or moral, to shield the people of that island from financial distress and establish them upon a firm foundation of prosperity, then there is no room for discussion. It must be done, cost what it may, because this country never runs away from duty.

The month of January and part of the month of February were devoted by the Ways and Means Committee to hearing the statements and arguments. Cuban planters, capitalists, officials, and business men, who united upon a reduction for sugar and for tobacco as indispensable to their financial success and to the security and peace of the island, and to the cane growers, sugar-beet growers, and tobacco raisers and manufacturers of the United States, who asserted with equal zeal that any reduction of the duty on sugar and tobacco would ultimately ruin their business and destroy the capital invested, amounting to more than $130,000,000, throw out of employment 500,000 persons directly engaged, and cripple a far greater number who are engaged in allied industries.

The propositions of fact, about which there can be no dispute, which were established by the testimony thus taken are:

First. That there is no financial distress in Cuba at the present time. Labor is fully employed at remunerative wages ranging from $23 to $30 per month in gold, which is more than has ever been paid before. More laborers are needed to harvest the present crop of cane, which it is estimated will produce 850,000 tons of sugar. The general conditions in the island are described by Señor Emilio Nuñez, civil governor of Habana, in an article published in Success this month.

To comprehend properly the story of Cuba's advance and the operation factors in its rehabilitation, it is necessary to take a view of the island as the Spanish troops left it. From one end to the other it was devastated. The outlook in any given direction from Habana, for miles and miles, was bleak and discouraging. One might have traveled 100 miles without seeing a house or a living animal. Everything was in ruins, for even the smaller towns had fallen into decay or had been left in ashes, sometimes by the Cuban army, more often by the Spanish, a part of whose tactics it was to leave no village standing which could not be garrisoned. The torch had caused vast damage to the country at large, blighting its prospects for future growth and bringing ruin to individuals.

A MODERN PHŒNIX ROSE FROM THE ASHES OF MENDICANCY.

Here and there were left cities which, by the influx of reconcentrados, had populations far in excess of their natural numbers. In the miserable, half-starved army of unfortunates were to be found many former planters who were once rich, but had been beggared by fire and the sword. Cuba became, for the time being, the great modern country of mendicancy. The country districts could provide no sustenance for those who knew how to till the soil. The cities were overflowing with a ragged population, who besought alms from those who had nothing to give. When I say that at the close of the war there were in Cuba 60,000 beggars—unprofessional seekers of aid—I am making a small estimate. This was the condition of affairs when the United States took Cuba in hand.

Since that time a marvelous change has been wrought. In business affairs with the world Cuba is almost as active as it was prior to the war. Its internal government is better than it has ever been before. Sanitary science has brought improvement in municipal attention to health, the cities have acquired clean streets and practical sewerage systems, buildings now give evidence of modern American planning, and education has taken giant strides. Step by step order has been brought out of chaos.

One of the first steps in Cuba's advancement was in the system of relief instituted by the Government of the United States. The beggars and the impoverished were fed, not only as a charitable duty, but as a matter of policy. A man can not conquer a wilderness on an empty stomach; weakened bodies are not fit for the work of saving the island from ruin.

So the establishment of posts in Habana and other places for the aid of the needy thinned the ranks of beggars, as it was expected it would. Almsgiving, instead of encouraging mendicancy, relieved from despair individuals who had the energy, in ordinary circumstances, to support themselves and even to help enrich the country. In less than a year the United States Government had only the sick to care for. Beggars had become laborers, artisans, merchants, and planters. As soon as a man or woman could find anything to do which would relieve the authorities of the burden of his or her support, another would be stricken from the lists of the needy. To-day there is not a beggar on the island of Cuba.

It may be observed that this article was not prepared for use before the Ways and Means Committee.

Secondly, the demand for a reduction in tariff duties on tobacco and sugar is not founded upon present distress, but upon an apprehension that the price of sugar at this time being so low that the Cuban planters can not pay the duty, which is 1.685 cents per pound, and make a profit; that they will not be able to plant another crop, having already expended their credit and having reached their limit of debt, and that lack of employment will create discontent and foment disturbances among the people and bring on another revolution which would entail trouble and expense upon the United States.

It is not claimed that the low price of sugar in the world is in any way attributable to the United States. It clearly results from the stimulation given the beet-sugar industry by the bounties paid by foreign governments, particularly Germany and France, and the indirect bounty received by producers from a system called the "cartel," by which the domestic consumer is charged the enormous price of 8 and 10 cents per pound for refined sugar, the profits arising being divided between the refiners and the growers.

This year the overproduction amounts to about 1,300,000 tons, and has forced the price of raw sugar, duty paid, down to about 3½ cents per pound in New York. At this price Cuban raw sugar, produced at 2.06 cents per pound, paying duty at 1.685, with cost of transportation, etc., added, would net a loss of about a half a cent a pound. To meet this loss and secure some profit, the demand is made for free entry of Cuban raw sugar, or if that is not accorded, then for a reduction of 50 per cent on the tariff rate.

It is further urged that the relations between Cuba and the United States are such that a legal and moral duty rests upon this country, not only to establish a stable government, republican in form, for Cuba, but also to secure for the inhabitants of that island such a measure of financial prosperity as will give them contentment, and remove all inducements to engage in revolutionary disturbances.

Representatives of the sugar-cane growers of Louisiana and of sugar-beet growers of 11 Western States object to any reduction of the duty on sugar and assign for reasons, first, that the cane growers have invested in the business in Louisiana $100,000,000; that they are customers of other States for necessaries of life to the amount of $70,000,000 annually; that not less than 500,000 persons find employment in and about the business; that it is the chief and practically the only industry of the State, and that free Cuban sugar, or any material reduction of the duty, would force them to sell their crop at a loss, and eventually completely destroy their business, obliterate their capital, and beggar the State, there being no other use to which their lands can be put, the climate being too moist for either corn or cotton.

They urge that to stimulate the production of sugar in Cuba would put under cultivation vast areas of land that have never been cleared, which have been acquired by Americans and others, and from which sufficient sugar could be produced, at a cost with which they can not compete, to supply the entire demand of the United States. They point to the fact that the production of sugar in Cuba has risen from about 300,000 tons to 850,000 tons since the Spanish war; and that with 150,000 tons from Porto Rico, 350,000 from Hawaii, the total consumption of the United States of 2,219,847 could be easily made up in a very few years, and at a cost which would render profitable sugar growing in the United States simply impossible. To the planters of Louisiana it is perfectly plain that compliance with Cuban demands would be ruin to the sugar industry of the United States and bankruptcy for all employed therein.

The sugar-beet growers and refiners of 11 Western States set up a plea that they now have $30,000,000 invested in the business of growing sugar beets and refining beet sugar, and that last year they produced 150,000 tons of sugar, which, if sold for 4 cents

per pound, made $12,000,000, practically all of which went to farmers and laborers; that the Government has been for years holding out inducements to Western farmers to go into this business, having established experimental stations, taught them how to raise beets, at one time paying them a bounty; that now the problem is solved and the business is beyond the experimental stage. Forty-nine factories were operated this year; 50 more are ready for next year if the business is not disturbed; 100 more which are projected will soon be in operation, and in a few years, if let alone, they can produce sugar enough to supply the demand and keep at home more than $50,000,000 which is annually paid for foreign sugar. The farmers of the West claim that the protective system, which tends to raise the price of every manufactured thing they buy, ought not to be denied them upon a purely agricultural product. They claim that since the establishment of this industry a new era has dawned upon the West, for the reason that the worn-out wheat lands will produce beets at good profit which can be sold for ready money, and they object to the change demanded because free Cuban sugar means for them exactly what it means for the Louisiana planters—ruin.

The force of these objections depends largely upon the capacity of the island of Cuba to produce sugar cane and the cost of its production. There is substantial agreement to the proposition that not more than one-eighth of the available sugar land of Cuba is under cultivation, and that 2.06 cents per pound is a fair average price of production at the present rate of wages, though it is claimed that 1.25 or 1.50 cents would be nearer the truth.

CUBAN PROSPERITY.

The following clippings from a resident Habana correspondent to a leading industrial paper in the the United States tend to show what has been going on in Cuba:

The grand central factory "Boston," at Banes, belonging to the American Fruit Company, will commence its crop on the 1st of March next, and is expected to produce 100,000 bags, as well as "Santa Lucia," at Gibara, that has just been put under way.

The large factory of foregoing name, located in the district of Cienfuegos, and which was recently purchased by an American syndicate that has taken the name of Damuji Sugar Company, has just placed under culture 40 additional caballerias of new lands, which are equivalent to about 1,350 acres, which will allow them to enhance their annual output to about 40,000 tons.

The large San Francisco central factory will soon be operated at Santa Cruz del Sur, in the province of Porto Principe. It belongs to a syndicate that has been organized in New York, and has already constructed about 10 miles of broad-gauge railway, upon which two locomotives are constantly running to convey trains laden with materials or workmen to all distant places where either are wanted.

The Cuban Land and Sugar Company have just contracted for the planting with cane of 1,000,000 acres of land at San Nicolas; the company which had heretofore sold their cane to neighboring factories intends to establish a mill and grind it for their own account.

Arrangements are being made to establish at Yaguaramas, in the province of Matanzas, another large sugar central factory. The promoters of the scheme here succeeded in obtaining the assistance of several American capitalists who have subscribed for a certain number of shares.

Another large central sugar factory is on the way of being established in the district of Holguin, province of Santiago de Cuba, on the bank of the Bejaru River. About 3,500 acres of good sugar land have already been placed under culture. The mounting of the machinery will soon commence, and in the meantime, the construction of the railway to connect the plantation with the Central Railroad is being actively pushed. The principal promoters of this new factory, in which a large amount of American money has been invested, are Messrs. Dumois Brothers, the representatives in Cuba of the American Fruit Company, of Boston, that already own in the same locality the Grand Central Factory, Boston, that will inaugurate sugar manufacture early next year and is considered one of the best equipped in the island.

Mr. Stillman, of New York, for whose account a large sugar factory is being erected at Cabo Cruz, on the east southern coast of Cuba, is in treaty to purchase 400 additional caballerias (13,250 acres) in the same vicinity, and the total cost of the factory including value of the land, is estimated at $2,500,000.

A royal gift.—The American syndicate proprietors of the Chaparra factory that is being erected at Banes, in the province of Santiago de Cuba, and which will be one of four huge factories in Cuba, purchased 1,000 oxen with the purpose of distributing them among their poorer land tenants, whom the company will also advance on reasonable terms all the money they may need to increase cane planting, as their intention is to turn out from 300,000 to 400,000 tons of sugar yearly. Chaparra will be the most powerful center of the island, with a production from the first epoch of over 200,000 sacks of sugar, with powerful and modern machinery which will cause in Cuba an industrial revolution by its novelty, in its installation, and in its workings, with its extensive fields of cane (of more than 300 caballerias, equal to 10,000 acres), of great production and excellent cultivation, and its extensive railroad (over 40 kilometers) and its commodious port of Cascarero. This enormous planting is without precedent in the history of Cuba and probably of the entire world.

Plantation Union, situated on the Cardenas and Jucaro Railway line, about 9 miles from the port of Cardenas, has just been purchased for account of an American syndicate, and as said plantation was almost totally destroyed during the war its new proprietors intend to rebuild and equip it with all the most modern and improved apparatus. The land is said to be exceedingly fine, and the greater part of same has been placed under culture after the termination of the war.

HABANA, *April 7, 1901.*

American investors continue to place money in Cuba, and scarcely a week passes but some new commercial enterprise, fostered in the United States for the development of the island's resources, comes to light.

Another American syndicate, presided over by Mr. John J. Craig, of Philadelphia, has lately invested heavily in sugar lands on this island and purchased a large tract adjacent to the Cauto River, in the province of Santiago de Cuba. The company intends to build on said premises a large factory, which will be equipped with all the most modern sugar improvements. Mr. Craig has been engaged in sugar business with Cuban planters for the past thirty years.

HABANA, *September 24.*

Congressman R. B. Hawley, representing American capitalists, has purchased the Tinguaro sugar estate, one of the largest in Cuba, in the province of Matanzas. The estate includes 20,000 acres, which, with other large properties along the south coast that Mr. Hawley is arranging for, will, it is expected, alone produce 100,000,000 pounds (44,000 tons) of sugar.

A large part of the land visited is virgin soil, upon which $1,500,000 will be expended, including the cost of improvements.

Two American citizens, Messrs. Ladd and Barlow, have just entered into a copartnership with a well-known and experienced Cuban fruit grower, Mr. Cassanova, to establish on a large farm, located at Santiago de las Vegas, near this city, and belonging to the latter, an orange grove, which is expected to be the largest on this island when the plans upon which the company is operating be perfected. The concern will be run under the Florida plan, and is expected to afford handsome benefits to its proprietors.

A certain number of American capitalists have determined to invest heavily in Cuba, and besides the acquisition of 75,000 acres of good sugar-cane land near Cienfuegos by a syndicate of New York capitalists, a certain number of large tracts of land located at both extremities of the island, at Santiago de Cuba and Pinar del Rio, have recently been sold to American companies, and several others are in treaty with the representatives of the respective syndicates, which shows that people in the United States who have money to invest commence to realize that Cuba offers them a good field for speculation.

HABANA, *April 10, 1900.*

Despite the advice of the insular secretary of agriculture, Gen. Rius Rivera, it is said that a certain number of American capitalists have lately invested heavily in sugar deals on this island and that they are sure such investments will soon become a paying business, whether Cuba be annexed to the United States or not.

HABANA, *October 16, 1899.*

In spite of all that has been said about the reluctance of Americans to invest their capital in Cuban property, large purchases are being daily made by them, and to-day I can report the recent sale of the famous banana farm called "Cabonico," located in the vicinity of Holguin, to a large American company, that intends to commence at once the reconstruction of the farm, on which a certain number of American families purpose to colonize and conduct thereon a large fruit and tobacco culture business.

I can hardly believe it is possible that the United States people will be able to consume the totality of the fruit to be grown in Cuba for their exclusive use and consumption.

Corn growers seeking protection.—Cuban corn growers request the Government to enhance duty on American corn imported into this island, since that of 15 cents per bag of 100 pounds keeps prices so low that they can not dispose of their crops without experiencing heavy losses. They accordingly ask that the duty on corn proceeding from the United States should be raised to 60 and 65 cents per bag, as a measure calculated to protect the home growth, as otherwise they are utterly unable to compete with American Western corn.

HABANA, *February, 1900.*

The large central sugar factory located at Santo Domingo, in the jurisdiction of Sagua la Grande, is reported as having just been sold to an American syndicate that intends to increase its producing capacity and make it one of the largest sugar-producing centers on this island in less than one year.

HABANA, *February 10, 1900.*

Consolidation of sugar refineries.—The proprietors of the sugar refineries at Habana, Matanzas, Cardenas, and that on plantation "Providencia," at Guines, have formed a syndicate or trust, consolidating their interests under a joint management, whose business is to be conducted under the style of the United Cuban Refineries, Messrs. Quesada & Alonso, of this city, to represent them for the sale of all their goods.

[Another Habana dispatch.]

It is reported that the grand central factory Lugareno, at Minas, province of Porto Principe, has just been sold to an American syndicate for $800,000 United States currency, the purchasers to take charge of said factory after the taking off of this year's crop.

Another American company has made propositions for the purchase of central factory San Miguel, at Porto del Padre, in the same province as above, and the transaction has not as yet been closed, owing to a difference in price, for while the owner, Señor Francisco Pla Picabin, wants $1,500,000 for his plantation, buyers' offer does not exceed $1,200,000; but owing to the strong desire to come to a fair understanding, it is likely that the question will soon be settled in a satisfactory manner.

HABANA, *June 12, 1899.*

The representative of the powerful New York syndicate is in treaty for the purchase of several large sugar plantations, which he offers to pay cash for, after redeeming all mortgages thereupon attached. To other parties, who are as yet unwilling to part with their properties, large advances are made them, on liberal terms, on produce of the next crop, which remains affected to guarantee payment of advanced money.

A syndicate is buying up all lands to be acquired along the Jucaro-Moron Railway and the ancient military trocha, with the avowed purpose of carrying thereon sugar culture on a very extensive scale.

An American company is being spoken of that intends to invest $1,000,000 in the purchase of 100,000 acres of land. They are sanguine of making fortunes, growing, besides sugar cane and tobacco, all sorts of tropical fruits for the Northern markets.

The factory Narcisa, in the Yaguajay Valley and belonging to the Narcisa Sugar Company, of New York, is progressing in a very satisfactory manner, and is expected to take off in 1901 an extraordinary crop. Besides the old plantings, about 2,650 acres of land have been sown this year.

* * * * * * *

HABANA, *September 22, 1900.*

An American syndicate that means business has just purchased a large tract of land, covering about 14 leagues, between rivers Cauto and Salado, in the province of Santiago de Cuba, whereon they contemplate to establish a grand central sugar factory and a large hog-breeding farm, to conduct on an extensive scale and simultaneously with the manufacture of sugar that of lard, hams, bacon, sausages, and salted, pickled, and smoked pork, which will undoubtedly prove to be a well-paying business, since the company will be able to sell their goods cheaper than the similar ones imported from the United States.

Of the four huge sugar estates in Cuba, the largest of all will be that of Cabo Cruz that an American capitalist is erecting at said place, in the province of Santiago de Cuba, and whose producing capacity will be, it is said, about 225,000 to 230,000 bags; next will come Chaparra, with 200,000; and after this, Caracas, in the province of Santa Clara, and belonging to Messrs. Terry Brothers, whose capacity is estimated the same as that of Constancia, in the same locality, and which has been recently sold to an American syndicate, at from 140,000 to 150,000 bags. It is likely that if what is said about the Cabo Cruz factory is true, it will be one of the largest if not the largest in the world, since its production will range between 40,000 and 45,000 tons of sugar.

Cuba sugar factories.—The number of sugar factories existing in Cuba today is estimated at 361, whose location is as follows: Pinar del Rio, 20; Habana, 40; Matanzas, 118; Santa Clara, district of Sagua, 43; Cruces, 15; Santa Clara, 14; Cienfuegos, 32; Remedios, 20; Sancti Spiritus, 7; Puerto Principe, district of Nuevitas, 6; Santiago de Cuba, district of Manzanilla, 14; Gibara, 3; Guantanamo, 11; Santiago de Cuba, 8. Total, 361.

It is generally expected that the construction of the Central Railway will impart great impetus to the sugar interests in the province of Puerto Principe, the drawback of which was chiefly the lack of easy and cheap ways of communication.

There can be no reasonable doubt that if Cuban sugar could find market in the United States without payment of duty, Cuba could and would in a very short space of time, not to exceed ten years, produce sufficient to supply the entire demand in the United States, and at prices that would make successful competition on the part of the sugar producers of Louisiana and the West impossible. Not more than one-eighth of her sugar land has been placed under cultivation. Her climate and soil enable her planters to produce raw sugar at less cost than anyone else in the world. What, then, is to hinder a doubling or trebling of her highest production, which in 1894 reached over 1,000,000 tons. American enterprise, capital, and ingenuity, with the privilege of importing coolie labor, which is now enjoyed, will speedily accomplish the task, and then all the capital invested in sugar raising in the United States will be irretrievably lost, and all the people engaged forced to seek new employment.

The question, therefore, is, Shall the sugar growers of the United States be made bankrupt and driven out of business, and a great loss be entailed upon all the related industries, in order to save the Cuban planters, Spanish and American, and the Cuban people from anticipated financial distress, which, if it occurs, will grow out of temporary conditions which the United States was not instrumental in producing, viz, overproduction of sugar in the world?

If we are under obligations, legal or moral, to insure Cuba not only a free and stable government, but also material prosperity, there is but one answer, and that is yes.

As to the legal obligations, if such exist, they must be based upon some act of Congress, treaty, or convention entered into with Cuba or Spain.

The treaty of Paris, so far as it relates to this subject, is as follows:

ARTICLE I.

Spain relinquishes all claim of sovereignty over and title to Cuba.

And as the island is, upon its evacuation by Spain, to be occupied by the United States, the United States will, so long as such occupation shall last, assume and discharge the obligations that may, under international law, result from the fact of its occupation, for the protection of life and property.

ARTICLE XVI.

It is understood that any obligations assumed in this treaty by the United States with respect to Cuba are limited to the time of its occupancy thereof; but it will, upon the termination of such occupancy, advise any government established in the island to assume the same obligations.

By this treaty the United States is under legal obligation to "protect life and property" in Cuba "so long as the time of its occupancy thereof continues," and no longer. That is all. The most eager friend of Cuba must fail to find in this treaty evidence upon which a claim can be founded that the United States is under legal obligations to come to the financial aid of the people of Cuba whenever the changing markets of the world render any of their agricultural products unprofitable.

The Cuban constitution has been adopted; the election of a president of the republic has taken place. Nothing remains but to induct him into office, and the occupancy of the United States will end, and with it all the obligations under the treaty of Paris to protect life and property in the island.

The only other written instrument under which it is contended Cuba has a legal claim on the United States is the so-called Platt amendment, which is as follows:

I.

That the government of Cuba shall never enter into any treaty or other compact with any foreign power or powers which will impair or tend to impair the independence of Cuba, nor in any manner authorize or permit any foreign power or powers to obtain, by colonization or for military or naval purposes or otherwise, lodgment in or control over any porton of said island.

II.

That said government shall not assume or contract any public debt, to pay the interest upon which, and to make reasonable sinking fund provision for the ultimate discharge of which, the ordinary revenues of the island, after defraying the current expenses of the government, shall be inadequate.

III.

That the government of Cuba consents that the United States may exercise the right to intervene for the preservation of Cuban independence, the maintenance of a government adequate for the protection of life, property, and individual liberty, and for discharging the obligations with respect to Cuba imposed by the treaty of Paris on the United States, now to be assumed and undertaken by the government of Cuba.

IV.

That all acts of the United States in Cuba during its military occupancy thereof are ratified and validated, and all lawful rights acquired thereunder shall be maintained and protected.

V.

That the government of Cuba will execute, and as far as necessary extend, the plans already devised or other plans to be mutually agreed upon, for the sanitation of the cities of the island, to the end that a recurrence of epidemic and infectious diseases may be prevented, thereby assuring protection to the people and commerce of Cuba, as well as to the commerce of the southern ports of the United States and the people residing therein.

VI.

That the Isle of Pines shall be omitted from the proposed constitutional boundaries of Cuba, the title thereto being left to future adjustment by treaty.

VII.

That to enable the United States to maintain the independence of Cuba, and to protect the people thereof, as well as for its own defense, the government of Cuba will sell or lease to the United States lands necessary for coaling or naval stations at certain specified points, to be agreed upon with the President of the United States.

VIII.

That by way of further assurance the government of Cuba will embody the foregoing provisions in a permanent treaty with the United States.

This amendment forbids Cuba to enter into any treaty that will impair her independence or contract any debt which can not be discharged out of the ordinary revenues, and allows the United States to intervene for her protection and defense. It binds Cuba to continue to execute the plans of sanitation of Cuba made by the United States, which are for the protection of both countries, and to sell us a naval station to enable us to defend her independence.

Cuba is not forbidden to trade or make commercial treaties or to do business with any country. No control is retained by the United States over her trade, finances, or business relations. She may buy and sell where and when it pleases her people and at such prices and on such terms as she may be inclined to accept. No one can justly say that the Platt amendment is in any respect a limitation on the commerce of Cuba or that any obligation can be asserted on the part of the United States to guarantee Cubans against loss in business or to insure their financial success.

The next question to be considered is whether the United States is under moral obligations to Cuba such as require the aid demanded for the proper discharge thereof.

A moral obligation is not easily defined, if indeed it is capable of definition. Who is to decide when such an obligation arises, or how much it would take to satisfy it after the question of its existence is settled? Does the fact that the United States voluntarily intervened and at great cost of life and treasure drove away the Spanish tormentors and gave Cuba the priceless boon of freedom create a moral obligation to provide for the wants of the Cuban people in every time of need?

Does the fact that after the last Spanish soldier had been expelled, the United States contributed $3,000,000 to pay those who claimed to have been in the Cuban army and distributed more than 5,000,000 of rations among the starving poor; abolished all export taxes, amounting to $900,000 in 1900, reduced the duty on salt, put building materials, school furniture, and crude petroleum on the free list; made great reductions in manufactured iron, railway equipment, and sugar-making machinery; abolished the Cuban tax of 10 per cent on passenger and 3 per cent on freight rates, equal to $300,000 per annum; all municipal taxes known as "repartiments," also the consumption tax on meat, food, fuel, and charcoal; cleaned, purified, and disinfected her houses and cities so that yellow fever and smallpox, once an annual scourge, are now only memories; relieved her of a debt of $300,000,000; do all or any of these benefactions raise a moral obligation on the part of the United States to support the people of Cuba, or to pay her planters a price for sugar above the market price in the world?

If the conclusion is that under the circumstances we owe Cuba further succor and support, and that we are under moral obligations to furnish it, then how much shall it be and how long shall it continue? Those among us who believe in absolute free trade with other countries assert that nothing short of free Cuban sugar will suffice. The Cuban planters, principally subjects of Spain, who have never renounced their Spanish allegiance, are also distinctly of the opinion that no other relief will be adequate or satisfactory. The sugar-refining interests in the United States are also very sure that no benevolence short of free sugar would avail. Those of our citizens who have acquired great estates and erected expensive sugar mills in Cuba may also be added to the list of persons whose benevolent aspirations toward this young republic will be content with nothing short of free sugar. Other persons whose sympathies have been aroused by the vast and unceasing flood of literature on the subject that has appeared in this country are of the opinion that a concession of 50 per cent in the duty would be enough, while others think 33 or even 25 per cent would adequately meet the case.

Those among us who adhere to the doctrine of protection to American industry and the preservation of home markets to our own citizens, deplore the necessity, if such exists, of disturbing our trade conditions, which are prosperous beyond the prophecies or dreams of any high-tariff advocate. They deny that Cuba has anything to give in the way of reciprocal-trade concessions that

would compensate for the annihilation of the sugar industry in the United States and make us forever dependent for a necessary of life on foreign producers.

There are others who deny that we owe any further duty to Cuba, and who believe that the full measure of our legal and moral obligations have been fully performed.

And, finally, those engaged in the production of sugar in the United States insist with great and undeniable force that charity to Cuba, if it must be given, ought not to be entirely at their expense.

The consequences of a wrong decision of this question are so grave that those having the responsibility to decide may well hesitate and deliberate. In advance of their conclusion I do not presume to suggest a plan for Cuban relief, or indicate an opinion that such relief is either obligatory or necessary.

As remarked in the beginning, my purpose has been to state the facts as they appear from the testimony.

War-Revenue Taxation.

SPEECH

OF

HON. JOHN F. RIXEY,

OF VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 17, 1902,

On the bill (H. R. 10530) to repeal war-revenue taxation, and for other purposes.

Mr. RIXEY said:

Mr. CHAIRMAN: I avail myself of the privilege provided for in the rule under which this bill is considered to suggest, in the absence of tariff revision—which the Republican party will not permit and which can only be secured through the Democratic party—how the interests of the farmer may be promoted by treaties of reciprocity with foreign countries.

First, however, a word as to this bill and as to Cuba. This bill, for the repeal of the war taxes imposed in 1898, is assented to very grudgingly and with poor grace by the majority party in this House. The repeal is not to take effect as to any article until July 1, and as to other articles not until January 1, 1903, nearly eleven months.

If it were done when 't is done, then 't were well it were done quickly.

The Philadelphia Inquirer, a stalwart Republican paper, February 5, says:

DO NOT CUT OFF THE SURPLUS.

The House seems bent upon cutting off the war taxes—making a grand sweep of $77,000,000.

The Inquirer confesses that it has no sympathy with such a proposition at this time.

Where is your money coming from to build the canal? Where is the money coming from to build up the merchant marine, to dig out the rivers and harbors, to promote irrigation, to add the ships to our Navy that ought to be building now but are not?

It is useless to talk about reducing expenses in the Philippines as one reason why we can lop off the surplus, or of arguing that the withdrawal of the army from Cuba will decrease expenditures. All the reductions possible from those sources will not begin to carry on the vast enterprises that the nation must enter into. * * *

If the House goes into this wholesale business of knocking the surplus out, the Senate will be looked to to block the scheme.

There is no doubt that this view is held by a strong element in the Republican party.

There are strong influences against the repeal. There are many who desire to continue the war taxes with expectation and assurance of great appropriations for favorite subsidies, but there is a stronger power behind it. Congressional elections are approaching and to be held in a few months. A prominent Republican of this House well expressed to me the situation when he said if the Republicans did not provide for repealing the war taxes at this Congress, they would not again soon have the opportunity. The people are tired of temporizing and demand the total repeal of taxes which have been unnecessarily imposed for a year or more.

When the bill for a partial repeal was pending, I had intended then to urge the total repeal of the whole war taxes, but, as often happens here, time could not be secured. The Republican party concurs in this tardy act of justice for the repeal of the war taxes in the hope that it will insure another victory for that party. But other accountings are to be had. What of their treatment of Cuba? What of their treatment of the Filipinos? What of their nursing and encouragement of trusts and monopolies? And what of their continued protection of manufacturers who, under the plea of protection against foreign competition, have secured a prohibitive tariff enabling them by combination to rob the American people while they sell in the foreign markets in competition with foreign goods at less prices than they sell to our own people?

What of Cuba? I have asked. It is as true to-day as when we declared war—nay, truer—Cuba of right ought to be free. But is it? We said to the world that our only purpose in going to war with Spain was to free Cuba. Have we done it? In sixty days we drove Spain from Cuban soil; but now for almost four years the tramp of the American soldier has been heard throughout the island, and military rule, obnoxious and galling, as we know, to every free man, controls and makes and enforces the law. Under the most trying conditions the Cubans have acted with great self-restraint and patience. Foreign soldiers regulated their election of members to the constitutional convention, and it is believed that the War Department here dictated the newly elected president of the Cuban Republic.

In everything the military governor, appointed by the United States, practically controls and governs the island. When is it to end? Some say not until Cuba, driven to desperation, begs for annexation to the United States. Does not the blush of shame mantle the cheek of every true man at the thought that this great world power should so use its great strength? We said to the world that we had no idea of taking territory; only to free Cuba. Our acts since give the lie to our words. If annexation is had, it should be voluntary and not compulsory. After centuries of oppression and tyranny Spain was driven from her borders, leaving Cuban industries paralyzed. Her inhabitants petition us for concessions in trade relations. The President in his message said:

Every consideration of duty and interest demands that Cuba should have liberal treatment at our hands.

Mr. Cleveland said:

The arguments used in opposition to tariff concessions (to Cuba) based on our material interests are fallacious, mistaken, and misleading, while their source and the agencies of their propagation and spread can not fail to be recognized by every honest, patriotic citizen with shame and humiliation.

Her commissioners have pictured in the most graphic manner her desolation and the poverty of her people; and yet the Republican party continues military rule and to this day refuses to "temper the wind to the shorn lamb."

AS TO THE PHILIPPINES.

This House, on the 18th day of December, 1901, under whip and spur and without the opportunity for amendment, passed a bill enforcing the Dingley tariff rates against the Philippine Islands—the property of the United States—part of our territory and part of our people. It is true that the Supreme Court, by a majority of one, said we had the power to do this. Power? Yes. But right, moral right? No. Many of us, I among the number, believe the decision of the court wrong, just as I believed it wrong when it reversed former decisions and held the income tax unconstitutional. It is but human, and "Humanum est errare." Bowing to the decision until reversed, as we must, we appeal for our action to a higher guide—that of right and justice.

The Filipinos desiring freedom are denounced as rebels, and our soldiers are engaged in the pacifying business of hunting them down and shooting them as they would do wild animals in their jungles. Is there a Filipino army? If so, how many men and who are the commanders? It was claimed at the time of the capture of Aguinaldo that he was the last remnant, but still the so-called war goes on.

They thought Spain's defeat meant their freedom, and can not reconcile themselves to a continuation of their serfdom. Freedom is what they have fought for and want.

We are told by the military and civil governors whom we have sent to those islands that the greater portion of the inhabitants are reconciled, law abiding, and peaceful. Fifty thousand troops are, however, still kept there, and we are destroying the natives and the industries of the archipelago with powder, bullets, and prohibitive tariffs. The contention is now made that we will never let them go. Their bondage must be perpetual, to our great cost and detriment. No wonder that they dislike us—hate us. Like the Cubans, they are a feeble folk—only a few million half-clad, half-fed, half-civilized people—but justice and truth are as eternal and all-pervading as the heavens. Even Spain conceded free trade; we give them the Dingley tariff.

Popular indignation with the injustice and bad faith of the Republican party in its treatment of the Cubans and Filipinos should result in the retirement of that party to "innocuous desuetude" and in the restoration to power of the Democratic party, which will give a strict observance of our plighted faith for Cuban independence and fair treatment of the Filipinos.

But it is not my purpose now to discuss the problem of the Philippine Islands, nor in the time at my disposal can I consider, as I would like, the different phases of the tariff. I can at best do little more to-day than indicate how the interest of the farmers can be promoted by treaty arrangements with foreign countries.

Is the attitude of the Republican party to treaty arrangements promotive of the best interests of agriculture?

The Republican party stands as the protector and friend of all the great monopolies, trusts, and combinations; as father and sponsor for the trust-breeding tariff, which surrounds our country with a Chinese wall, placing the consumers at the absolute mercy of the fattened and bloated protectionists, who have grown so insolent in their security that the murmurings of the people go unheeded. Their just demand that articles controlled by trusts for the purpose of increasing the price and securing unreasonable profits from the people be placed upon the free list, so that competition from foreign countries may protect them from their own oppressors, continue to be ignored. The Republican party acts as if it believed in the opinion of Hamilton, the founder of Republicanism, when he said: "The people? The people are a beast." The instances of prices increased by the trusts from 25 to 100 per cent are many and glaring; in some cases the price has been raised more than 200 per cent, and it would be an insult to the intelligence of the people to believe that they will forever permit this extortion and robbery.

A day of reckoning must come—will come. But 2 Republicans out of the 11 on the Ways and Means Committee seem willing to join with the 6 Democrats to protect the people against the trusts. A Democratic victory in the Congressional elections will mean 11 Democrats to 6 Republicans on that Committee. It is for the people to decide.

It was thought for a while that the Republican party, though refusing to revise the tariff or draw the fangs from the serpent by putting trust-made articles on the free list, might follow the course marked out by President McKinley in his Buffalo speech and favor the opening of foreign markets to agriculture and manufacture by giving reciprocity. But who believes it now?

If we can not secure a reduction in the great tariff of this country, we should at least have reciprocity, and in this way open the markets of other countries. If we do not give trade concessions, other countries, goaded to desperation by a sense of our injustice, will, with their tariff walls, exclude our manufactures and agricultural products from their markets.

Blaine saw the danger to the farmer from high tariff duties and strongly advocated the lowering of tariff duties by reciprocity treaties.

William L. Wilson, writing in the Forum, October, 1892, said:

Mr. Blaine, with a sagacity not shown by other protectionists, saw the danger and folly of the bill as it was carried through the House. He saw the imperative necessity for larger markets for the farmer, while the blind authors of that bill were intent only upon securing the home market for the special interests they represented. He first tried by personal conference with the Republican members of the House committee to secure some amendment to their tariff bill looking toward new markets for our exports. Private advice and warning having failed, he forced the fight openly. He followed up an amendment offered in the Senate by a Senator from Maine with two personal but public letters to the other Senator from his State, which set forth what he could not say in his official report, the impending loss of existing markets to the American farmer and the complete failure of the McKinley bill to provide any new outlet whatever for the farmer's surplus grain or meat products.

The Export Bulletin, in its issue of January, 1902, under the headlines "Reciprocity Treaties," said:

This subject is destined to become an important one in the politics of the United States. The great producing interests of the United States in seeking an outlet for their surplus products recognize that we must offer reasonable inducements to foreign countries for reciprocal trade. Some of the highly protected industries, however, of the United States are unwilling to make any concession which will injure any of our home industries, and insist upon themselves being the judges of what will and what will not injure. From the disposition shown thus far they will make no concessions until compelled to, and the danger is that they will sit upon the safety valve until the pressure of public opinion bursts the boiler; or, in other words, that instead of the tariff being reformed by its friends through reciprocity treaties, which an opportunity now exists for, all reforms will be resisted until a ground swell of public opinion comes which will change party lines and the tariff will be reformed by its enemies.

Some time ago I heard the junior Senator from New York [Mr. DEPEW] say in a speech in the Senate that the manufactures of this country had outgrown the home markets and foreign markets must be found; or, as another expressed it, we must find a market for our surplus or stop producing it. This condition has been true of agriculture for many years, but so long as it was true only of agriculture little concern was manifested by the Republican party.

The Republican party's idea is to open by war and at a great expense of blood and treasure an insignificant market in the Philippine Islands. This attempt has already cost us something like $400,000,000 and the lives of thousands of our young men. By reciprocal relations with the great nations of the world we can (and without the shedding of blood or expenditure of money) open up their markets to the products of our fields and manufactories.

According to the Journal of Commerce—

The returns for eleven months indicate that the value of our agricultural exports for the year will reach $910,000,000, while those of manufactured products will not be less than $390,000,000. In spite of a decrease of $46,000,000 in the last-mentioned item, as compared with 1900, the total export trade of 1901 promises to come within a few millions of $1,473,000,000, the unexampled total of last year.

Who is to consume this surplus if foreign countries, imitating our policy of prohibition, bar our products from their markets?

European countries seem to be awakening to the necessity of tariffs against American products in retaliation of our high duties. Germany is even now considering a revision of her tariff, increasing the rates very largely upon imports, as the following table shows:

Samples of some of the increased tariffs of Germany that affect the United States.

	Per 100 kilos (220.46 pounds).		United States exports to Germany.
	Present rate.	New tariff.	
Wheat	$0.83	$1.55	$6,495,209
Rye	.83	1.43	352,392
Barley	.48	.95	1,531,455
Oats	.86	1.48	394,108
Flour	1.74	3.20	2,700,638
Corn	.38	.95	18,776,736
Horses (per head)	4.76	7.14 to 71.40	----------
Hogs (by weight)	1.19	2.38	----------
Meats, fresh or frozen	----------	7.14	----------
Meats, salted or smoked	4.04	8.33	3,243,272
Meats, finer quality	14.28	17.85	----------
Lard	2.38	2.98	12,269,958
Butter	3.81	7.14	65,207
Eggs	.48	1.43	----------

The Record-Herald, of Chicago, is right when it says:

The people will have reciprocity or a general tariff revision. They will not pay fancy prices as a gratuity to protected manufacturers who underbid their foreign competitors in all of the markets of the world.

Hon. John A. Kasson, late special commissioner of the United States under President McKinley, said:

Official letters show that even in Great Britain, which with her possessions gives us a market for over 50 per cent of all our exports, the agitation for tariff protection has already commenced. In Germany governmental hostile action has been officially announced.

One German economist, after asserting that our tariff is now seven times higher than the present German tariff, and will remain four times higher than their new tariff, proposes that legislative provisions on the part of Central European States shall make their new tariffs applicable to European countries only, and that they adopt for American products the identical rates of the United States tariff. He adds that of course the United States can not complain if Germany simply reciprocates their own tariff.

Both agrarians and manufacturers abroad are appealing to their governments for new measures against "the American invasion." They are specifically aimed at our agricultural interests.

The markets of the United Kingdom are open to us, while those of Germany and France are subject to restrictions. The following table for 1900, showing some of our exports to those countries, is therefore of interest:

Products.	Great Britain.	Germany.	France.
Meat products	$116,000,000	$27,000,000	$5,000,000
Wheat ..... bushels	60,831,811	16,752,528	[a] 1,973
Wheat flour ..... barrels	10,215,605	107,433	[b] 1,139
Indian corn and corn meal .. bushels	77,772,862	44,273,187	4,727,852
Tobacco ..... pounds	88,804,522	28,084,179	36,550,584

[a] In 1898 it was 34,663,911 bushels. [b] In 1898 it was 42,238 barrels.

Notwithstanding our large exports, it is but a small per cent of the world's trade, as will be seen by the following table, showing the imports into European countries for a single year:

Countries.	Year.	Total.	From United States.	United States share.
				Per cent.
Austria-Hungary	1900	$336,696,000	$7,675,019	2.2
Belgium	1900	427,740,000	46,929,953	10.9
Bulgaria	1900	9,268,000	48,200	5
Denmark	1900	111,059,000	15,499,371	13.9
France	1900	881,706,000	82,553,335	9.3
Germany	1900	1,389,264,000	197,603,400	14.2
Greece	1900	25,087,000	327,569	1.3
Italy	1900	339,847,000	36,731,704	10.7
Netherlands	1900	791,055,000	83,721,501	10.5
Portugal	1900	64,518,000	5,705,179	8.8
Roumania	1900	41,878,000	31,037	.07
Russia	1900	294,837,000	8,498,950	2.8
Servia	1900	10,422,000	369	.003
Spain	1900	171,375,000	15,200,917	8.8
Sweden	1900	143,362,000	11,520,574	5
Norway	1900	83,267,000		
Switzerland	1900	214,800,000	297,283	.13
Turkey	1898	11,890,000	405,217	3.4
United Kingdom	1900	2,548,260,000	602,221,375	23.6
Total for Europe	----------	7,895,831,000	1,114,952,953	14.1

To the above are to be added the imports into Asiatic, African, South and North American countries, bringing the total imports

into all foreign countries $10,398,189,000, of which only $1,468,373,470 are from the United States—being about 14 per cent of the total trade. Of these exports from the United States two-thirds are food stuffs. For 1901 the exports of manufactures amounted to $395,144,030—a falling off of $46,262,912—while the exports of agricultural products amounted to $940,246,488—a gain of $35,591,077 over 1900. A vast field is open for the products of this country. Will we avail ourselves of it?

Our first duty should be a revision of the tariff in the interest of the farmer and the consumer. Until this can be secured, treaties of reciprocity should be made with foreign countries providing for the admission of our manufactures at a low tariff rate and of agricultural products absolutely free. This is the way to encourage and promote the farming interests. Let us send to all the markets of the world our bread stuffs, meat products, tobacco, and cotton. No longer let the cry be simply for home markets but foreign markets. By a wise use of reciprocity they can be secured. It would again place agriculture at the fore front of wealth-producing industries.

By these new markets to the farmer the demand for his products will be doubled, prices increased. Reciprocity refused, retaliatory measures follow, with the closing of foreign markets to our products. If the party in power does not give it, the people have the remedy in their own hands. A Congressional election is approaching. The leaving at home of the statesmen opposed to lowering the tariff wall or of making any concessions for farm products by reciprocal arrangements with foreign countries will secure the needed legislation.

As an illustration, I would say, give Cuba a reduction of 50 per cent in the tariff on sugar and secure her markets for the agricultural products of wheat, corn, flour, and cattle, and for our manufactures, of none of which is she a large producer.

Gen. Leonard Wood, our military governor in Cuba, in his circular letter to members of Congress, says:

> Cuba has submitted a proposition of reciprocity which will turn to the United States $34,000,000 of the $37,000,000 of her trade, which last year went to Europe; and under conditions of increasing agricultural and commercial prosperity her trade will soon be among the most valuable which we have. To-day it amounts to a little less than $70,000,000. With conditions of confidence and prosperity it will probably soon reach $150,000,000, a trade well worth cultivating; and of this amount at least $144,000,000 should come from the United States.

In a like manner, and to a greater extent, a reduction in our tariff rates on the favored products of other countries could secure free entry for our breadstuffs and meat products to their markets.

The time is ripe for these reciprocal relations. No political party ever had a better opportunity of serving the farmer. Will the Republican party put its foot upon the trust octopus, revise the tariff, and by reciprocal relations open the markets of the world to our products? The answer, in the light of its past history, must be no, and on this the appeal lies from the Republican party to the people.

There is now great depression in Germany, Russia, Great Britain, and France, while for the past four years there has been a period of great prosperity in the United States. Is this to continue, or are we standing upon the brink of a precipice? Experience in the past shows that great depression abroad is followed by depression here. But whether this is to be an exception or not we should throw out the "life line" while we are in condition to do so, open the markets of the world, and seek to place the producing interests where they can stem the tide of adversity.

Securing open markets for our agriculture and manufactures will do more to build up our merchant marine than the subsidy scheme by which it is proposed to take millions from the public treasury to give to owners of ships. Of this measure the opinion of the National Grange, Patrons of Husbandry, representing the farmers of the United States, is expressed so tersely that I adopt their language as my own:

> The principle involved in the ship-subsidy bill before the last Congress has the unanimous opposition of the farmers of the country as expressed by the National Grange and by the master of every State grange in the land. We are in favor of the development of the American merchant marine and of manufacturing as we are in favor of the development of American agriculture, but are no more in favor of contributing to a few wealthy ship builders than we are of contributing to farmers or manufacturers. We have reasons founded on sound principles of statesmanship to oppose a scheme that contributes to the profits of the few at the expense of the many without adequate return. The toiling farmers of the land have developed American agriculture until its products constitute a majority of the exports of the country without Government aid, and we understand that American steamships are already yielding their owners profits in transporting these and other products to all parts of the world without Government subsidies. The farmers of the country ask for no special favors in legislation and oppose in the most vigorous manner such special favors to ship builders and owners as are embodied in what is familiarly known as the ship-subsidy bill.

Securing the open markets of the world will do more for the farmers of this country than the expenditure of the many millions on the arid lands of the West, whose Senators and Representatives, we are told, have made a hard and fast bargain to stand together in their demand for relieving the public treasury of its surplus. The National Government had as well provide great reservoirs in the Eastern States for the storing of water against the destructive droughts which sometimes destroy corn and hay crops and burn up the pasture lands, preventing the fattening and marketing of cattle, entailing great and sometimes destructive loss to their owners.

Let these special pets, schemes, and subsidies, offshoots of a perverted idea of Government, slumber and sleep. The people do not want them. Let us all unite upon the common plane of the greatest benefit to the greatest number and encourage agriculture. Let us do what we can to restore it to its old-time prosperity. Let us dignify the farmer's calling and increase his profits by giving him the best markets of the world. Too long has he been the victim of a tariff which has consumed his earnings and made his calling unprofitable. Give him now his "day in court." His calling is the most ancient and has always been among the most honorable. Let us make it the most profitable, so that our young men may be content to remain to build up the waste places. Nothing is to be more regretted than the leaving of our farms and farm life by the sturdy young men to accept places in the city, yielding them a bare support and with no hope of advancement. To the question, "Why do you leave the country?" the reply is almost invariably made, "Farming no longer pays."

The depreciation of agriculture is well illustrated by a comparison of the great appropriation bills for a single year. The producer, agriculture, has an appropriation of $4,000,000, while the consuming Department, War, has $116,000,000 and the Navy $66,000,000.

This ought not to be. The Government should be more liberal with the Agricultural Department, which should be developed on all lines in the interests of the farmer. It is probably the best and most economically administered of all the departments of the Government, while the many millions so recklessly spent upon the Army and Navy and other departments should be curtailed.

The people who live upon the Government stand together, while the people who pay the taxes and support the Government are frequently divided. Let the farmers unite to demand that treaties be so framed as to give them the open markets of the world, and an era of unexampled prosperity must await them.

Oleomargarine Bill.

SPEECH

OF

HON. HENRY D. CLAYTON,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 3, 1902.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 9206) to make oleomargarine and other imitation dairy products subject to the laws of the State or Territory into which they are transported, and to change the tax on oleomargarine—

Mr. CLAYTON said:

Mr. CHAIRMAN: In view of the strong and perhaps authoritative statement of the gentleman from Illinois [Mr. GRAFF], who has just taken his seat, it may be wholly unnecessary for anything more to be said in this debate, for he has informed the House in a very impressive manner, indicating great knowledge and confidence, derived, doubtless, from a canvass of the House, made, perhaps, by the aid of a very powerful and efficient lobby on the outside, that this bill will certainly pass. I have never had anything to do with lobbyists and have no information of the kind expressed by the gentleman. Therefore, in the time accorded to me in this debate I desire to address the committee upon the lack of authority in Congress to rightfully enact this legislation, and also to more fully expose the real purpose of the pending measure, and, furthermore, to show that this bill ought not to pass, even if Congress has the power to enact it into law.

Mr. Chairman, there is not a man in this House, I dare say, on either side of the question, who has not been impressed by the lack of candor exhibited throughout the discussion by the advocates of this bill. We have seen evasion after evasion of proper answers to proper questions propounded to the friends of this measure; and it is not offensive, I hope, to say that a pettifogging lawyer would be discredited in the court of a justice of the peace if he advanced such arguments as some of the supporters of this bill have inflicted upon the House.

Mr. Chairman, the first question that addresses itself to the conscience and enlightened judgment of every member of this House, when a measure is introduced here, is, What rightful authority has Congress for the passage of the bill? I trust, Mr.

Chairman, that in view of the ancient history to which the gentleman from Vermont, defender of this bill, has adverted—the account of Jacob and the herds of Laban, and Moses and the flocks of Jethro—I may refer to that antiquated document known as the Constitution of the United States, which is still an instrument of interest to academicians and students of history, and, I may add, of some binding force upon at least a few members of Congress.

Sir, at the beginning of each session of Congress the members of this House swear that they will support this venerable instrument and be guided in their action by this great chart of the Federal Government. Yet, sir, it is a lamentable fact that when questions are presented here members are impatient at any reference to the Constitution, and some of them manifest intolerance sometimes when a Representative rises to give his interpretation of the organic law of the Federal Government, a government of a written constitution, of delegated powers, and denied the exercise of powers not conferred. It is elementary to say that Congress has no power to legislate unless that power is expressly granted in the Constitution, or derived by fair implication as a necessary incident to or consequent from a power expressly granted. That was the canon of construction and the law even before the adoption of the tenth amendment. The people have always been jealous of their right to home rule, and one of the fundamental teachings of the Democratic party has always been that the rights of the State must be as zealously guarded against Federal usurpation as the rightful power of the Federal Government ought at all times to be recognized. Carrying these principles in our minds, let us weigh and test the bill under consideration.

Now, it must be admitted that the measure is bottomed upon some one or more provisions of the Constitution, for independent of that instrument there is no power in Congress. I have heard it said in this debate, in substance, that this bill is authorized and justified under the taxing power conferred upon Congress, and some of these same expounders of the Constitution would construe the general-welfare clause to be a grant of power instead of a limitation upon the power to tax. Certainly the Federal Government has the right to tax for well-defined public purposes. And I agree that the taxing power has been often abused, and that sometimes it has been so perverted as to destroy certain interests and in other cases so misused as to build up and foster illegal conspiracies and unlawful combinations, known as trusts. Examples of the perversion of the taxing powers are numerous.

That this power is perhaps the greatest possessed by any government I do not deny, for it was said in McCullough *v.* Maryland "that the power to tax involves the power to destroy." But in citing the opinion delivered by Chief Justice Marshall in that case, the gentleman from Vermont [Mr. HASKINS] seems to approve the statement quoted solely because it recognizes the ability of the taxing power to destroy, and he apparently exults in the destructive feature of this power and its application to oleomargarine and cotton-seed oil and beef cattle, allied industries affected by this bill. He forgets that Judge Marshall used the language as in the nature of a warning of the danger to come from the abuse of the taxing power. In this connection, the gentleman might also have quoted from the Topeka case, where Justice Miller, speaking for the court, said:

> To lay with one hand the power of the law on the property of the citizen and with the other to bestow it upon favored individuals to aid private enterprise and build up private fortunes is none the less robbery because it is done under the forms of the law and is called taxation.

It is admitted by candid men that this very ability of this power to destroy is an efficient way that one class of producers and tradesmen have here invoked through the medium of this bill to destroy the industry of another class of producers and tradesmen. Let me ask, Mr. Chairman, does this bill come legitimately within the purview of the rightful authority of Congress to lay taxes? The courts have never said so, as to this particular bill, and perhaps never will, in any event, pass directly upon this question. They may say that they can not inquire into the real purpose of this bill, because, they may say, it declares in its face that it is at least in part a revenue measure. In plain English, this bill may stand up before the Supreme Court of the United States and assert a false purpose, assert a lie that the ablest efforts of Annanias could not equal, and yet the court may say that the statute can not be pronounced unconstitutional.

Mr. Chairman, it is not given me to know what the Supreme Court may declare with reference to any statute. That court has in these, the latter days of the Republic, made some remarkable decisions, overruling decisions of this very court that have stood as the settled construction of the Constitution for over a hundred years. Let me instance the Hylton case, that was the judgment of the court for more than a century, holding that Congress has the power to lay an income tax. And yet this decision, by a change on the part of one of the justices, was overruled in the well-known case of Pollack *v.* The Farmers' Loan and Trust Company. Take another instance, the case of Loughborough *v.* Blake, which stood so long as the decision of the court, defining the United States to mean all territory of the United States, including the District of Columbia and the Territories, as well as the States, and holding that the clause of the Constitution requiring uniformity in taxation was applicable everywhere, and yet we have the Insular Decisions overturning this ancient doctrine.

But does this measure come within the constitutional purview? I think not. It goes further than any measure of the like kind ever did. The courts may run away from the consideration of the real object of the bill by saying that the measure appears to be for revenue, as I have said, or that it is in the nature of the exercise of the political power and that authority was invested in Congress to construe this latter power, and that when an act pretends to be the exercise of one or the other of these powers the courts can not interfere. Hence it may be, Mr. Chairman, that the constitutionality of a measure of this kind can never be questioned in the courts. The court may ignore the real intention, as they have done. Remembering these facts, a member of a coordinate branch of the Government, charged, as he is, with construing and supporting the organic law, may perhaps be permitted to say that his confidence in the opinions of the Supreme Court has been somewhat lessened. As I have instanced, that tribunal has construed this very question of taxation as suited the exigencies of "the idle holders of the idle capital." And Congress has gone on and levied taxes upon the Porto Ricans, and its approval by the Supreme Court has gone far toward destroying the clause of the Constitution which undertakes to guarantee uniformity of taxation throughout the United States.

So then, gentlemen, it is for you to interpret this instrument touching the power you are called on to exercise, for if the courts avoid the ascertainment of the real purpose here involved and known to us there can be no tribunal in which to bring the bill to a correct final test. The only remedy may be a resort to Congress to repeal the statute. Every man here, therefore, must sit in judgment upon this measure. He must try it in the light of his judgment and determine whether it is within the scope of our legislative authority; he must try it in view of our written delegated authority, and I hope every Democrat will try by the ancient teachings of the fathers. I do not mean to say that the decision of the Supreme Court in any case is not the law of that case. Every good citizen must accept it as such and abide by it. But it is none the less true that we, in our representative capacity, have the right, and it is our high duty, to adjudge for ourselves the constitutionality and purpose of any measure here presented to us. We may, of course, and doubtless should, study and weigh the reasons that support the interpretation by that august tribunal given to any question we may have under consideration demanding the exercise of enlightened judgment and conscience.

Is this bill for the purpose of raising revenue? That is what some of the gentlemen who support it would pretend to make us believe. They themselves do no believe it. You know the object of this bill is to destroy the oleomargarine industry, and you propose to do it in this insidious way, under the sneaking form of invoking the taxing power and commerce power of the Federal Government to do what you know you could not do if you avowed the purpose in plain words on the face of your bill.

Now, as honest men, stand up and deny it. Don't you know that the representatives of the great dairy combinations, who have been lobbying here and flooding the mail of every member of Congress with postal cards and printed extracts—do not you know, and do not they know that what you intend to do is to prevent the use of oleomargarine, whether colored or not, as a substitute for butter? The man who does not know that, with due deference to distinguished gentlemen, and I trust without giving offense, is a fit subject for St. Elizabeth's Asylum.

Mr. Chairman, if this bill did not show in its features its real purpose, we could trust its friends, who have lobbied and testified for it, to tell us its meaning. Hear the chief of them, Mr. Hoard, who in speaking of this bill said:

> In plain words this is repressive taxation.

And hear him again. I now read from the printed hearings of the committee that reported this bill.

> Mr. SCOTT. If the passage of this law should not diminish the sale of oleomargarine, would its enactment still be demanded?
>
> Mr. HOARD. That is a question I could not answer you, because it is too problematical. I could not say what would be demanded if we did not do this or that.
>
> Mr. SCOTT. I thought I might get your opinion whether, if you thought the passage of this law would not restrict the sale of oleomargarine, but would simply make it an honest sale instead of a dishonest sale, you would still be in favor of it.
>
> Mr. HOARD. I am absolutely opposed to the sale of oleomargarine in the guise of another thing.
>
> Mr. SCOTT. But if it could be sold honestly——
>
> Mr. HOARD. I do not care whether it is sold honestly or dishonestly; I am opposed to counterfeiting.

Mr. SCOTT. But under this bill, after paying the tax, it can be sold only as oleomargarine, can it not?

Mr. HOARD. I suppose so. It can be sold to that extent but no more, but I have to do business with the things I have, with the machine I have; I can not approach it from the Federal standpoint except through taxation.

Mr. SCOTT. I understand that. But you seem to fail to catch the drift of my question. I object just as much as you do to the sale of one product for another product. I was simply asking whether this bill would be demanded if, after its passage, just as much oleomargarine would be manufactured and put on the market as is now manufactured and sold.

Mr. HOARD. In that case, sir, I would come before Congress and demand a still higher tax.

And yet gentlemen tell us here that this bill will not militate against the manufacture and use of oleomargarine, and this, too, in the face of the statement of Mr. Hoard that if it should pass and the result should be not to diminish the manufacture and sale of oleomargarine he will come before Congress again and demand a still higher tax.

Permit me, Mr. Chairman, to read the colloquy that occurred this morning between the gentleman from Connecticut and myself:

Mr. CLAYTON. I would like to ask the gentleman from Connecticut a question. Stripping this controversy of all verbiage and getting at the heart of the proposition, is it not the purpose of the bill, by the abuse of the taxing power of the Government, to destroy one of the legitimate industries in order that the price of butter may be enhanced to the consumer?

Mr. HENRY of Connecticut. Oh, no, no; I say, decidedly, no.

Mr. CLAYTON. Will the gentleman answer another question? How much more will the consumers of butter have to pay for butter, when they eat it, after this bill becomes a law?

Mr. HENRY of Connecticut. Not one cent, in my opinion.

Mark that, Mr. Chairman.

Mr. CLAYTON. Then who will receive this benefit?

Mr. HENRY of Connecticut. It will benefit the laboring man that will buy oleomargarine for 15 cents where he now pays 20.

Mr. CLAYTON. How can the gentleman demonstrate that? Will this not destroy the oleomargarine industry?

Mr. HENRY of Connecticut. No; it will not.

Mr. CLAYTON. Why was it, let me ask the gentleman, that the committee struck out the word "yellow" on page 2 of the bill?

Mr. HENRY of Connecticut. Well, there was a difference of opinion, I may say, in the committee, and as that is a committee secret I prefer not to go into it.

Mr. CLAYTON. Will the gentleman answer one more question? Why is it, if you are so anxious to protect the people against fraud, your committee did not provide for the taxing of renovated butter? Isn't that a fraud on the consumer when it is sold to them as pure, fresh butter?

Mr. HENRY of Connecticut. If the gentleman from Alabama will introduce a bill and have it referred to the Agricultural Committee, I guarantee it will receive consideration.

Mr. CLAYTON. That question was up to your committee. That proposition was distinctly offered to you in the last Congress, and it is offered to you now, and I will offer it as an amendment to this bill. Will the gentleman from Connecticut support it?

Mr. HENRY of Connecticut. No. That is another proposition.

Mr. CLAYTON. Will the gentleman answer this question frankly? Is it not the purpose of the Dairy Union and your purpose, by legislation, by the abuse of the taxing power of the Government, or a stretch of the commerce power of Congress, to tax it and outlaw a legitimate industry—the manufacture of wholesome oleomargarine.

Mr. HENRY of Connecticut. I will say—and I trust the gentleman will credit me with candor—that I would not be a party to any such legislation.

Mr. CLAYTON. Then what good is going to be accomplished by this bill? You say that it does not raise any revenue for the Government; you say it does not enhance the price of butter; and if it does not benefit the farmer in the sale of the butter, and raises no revenue, tell me where the good can come in.

Mr. HENRY of Connecticut. Oh, well, the gentleman can have plenty of time to put that into his argument.

Mr. CLAYTON. I want the gentleman to answer it. He got up here to defend the measure.

Mr. HENRY of Connecticut. I will answer questions, but not an argument.

Mr. CLAYTON. Now, I ask the gentleman again, will the Federal Government be benefited one dollar by the taxation from this measure?

Mr. HENRY of Connecticut. That is a minor consideration, but the Federal Government will derive some benefit from the taxation.

Mr. CLAYTON. What amount of taxes will the Government derive from this source?

Mr. HENRY of Connecticut. I can not answer.

Mr. CLAYTON. The butter maker or the farmer whom you are so anxious about—how much benefit will he derive from this measure?

Mr. HENRY of Connecticut. Oh, well, the farmer is the best judge of that for himself.

Mr. CLAYTON. You say that this tax is not going to enhance the price?

Mr. HENRY of Connecticut. The farmer is here asking for this legislation.

Mr. CLAYTON. What farmer is here? The butter trust, I suppose, which was formed in Kansas City a few days ago, is asking for this measure.

Where is the revenue feature of this bill? Why, one gentleman to-day said it was going to reduce the revenue. And he demonstrated that. You are going to increase the revenue by passing a bill taking off revenue! That is the logic. If so, you must increase the sale and consumption of oleomargarine, further popularize it as a clean and wholesome article. Do you intend that? Do the owners of the great dairy plants at Elgin, Ill., and in Minnesota, and in Wisconsin, believe that? Give me a candid answer.

Mr. McCLEARY. Will the gentleman allow a question?

Mr. CLAYTON. Certainly.

Mr. McCLEARY. Did not the Wilson bill reduce the revenue? And was it a revenue measure?

Mr. CLAYTON. It did not reduce it from nothing, and I am coming to the tariff. Besides, that bill was designed, by lowering the wall of a protective prohibitory tariff, to increase importations, and thereby increase the revenues arising from customs duties. I am glad you suggested it, because I have a little tariff talk for some gentlemen on this side who have been lecturing you people on tariff.

Now, Mr. Chairman, what is the object of this bill? To raise revenue? Confessedly not. Why are you going to impose this tax? Do you not know that this 10 cents a pound tax upon oleomargarine is like the 10 per cent tax upon State banks of issue? Do you not know that it is intended primarily to be a prohibitive tax? If not, then why? If it does not prohibit the manufacture and sale of oleomargarine, what will happen? It must necessarily increase the price of it, for one of two things must result; either the manufacturer of oleomargarine must increase the price, or else he must go out of the business. Your object is one or the other. Which?

Mr. HAUGEN. Will the gentleman allow a question?

Mr. CLAYTON. Yes.

Mr. HAUGEN. How do you harmonize your statement with the statement of the gentleman from Ohio, who says that the market price of oleomargarine in the city of Washington to-day is 15 to 18 cents a pound, while the price of butter in the city of Washington is 35 cents a pound.

Mr. CLAYTON. Does the gentleman refer to the gentleman from Ohio, Mr. GROSVENOR?

Mr. HAUGEN. Yes.

Mr. CLAYTON. I did not have the pleasure of hearing his remarks this morning and I am not much of a harmonizer anyway. You jump on old Santa Claus, as that gentleman is familiarly called, yourself to-morrow, and he will give you enough. [Laughter.] He will take care of himself.

Mr. FOSTER of Illinois. In the line you have just been arguing, I do not know whether you heard the little colloquy that occurred between the gentleman from Illinois [Mr. BOUTELL] and the gentleman from Minnesota [Mr. McCLEARY]. In answer to the question of the gentleman from Illinois as to why colored oleomargarine was to be taxed 10 cents a pound, the gentlemen from Minnesota [Mr. McCLEARY] replied that the minimum cost of oleomargarine was 8 cents a pound, that the minimum cost of butter was 17 cents a pound, and that they taxed the oleomargarine 10 cents a pound in order to make it a cent a pound higher than the minimum cost of butter, and thereby give it the benefit of the larger market.

Mr. CLAYTON. I thank the gentleman for the suggestion. Now, Mr. Chairman, we know that whatever view the courts may take of this matter, stripped of its verbiage and getting down to the real meaning of this bill, the purpose of it is to destroy one industry by the use of the taxing power of the Federal Government. Either that is the object of it or else it is to make the customer pay a higher price for a particular product. Now, you can not run away from one of those conclusions. One or the other is bound to be true. Will any man here say that this is a rightful regulation of interstate commerce? By any construction of words can it be stretched to be that? Read the purpose of the bill. It shows plainly that the object is to hedge about the manufacture, the production, the sale, and the use of oleomargarine, not only as an interstate article, but an article of domestic manufacture and consumption in the States.

It goes further than any bill that has ever been proposed to this Congress. You not only assume to pass certain Federal statutes, but you propose in the first section of this bill to delegate certain assumed Federal power, if you have any, to the States. The gentleman from Texas [Mr. BURLESON] argued well on that proposition this evening, and without an examination I agree with him that if we sit here in judgment upon a proposed law the maxim "delegatus non potest delegare" applies. We are agents. The Federal Government is clothed with certain powers taken away from the States. We know that when the duty is imposed upon us of doing certain things, when a certain power is delegated to us, we ought not to delegate that to the State legislatures, and before I conclude I shall discuss that provision of the bill.

Mr. WILLIAMS of Mississippi. Now, if the gentleman from Alabama will excuse me, he has just said this bill went further, and he made an illustration in one particular; and it goes further in another particular. If an oleomargarine company was chartered by the State of Illinois to do business in Illinois, and not outside of that State, and manufactured oleomargarine and sold it only as oleomargarine, colored, and Illinois had any laws against its being colored, then this bill would drive it out as a matter of State manufacture and State consumption in the State without any interstate trade about it.

Mr. CLAYTON. The gentleman's interruption was timely. I thank the gentleman for the suggestion.

Now, Mr. Chairman, I am as tolerant as any Democrat here with his brethren. I want to say something on the line of a Democratic doctrinal sermon. [Applause.] Now, we are Democrats because we believe in certain doctrines, and not because your cow lobby asks us to do a certain thing. [Laughter and applause.]

Mr. McCLEARY. Or cotton-seed lobby.

Mr. CLAYTON. In reply to the suggestion of the gentleman, let me say that I have not had a single letter or petition from the cotton-seed growers or cattlemen, both of whose products enter with butter and milk into the composition of oleomargarine. And let me say further, that so far as I know, not a single cotton-seed grower has been here. Not one has said anything in writing or otherwise to me on the subject. Why are we Democrats? One thing that makes us Democrats is our theory of the Government of the United States, and when you come to construe the taxing power of the Federal Government you Democrats believe that the Federal Government has the power to tax for the purposes of revenue and to carry on the Government economically administered. [Applause.] You Democrats have been talking about these Republicans all your lives for abusing the taxing power of the Government; you have been saying that when they passed high protective tariff laws it was an abuse of the taxing power of the Federal Government. Although the Supreme Court has said it could not declare these abuses unconstitutional, you have always maintained that prohibitive tariffs and the like was an abuse of and pro tanto a destruction of the power. Why? Because you said they were fixed so high as to prohibit foreign competition, and enabled the domestic manufacturer to mark the price of his goods up to the price charged by the foreign competitor plus the tariff, and thereby reducing revenues and making the manufacturer rich at the expense of the consumer. That is the doctrine that Democrats have always maintained. Now, beardless Democrats, and baldheaded ones, too [great laughter], answer me this: If it is wrong for the Federal Government to levy a protective tariff to build up a domestic manufacture, how much more wrong is it for the Federal Government to levy a tax to destroy a domestic manufacture? [Loud applause.]

Mr. WILLIAMS of Mississippi. Neither is for revenue.

Mr. CLAYTON. Neither one is for revenue, as the gentleman from Mississippi has stated. Now, let some of those Democrats who are thinking of voting for this bill take this Democratic doctrine home with them and chew over it. [Laughter.] Chew over it; and I want to tell any one of you that in case a good, live Jeffersonian Democrat gets after you and unshirts you, you will stay at home and he will come here.

Mr. HEPBURN. Will the gentleman from Alabama permit me to ask him a question?

Mr. CLAYTON. Certainly.

Mr. HEPBURN. Do you regard the present law upon the subject which you have just mentioned a proper exercise of the taxing power?

Mr. CLAYTON. The present law. I did not vote for it.

Mr. HEPBURN. Do you regard it as a proper exercise of the taxing power?

Mr. CLAYTON. I do not.

Mr. HEPBURN. Yet you will remember that it was passed by a Democratic Congress.

Mr. WILLIAMS of Mississippi. But by a Republican vote.

Mr. HEPBUBN. Oh, no.

Mr. CLAYTON. I do not care. The gentleman has said that there are various sorts of Democrats, and I say there are various sorts of Republicans.

Mr. HEPBURN. Would you like to have a list of the distinguished Democrats who voted for that law?

Mr. CLAYTON. I prefer not to be interrupted with that, as my time is limited. I was proceeding to deliver a sort of a Democratic talk over here. [Laughter.] If you want to come over and join this side, I will take you in under the head of baldheaded Democrats. [Laughter.] You would make a good one. You come mighty nigh talking like one sometimes. If you lived in Alabama, I believe you would be one. I wish you were down there.

Now, Mr. Chairman, let us look further into this bill, as it has been printed to accompany the report of the committee. Section 1 seeks to avoid the effect of the Original-Package cases and to surrender back to the States the commerce power of Congress, to be used by any State, in its discretion, for the prevention of the sale and use of oleomargarine sent there from another State. This section says that "oleomargarine, etc., transported into any State or Territory, etc., and remaining therein for use, etc., shall, upon the arrival within the limits of such State, etc., be subject to the operation and effect of the laws of such State, etc." And in the proviso to this section it is said "That nothing in this act shall be construed to permit any State to forbid the manufacture or sale of oleomargarine in a separate and distinct form and in such manner as will advise the consumer of its real character," etc.

Now, Mr. Chairman, we have here a monstrous proposition—the surrender by Congress of its control over interstate commerce, so far as the oleomargarine industry is concerned. If Congress can surrender this control in the case of any article of interstate commerce, there is no reason why Congress can not surrender to the States the control over any or all articles of interstate commerce—over such articles of interstate commerce as cotton-seed oil, as so-called sardines from Maine—little fishes caught there and embalmed in some sort of grease and put into cans with French inscriptions thereon, and stating that they are imported French sardines, put up in pure olive oil. And let me also mention candy composed in part of chalk, and other deleterious substances put in packages, branded as pure sugar candy; and canned peas may be included, for they are artificially colored very green, and put up in boxes labeled French peas. Some of you will recollect that in the Fifty-fifth Congress the lamented Mr. Dingley, of Maine, wore a silk hat stamped inside with the words "Made in London," and he confessed here on the floor of this House that while the hat was made in America it was so stamped to please or fool the dudes, who desired to be "English, you know," and wanted to buy low-priced silk hats. If we are going into the paternal business, for mercy's sake let us protect the dudes from imposition. They need it.

Mr. Chairman, what is the nature of the power conferred upon Congress by the commerce clause of the Constitution? Undoubtedly so far as trade with foreign nations and between the States and with the Indian tribes is concerned it is an exclusive power. An analysis of the clause subdivides the power into three several and separate subjects to which it applies. I need not discuss that part relating to trade with the Indian tribes, for every lawyer knows that it has been uniformly held that so far as trade with these tribes is concerned Congress has the fullest power to regulate and license that, and the converse of license is prohibition. As to control over commerce with foreign nations, the power is again of the fullest nature, and necessarily so, because it is the exercise of the power of the Republic as an indissoluble unit, as an indivisible, legal, and political entity. In this view, embargo has been laid upon foreign commerce, and many other things done illustrating the extent of the power over foreign commerce.

It is well to remember the history of the commerce clause and its adoption, and that so far as the States are concerned, that part relating to interstate commerce, while it is full power for the protection of the commerce of each and every State from injurious legislation by any other State or States, it is a power less full than the power over foreign commerce, for Congress can not lay an embargo on the commerce of one State in favor of a rival State. It must be remembered that in the convention which framed the Constitution there was a universal demand growing up out of the necessity of the case for the surrender of interstate commerce to the exclusive control of Congress. It was deemed wise and necessary that this power should be surrendered by the States and vested in Congress. Before the formation of the Union a State was sometimes guilty of hostile legislation and acts of reprisal against the commerce of a rival State. The quarrel between Virginia and Maryland is a conspicuous example. The States felt the necessity of having this power in a central authority, to be exercised for the common benefit of all and to the detriment of none. The statesmen in the convention recognized that the Union could not last or ever be a harmonious Union as long as a great State had the power to discriminate against the commerce of a weak State. Hence the necessity for conferring exclusive control over interstate commerce upon the Congress, composed of a House of Representatives elected from districts, and of a Senate, where any small and weak commercial State is the equal in political and legislative influence of the one greater in population and commerce.

Now, why shall this first section of the bill be enacted into law, which, permit me to say, I do not believe will stand the test of judicial scrutiny? It is for the manifest purpose of giving to such States as Wisconsin and Minnesota, who are greatly interested in the dairy product—butter—as an article of interstate commerce, control over oleomargarine as an article of interstate commerce. Those States are not interested in cotton-seed oil, a Southern States article of interstate commerce, or in beef cattle and the by-products, an article of interstate commerce of Texas, or corn, oil, and glucose, articles of interstate commerce of Illinois. The answer is that the object is to allow dairying States to drive oleomargarine out of the interstate business. And why is the absurd proviso put in section 1 of the bill, saying, in effect, that nothing in this act "shall be construed to permit"—mark the word—"any State to forbid the manufacture, etc., of oleomargarine in a separate and distinct form," etc.?

This proviso assumes that the State either does not have full control over purely domestic and intrastate affairs, or that Congress may interfere with the police regulations of a State of purely State concern, and in no constitutional sense of any concern to the other States of the Union. If this be sound, what becomes of the reserved powers of the State? With these reserved powers

destroyed by Federal usurpations, we will at once have an absolutism at Washington. There will be no restraint or limitation whatsoever except what Congress and the Executive may deem expedient.

Mr. Chairman, it is regrettable that bad precedents have been paraded before this House in this debate as reasons for the enactment of this bill. For myself, Mr. Chairman, it is enough to say that bad customs and bad precedents can never become the law, or of binding force upon me here. The customs and precedents must not only be good, but they must come up to rightful and constitutional admeasurement.

Oleomargarine has been pronounced over and over again, by experts from one end of the country to the other, to be a wholesome article of legitimate commerce, as useful and as palatable as butter, and far superior, from the hygienic standpoint, to renovated butter, which the experts say is filled with noxious germs, and yet sold by the great dairy combination as pure, fresh butter. The Shollenbarger case declares oleomargarine to be an article of legitimate interstate commerce and of wholesome dietetic use. Mr. Chairman, I can not support this bill, because I do not believe that it is the rightful exercise of either the taxing power or the commerce power possessed by Congress. It does not square with old-time Jeffersonian Democracy.

Come, my brethren, stray not away from your party doctrines. Serve the Lord, and I say it reverently, and always vote Democratic. If you have strayed away, come back, and then sing in your heart:

This is the way I long have sought,
And mourned because I found it not.

[Applause.]

Come, my brethren, come with me, and if you stand united on this side that distinguished gentleman from Illinois [Mr. BOUTELL] and that distinguished gentleman from Ohio [Mr. GROSVENOR] will rally enough true Republicans who believe in the Constitution and an open field and a fair fight for all legitimate American industries to defeat this iniquitous measure. [Applause.]

Mr. Chairman, one more thought and I have done. I am against this bill for another reason. How many laboring men are there whom the gentleman from Connecticut is so solicitous about? Every time I asked him a question he would say, "Oh, oh," or "No, no," and go into hysterics and escape behind some proposition about the poor laboring man. He was pathetic. I like to have cried myself. [Laughter.]

How much butter is made per annum, and how many people are there that want butter or something as good as butter, and can not pay the price of butter? There are but 1,500,000,000 pounds of butter made in the United States per annum, and only 800,000,000 pounds go into commerce, and the rest is consumed at home. But let us take the whole billion and a half as entering into commerce and divide it among the 80,000,000 people who want butter, give the laboring man a little on his bread occasionally, and how much butter is there per capita? About 19 pounds. Nineteen pounds of butter for the laboring man to spread on his bread from New Year's Day to the last of December. Do you think your laboring man will get much?

Now, some laboring men have asked me to vote against this bill, and I want the gentleman from Connecticut [Mr. HENRY], when it again comes his time to-morrow, to show me where the laboring man will ever get his bread buttered at all if this bill passes and accomplishes its object.

I thank you, Mr. Chairman and gentlemen, for your considerate attention. [Applause.]

To Repeal War-Revenue Taxation.

SPEECH

OF

HON JAMES M. ROBINSON,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 17, 1902,

On the bill (H. R. 10530) to repeal war-revenue taxation, and for other purposes.

Mr. ROBINSON of Indiana said:

Mr. SPEAKER: I shall avail myself of the privilege afforded to present my views apropos of the subject under consideration.

This measure for the repeal of war taxes is not timely. It has been too long deferred. The Ways and Means Committee, abusing the patience of the country by its refusal to reduce taxation, has until now shielded itself from the demands of the people by the power of the same rules that it now invokes for the speedy passage of this bill. Does the haste now evinced show an awakening to a sense of dereliction of duty? Voicing the sentiment of the country, we on this side have repeatedly demanded a repeal of these taxes, but as often you refused, and you were fortified in these refusals by the drastic rules of the House.

So long as such rules continue no one of the minority will be held responsible for any act of legislation.

But how is it with you of the majority, whose constituencies demand lower taxes, a control of trusts, and, withal, that you should represent them on this floor? How can you, who have the power, and how can your constituencies, submit to this tyranny of the rules? For years, under Republican rule, the most popular branch of the American Congress has been governed with a rod of iron, wielded by a few on the floor, and under the sanction of iron rules by those few promoted and sustained.

History records that we have a republican form of government, but the evidence of it is not found in the House of Representatives. Scourged in conscience and in action, with party fealty making cowards of you all, you members of the majority, and your constituencies are disfranchised, while this body exists only as a relic of a proud and historic form of people's government intended by our fathers to have been transmitted to their posterity.

Must the people look only to the Senate for all there is of orderly procedure, discussion, and deliberation in the American Congress? On taxation measures it seems they must. For years a surplus in the Treasury has been piling up, with all the attendant evils. Evils in extravagance, in ill-fated and ill-starred ventures have ensued from a failure to repeal these burdensome war taxes long ago.

Policies un-American and unfortunate have been pursued which would never have been dreamed of if an unending drain of taxes had not been piled up in the Treasury.

Why were they not repealed after the Spanish war was over, as was promised? It lasted only ninety days.

The answer will disclose the attempt to change the principles of the Republic, and show a departure to the new and untried paths of colonial rule by the Republican party. Till then that party had stood for the rights of self-government, the equality of man, and for the eternal principle that all men should be free.

Where is your love of liberty now, your altruism and philanthropy, if you rob a people of self-government and deny to them the constitutional and traditional rights that Americans enjoy? This change has come through broken promises, perfidy, and national dishonor.

In 1898, when humanity and love of liberty caused us to declare war for Cuba, true Americanism actuated the hearts and minds of statesmen on this floor.

I read from the debates on the war-tax bill from the 27th to the 29th of April, 1898.

The gentleman from Maine, Mr. Dingley, whose spirit has since gone across the Great Divide, who at that time ably represented his party's policies on that side, said:

Mr. DINGLEY. Mr. Chairman, this bill, as the title indicates, is a war measure—a measure forced upon us by reason of the fact that the United States is now engaged in a war with Spain, and it is in view of this fact that the Committee on Ways and Means have felt called upon to take early action with reference to replenishing the Treasury and furnishing a revenue for carrying on the war.

The gentleman from Iowa [Mr. DOLLIVER] who has since gone to the Senate, said in the same connection:

Mr. DOLLIVER. I have said these things because I want the House to understand that the measure which is here proposed is no confession on our part of the failure of the Dingley bill. It aims to create new revenues to cover new expenditures. It levies wartaxes because we are on the threshold of war times.

The gentleman from Illinois [Mr. HOPKINS], who also represented well his party, then said:

Mr. HOPKINS. Mr. Chairman, the bill we have under consideration is, as has been well stated by the gentlemen on this side who have preceded me, prepared not to carry on and pay the necessary expenses of the Government in time of peace, but to meet the expenses of the emergency that is upon us.

But it remained for the distinguished gentleman from Illinois [Mr. CANNON], the chairman of the Appropriations Committee, to round up the purposes of his party in providing for war tax four years ago. His standing made it appropriate for him to speak, and he spoke in prophecy. He said:

Mr. CANNON. I understand, in the third place, when the war ceases, that it will be the duty of the general Congress to immediately—when we have no longer need for these revenues—repeal the law. [Applause.] That is what I understand. * * * It is strictly and exclusively a war-revenue matter.

And further he said:

Not one dollar will be raised by taxation; not one dollar will be raised by borrowing, except as it is needed. If the war ends in six months, as the gentleman from Kentucky thinks it will, then we shall be in a position six months from now to repeal this taxation.

This language is particularly significant now, though it was uttered four years ago.

The gentleman to-day is regarded as the "watchdog of the Treasury;" the holder of the keys; the tribune of the people; one whom the Democrats gladly join in his efforts to secure economy.

To-day he decried the evils of a surplus in the Treasury. He used his usual vigorous language, the same as he did in his speech four years ago. But, sir, what has our friend been doing during the last four years of stupendous accumulation of surplus and wild enterprises to consume and dissipate it?

Why has he slept for four years on this proposition? He knew and deprecated the surplus and its evils; but he was silenced, as was many of his Republican colleagues, by the rules of the House. He can no more have his way than can others, so long as the present rules thwart the individual will of members and so long as the members of the majority shrink from the discharge of their duty in overturning those rules.

To-day the gentleman repeated the sentiments of his speech four years ago, but overlooked his silence of four years cruelly imposed by the Reed rules, and when the party lash was heard to-day he, with others, rushed within the lines.

Mr. PAYNE, who succeeded to the leadership after the death of the lamented Mr. Dingley and is now chairman of the Ways and Means Committee, on April 29, 1898, used this language:

> The proposition of the gentleman from Massachusetts is that we provide here for a set of bonds that would be payable in three years, because, he says, he wants to continue these war taxes and pay these bonds. The proposition of the committee is that when the war is over we cut off the war taxes [applause], and that we pay the bonds as we paid the bonds of the late war—out of the usual and ordinary taxes of the Government.

These were the promises of leaders solemnly made, but the taxes went on. Extravagance encouraged by the accumulating surplus ran riot.

Vicious practices and policies were encouraged by the glitter of the people's money in the vaults. A useless and unheard-of surplus was erected, and war taxes went on till it reaches now, with the gold reserve, $325,000,000.

More than one-half of this is taken from the avenues of business by taxation, so much indeed that you found it necessary to resort to a dangerous and pernicious policy to return it to the people.

Under the Gage system of favoritism to national banks we find to-day $107,000,000 in round numbers deposited, without interest, in national banks scattered over the country, but largely in the East and in large cities.

This is the people's money, collected from them by the National Government in the form of war taxes. It is placed in the banks to prevent a stringency in the money market. It can be thus got out in the avenues of business by the people paying interest to the banks to get it. As this amount is strictly the people's money, and as they get it from the banks that hold it till the people pay an interest to receive it, it may be claimed by the wily money changer that the people are their own bankers; but this will hardly be relished, as they have to pay interest to get their own money from their own banker. The Lord be merciful to them, as their own money must percolate its way to them through the clay of a national banker. This is one of the vicious expedients of the great surplus project, one of the means to which end was the continuance of war taxes.

The vices of this system are easily shown. It is dangerous to make the national banks special favorites of the Government. It is still worse to regulate the exercise of such a power so that only a select coterie of bankers become the beneficiaries of this peculiar system of surplus offset.

A law may be general in its terms, but the ways of evasion seem to be known and easy in Administration circles. This system may be useful in certain exigencies, but in most cases the practice will be vicious and violative of the best interest of the people.

Its practice confesses an unjust use of the taxing power, for without an unnecessary accumulation there would be no transfer of the money to the banks. When is this money to be loaned to the banks and when withdrawn? In good times or in times of panic? Will the Government be able at all times to withdraw it with ease? Would it not be especially difficult to withdraw it in panicky times?

To the bankers of what section will it first go? To those sections where stock gambling and where dealing in options and margins may affect local conditions, or will it go to the West for the movement of crops?

The answers to these queries will show the extreme danger that inheres in the policy.

Such a discretion is lodged in the Secretary of the Treasury that he is made a Napoleon of finance and a Czar over our money.

An officer should not have such a power, or be subject to the influences that surrounds the exercise of it. Those who submerge patriotism to greed would encourage excessive taxation to accumulate a surplus, to get the pelf.

The decisions to be made under such a power are too momentous to the people, too fraught with consequences to give to the Secretary of the Treasury the right to make them.

Another practice open to the same temptations and abuses as the one just mentioned has likewise been encouraged by over-taxation—the purchase of United States bonds by the Secretary of the Treasury.

Why should a premium for Government bonds be paid with the people's money, when the people could usefully employ that money till the bonds matured? Why exact taxation and pay a premium for low interest-bonds not yet due?

Randolph's policy of "pay your debts as you go" is one to be commended, and the speedy payment of debts outstanding is likewise good policy in public administration. It is not a good rule to excessively tax to provide a surplus from which bonds can be purchased at the market price; which means at a premium, especially when the people, if not so excessively taxed, would be better able to pay off their private, State, and municipal debts, which usually hang at a higher rate of interest over their heads.

The instances in our country's history to prove the wisdom of this practice will be rare. The evil lies in the overcollection of taxes, and the flagrant abuse, long continued, was caused by the failure long ago to repeal these taxes in response to the demands of the people. The system gives opportunity to take advantage by the banks and bond-holding classes, who must always be closely allied in interest.

When the Government offers to purchase the price of bonds goes up. So when the Ways and Means Committee adopt a system of taxation that will accumulate a surplus, the money manipulators know this and that the Government will offer to purchase their bonds, and the price goes up. The price is not always governed by their value as interest-bearing securities, being the basis of the banking system that enhances them, and the fewer of them the greater the value. If the bondholders would so far permit the Government to get out of debt so as to materially reduce its bonds, no one can tell the price to which they would go, since they furnish to the national banker a peculiar and valuable monopoly.

The Republican policy has been to keep up taxation. They never stopped at $150,000,000 gold reserve and a good working balance, but taxes continued till it reaches the grand total of $325,000,000 in the Treasury.

For several years it has been a race between the Republican members of the Ways and Means Committee, that originates revenue measures, taxing the people on the one hand, and Republican Secretary Gage on the other getting it out to the bankers, the bondholders, and the people.

How did he do it? By depositing it in the banks without interest and the purchase of bonds at a premium.

A month before his resignation Secretary Gage proudly recounted that since April, 1901—in nine months—he had purchased $58,714,700 of bonds, for which he had paid $72,226,845.

Who placed it in his hands to pay in premiums on the purchase of bonds $13,512,145 in nine months? Clearly the Republicans in Congress, acting under the leadership of this committee, who kept up these war taxes to create a surplus and long after they were needed for an economical administration of the Government.

In this class I do not include the $20,000,000 paid to Spain for the Philippine Islands, and for a war, the end of which has been often predicted but has never come.

The mooted purchase of the Danish West Indies would never have been thought of if it had not been invited by the surplus. During thirty years they have been on the bargain counter. The overflowing Treasury furnishes an opportune time to try to press them upon us.

Mr. Speaker, the rule adopted gives us no right to amend the bill proposed. The minority came here this morning knowing that they would be compelled to take the medicine in doses and ingredients that your rules prescribed for them. We have no power by amendment or repeal to change another great power with which the Secretary of the Treasury was clothed by a provision of the war-tax bill and which is unrepealed by this—the right to borrow not more than $100,000,000 on certificates of indebtedness. This is the first time in the history of the Government that this grant of power has been given. It would be rare, indeed, that availment of this provision should be made, but it stands as an additional reason why a large surplus should not be created by taxation. It furnishes adequate protection against a reduction of a fair working balance in the United States Treasury.

While an administration would hesitate long before it issued such certificates of indebtedness without calling Congress together, if it were in adjournment, yet so long as the law remains there can be less excuse for the reckless building up of a surplus, which of late has been the policy of the Administration.

From a political and official standpoint the depositing of money without interest with the national banks to the amount of $107,000,000 and the payment each year of millions in premiums on the purchase of Government bonds is less reprehensible than is the action of the party in power in permitting these taxes to remain which made possible the large surplus and the great abuses connected therewith.

Discussion of Confederate Pensions and Homes—Mexican Pension Laws—Spanish War Pension Claims—50,000 Filed up to January, 1902—Climate in the Philippines—Horrible Health Conditions of the American Soldiers in Philippines and those from Philippines and Cuba Serving in China—Philippines not White Man's Country.

SPEECH

OF

HON. JOHN W. GAINES,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Monday, January 13, 1902.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 8581) making appropriation for the payment of invalid and other pensions for the fiscal year ending June 30, 1903, and for other purposes—

Mr. GAINES of Tennessee said:

Mr. CHAIRMAN: Born about at the beginning of the civil war, it was not my fortune to have enjoyed the opportunities, however glorious or dangerous they were, that conflict presented, nor have I had the misfortune to have been personally punished with its awful trials, but I have keenly felt the point of adverse fortune, the outgrowth of that scourging conflict, and I regret that I am not alone in this respect, for no one, old or young, in the South escaped its awful effects. But, sirs, I rejoice that the wounds which the unfortunate conflict made have long since healed, and the reverses it wrought, that seemed for a while to paralyze the possibilities of the South, have been in a great measure overcome by the unremitting industry, the patriotic heroism, the native ability, and the noble ambition of the Southern people.

While, sirs, I was not in the Confederate service, from the very beginning of their teens, as well as those bordering on old age, my kindred were, and from beginning to end, and I make no apology for them here, nor their comrades. Nor have I ever done so; nor will I ever do so.

I do not speak to-day by request or petition from a single Confederate of my distinguished constituency, but I feel that I reflect their wishes and those of my people when I here and now utterly repudiate the statement, made during this debate, that if Congress would pension the disabled and honorably discharged Confederate soldier or build them a Home "that then we will have peace between the North and South."

Mr. Chairman, we already have peace between the North and South, and have had it for years, and that peace is secure, and if it were not, the people in the South are not, have not been, and never will be, a people whose love and friendship can be bought with money, with pensions, with gratuities, with charities, or with office. [Applause.] Let Congress pay the hundreds of just claims due the Southern people, payment of which they have demanded for years and years only to be denied. This would be simple justice long delayed. Do this and the Southern people will provide for the honorably discharged Confederate soldier, and, sirs, they will do so anyway, and have done so, and will continue to do so.

The Southern people have paid unmurmuringly the heavy burdens of taxation exacted of them by the Federal Government, while but small have been the reimbursements they have received of any kind, and especially in the payment of their just claims, the integrity of which is absolutely undisputed.

The people of the South have always been governed, and will continue to be governed, by a deep sense of right and justice. They have always maintained their self-respect, their manhood inviolate, their womanhood pure, their homes free from plunder, and not infrequently am I told by Republicans of this House that the time will yet come when the Southern people must and will save this Union from destruction.

The Southern States forty years ago called for their services and promptly received them, and it is nothing but right and just that the States who received this service should now provide for those who tendered it. Such circumstances raise a moral obligation on the State, and the Confederate soldier feels that when he receives a pension from such State he is not accepting a charity, and when he enters a Confederate Home that he is accepting what he deserves—that four years of his devoted service entitles him to receive either or both.

But in every instance where a Confederate soldier has spoken to me on the subject, he has said that he feels that "to accept a pension" from the Federal Government would be receiving "a pure gratuity," "a charity," and that there is no difference between accepting a pension and entering a Confederate Home erected by the Federal Government.

If thus treated by a Southern State, he feels that he is receiving right and justice in consideration of services rendered at the call of his State; in the case of the Federal Government he feels that to accept such a pension he accepts a charity, because he did not respond to the call of the Federal Government for his services when called for, and therefore no consideration passed.

The Confederate soldiers and the Southern people, Mr. Chairman, are actuated by another consideration in declining to become the wards of Government charity. They cherish with unspeakable pride the sacred and unsullied muster roll of the Confederacy, and they would hand it down to history untarnished—a glorious roll of honor. They would prefer to suffer the privations of poverty rather than see that roll of honor sullied by greed and a mercenary grasping after gratuities. The South rose from the ashes of devastation by the unaided and unequaled efforts of these ragged veterans, asking no bounties or gratuities from Government, and she has kept up in the race for development and industrial advancement with those who have wallowed and fattened on Government favors; and now, after having passed through an ordeal of labor and struggle, exhibiting recuperative powers unequaled in the history of any people, she would not willingly submit herself to the operation of a system of pensions, of something for nothing, that will surely entail degeneracy, idleness, and impotency. Whatever others may do with their affairs, as for the South she prefers to maintain inviolate and pure the sacred integrity of that glorious roll of honor, as an inspiration to coming generations, and she dare not pollute it and thus incur the curse that follows an indolence begotten by unearned gratuities.

CONFEDERATE SOLDIERS' HOMES.

Nearly all the Southern States have built Confederate Homes, and provide for and maintain the honorably discharged, disabled Confederate soldier. I am glad to state that the State of Tennessee some years ago erected a Confederate home on the "Hermitage Farm," and there provides for her honorably discharged Confederate citizens a retreat where she gives them attentions as good if not better than those given in the Federal Homes; and I want to state just here that when the time came to enact a law for the building of this Confederate Home, the Republicans and Democrats, like a band of brothers, united and enacted the law, and though at that time a private citizen it was my pleasure to aid in the undertaking. But even before this was done, Mr. Chairman, it is a pleasing fact to state that I never saw an honorably discharged Confederate soldier begging on the street, South or North.

But the Confederate soldier needs no defense, and if he did we could point with pride and pleasure to his record in State and national affairs.

Since he sheathed his sword at Appomattox down to this moment he has occupied every place of trust in the gift of his people except those of President and Vice-President. From constable to governor; from governor to the Senate of the United States; from the State court to the Federal bench; from the lowest to the highest office we trace his illustrious record. To-day he is a member of the Supreme Court of the United States, and we have had three ex-Confederates on that high bench since the civil war—the distinguished Lamar, of Mississippi, the illustrious Howell E. Jackson, of Tennessee, and now Associate Justice White, of Louisiana.

The Confederate has filled every position in civil or military affairs, as he always did and always will, with distinction to himself, with credit to his people, and his constituents take pride in the fame he has won for himself and the glory he has shed upon his native State and this Republic which he loves with unremitting devotion.

But there is another statement developed during this debate that prompts me to speak to-day, and you will hear it often on the outside. It is this: "We are glad we have had the Spanish war; now we have a reunited country;" or, "Now the South and the North are reunited."

I am glad we had the Spanish war. I voted for it, and my kindred fought in it, and we will all act in the same way again under the same circumstances. It was a righteous war, if war is ever righteous. It was planned and fought in the name of liberty, just as our Revolutionary war was. We were victorious, and the conflict quickly ended.

But I do object to having it prated in my ears from the Golden Gate to Hell Gate, from the Lakes to the Gulf, as the case has been, that simply because the soldiers of the North and South, sons of Federal and ex-Confederate soldiers, fought side by side in the Spanish-American war that such an act is proof "that now the South and North are reunited."

Mr. Chairman, the North and South were already reunited, in law, in fact, and in feeling, and the heroism and devotion of the Southern soldier in the Spanish war, his quick response to the call of the President, and his brilliant achievements on the battlefield and on the sea were but overt acts demonstrating the preexisting fact that the North and South had in every way long since become reunited. [Applause.]

There is another question that I have been waiting all day to elucidate, that arose in the debate this morning and upon which issue was taken by my distinguished friend from Colorado [Mr.

BELL], my distinguished friend from Missouri [Mr. CLARK], and my distinguished friend from Tennessee [Mr. SIMS], and myself. I contend that the Confederate soldiers who left the Confederate service and served in the Federal Army was pensionable under certain circumstances. I believe these gentlemen disputed my contentions. The law I allude to is the act of March 3, 1877, which reads as follows:

Be it enacted, etc., That the law prohibiting the payment of any money on account of pensions to any person, or to the widow, children, or heirs of any deceased person who in any manner engaged in aiding or abetting the late rebellion against the authority of the United States, shall not be construed to apply to such person as afterwards voluntarily enlisted in the Army of the United States, and who, while in the service incurred disability from wounds or injuries received or disease contracted in the line of duty.

This act was amended August 1, 1892, to read as follows:

That it shall not be construed to apply to such persons as afterwards voluntarily enlisted in either the Navy or Army of the United States, and who, while in such service, incurred disability from a wound or injury received or disease contracted in the line of duty.

These are the acts, the laws, which I alluded to this morning, and my friends who have insisted that pensions be granted to Confederate soldiers who subsequently served in the Federal Army and were denied pensions, it seems, by the Commissioner, because there was no law allowing it, can certainly have such relief as these statutes provide for.

MEXICAN PENSIONS.

There is another matter, Mr. Chairman, about which I wish to speak. I have been in Congress five years, and this is the beginning of my third term, and I believe I have listened to more speeches on pensions in various forms and witnessed more contortions and circumlocutions of elocution on this subject than on any other which has been discussed in this Chamber. But in all these debates not one-tenth or even one-fiftieth of the speeches have been devoted to the proper protection and care of the old Mexican veteran. You will remember that he is all over the United States. There are a great many of them from my own State. When the war broke out and volunteers were called for, 30,000 Tennesseans begged at the White House to be mustered into the service, when only 3,000 was the quota of Tennessee.

And how are they pensioned? I want to correct the gentleman from Iowa [Mr. HULL], who said they were pensioned just as the soldiers of the civil war are pensioned. He is mistaken. The law is, and I have it before me, that he is only allowed $8, but if he be practically a pauper and unable to maintain himself, and makes oath to that effect, the law gives him $12 a month. Now, I know this is the practice, because I had a case of an old Mexican veteran, between 60 and 70 years old, feeble in body, with one eye, unable to labor, insolvent, an honest man, respected by everybody, who had for several years only received $8, and the Commissioner refused to pension him at $12 because he would not take the pauper's oath, and I had to appeal, and successfully, to Congress last session in a special bill to pension him at $12. In addition, a Mexican veteran must be 62 years of age before he gets even $8, and must humble himself as a pauper to get $12, which is the very utmost limit.

The rate paid soldiers of the civil war under the same circumstances is far in excess of $12, and it is a great injustice to make this distinction.

History makes no record of similar glorious achievements where an invading army with inferior numbers won not only every battle, but never lost even a skirmish; and thus did these heroes add luster to the glory of American arms and exhibit a prowess that challenged the admiration of the world and which has been a shield of menace to any who might wish opportunity to assail us. But it did not stop at that, as gloriously sufficient as it seems. These veterans, whom we now neglect, added many States to the Union, and the history of the development constitutes one of the richest pages in American annals, and the total of the riches they bought for us with their blood is so fabulous as to defy computation. It is but fair and just and right that these men should be placed upon the same footing as the soldiers of the other wars, whom we reward so handsomely and deservedly, and until it is done it will remain a shame upon every Congress that neglects to do it.

FIFTY THOUSAND SPANISH WAR CLAIMS FILED UP TO JANUARY, 1902.

Mr. GAINES of Tennessee said:

Mr. CHAIRMAN: This debate has developed another question that I desire to discuss, and that question is: Why the abrupt and immense increase in pension claims filed since the war with Spain begun in 1898?

The Commissioner in his last report, for the fiscal year ending June 30, 1901, undertakes to explain this matter, and says that industrious claim agents have caused the filing of so many pension claims for soldiers who served in the "Spanish war."

I can not agree to this as either the sole or main cause, and the Commissioner unwittingly submits proof in his report going to show that the main cause of so many of such claims being filed is that the white man can not stand to live as a citizen or fight as a soldier in a tropical climate without being saturated with tropical diseases that wither and destroy his health, if not his life.

I am informed by the gentleman from Wisconsin [Mr. BARNEY], who reports this bill, that the Commissioner of Pensions stated to him since his report was filed that 50,000 "Spanish war" pensions had been filed up to January 1, 1902. This report states that 45,710 had been filed up to June 30, 1901, by persons "incurring disabilities in the line of duty" in the "Spanish war."

The Commissioner further states that 6 per cent of our civil-war veterans filed claims for pensions in the first seven years after the close of that war, and that 20 per cent of the number of soldiers engaged in the "Spanish war" had within three years filed claims for pensions.

REPRESENTATIVES ON OUR PENSION ROLL IN NEXT CENTURY.

The Commissioner further states that there will be representatives on our pension roll at the beginning of the next century, and submits a most remarkable table that is official, showing the examination of, by a "medical officer" of the United States Army, a certain "crack regiment," as the Commissioner calls it, which was examined just before it was mustered out, and that, too, after sixty days of recuperation at Montauk, N. Y.

48 PER CENT OF A "CRACK" REGIMENT APPLIED FOR PENSIONS UP TO JUNE, 1901.

I submit that this remarkable, and certainly we must believe indisputable, official report clearly goes to show that our troops can not stand to live or fight any length of time in Cuba or any other tropical climate without sickness, disease, and death in shocking proportions.

MEDICAL OFFICER'S REPORT ON THIS CRACK REGIMENT WHEN MUSTERED OUT—70 PER CENT DISEASED.

I will now read at page 47 and 48 of the Commissioner's report:

A good object lesson in this regard is furnished by the history of a volunteer regiment which was recognized as one of the "crack" regiments in service during the war with Spain. Its membership was notably a fine body of men, and its officers were men of experience and ability and skilled in military matters. Few regiments had as good a record for service as this one. It was at Camp Alger for a time, then at Camp Thomas, then at Tampa Fla.; thence sailed for Santiago de Cuba, where it was placed in the trenches and did good service until it returned to Montauk. From there it was returned to the place of its enrollment, and at the expiration of a sixty days' furlough was mustered out of service.

This regiment had a membership of 53 commissioned officers and 937 enlisted men. There were no battlefield casualties, but 1 officer and 22 men died of disease while in the service. The published report of the medical officer on the muster out of this regiment shows that 1 per cent of the men of the regiment were improved by military service, 5 per cent were in as good physical condition as at time of enlistment, 24 per cent were but slightly affected, and, as a rule, the troubles were not traceable to military service. Of the remainder (70 per cent), or 528 men, the general condition was as follows:

Irritable heart, due to fever	365
Mitral regurgitation	4
Chronic bronchitis	214
Acute bronchitis	47
Phthisis	3
Gastritis	158
Enlarged or congested liver	116
Enlarged spleen	316
Inflammatory condition of intestines	53
Irritability of bladder and incontinence of urine	76
Nephritis	5
Hemorrhoids	11
Varicocele	61
Inguinal hernia	3
Rheumatism	26
Myopia	19
Slight eye strains	29
Slight deafness, due to quinine	17
Chronic nasal catarrh	9
Sprain of back	3
Old dislocation, right shoulder	1
Gunshot wounds, left forearm	2
Badly set Colle's fracture	1
Secondary syphilis	2
Suffering from pains in the muscles, especially the calves of the legs and lumbar region, loss of weight from 10 to 30 pounds, accompanied by more or less debility	471
Relapses of fever continuing to occur up to January 4, 1899	87

* * * * * * *

Up to June 30, 1901, 477 claims for pension have been filed in this Bureau on account of service in said regiment for disabilities alleged to have been contracted during the brief term of its existence.

Here we find in this remarkable official examination, had at the proper time by a sworn officer of the law, that 70 per cent of the men, or 528, were on the sick list when mustered out, and many afflicted with dangerous diseases, and that up to June 30 last 477 claims for pensions had been filed out of 967 soldiers, or about 48 per cent of the number of troops in the entire regiment, officers and men included, less 23 who died of disease while in the service.

SHOULD OUR PENSION WAR CLAIMS SURPRISE US?

Looking at this shocking document, are we surprised that 50,000 "Spanish war" pensions have been filed up to January 1, 1902, when we know that our troops have been fighting in the Philippine Islands for about three years of war and that 1,947 of troops

from the Philippine Islands were sent to China and fought there for a number of months and the sick report concerning them, as well as those remaining in the Philippine Islands, is most horrible and shocking?

Are we surprised that we have already issued pension certificates to 6,604 "Spanish war" soldiers or their widows at a cost of nearly $2,000,000 up to June 1 last? Should we be surprised that during the last year we had 1,014,321 persons' names on the pension roll; that during the year we dropped 44,386; that we added 44,225 new names, and restored 3,567 old names, making a net gain on the pension roll of 4,206, and leaving a net total of persons on the pension roll on June 30, 1901, of 997,735—the largest number at the end of any fiscal year in our history, the Pension Commissioner states?

This last pension appropriation bill carried over $145,000,000, but the Commissioner has not paid out this full amount but has managed to save about $5,000,000 because the "arrearages for pensions have diminished" and have been diminishing in the same rate for "the past ten years," and therefore there was no reason to pay out the full amount appropriated.

This is the only encouraging feature about the pension expenditures this report discloses, that is, that the old pension debts or arrearages are diminishing as time rolls on.

PHILIPPINE CLIMATE AND ITS EFFECT ON THE HEALTH OF OUR SOLDIERS AND THE WHITE RACE GENERALLY.

Henry F. Hoyt, major and chief surgeon, in a letter to the Philippine Peace Commission, August 27, 1899, says:

That the fact that the white man can not successfully perform manual labor in this climate and that the Chinese are more reliable in this respect than the native should not be overlooked. (Vol. 1, p. 262, Philippine Commission's Report, 1900.)

He further states—

that smallpox is prevalent everywhere, and in this latitude and longitude is very fatal, especially to whites.

Major Hoyt had been in the Philippine Islands about nine months at this date, as surgeon (Ib., p. 264), and had been for ten years a practical sanitarian (Ib., p. 263).

NO SUCH THING AS "ACCLIMATIZATION" OF THE "WHITE MAN IN TROPICAL CLIMATES"—HE INVARIABLY DETERIORATES.

Maj. Charles F. Mason, surgeon, Twenty-sixth United States Volunteer Infantry, Jaro, province of Iloilo, P. I., in a report upon his "observations on diseases in the Tropics," found at page 234 of the Surgeon-General's report for the fiscal year ending June 30, 1901, says:

I do not believe there is any such thing as acclimatization of white men in tropical climates, and that their health gradually deteriorates and they become less fit for active service.

DISEASES IN PHILIPPINES AND EFFECT OF SAME.

On page 235 he says:

Dysentery prevails throughout the year, but there is a marked increase in the number and severity of the cases at the commencement of the rainy season and a progressive increase in both respects until a maximum is reached toward the end of August. It is by far the most serious disease which attacks the white soldiers in the Tropics, both as regards its mortality and its invaliding effects. Out of 32 deaths from disease in the Twenty-sixth United States Volunteer Infantry during its first year of service in the Philippine Islands, 15 were from dysentery and its complications and 10 more from typhoid fever.

BOILS, ABSCESSES, AND LEG ULCERS COMMON.

Boils, abscesses, and leg ulcers are very common, the latter especially during campaign, when it is impossible to keep the underclothing clean. Though not dangerous to life, these seemingly trifling ailments put a large number of men out of service temporarily and correspondingly swell the sick report.

DEAFNESS AND EAR TROUBLE.

Suppurative inflammation of the middle ear with perforation of the drumhead is of frequent occurrence. It is insidious in its commencement, often deafness and sudden discharge of pus being the first symptoms noticed. Upon examination an acute catarrhal pharyngitis is usually found.

BUBOES AND SUPPURATION PREVALENT.

Another interesting condition is the prevalence of buboes, both in the groin and axilla, without discoverable point of origin. Frequently a careful examination of the tributary lymph district fails to reveal any lesion whatever, and this though the bubo may proceed to suppuration.

HOW CAN THE WHITE MAN LIVE THERE?

This being true, how can we expect the white farmer to live in the Philippine Islands, while Dr. Hoyt says, as the fact is, the white man can not work in the sun in this climate. But these two gentlemen are not alone in speaking of the effect of this climate on the white man.

EVEN SEASONED SOLDIERS CAN NOT STAND THE CLIMATE.

Major-General Greenleaf, in his report May 16, 1901, says that even "seasoned soldiers" can not stand the Philippine climate; that his health is undermined; that "the most energetic and stalwart American after a year's service here loses energy, strength, and ambition;" that he performs even his "duty demands half heartedly;" "that he feels at the time a draft on his vital energy;" that the "immature youths, the hard drinkers, and recruits" are repeatedly on the sick list, in the hospitals, and have "been sent to the United States." I will insert the entire quotation, Mr. Chairman, in my remarks:

NEITHER THE "IMMATURE YOUTH" NOR "SEASONED SOLDIER" CAN STAND THE PHILIPPINE ISLAND CLIMATE.

Surgeon Greenleaf says:

The immature youths, the hard drinkers, and the recruits with inherited or acquired weakness of constitution have gradually, after repeated appearance on the sick report and running the gamut of various hospitals, been sent to the United States. Service in the Philippines shows on a grand scale the operation of the law of the survival of the fittest. Seasoned soldiers of proper age, disciplined and intelligent enough to appreciate the primary rules of hygiene, and moderate in their habits, remain. The proportion of sickness among such men as these would be surprisingly small but for two adverse factors.

The first is the inevitable undermining of the strength of the most robust by tropical service.

The most energetic and stalwart American after a year of service here loses energy, strength, and ambition. He performs what work his duty demands more or less half-heartedly and with a draft on his vital energy that he can actually feel at the time. Slight ailments, to which a second thought would not be given in the United States, are felt out of all proportion to their severity; and the number of entries for trivial complaints on the sick report increases. The most valuable work of the medical officer, with troops in camp and garrison, consists of judiciously advising and treating this class of cases—the slight ailments of men who do, or are striving to do, their full duty, and who honestly dislike their names to appear on the sick list.

I desire to state just here that in the face of the testimony of Surgeon Greenleaf that immature youths and recruits with weak constitutions should not be sent to the Philippine Islands we are still sending them there. I saw many going and I saw many returning. It certainly is a most distressing condition that we must thus sap and deprive society and the business of this country of our splendid young men to send them to distant lands to do what? Go right into "hospitals," and later sent home, either dead or sick, back to the United States!

GENERAL OTIS'S REPORT FOR 1899.

I will now read the report of Major-General Otis for the year 1899 to show the condition of our troops in the Philippine Islands, in which we find that out of one regiment of 873 officers and men 60 per cent were in the hospital, and of the remainder there were not 8 men in each company who had the strength to endure one day's march.

ONLY 8 MEN IN EACH COMPANY ABLE TO MARCH ONE DAY.

On June 2 the surgeon of one of these regiments reported that of 873 officers and enlisted men 30 per cent were in the Manila hospitals sick and wounded, 30 per cent were sick at San Fernando, and "of the remainder there are not 8 men in each company who have the strength to endure one day's march." In respect to this report the chief surgeon of MacArthur's division remarked that he had made a careful examination of the men and that of the whole number in the regiment then present only 96 were fit for duty. The division commander remarked on May 22 and June 5, with regard to these and similar reports, as follows:

The duty required of the men of this brigade, in common with the other commands of the division, has been severe and continuous since the 4th of February of the current year. The sun, field rations, physical exertion, and the abnormal excitement arising from almost constant exposure to fire action have operated to bring about a general enervation, from which the men do not seem to rapidly recover, although the present conditions are very favorable.

MANY COULD NOT MARCH 5 MILES.

The four regiments now present have an enlisted strength of 3,701. Of these, 1,003 are sick and wounded, leaving an effective force of 2,698, which, after deducting necessary details for special duty, yields only 2,307 for the firing line, many of whom could not march 5 miles under the conditions which obtained from Madolos to this place.

PHYSICAL CONDITION OF MEN GROWING WORSE AND WORSE.

The physical conditions of men in the organizations which originally commenced the campaign in this division, and are still at the front, has, during the past month, been a matter of great concern. The difficulties are progressive, and without any apparent fluctuations are growing worse from day to day.

SCORCHING SUN ALMOST AS DESTRUCTIVE AS THE ENEMY'S FIRE.

For four months these men have been continually under arms night and day, exposed in a relaxing climate to a scorching sun, almost as destructive and much harder to bear than the enemy's fire, until, apparently, the severe, unremitting and almost unexampled strain has told upon whole organizations to such an extent that they are now completely worn out and broken in health.

NO VITAL RESISTANCE TO DISEASE.

The weakened hearts and quickened pulses indicate a condition akin to that of typhoid-fever convalescence, and restoration to physical efficiency will not take place in this climate within any reasonable period, and meanwhile such men display no vital resistance to acute disease.

This feature of the "soldier's irritable heart" was a condition well recognized during the strain of the civil war, but with these men there is the additional disability of general physical prostration.

We find, then, that the report on the "crack regiment" from Cuba, the regiments in the Philippines, the testimony of Major Hoyt, Major Mason, and Surgeon-General Greenleaf, all clearly show that our soldiers can not, nor can our white people, survive the climatic influences in the Philippines.

This being true, how can we expect, if we deal justly with the soldiers who serve in these countries, that the pension roll shall diminish, either in the number of pension or their value?

Mr. SIMS. Will the gentleman permit me to ask him a question?

Mr. GAINES of Tennessee. Certainly.

Mr. SIMS. Did those gentlemen who were receiving salaries of $15,000 or $25,000 a year from the Government look very pale?

Mr. GAINES of Tennessee. Two of them did, I know, and I think a third one did, while I see from the press reports that Mr. Commissioner Ide, of Vermont, has had to leave for Japan on account of some terrible bowel trouble, although when I left there he looked to be the healthiest man in the entire Commission. It is enough to make any man look pale and lose strength both in mind and body to stay there, no matter what salary he receives. You can not overcome climate with salary.

AMERICAN WOMEN CAN NOT STAND THE PHILIPPINE CLIMATE.

I want to say, furthermore, Mr. Chairman, and with emphasis, that it is an outrage to permit the white women of this country whom we can control to go to that island at all. There is not a woman in that island who has been there any length of time who has a blush in her cheek, not a one has a rose in her face, not one who does not look jaded, pale, debilitated, and sick. Every month her usual condition of life, instead of continuing naturally, is prolonged and becomes more or less hemorrhagic, and thus continues until she is packed up and sent to Japan or back to the United States, seeking to restore her health by the cool or white man's climate, and this is continually being done.

I saw a great number of American women in Japan, while hundreds of them were returning, as rapidly as they could get out of the island, to the United States, looking pale and withered.

There is no question about this effect upon our white women. I discussed it with physicians, military and civic, and in a few instances with some husbands, and last night, at one of our hotels, I heard a husband say, who had been in the islands for about three years—had lost, as he said, "40 pounds of flesh"—"I am tired and broken down. When I sit down here I feel like going on through the seat. Now I have got to go back, after three years' service there, and serve two years more, under the law, and I do not like to do it; and I must take my wife back with me, whom I brought here not long ago because of her health. It is no white man's country. It is no place for the white woman." I have numerous statements to the same effect, but not with me, as I did not expect to speak to-day.

Mr. SIMS. Does the gentleman think it is safe to send female teachers to that country?

Mr. GAINES of Tennessee. Certainly not, so far as their health is concerned.

Mr. Chairman, this is a serious question, and, like my colleague, I am so treating it. These are facts that any man can ascertain who so desires. Any man with common sense can see that there is something there that is poisoning to the vitality of the American man and the American woman in that climate. Of course there are some exceptions, but even many of the exceptions will say to you that while they are not sick, yet they feel weaker, mentally and physically, than when at home.

Others will say the same thing, and further that they have lost their flesh and regained it, but still they are weaker mentally and physically than ever before and unable to remain in the sun. These are plain, indisputable, potent facts that must be considered and on which I dwelt with great industry while in that country; indeed, with as much industry as I ever investigated any question in my life and with all the care that I could possibly bring to bear upon that subject; and I say, and shall continue to say, that that archipelago is no white man's country, and that no white woman should be permitted to go there, and certainly not to go there and remain more than a few months.

I have here a statement given me by one of the best officers in the Army, who, pale, thin, and worn-out, was being sent home for his health, bringing with him his wife, a victim of the Philippine climate also.

He says:

SAN MIGUEL BAY, CAMARINES, LUZON,
September 23, 1901.

In considering the question of living in the Philippines, an American will naturally ask, How have Europeans or Americans stood the climate of the Philippines? A statement of my experience having been requested, I would state the following facts: To show that these statements are from personal knowledge, I would first say that I arrived in Manila March 4, 1899; that I was on all the hardest campaigns of the early part of the war, making forced marches on part rations, hard fighting over rice swamps and in mountains for over a year, and severe office work in Manila for about a year, thus testing the climate by physical as well as mental work. During these two years and eight months I have gathered also from civilian Europeans of long residence in these islands information which shows their experience to be the same.

At first one is inclined to believe that the climate of these islands has been maligned; that it is not so bad as had been represented, but, being on the alert, one will find growing on himself, however energetic he may be, the "mañana" habit, to put off until "to-morrow;" a disinclination to do business. One is extremely fortunate in the first few months if, by taking good care of himself, of his drinking water, etc., he escapes bowel troubles; but the one thing he can not escape is the gradual but sure sapping of his energies, mental and physical. His blood becomes thin and impoverished, due to the constant heat and little change of seasons. There is no recuperative period. His impoverished blood will not readily cause any little wound to heal. He almost invariably becomes the victim of boils, which may become ulcers, and I have known numerous cases to die of blood poisoning from lancing of these ulcers and boils—a continuous drain on the system.

There is apt to come after the bowel-trouble period and the eruption period a period of lassitude, when one cares little whether he goes back to God's country or not—cares little what becomes of him if he is forced to stay. All these periods and experiences I have passed through, and know of hundreds of others—in fact, almost all my acquaintances—who have done the same.

To my mind there is no doubt but that it is necessary that, unless a man come here to die, he must, as commercial houses recognize in their agencies, have a rest period, and be sent to a colder climate to again get his blood enriched—filled with ozone, red corpuscles, or whatever it may be.

As for physical exertion, constant and continued, as in case of labor in the United States, it is out of the question; it can not be done. The sun, above all else, must be avoided. It was absolutely necessary to make hard marches at night or the very early morning. In the sun even the native carabao dies quickly. On one expedition, eight carabaos having died from effects of the sun, 20 men to each cart had to haul them with ropes. One hundred and sixty men, American soldiers, hauling carts with ropes! The effect on them, of course, was to send a large per cent to the hospital, where some died. However, these deductions I make from careful thought, coupled with my experiences and conversing with Europeans who have been many years here at intervals.

One can keep out of the sun most of the time, if his business permits, and live here two years or a little more, but then he must get to a cold climate. He must not do manual work, but get natives or Chinamen to do almost everything. By careful attention to diet and proper drinking water and about four months in a cold country every two years one can be reasonably well. Of course the transition from cold to warm climate and the reverse will be wearing, and perhaps tend to an earlier breaking down of the system.

Mr. CANNON. How long was my friend in the Philippine Islands?

Mr. GAINES of Tennessee. I was there about two of the longest months that I ever spent anywhere in my life, and I worked night and day in order to get possession of all fundamental conditions existing there. I went there for that purpose, and that alone.

Mr. CANNON. Does the gentleman now make profert of himself to show the harmful effect of that climate?

Mr. GAINES of Tennessee. I hope the gentleman will not compel me to say——

Mr. CANNON. I was only going to thank Heaven that the gentleman is still alive and with us.

Mr. GAINES of Tennessee. I am glad, too, and as long as the gentleman is a member of this House I hope to Heaven that I may be here. [Laughter.]

Mr. Chairman, when we arrived at Nagasaki the weather was cool and bracing. Owing to an accident to our vessel we were delayed a number of days. During this stay here all of the passengers, including the soldiers, except a few who died and the consumptives, in two or three days showed signs of returning vitality and health. Ladies who were unable to walk were seen ashore in a few days. Some color begun to show itself in their pale faces, while the men quickened their steps and gave solid evidence of returning vigor.

Mr. CANDLER. Will the gentleman answer a question?

Mr. GAINES of Tennessee. With pleasure, if I can.

Mr. CANDLER. Will you tell us what the percentage of deaths is in the Philippine Islands among the soldiers?

Mr. GAINES of Tennessee. Your question calls for the percentage of deaths in the Philippine Islands and not elsewhere—that is, those who died within the limits of the Philippines, and not those who died after they came home to the United States and died by reason of disability incurred while in the Philippines; nor does it include the per cent of soldiers who died on the sea while returning to the United States from these islands. Your question then is: What is the per cent of deaths among our soldiers while in the Philippine Islands, and not after they returned to the United States?

In answer to this question I will submit a table which I have prepared from the figures used by Surgeon-General Sternberg at pages 127 and 128 of his report for the fiscal year ending June 30, 1901.

He says that the lowest rate for all causes of death was in 1897, the year before the Spanish war began. We will compare the death rate of troops serving in 1897 and 1899 and 1900 in the United States and those serving in the Philippine Islands in 1899 and 1900, and the following is shown:

Death rate of troops serving in United States per 1,000 of strength.

	1897.	1899.	1900.
All causes	5.11	7.89	7.78
Disease	3.14	6.56	4.83

Troops serving in the Philippine Islands.

	1899.	1900.
All causes	30.58	28.75
Disease	15.30	20.26

Troops from Philippines serving in China.

	1900.
All causes	47.76
Disease	23.62

"Fortunately, the mean strength of men in China was small—1,947," says General Sternberg.

You hear it often said that the death rate of our troops operating in the United States is about the same as that of troops operating in the Philippine Islands. This is clearly disproved by these figures.

The death rate in the Philippine Islands for all causes was six times greater in 1899 than in 1897 in the United States, and four times greater than in 1899 and 1900 in the United States; while the disease rate of death in the Philippines in 1899 was three times greater than in 1897 in the United States and twice as great as in 1899 and 1900 in the United States; while in the year 1900 in the Philippine Islands the death rate was 20.26, and in the United States in 1897 it was four times less, and in 1899 and 1900 nearly three times less, than in the Philippine Islands.

DEATH RATE IN CHINA COMPARED.

Now, the death rate from all causes amongst our troops in China in 1900, who were sent there from the Philippines and Cuba, was nine times greater than in 1897 and more than six times greater than in 1899 and 1900 in the United States, while the death rate from disease in China was more than seven times greater than in 1897 in the United States, nearly four times greater than in 1899 in the United States, and nearly six times as great as in 1900 in the United States.

We had no fighting between the Atlantic and Pacific within the domain of the United States in 1897, 1899, or 1900, but the death rate is greater in 1899 and 1900. And why? Because the soldiers serving within the limits of the United States, between the Atlantic and Pacific, had previously served, in all probability, in Cuba or China or the Philippines, and had returned home sick and died, or were discharged for disability.

HEAVY DEATH RATE IN CHINA—THIRTY-THREE AND ONE-THIRD PER CENT.

Surgeon-General Sternberg, at page 155 of his report, states that the "death rate from gunshot wounds in China was 66⅔ per cent, and from disease 33⅓ per cent."

At page 161, in speaking of this command in China, this report says:

> During that period of the military occupation prior to October 1, 1900, the sick report, although large, was in no manner excessive when the severity of the campaign and attending circumstances are taken into consideration, many of the troops actively engaged having been previously on duty in Cuba and the Philippines and China, and were necessarily debilitated and proper subjects for disease incidental to a campaign.

He then states that digestive diseases, including diarrhœa and dysentery, led all others, with a total of 2,426 cases, or 43.5 per cent of all; malarial fever, 6.51, or 11.6 per cent; accidents and injuries, 5.77, or 10.3 per cent; respiratory, 5.68, or 10.1 per cent. He also states that we "had 100 cases of heat exhaustion in the march from Tientsin to Pekin," the death rate there being, as stated, 33 per cent.

CUBA AND THE PHILIPPINE CLIMATE UNFITS OUR TROOPS FOR ACTUAL WARFARE, EVEN IN COOL CLIMATES.

China is a cool country, yet we see that our troops when engaged in actual warfare, as they were in China, fell victims to disease—went to pieces generally. The Surgeon-General says, "Fortunately we had no more soldiers there than we did, the death rate being, as stated, 47.76 per 1,000 of strength and from disease 23.62 out of 1,947 men."

I ask, now, seriously, what benefit would troops be to the United States on this side of the world; that is, what benefit would troops serving in the Philippine Islands be if we had a war between the Atlantic and Pacific if they go to pieces as they did in China, a cool country, when they were engaged in actual hostilities? Practically none, although as usual they would be true and patriotic and fall in the last ditch.

General Sternberg states that in 1894 our sick rate from all causes fell to 1,089.73 amongst our troops operating in the United States, but it rose, he states, in 1900 to 2,311.81 per 1,000 of strength from 2,178.06 in 1899. In 1894 our troops operated within the limits of the United States; in 1900 they operated in the United States, Cuba, China, the Philippines, and Porto Rico; and General Sternberg says that the cause of the great increase to our sick report, discharges, and deaths in 1900 over 1894 and 1897 was because our troops "operated in the Philippine Islands and China;" that the rates were "by no means heavy in Cuba, Porto Rico, and the United States."

So we see that when our troops operate in tropical climates these rates are more than doubled. We see this from another statement General Sternberg makes. He says:

> The troops serving in the United States during the year 1900 had an admission rate of 1,510.97 per 1,000, and 1,677.51 in 1899. The troops serving in the United States in 1900 were not engaged in hostilities, but many of them had been to Cuba, China, Porto Rico, and in the Philippine Islands, and hence the rate was increased more that half over the rate of 1894.

General Sternberg further states that our lowest admission rate for disease was 830.65 in 1896; that is, amongst our troops operating in the United States; but he further states that among our troops serving in the United States the rate for disease was 1,242.87, and in 1899 it was 1,496.84. This admission rate for disease in 1900 and 1899 was increased because our troops had been operating in the Tropics and in China.

Take now the admission rate for 1900 of our troops in the Philippine Islands and we find General Sternberg states, at page 128 of his report, that it was 2,621.96 in 1900 and 2,395.52 in 1899—more than twice as much as in 1894 and more than one and a half times greater than in 1900, and about the same for 1899 amongst troops operating in the United States, and this is true, although thousands of troops were sent from the Philippine Islands and China back to the United States and admitted on the sick list.

Take now the ratio of discharge for 1900 with troops operating in the United States and we find General Sternberg states that in 1900 it was 39.29 per 1,000 of strength and 26.95 in 1899, while the death rate was 32.52 from disease and 3.14 in 1897.

Take now the discharge rate in the Philippine Islands in 1900, and we find that it was 18 for all causes, for disease 13.83, while the discharge rate amongst troops operating in the United States was 39.29 per 1,000 of strength for all causes, but for disease it was 32.52; but why? Why is the rate less for discharges in the Philippines than in the United States, with the death rates greater and admission rates also in the Philippine Islands. Simply because the troops are not all discharged in the Philippine Islands who are taken sick there, but are sent home, as a last resort in many instances, to save their lives and are discharged in the United States, and as a rule at San Francisco.

I will here insert three other tables exploiting these official figures taken from General Sternberg's last report, and upon which I have in part commented:

United States Army per 1,000 of mean strength.

	1900.	1899.	1889-1898.
Admission rate	2,311.81	2,178.06	1,280.19
Disease	2,115.54	1,985.58	1,047.44
Injury	196.27	192.48	232.75
Discharge rate	22.60	21.98	14.79
Disease	17.71	17.51	11.68
Injury	4.89	4.47	3.10
Death rate	22.74	18.43	9.83
Disease	15.79	11.76	7.08
Injury	6.95	6.67	2.74

In Philippines per 1,000 of mean strength.

	1900.	1899.
Admission rate	2,621.96	2,395.52
Disease	2,462.83	2,206.36
Injury	159.13	189.16
Discharge rate	18	17.82
Disease	13.83	13.16
Injury	4.17	4.66
Death rate	28.75	30.58
Disease	20.26	15.30
Injury	8.49	15.28

Per 1,000 of mean strength.

	Cuba.		Porto Rico.		China, 1900.
	1900.	1899.	1900.	1899.	
Admission rate	1,873.07	2,749.74	1,577.98	2,522.40	2,947.61
Disease	1,586.19	2,537.98	1,397.71	2,255.97	2,625.58
Injury	286.88	211.76	180.27	266.43	322.03
Discharge	16.57	20.25	15.14	19.85	38.52
Disease	13.23	16.26	13.76	16.63	17.98
Injury	3.34	3.99	1.38	3.22	20.54
Death	9.78	18.30	5.05	11.27	47.76
Disease	8.40	16.36	5.05	9.12	23.62
Injury	1.38	1.94	.....	2.15	24.14

Take now the admission rate for all causes in the United States, according to General Sternberg's figures, and we find that in 1894 it was 1,089.73, and in 1900 2,311.81, and in 1899 it was 2,178; but in the Philippine Islands for 1900 the admission rate was 2,621, and in 1899 2,395.52.

In 1894 our troops served in no tropical climates, while those serving in the United States only had served in tropical climates and returned home and were admitted to the sick list, while those

serving in the Philippine Islands, of course, were stricken down to the sick list and to death by remaining in and out of the sun, fighting part of the time and resting a part, and yet we see the immense difference, and we further notice that the admission rate for all causes in 1900 was 2,311, but for disease it was 2,115, and only 196 for injury. Hence, disease caused nearly all the admissions. This was now for the whole Army, and we find the same result or condition with the troops in the Philippines, where for all causes the admission was 2,621, for disease 2,462, for injury 159. We see for the same year, 1900, that the death rate for the whole Army of the United States per 1,000 of mean strength was 22.74, and for ten years previous, from 1889 to to 1898, it was only 9.83, but amongst our troops operating in the Philippines the death rate was 28.75 in 1900, and 30.58 in 1899. Again, the death rate from disease in our Army in 1900 was 15.79, in 1899 it was 11.76, but for ten years previous it was only 7.06, but in the Philippines the death rate for disease in 1900 was 20.26 and in 1899 15.30, and this, too, after thousands and thousands of soldiers had been returned from the Philippines to prevent them dying there.

MY OBSERVATION AND OPINION ON CLIMATE AND HEALTH IN THE PHILIPPINE ISLANDS.

Now, Mr. Chairman, I want to say just this—and I want the distinguished leader of this House and the great mouthpiece of the Appropriations Committee to hear this: Just so long as we send out white men to the Philippine Islands and keep them there any length of time, as a rule, just so long will we continue to bring back dead men or men so utterly disabled when they return to their homes that they begin to apply for a pension the minute they strike the land, if not before.

I had an opportunity to look into this question with some degree of care myself while in the Philippine Islands and returning. The condition of the troops, the effect of the climate, the many complaints lodged with me about the condition of the soldiers and the effect of the climate, impelled me to thoroughly investigate it, and I did so, and that investigation corroborates, in effect, the statements in the report of General Otis, the other majors or surgeons whom I have quoted, and Commissioner Evans in his report on the "crack regiment" that served in Cuba.

BURIALS AT PRESIDIO, CAL.

On returning from San Francisco a few days ago I had a conversation on the train with a gentleman of intelligence and sobriety, but a stranger to me, and a Republican in politics. He said that he had just returned from the camp at Presidio and was there on one or two of the burial days; that they had two burial days per week; that they buried on an average per week from 16 to 60 soldiers there, and that the burial ground had been recently enlarged by the purchase of an adjoining farm for burial purposes. I use the words of the gentleman as near as I can recall them and certainly the substance of his statement.

450 SOLDIERS SICK AND 21 INSANE ON THE SHERIDAN.

There were about 1,500 soldiers that started from Manila when I did aboard the *Sheridan*, 450 of whom were sick, with the list daily increasing, several of whom died on the way. There were aboard 21 insane, some becoming so after we started, and I have heard of other cases since I left there, including Army officers, who had become insane and were being returned to the United States, and I was informed of other like cases before I left the islands.

INSANITY AMONGST THE SOLDIERS LARGEST IN THE PHILIPPINES.

Surgeon-General Sternberg, at page 173 of his report, states that 273 cases of insanity had been reported for the fiscal year, 149 of whom were sent to the insane asylum at Washington, while 124 returned to their duty after having been on the sick report for some time. He says:

> The increase during the last year is explained by the nervous depression and homesickness among the relatively larger proportion of the strength of the Army serving in the Philippines. The cases were reported 23 from home stations, 3 from Porto Rico, 14 from Cuba, 7 from China, 99 of the regular troops in the Philippines, and 123 from the volunteer troops in the Philippine Islands.

In other words, out of 273 cases, all of them arose in tropical climates except 23 from home stations and 7 in China, and they had been serving in Cuba and the Philippine Islands.

INSANE PATIENTS AT PRESIDIO, CAL.

The report on insane patients at Presidio Hospital, San Francisco, by Deputy Surgeon-General Girard, is found at pages 122, 123, and 124 of the Surgeon-General's last report.

Colonel Girard says that 180 patients that had been diagnosed as insane received at this hospital during the year were divided as follows: Regulars, 96; volunteers, 78; discharged soldiers, 2; prisoners, 2; civilians, 2. He says it has been exceedingly difficult in many cases to determine the exact form of insanity, and that diagnosis was determined only after careful study and observation. Then follows a classification of the different phases of insanity. He then states that—

> During the year there have been 46 cases diagnosed as insane received at this hospital on which the diagnosis was not confirmed. It is probably true that most of these cases, if not all, were insane at the time when they were transferred to this hospital, but the majority of them came from the Philippine Islands, * * * and the voyage home, together with a more cheerful surrounding, resulted in the disappearance of the abnormal mental condition.

In other words, bringing 46 of the 180 patients home improved their mental condition. You can see now the effect of this climate on 46 soldiers, not ordinary citizens, but strong, able-bodied soldiers, as they must have been when mustered into the service. They wither physically and, it seems, mentally in this climate. Continuing, Colonel Girard says:

> Most of the cases were of the type of insanity in which the prognosis is good, and most of them were, without doubt, due to the nostalgia and the depressing influence of campaigning in the Tropics. Upon removal of this condition the return to the normal mental condition was rapid and complete.

THEY MUST BE RETURNED HOME TO CURE.

In giving the etiology of the insane cases returned from the Philippines, Colonel Girard says:

> The etiology of insanity in soldiers returned from the Philippine Islands is a subject which is at once simple and complex. Without a doubt a large proportion of the cases which become insane have a hereditary taint which had not been discovered prior to enlistment.
>
> This, taken with the long distance from home, the intense heat of the tropical sun, constant harassment by the enemy which it is impossible to see, excessive use of alcoholics, and the depressing influence always present in a tropical climate, will account for the changed mental condition. The influences just spoken of, without the hereditary predisposition, are enough to produce in a highly nervous individual mild or even severe forms of insanity. It is safe to say, however, that the proportion of insanity in the Army does not exceed that in civil life in any large city where the conditions of life approach the conditions found in the Philippines as regards social surroundings, etc.
>
> It has also been found that the ratio of recovery in the case of soldiers returning from the Philippine Islands is much larger than that found in a corresponding number of individuals taken from civil life, and this goes simply to prove that the condition of insanity present has been only a temporary one which rapidly disappeared upon transference to other conditions more favorable to the individual. Almost all of the cases of melancholia will be found upon examination to be due to nostalgia and, as a rule, in these cases the prognosis is very favorable, provided the patient is transferred to the United States.

Bear in mind, this is the effect of the Philippine climate on an able-bodied man—an American soldier, who can be cured, when at all, "provided the patient is transferred to the United States," as the surgeon says.

We see from this report and others that I can quote that when a soldier is predisposed or tainted with insanity that in the Philippines it is quickly developed. This is very distressing information, for we know that it is very hard, if not almost impossible, to ascertain or to get a recruit under examination to confess, even if he knew, that he is predisposed to insanity.

In addition to this, it is perfectly clear to my mind from the interviews I have had with soldiers and some officers, regardless of the manner in which they take care of themselves and whether they drink or not, that two things do occur to the soldiers—that it weakens mentally and physically the white man in the Philippine Islands to work or remain any length of time there in the sun. I have in mind now an officer who lost 50 pounds of flesh and regained 50 pounds and 10 pounds more, and yet he said to me that he was weaker mentally and physically than ever before in his life; "and yet I take good care of myself; I am not a drinker." Such statements as to mind and body are common in the Philippine Islands.

MORTALITY IN THE PHILIPPINE ISLANDS FROM AUGUST 1, 1900, TO APRIL 30, 1901—NINE MONTHS.

In further answer to the inquiry of the gentleman from Mississippi [Mr. CANDLER], and to bring down the condition of our soldiers in the Philippine Islands to as late a date as possible, I will now quote from the report of Assistant Surgeon-General Greenleaf, chief surgeon in the Division of the Philippines, dated May 31, 1901, found at page 133 of General Sternberg's report last filed.

Colonel Greenleaf produces a table covering this period, showing, indeed, he says "the average daily deaths is 3.6 as against 4.7 in my last report." That is, that this was the rate (3.6) for the nine months named. He further adds that "the mortality rate for this period is about 20.45 per 1,000 per annum; in the last report it is 26.20 per annum"—that is, for these nine months a little over 20 men out of every 1,000 died.

He further says that the proportion of officers killed in action is very great, and shows the number to have been 13 during these nine months. He continues, "The deaths from wounds diminished one-half from last year." His table shows that during that period our total loss of officers was 31 and soldiers 1,056—total, 1,087; which, at the same rate, would make, for twelve months, the mortality 1,448 within the limits of the Philippine Islands.

I quote further from Colonel Greenleaf:

> It is gratifying to report a steady decrease in deaths. This seems to be mainly due to the falling off of the number of those killed in action and died of wounds, but the figures showing death from disease give a decrease in some important particulars and at least a maintenance of former rates in all others except dysentery.

Let me analyze this statement here and now. First, he says there has been a steady decrease in deaths. Second, this seems to be mainly due to the falling off of those killed in action and died of wounds. Third, he says the figures showing deaths from disease give a decrease in some "important particulars." Fourth, that there is at least a maintenance of "former rates" in all except dysentery.

In other words, the number of deaths is decreased only as to officers and men killed in actual battle, while the former rates of death are about the same, except the rate for dysentery, which has increased.

We are surprised that there were any officers or men killed, and we all deplore the fact—for we remember that this report covers the summer of 1900, when our Presidential canvass was on, while President McKinley was President, and after he was re-elected—because we remember that we were informed in substance by the distinguished Philippine Commission, through a cablegram that cost the American Government, as the press report stated, either $5,000 or $7,000, that the war was over in the Philippine Islands in the summer of 1900, and, further, that final peace would be complete if McKinley was re-elected.

Now, if the war was over, how were our soldiers killed during this period? If the re-election of McKinley meant final peace, how is it that they were killed after he was re-elected and while he was still President? Was this cablegram a campaign document only?

We find that the mortality rate was 20.45 per 1,000 per annum during this period of nine months, while the mortality rate in 1897, when we had no war, and when President McKinley was President, was only 5.11, and in 1900, 7.7 amongst our troops serving between the Atlantic and Pacific, where there was absolute peace and no war.

ABOUT 4,000 INVALID TROOPS SENT HOME IN NINE MONTHS IN 1900.

At page 134 Colonel Greenleaf says from "August 1 to April 30, the number of invalids sent home from the Philippine Islands was as follows: Regulars, 1,132; volunteers, 2,861;" total, 3,993.

This of itself would lessen the rate of deaths in the Philippines, and, it seems to me, would easily keep the rate of mortality down to "former rates;" but we find from the table which Colonel Greenleaf submits that the number of deaths during these nine months increased, caused by injuries, suicides, drownings, and dysentery.

PRAYERS OF THE PATIENT TO GO HOME ANSWERED.

On page 138 he says, "the transportation of over 4,000 invalids, insane, and men to be discharged on surgeon's certificate of disability to San Francisco has been successfully carried out," and he says, "unofficially," "their condition improved." Continuing, he says, "deaths have occurred from dysentery and other diseases, but on many occasions, after careful deliberation and on the urgent prayers of the patient, men were sent home as a last hope."

In other words, almost the dying were sent home as a last resort, and by sending them home he says the condition of the majority improved.

Still, the distinguished surgeon is only able, after sending nearly 4,000 desperately ill soldiers home, to keep the "former rates" of mortality in the islands at a standstill, and then fails as to dysentery, which his table shows is on a large increase—24 per cent in 1900 as against 19 in 1899.

On the subject of dysentery and the transfer to the United States of invalids, at page 134, he says:

Dysentery gives a large increase, and this bears out the belief that every case of amœbic dysentery should be sent home at once when the diagnosis is made. It would also appear that length of service does not give any immunity from dysentery, but rather seems to predispose to its acquirement.

SUICIDES REMAIN AT NEARLY THE SAME RATIO.

The mortality for variola has decreased 60 per cent of former rate. In typhoid fever it has diminished 28 per cent.

Malarial fever and results give a very small mortality, notwithstanding their great prevalence. It is commonly observed in the provinces that the natives have "calentura" as severely as American soldiers, and with a considerable mortality. As our post duty diminishes and the men can sleep in their cots with mosquito bars every night, malaria will probably diminish very much.

TRANSFER OF INVALIDS TO THE UNITED STATES.

This constant and unavoidable drain on the strength of our forces remains large, and although the greatest care to choose the subject for transfer has been taken, and each patient is carefully examined by a board of medical officers, the figures show that the loss from transfer for treatment to the United States will be a very large factor in estimating the strength of troops to be kept or afterwards sent for duty in the Philippines.

It has been found poor economy in many cases to keep a soldier here who has apparently recovered from an attack of dysentery and has been returned to duty from hospital, with hardly an exception again to be taken sick. The amount of duty performed by a sick man between his stays in hospital is entirely incommensurate with the ultimate danger to his health or life. It is best to send such a case to the United States as soon as the disease is diagnosticated.

CONSUMPTIVES BEWARE OF PHILIPPINE ISLANDS—PATIENTS WITH TUBERCULOSIS SHOULD NOT STAY IN THE PHILIPPINES.

Malarial fever is generally completely recovered from. Nearly all of the well men of a years' service have had it, but men saturated with the malarial poison from service in especially unhealthy localities, bloodless and weak, with torpid livers and enlarged spleens, never completely recover here and should be sent home. Such patients furnish fertile soil for dysentery. Experience shows that a lowering of the physical standard for recruits is an expensive luxury, when such men are sent to the Philippines. More especially does this apply to the enlistment of minors. Even a strong, athletic youth, with the measurements of a man of 21 and free from blemish, is seldom a desirable recruit for tropical service.

In September I noted that out of 445 convalescents to be sent to the United States for treatment 129 were under 21, or 29 per cent of the whole number. Such boys are particularly prone to typhoid fever; in fact, 18 or 19 is the favorite age for typhoid fever all the world over. They seem to have malarial fever more severely and become cachectic more rapidly than older men. When the first sense of novelty and adventure wears off, the boys lose heart and become homesick; in short, they are more imprudent concerning their own health and less resistant to the disease-producing agents.

"An ideal army for the Tropics would consist of men between 25 and 40 years of age."

FIVE HUNDRED AND TWENTY-SIX DISABLED SOLDIERS LARGE NUMBER TO LOSE IN A YEAR.

On page 135 Colonel Greenleaf further states that between May 31, 1900, to April 27, 1901, there were sent home 526 soldiers suffering from "disability," about which he says:

This is a large number to lose in less than a years' time, but every care has been taken to select cases for discharge, and it is not likely that the figures will be improved upon as new troops come in.

Then the ending of the war in the summer of 1900, the re-election of McKinley, the sending home of 4,000 invalid troops, and sending thousands of new troops to the Philippines have each and all failed to reduce the rate of mortality in the Philippine Islands, and why? Simply because it is not a white man's climate and a white man can not survive there operating as a soldier or as a laborer on the farm for any great length of time.

GENERAL STERNBERG'S REMARKABLE STATEMENT.

In the face of all these facts, of all this distressing history of the decay of our soldiers in our tropical climates and their increased illness and physical distress when they go to the cold climate of China from the Philippine Islands and when they come back home from either place, we find a remarkable statement of General Sternberg at page 127, to wit:

The health of the Army must be regarded as having been unusually good during the calendar year 1900, the medical certificates of which are tabulated in the present report.

This reminds me of a conversation I had night before last in one of the hotels with two officers who had just returned from the Philippine Islands. One of the gentlemen said to me, "Mr. GAINES, you should talk with this gentleman about the Philippines." He has just returned and has been there some time. We were introduced and I asked him, "How have your troops stood the climate in the Philippines?" He promptly replied, "Oh, that is the best tropical climate in the world;" and immediately the other officer said, "Now," shaking his finger in his face, "Now, you know that when my command went up to relieve yours there was over 50 per cent of your men on the sick list." "Yes, that is true," my new acquaintance said, "but still I submit that the Philippine climate is the best tropical climate in the world;" and both officials laughed.

Mr. CANDLER. Can you tell us the rate of mortality among the Americans who have gone there?

Mr. GAINES of Tennessee. Of course the American civilian leaves there before he gets sick, but the soldier can not. In conversation with a leading physician of Manila, whose name I do not recall just now, and in the presence of my distinguished, lovable, and gifted friend, Governor Taft—one of the great men of the age, I think—this physician said to me, and Governor Taft corroborated the statement, that over 30 per cent of the children in the city of Manila die annually.

Colonel Greenleaf's report, at page 139 of Surgeon-General Sternberg's report, says that out of the population of Manila, 244,732, excluding officers of the Army and Navy, the total number of deaths was 8,671, "an annual rate of 42.54 per 1,000, exclusive of Army and Navy. Twelve cemeteries and one crematory are in charge of the board of health," and that the total number of births for a period of ten months was 3,349 registered, or 18.29 per 1,000.

Mr. CANDLER. Can you tell us what the rate of mortality is as to these school-teachers who went over there?

Mr. GAINES of Tennessee. They have not been there long enough to die yet, but you will hear from them later. Unlike the soldier, they can leave the island before they are invalids, and I am informed that many of these teachers married on arriving at Manila and married "returning" soldiers. [Laughter.]

Mr. Chairman, I have been talking seriously on this great question; that is, the inevitable, the natural conditions, that can not be overcome, and the effect of those conditions upon the American people or any other white people who live temporarily or permanently in the Philippine Islands. I went to the Philippine Islands to get the facts, the whole truth, if possible, and for the ulterior purpose of benefiting my constituents and the people of this Republic by returning here and telling them of the unvarnished facts, as I ascertained them. I had no other desire to take

this tedious, extremely laborious, long, and expensive trip. I desired to go to Europe for a good rest, but I felt that my duty was to go to the Philippines, and so I did.

And I want to say here, and as seriously as I know how, that the American people should weigh it well before they determine upon permanently holding these islands. To do this, they must be Americanized; that is, by sending many of our white people there to live, at least for several years at a time, as civil officers and soldiers, and we have seen, and I state it as a fact, from my observation and from information received in the Philippine Islands and from a great number of Army and Navy officers with whom I talked on my trip around through the Mediterranean and Red seas, the canal and Indian Ocean, that the climate in the Philippine Islands is not a white man's climate, nor is that country a white man's country.

We may select for the Army athletes and for the civil officers the best physical specimens, yet still they degenerate physically and mentally and must be relieved often from their duties and brought home to a cooler climate. This is the rule with merchants living in other countries who have agencies in the Philippines. One agent remains a certain number of months or a year and then a substitute comes and the agent then returns to a cold climate, and thus the endless chain is kept up.

Now, if the effect of this climate is so withering to the white people who have vigorous constitutions, to the soldier who is picked out as a perfect man, mentally and physically, how can the great masses—how can our white people as a body—ever live in that country? If the strongest must return in a short while, what about the ordinary, the consumptive, or those of weaker constitutions?

You have the statement of the distinguished Secretary of War, Mr. Root—a man I admire, whose ability I respect. He says, in substance, and so orders, that our soldiers must be succeeded by others from time to time, none to remain longer in the Philippines than two or three years. Why return these soldiers—to save their health from "permanent" ruin, or their lives?

CONSUMPTIVES CAN NOT LIVE THERE.

A consumptive can not live there at all. He gallops right off in a short while. The gentleman who carried this large body of school-teachers to the Philippines not long ago had himself to wheel around and hurry back home, and is now at home threatened with consumption, so the public press states. The climate is damp and is absolutely destructive to consumptive lungs.

This is a serious condition there. We can not overcome climate. By building any kind of a house you can not overcome natural conditions, and they are there in the extreme in this respect. They are the work of God. I do not care how you feed a white man there, nor how you house him, these climatic conditions occur and recur—practically ever present.

Of course there are exceptional cases in other diseases, but I heard of none with reference to lung trouble, and the overwhelming weight of testimony gathered by me from military men and civilians, from physicians and laymen—and I talked to many of all classes—is that the Philippine Archipelago is not a white man's country, because of climatic conditions.

I did not expect to discuss this matter, Mr. Chairman, at this time. I expected to do so on some other occasion, but when I see this Spanish war pension list rolling up until it touches the 50,000 notch, and an explanation is made of it that I do not think tenable; that is, that it is caused by industrious claim agents, and that therefore the Spanish war pension claim is without merit, I feel it my duty to state what I know to be the facts, and just at this time, going to show that this explanation is practically without merit, and that there must be a great deal of merit in the pension claims themselves, and that if we treat the Spanish war and Philippine war disabled soldier, or his widowed wife and orphan children justly, that our pension liabilities are bound to increase in large proportion.

It may be true that a keen, industrious claim agent will wear himself out on a pension claim totally devoid of merit, but I doubt it; and I think that the Commissioner's explanation proves less satisfactory as you investigate the facts than on first impression.

You will find the soldier out in the provinces, in the jungles, and slums. They are the pension claimants, and not the officers, the majority of whom, it seemed to me, were in the cities and towns, mostly Manila, the great Mecca of the island.

You need not expect under such circumstances for pension claims of the soldier to be reduced in number or in value. Of course, by law, you can limit their right to be pensioned, and reduce its value. You can economize on the Spanish and Philippine war victims, as has been suggested by the leaders on the Republican side. You can make flesh of the civil war veteran and bone of the Spanish war victim. Trembling with disease, for life, acquired in the brown man's country—health ruined—you may say he does not merit the pension that the soldier does who fought four years and was wounded; but still the fact remains, as the law is now, that our pension liabilities will grow in huge proportion if present conditions are perpetuated.

30,000 TO 60,000 SOLDIERS, SAY THE MILITARY, FOR THE PHILIPPINE ISLANDS.

Almost without an exception the military men whom I saw in the Philippines say that for years, and even after peace is restored, we must police the Philippine Islands with a huge navy to keep off other nations, and be ready in case of war with from 30,000 to 60,000 land force to act in concert with the Navy. In case of war with any nation, they all say, as did many leading foreign, military, colonial officials, with whom I talked in other countries as I passed along, the enemy will strike us where we are farthest away from the base of supplies, just as we did Spain—in the Philippine Islands—and that by holding permanently these islands we necessarily weaken ourselves, from a military standpoint.

This is what many said to me, notably three leading and distinguished English veterans and high officers, one of whom said to me we might keep a coaling station, the other two saying, "Cut loose entirely as quick as you can propitiously; you will never get your money back, and the people will not stand the great expense and inevitable liabilities that will arise in supporting an army and navy necessary to protect the island internally and from foreign interference."

These statements were volunteered in the course of a pleasant conversation, and not while the three officers were together, but while alone, separate, and apart from each other.

I asked them why English officers should talk thus while England continued to expand. The prompt reply came that "England got into the business of expanding unintentionally and unexpectedly, and now we can't stop." Said the oldest veteran of the three:

For instance, down here some little nation will commit some little depredation on the dividing line between an English possession and theirs, and we just go down there and have a little brush with them and take charge of them, and run their country to protect ourselves. This constantly occurs. So you see we got into the business of expanding and now we can't stop it.

And when you look carefully into the history of England you will find that her great leaders are correctly reported, as this English officer of twenty-five years' standing has stated, and at some other time I shall do myself the honor of quoting freely their advice.

WHAT THE CIVIL OFFICIALS IN THE PHILIPPINE ISLANDS SAY.

The civil officials in the Philippine Islands say that after peace is restored in the islands that a large army is unnecessary; that a small force, garrisoned in the islands, so it can be called into service on short notice, will suffice. They say there a civil "constabulary" is all that is needed when the insurrection ends.

If this is true, what size "constabulary" is necessary—a huge or small "constabulary?" Who will pay the "constabulary," composed, as they were when I was there, of American soldiers? They were paid large salaries from the revenues of the islands, and the Filipino claims that his taxes are absorbed in the payment of salaries already, and that the natives will serve for less money, which the American soldier will not do. It may be a small salary for the American people to pay, but an oppressive one for the poor, battle-scarred, bereaved people of the Philippines.

But suppose the "constabulary" system obtains, with a garrison troop, must we not have a navy to protect the naked shores from invaders and secret enemies, and from interference by foreign nations, when by some reckless, lawless, or ill-advised act on the part of our people there, foreign nations at once attack us from the sea? At all events, it would seem a huge navy in these waters is inevitable, at an inevitably large expense.

The War Department ledgers show that the average cost of each enlisted man in the Army during two years of peace, 1896 and 1897, was $882.86, and for two years of war, 1899 and 1900, $1,397.74, or $497.89 increase or 56.3 per cent.

A standing army we see not only jeopardizes the civil rights of the people, and this we have always been taught, but it is an expensive luxury in peace, and we see more expensive in time of war by nearly $500 per man. The expense per man of the Navy I am not advised, but I should think it would be in keeping with that of the land force.

Mr. HILL. As the gentleman was a member of the Coinage Committee and has had a very large experience in the question of free silver, will he give us, before he takes his seat, the benefit of the observations he made on that subject when he was in the Philippine Islands and other portions of the Orient.

Mr. GAINES of Tennessee. I had rather talk about human beings and the horrible condition of our soldiers in these islands than to talk about any kind of money. [Applause.]

I know that my distinguished friend has also been to the Philippine Islands and other brown countries and amongst other brown people, and I trust he will be as frank as I am trying to be

in giving his experience amongst them, and if he will do so now, I will yield the floor to him, so far as I am concerned.

But I want to say right here, in passing, that while the bankers and merchants favor the gold standard in this country, the bankers and merchants in the Philippines are in favor of free coinage of both metals.

This, I think, is clearly shown by the testimony in the several reports on that subject by the military and civil officers in the Philippines. Merchants and bankers there are in favor of silver money, and say that it will paralyze business and produce a panic if the gold standard is adopted in that country now. But I am not going to speak about money or money laws at this time, while we are endangering the life of our Republic and the lives of our soldiers in that country, and, as I believe, the inalienable rights of the people that were there before we were.

THE INALIENABLE GIFTS OF GOD ARE MORE PRECIOUS THAN THE GIFTS OF MANKIND.

Mr. Chairman, there are other phases of the Philippine question that I hope to exploit at a later day in the House. I have undertaken to reply to a number of policies and suggestions made during this debate, and I am now content to conclude, rejoiced, as I am, if I have accomplished in the least a practical refutation of the statement which I mainly set out to do, that the reason why so many pension claims have been filed on account of the Spanish and Philippine war was on account of the great industry of claim agents.

We can control claim agents, but we can not control disease, and I have shown, I think, that our soldiers and American citizens are poisoned with disease when they habituate this brown man's country.

If we hold on to these islands permanently, the fact stares us in the face that there must be an endless chain of soldiers sent there and an endless chain brought back—the sick and dead both—and that this policy is inevitable, and the proof of the fact is that this is what we are now doing, and the Republicans are fixing to perpetuate conditions that necessarily force us to face an endless chain of responsibilities and burdens on the lives of American soldiers and upon the backs of the taxpayers of this country.

I want to know if we are to go into the business of breeding sons for the purpose of making soldiers for the army in the Philippines? Are we to adopt a fixed or permanent policy of conquest, of colonization, of imperialism, that necessitates sending our sons and fathers to the Philippine Islands regularly, when they must come home sooner or later and perhaps drag out an existence the balance of their lives, broken in health and broken in spirit, with all their natural chance of fortune blighted, pensioners, if you please, upon a charitable or uncharitable Government?

This is the question that comes sharply before us. It will not down and will continue to confront us as long as the American soldiers are sent to that island, even though their unfortunate wives and beautiful daughters follow them there, running the risk, as they do, of destroying their own lives to minister to fathers and brothers when stricken, and finally, perchance, bring them back to their native land to live, or die if they must, about their own vine and fig tree. [Loud applause.]

Rural Free Delivery.

SPEECH

OF

HON. CHESTER I. LONG,

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 7, 1902.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 11728) to classify the rural free-delivery service and fix the compensation to employees thereof—

Mr. LONG said:

Mr. CHAIRMAN: Rural free delivery has brought our people who live in the country into closer relations with the Government and its administration. In his last annual message to Congress, President McKinley characterized it as "the most striking new development in the continued and rapid growth of the postal service." It has given a service to the people living in the country which those who live in cities have enjoyed for a generation. It has stimulated an interest in the history and development of the nation and has contributed to a still higher intelligence among the people. It has enabled the rural population to transact more intelligently and profitably the business upon which they depend for subsistence.

I believe the bill now under consideration will change this condition and retard the development of rural free-delivery. I am therefore opposed to the proposed legislation.

It is intended by this bill to contract for the mail service on rural free-delivery routes and let the lowest bidder carry the mail, providing he possesses certain qualifications.

The rural free-delivery system was inaugurated eight years ago by the establishment of a single experimental route in West Virginia. By the end of the present fiscal year more than 8,000 routes will be in operation. In addition there will be nearly 7,000 pending uninvestigated cases. Every State in the Union but Montana is represented in this service, and every Territory but New Mexico. Even Alaska has enjoyed the benefits of the system in certain localities. Thirteen so-called "county systems" have been put into operation. A county system contemplates the extension of the service to every farmhouse in the county. The benefits of such a service are inestimable. In the State of Kansas within the past three years 444 routes have been established. There are now pending in that State 455 uninvestigated cases. In the Seventh Congressional district of Kansas, which I have the honor to represent, there are 63 routes in operation and 68 uninvestigated cases. To this total number must be added 40 routes, which will be embraced in the county system now being investigated in Sumner County, and which, it is hoped, will be in successful operation within thirty days.

Kansas is admirably adapted for rural service. Reports of special agents and route inspectors show that its roads are unequaled in the whole country. The rural population of Kansas readily took to the service. Intelligent and industrious to a high degree, they are strongly in favor of its maintenance and are opposed to legislation that will impair its efficiency. My State is an example of the good that has resulted from rural free-delivery. It is my judgment that if the proposed legislation be enacted this excellence of service will be greatly injured.

It is undisputed that legislation calculated to insure the permanency of the rural service is essential. It is conceded that the experimental stage is past. Rural free delivery is an institution that is here to remain. Its benefits have been recognized. With respect to rural carriers, I quote from the last report of the First Assistant Postmaster-General:

> In regard to the rural carriers, however, it is a debatable question whether it is desirable at this time to withdraw from the Department the discretion now exercised in their appointment. While their selection is usually made on the recommendation of the Representative in Congress of the district, or of the local postmaster, the special agent who inaugurates the route passes on the qualifications of the candidates for carriers, including their ability to furnish suitable conveyances for the transportation of themselves and of the mail, and under his instructions will not confirm the appointment of anyone who has not the capacity and character to make him a proper custodian of the rural mail.
>
> As shown more in detail in this report, the relations between the rural carrier and the patrons of the route are such that it is possible that something of the effectiveness of the system would be lost if a method of selection were adopted which might secure carriers not enjoying the acquaintance and possessing the confidence of the people along the route.
>
> It is generally conceded that no other branch of our great postal system is so popular as the rural free-delivery service. This, I think, is due largely to the fact that it carries with it the facilities of all the other branches. It is, in fact, the extension of the post-office to the homes of the people, the carrier performing all the functions of a postmaster. He not only delivers and collects ordinary mail, but carries a supply of stamps and stamped paper for the accommodation of rural patrons, is prepared to register letters at the roadside, or to accept money for the purchase of money orders. It is evident, then, that the more easily and conveniently the carrier performs these functions the more satisfactory and popular the service becomes.
>
> The system now in vogue has resulted in the selection of a force of efficient and faithful rural carriers, and the insignificant number of removals and reprimands for derelictions in duty shows the excellent character of the force and the faithfulness of their work.
>
> But if it should be deemed unwise at this time to change the method of selecting carriers, there is no good reason why they should not have the protection and sense of security which the civil-service system throws over incumbents of office in the classified service.

Since this report was made, the President has promulgated the order placing the rural carriers under the classified service, and all selections are now made in compliance with rules formulated for this purpose.

The principal objection to placing rural carriers under the contract system is that it will demoralize the entire rural system. This structure has been reared with great care, and the radical change now sought to be made will demolish and ruin it.

Rural carriers are now taken from men of more than ordinary intelligence and ability. The very nature of the responsibility devolving upon them demands that they should be of such character. The average rural carrier performs services fully as responsible as those of a fourth-class postmaster. He is, in the language of the last report of the First Assistant Postmaster-General, a "traveling postmaster." Note the statement:

> In his capacity as a traveling postmaster a rural letter carrier is required to perform duties which are not exacted of a city carrier, and his responsibilities are therefore correspondingly greater. The sale of stamps, the registration of letters, and the receipt of money for the purchase of money orders, which the carrier frequently incloses in unsealed letters intrusted to him, necessarily bring him in close touch with his patrons and establish between them relations of a very confidential character. A rural carrier must

therefore be a man of character known to the patrons of his route and possessing their confidence, otherwise the rural free-delivery service will not receive the full patronage of the community in which he is employed. Under no circumstances will the average resident of a rural community intrust money or a valuable letter to a carrier whose integrity he questions and very seldom to a stranger, whether trustworthy or not. On the other hand, he will go to the extreme in trusting a carrier whom he has known, perhaps, since boyhood and in whom he has implicit confidence.

If we change this condition and substitute a method which will permit men to be carriers under no further restrictions than are provided in this bill, we will fail in the one object most essential—close relationship of carrier with patron—an object absolutely necessary to the success of the service. As is stated in the report above, the relationship between carrier and patron is very close. It is a question of one individual dealing with another. Aside from the responsibility devolving upon the carrier, nothing is more important than this individual relationship.

This bill places rural carriers under a system of contract. The responsibility of rural carriers is greater than that of city carriers. Indeed, it is a question if it is not fully commensurate with that of railway postal clerks. It certainly equals that of clerks in post-offices. Yet in all the years that the Railway Mail Service, the city carrier service, and the postal clerical service have been in operation there has been no effort to place these postal employees under the contract system. If it has not been deemed necessary to contract for city carriers, railway postal clerks, and city post-office clerks, why should it be any more for the good of the service thus to place rural carriers, whose responsibility is fully as great as any of the classes of postal employees just mentioned? Why extend the contract service to one class and ignore others in the same branch of the Government service?

The rural carrier under contract would occupy nearly the same position as the present carrier of a star-route, transporting mail from a railroad post-office to an inland office. Nor is the comparison at all favorable to the proposed legislation. The present star-route service, through no fault of the Department, is not successful. For years it has baffled the Department, the postmasters, and the patrons.

Under the proposed legislation the contract for carrying rural mail will be let to the lowest bidder. As it is now, the salary of $600 per annum is a consideration. It is a stimulus to men of ordinary ability and intelligence to leave other employment and seek the appointments. The proposed bill would open the doors to men who perhaps have failed at a trade, at farming, or some other means of livelihood, to bid for the contract at absurdly low figures. There would be nothing to attract the present carrier, or his equal. They would know in advance that any compensating figure at which they might place their individual bids would prove higher than that of men of other classes. A man may be able to read and write, but character can not be obtained in a system of competitive bidding. Under selection by appointment, with a compensation sufficient to be attractive, character and responsibility can be secured. The lowest bid is a matter involving figures. Character decidedly is not. The two may not be combined. If high bids obtain, there will be no economy in the proposed change. If bids be low, the efficiency will suffer.

If it were a mere question of carrying mail in bulk, where character and responsibility did not enter, the proposed legislation might do. Star-route contractors thus transport mail. But in the case of the rural carrier it is quite different. He handles and carries mail in piece, not in bulk. He comes into contact with the individual; not alone with one inland postmaster. He takes money orders; receives valuable letters and packages intrusted to him in separate pieces, and with a frequent knowledge of the contents. He sells stamps. He has clerical duties, as well as manual. He needs ability. His position demands it.

In this connection I desire to read from a recent editorial on the subject in the Philadelphia Press, written by the late able and efficient Postmaster-General, Hon. Charles Emory Smith:

The rural mail service is an individual service. The rural carrier collects mail and delivers it. He sells stamps and cancels them. He takes money for post-office orders, and he registers letters. His work is the work of the rural postmaster. It goes further than the work even of the city carrier. The rural mail service is the service of a moving post-office, and a salaried service is as necessary as in any post-office. Contract service would divide responsibility, slacken discipline, remove close supervision, and inevitably destroy the efficiency and morale of the service. It has been recently placed under the classified service by Presidential order. A contract service would destroy this reform. It would substitute for the picked force now doing this work the employees of a contractor, selected for economy and to make a profit, and not for character and to promote efficiency.

This, in my opinion, is a concise and logical argument against the proposed legislation.

It is apparent that the one result sought to be obtained by the friends of this proposed legislation is economy. It is evident the feeling exists among the friends of this bill that the annual expenditure for rural service is too great, and that it should be curtailed. But is not this curtailment of expense at the sacrifice of efficiency? Either the service under the new system will be bettered or be made worse. Economy and efficiency can not go hand in hand. If economy prevails and efficiency fails, then the entire rural service will fail, and the experimental work, which has now reached a stage of supposed permanency, will have been in vain. If the standard of present efficiency is maintained, then the very object sought in this bill will have failed, and the system be no better for the change.

But a close study of this bill's provisions permits only of one deduction—that economy will triumph under the change and efficiency will fail. All bids must be entertained. It is easy enough in seeking economy to strain a point on the prerequisites for carriers set forth in this bill. If economy is to be the consideration, a man who is not possessed of the character of the present rural carrier, who may be trustworthy in the main, who can read and write, who may possess intelligence in a degree, may, as lowest bidder, receive the contract, and yet be wholly incapable of discharging the duties of the position and fail in relationship with patrons.

The service would deteriorate in many other ways under this bill. As it is now, the carrier, receiving a stated compensation and knowing how far he can go in expenditure for equipment, feels considerable pride in properly preparing for the service. His horse is a good one, able to withstand long journeys and all weather conditions. His wagon is durable, neat, and well arranged for the proper transaction of his clerical duties. Uniformity largely prevails.

It is a matter of much pride with carriers as to which one shall have the best equipment; present the best appearance; possess the greatest facilities for expeditious and proper transaction of his duties. Under the proposed system there would be a nondescript assortment of men, horses, and wagons. Instead of the expeditious transaction of work being facilitated it would be interfered with seriously. Instead of pride there would be indifference. Instead of well-equipped wagons for the service there would be vehicles long since cast aside because they had ceased to be serviceable. Nor is this to be wondered at. A man who successfully bids for the contract to carry the mail on a rural route for $250 per annum could not be expected to take any great pride in his equipment or to do his work with dispatch and marked ability. You would have a system where good service would suffer. Neither the carrier, the patron, nor the Government would have justifiable pride in the conduct of the service. Dispatch of business would depart. The carrier would soon cease to find interest in his work. The individual relationship between him and the patron would not exist. The contract would terminate. The next carrier would go the same course. Economy would triumph, but the successful and efficient rural service would be seriously crippled if not utterly destroyed.

There is not a Representative from a rural district who is not aware of the constant changes in star-route service. Contracts terminate. Service suffers. Mails fail to be carried. Contractors become insolvent. Compensation is low. Never is there satisfaction. Protests are lodged against carriers on their service. Contractors fail in their duty, and the machinery of the contract system is constantly clogged. Is it the purpose of any man on this floor to see such a system in vogue in the rural service, in which we all take justifiable pride?

In the fiscal year ending June 30, 1901, out of between 4,000 and 5,000 rural carriers, only 33 were dismissed from the service, in every instance for a just cause. Only four arrests were made for theft. Of a total of 1,135 inspections made between August 1 and October 15, 1901, the inspectors found cause to complain of only 29 carriers, the conduct of two being reported as bad and 27 as careless or indifferent. This record, it seems to me, speaks well for the personnel of the rural carriers under the present system, and is a suitable guaranty of their character, responsibility and relationship with the patrons and with the Department. With such a creditable record, with such manifest efficiency prevailing, why change the system, even in the name of economy?

While the expenditures for rural service are increasing the expenditures for other purposes are decreasing on account of rural service. The fourth-class post-offices discontinued between November 15, 1900, and November 15, 1901, effect a saving to the Department of $120,221.43. In the same period 1,032 star routes and messenger services were discontinued. They required an expenditure of $174,404.41 which the rural service saved. The total saving to the Department in these two items, for which rural service was responsible, amounted in one year to $294,695.84. This is more than 8 per cent of the appropriation for rural service for the fiscal year following. If the growth of rural service is permitted to continue, this saving will be even greater, and will be in proportion to the annual expenditures for the service.

Rural free delivery has taken firm hold on the class it was intended to serve. The people who live in the country have long

felt that they have not received the benefits accorded to other classes. Manufactures were protected; river and harbor legislation came with frequency; cities and city population reaped advantages; certain classes and sections profited by appropriations and legislation; but it was left for rural free delivery to give the people in the country something practical, tangible, and productive of inestimable good. They felt this was something especially designed for them. Their feeling toward the Government and Congress was one of gratification and appreciation. And while this feeling now exists this population will resent any abridgement of the service.

The beneficent results of rural free delivery are many; let us not injure and impair the service by this unwise legislation.

Eulogy on Death of the late Robert E. Burke.

REMARKS
OF
HON. REESE C. DE GRAFFENREID,
OF TEXAS,
IN THE HOUSE OF REPRESENTATIVES,
Saturday, February 8, 1902,

On the following resolutions:

"*Resolved*, That the business of the House be now suspended in order that an opportunity may be given for tributes to the memory of Hon. ROBERT E. BURKE, late a member of the House of Representatives from the State of Texas.

"*Resolved*, That as a particular mark of respect to the memory of the deceased, and in recognition of his eminent abilities as a distinguished public servant, the House, at the conclusion of these memorial proceedings, shall stand adjourned.

"*Resolved*, That the Clerk communicate these resolutions to the Senate.

"*Resolved*, That the Clerk be, and is hereby, instructed to send a copy of these resolutions to the family of the deceased."

Mr. DE GRAFFENREID said:

Mr. SPEAKER: On the 5th day of June, 1901, as the stars were fading away at the approach of the great luminary which fills the earth day by day with effulgent glory, the soul of ROBERT EMMET BURKE took its flight, and may we not indulge the hope to that eternal day that knows no ending, and which was greeted with the words "Well done, good and faithful servant?"

The mystery of death is not more mysterious than life; man is fearfully and wonderfully made; endowed with the power of choice, good and evil lies before him, a tremendous responsibility, and yet it is this thing that lifts him infinitely above the brute creation and makes him a son of the living God. The largest, the truest, the noblest man is he who, broad in his conceptions, grasps with unerring precision the path which leads to noblest life and follows it, neither swerving to the right nor the left, in obedience to duty's call; such a man was my colleague, my lamented friend, ROBERT EMMET BURKE. Were there obstacles in the way, he overcame them; were there disparagements, he rose above them; were there dangers, he feared them not; grandly, serenely he passed on.

A soldier fighting for his beloved South, a young man struggling for existence by day and bending over his books at the midnight hour; a lawyer advocating with power and earnestness the cause of his clients; a judge, industrious, studious, careful; a statesman on the floor of this House, he acquitted himself always with great credit, and won the esteem and plaudits of those who knew him. Were I called upon to analyze and measure the characteristics which marked him, I should say industry, honesty, generosity, simplicity, nobility of soul, independence in thought and action. He respected the honest opinions of others, but was bound by none; his method was to carefully analyze, to sift, to weigh in the balance every question of moment, and then, without fear or favor, to act nobly his part. Nature endowed him with a rugged intellect, with fine discriminating powers, and a clear judgment, a kindly heart, a gentle disposition; these, coupled with indistury, energy, a high and lofty purpose, made him the clean, pure, noble, manly man that we knew and respected.

It is not strange that he should have been selected by his fellow-citizens to adjudicate their differences and determine the law; that they should have selected him to represent them on the floor of this House, for they knew that in him was justice, that in him was honor, that in him were the elements of the statesman, and he proved himself worthy of that confidence in every instance. His death is therefore a public calamity. He will be missed in the district which he represented; he will be missed in the State that he loved; he will be missed by the nation dear to his heart, and still more will he be missed by his friends and neighbors, for they knew him as the Christian gentleman, devoted to the church of his choice, kind, gentle, charitable, benevolent. He never forgot a friend nor cherished malice. A hospitable home was his in which centered all those endearing affections which made it to him the dearest spot on earth, and there he will be missed and mourned till time shall reunite wife and children.

And you, oh, you, who the wildest yearn
For the old-time step and the glad return,
Think of him faring on, as dear
In the love of there as the love of here,
Think of him still as the same, I say,
He is not dead—he is just away.

The Anti-Oleomargarine Bill.

SPEECH
OF
HON. J. H. DAVIDSON,
OF WISCONSIN,
IN THE HOUSE OF REPRESENTATIVES,
Tuesday, February 4, 1902.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 9206) to make oleomargarine and other imitation dairy products subject to the laws of the State or Territory into which they are transported, and to change the tax on oleomargarine—

Mr. DAVIDSON said:

Mr. CHAIRMAN: It has been a pleasure for us to listen to the remarks of the gentleman from Ohio [Mr. GROSVENOR]. He has entertained us if he has not instructed us. His position to-day is so different from the position he has always heretofore taken upon measures of this kind that I have wondered whether in the speech he has just made he did not expect us to take him facetiously rather than seriously.

In prior years his voice has always been heard in behalf of pure-food legislation, and this year he has introduced and had referred to the committee of which he is a member, a bill to prevent the use of shoddy in woolen goods. Therefore, it is somewhat surprising to hear him to-day advocating the cause of oleomargarine, and incidentally speaking a good word for those who manufacture the color which is inserted into oleomargarine for the purpose of deceiving the people and making that article sell for something which it is not. I presume he has tried to reach an honest decision upon this subject, but his argument is decidedly weak. He has stated that this bill to regulate the sale of colored oleomargarine was an attempt to destroy one industry for the benefit of another, and then he concludes his statement by saying that the oleomargarine industry, notwithstanding this legislation, will prosper greater in the future than it has in the past.

It has been claimed that oleomargarine as at present manufactured is a wholesome and nutritious article of food. Scientists have been found who are willing to state that samples of oleomargarine which they have tested have been found to contain nothing which could be called deleterious or injurious to the public health. I suppose if all oleomargarine was manufactured solely from the lard of the hog, the tallow of the beef, and the oil of cotton seed and sufficiently flavored by churning in pure milk, it might be called wholesome. The fact is, however, that a very large portion of the oleomargarine manufactured contains many other substances, some, at least, of which are not or can not be considered nutritious or wholesome. Read the statement issued by the Treasury Department, which shows the various "wholesome" and "nutritious" ingredients used in oleomargarine. I submit it here:

Quantity, character, and value of ingredients used in the production of oleomargarine for the year ending June 30, 1899; also percentage each ingredient bears to the whole quantity.

Material.	Pounds.	Value per pound.	Total value.	Percentage each ingredient bears to the whole.
		Cents.		
Neutral lard	31,297,251	8	$2,503,780.08	34.27
Oleo oil	24,491,769	9	2,144,917.69	26.82
Cotton-seed oil	4,357,514	6	522,025.08	4.77
Sesame oil	486,310	10	4,863.10	.53
Coloring matter	148,970	20	29,296.00	.16
Sugar	100,164	4	4,406.50	.12
Glycerin	8,963	10	896.30	.01
Stearin	5,890	8	459.60	.007
Glucose	2,550	3	76.50	.003
Milk	14,250,576	1	142,005.76	15.55
Salt	6,773,670	1	67,726.70	7.42
Butter	1,568,319	20	313,663.80	1.72
Cream	3,527,410	5	176,370.50	3.86
Butter oil	4,342,904	6	260,520.00	4.76

This shows that during the fiscal year ending June 30, 1899, in an output of 91,322,260 pounds there were used only 14,250,576 pounds of milk, 1,568,319 pounds of butter, and 3,527,410 pounds of cream, or 21.13 per cent of the whole amount. In other words, nearly 80 per cent of the year's product was made up of lard, oils, glycerin, sugar, and other foreign substances.

We also find that among the articles named in the patents granted for the manufacture of substitute butter are borax, cotton-seed oil, bicarbonate of soda, alum, glycerin, sulphuric acid, tallow, cornstarch, caustic potash, castor oil, chalk, slippery-elm bark, olive oil, turnip-seed oil, chlorate of potash, oil of peanuts, nitrate of soda, stomach of pigs, nitric acid, mustard-seed oil, sugar, caustic soda, and bicarbonate of potash. It is possible that so-called "neutral grease," when subjected to these acids and alkalies, may be wholesome butter, but, "leading scientists" to the contrary, 32 States, having over 60,000,000 people, have prohibited such deodorized grease from being colored in imitation of butter and sold in the market.

In the table just submitted we find "stearin" is also used in oleomargarine. Now, what is stearin? Some may think it is the hard fat from the beef which ordinarily is used for soap and candles. That is true, but there is also another kind of stearin. In the manufacture of certain grades of cotton-seed oil, in the refining of which caustic soda and potash are used, there is left a solid matter which in trade is "known as stearin and used in the butterine and soap-making industries."

During the year 1889, samples of oleomagarine taken from retail stores in New York and Brooklyn, were found to contain from 9 to 11 per cent of paraffin, which is "a colorless, odorless, translucent, waxy, solid mixture of hydrocarbons derived from methane, rich in carbon and indifferent to most reagents. It is contained in bituminous coal and petroleum, from which it is separated by distillation."

It is used to protect bronze and marble statues from destruction by the elements, and the obelisk now standing in Central Park, New York, has been coated with this biproduct of coal tar and petroleum in order to prevent it from being ruined by the action of the weather. Possibly the human stomach can digest a substance that time and the elements can not destroy, and some may consider that this substance, when mixed with the fats of steers and hogs is "just as nutritious" and "as easily digested" and "as perfectly wholesome" as butter, but I do not.

Oleomargarine melts at a temperature varying from 102° to 106°. Butter melts at a temperature of 92°. The normal heat of the human stomach is 98°. It is apparent, therefore, that butter—the natural product of milk which the Almighty provided as a natural food for the most delicate digestion, a food which the young, the old, and the invalid may alike use with the least possible harm—that this product is the natural food for the human stomach, because it melts and digests at a temperature of about 6° less than the normal heat of the stomach. On the other hand, oleomargarine can not be considered a natural and easily digested food for the human stomach, because the temperature at which it melts is a temperature which no healthy stomach ever attains, and as a consequence this unnatural, foreign fat can not be digested, but must be expelled by sheer gastric action and force.

A prominent lumberman told me he was opposed to this bill because he wanted to furnish oleomargarine to the men employed by him in the woods and on the drives on the river, because it would "stand up" in warm weather and he did not need to provide refrigerators in which to keep it, as he would have to do with butter. I have no doubt if a sufficient amount of stearin and paraffin and other such substances are used the product will "stand up" in most any kind of weather; but can it be said that a product which hot weather will not melt is as healthful and as easily digested as butter?

Knowing what ingredients are used in oleomargarine, I am satisfied that it can hardly be considered a wholesome and nutritious article of food. That question, however, is not involved in the legislation now proposed. For the sake of the argument, it may be admitted that oleomargarine is a food product and its manufacture a legitimate industry.

The purpose of this legislation should be clearly understood. The statement has repeatedly been made during this discussion that this bill is intended to destroy a legitimate industry. That it is intended to destroy one industry for the benefit of another. This I emphatically deny. The purpose of this legislation is not to destroy any legitimate industry. It is intended to destroy an illegitimate industry. It is intended to stamp out the fraud and deceit which one industry practices for the purpose of deceiving the people and thereby gaining an undue advantage over another industry. Its purpose is to protect an honest industry against the dishonest methods of another industry. [Applause.]

The manufacturer of oleomargarine has a right to sell his product to those who desire to purchase it in the open market for what it is. He has no right to so color and change the article that those who handle it will be able to perpetrate a fraud on the people who purchase it. That fraud is committed in the sale of this article there is no doubt. It has been admitted by many of the able champions of the oleomargarine industry, and the evidence taken before the Agricultural Committee clearly shows that practically all of the oleomargarine now sold by retailers to consumers is sold as butter and at a price equal to the prevailing value of butter. I deny, however, that the retailer is alone responsible for this fraud. I maintain that the manufacturer is primarily responsible. He is the one who seeks a market for this product. He is the one who employs every means which money can procure to deceive the people.

If oleomargarine was made in its own color, which is practically white, the retailer would have to sell it as oleomargarine, unless he colored it with annotto or some other substance to make it resemble butter. For a time I did not believe the retailer could insert such coloring matter without melting up and working over the whole product. It has been found, however, that it is possible for him to do so, and therefore a provision is inserted in this bill which will make such retailer a manufacturer within the meaning of this law and compel him to pay the manufacturer's license and a tax of 10 cents per pound upon each pound of oleomargarine which he shall color in order to make it resemble butter.

I have advocated the pending measure, which will compel the manufacturer to pay a tax of 10 cents per pound upon oleomargarine colored in imitation of butter, because I believe the manufacturers are primarily responsible for the fraud perpetrated upon the public, and therefore they ought to be the ones to pay the 10-cent tax. I hold in my hand a card issued by William J. Moxley, a butterine manufacturer of Chicago. It will be noticed that Mr. Moxley, in order to attract attention to the goods he manufactures, places upon the front page of his card a picture of the Stars and Stripes. Permit me to digress a moment, Mr. Chairman, to say that this is one of the most glaring instances which has come to my attention of the desecration of the American flag, and I hope the time will soon come when Congress will pass a law which will protect the Stars and Stripes, the flag of our country, from desecration of this kind. [Applause.]

Mr. Moxley puts Old Glory on the cover of his advertisement, and on the next page he arranges a pyramid showing the different shades of color which he is able to give to the oleomargarine which he manufactures. Each block is numbered and marked. No. 1 is marked "No color;" No. 2, "Denver color;" No. 3, "Wisconsin color;" No. 4, "Country rolls—Pittsburg color;" No. 5, "Cincinnati color;" No. 6, "Straw color;" No. 7, "Chicago regular color;" No. 8, "Brick or high color." No. 1 is the natural color of oleomargarine and is white. Through the remaining blocks runs a shade of yellow, each one darker than the previous one, until No. 8 reaches a brick or high color. Does anyone believe that this advertisement is sent out at the request of the retailer? No. It is the manufacturer, who is trying to sell his product. He sends this card to the retailer and with it a letter of instruction. Let me read this letter:

CHICAGO, *April 5, 1899.*

NOTICE TO THE TRADE.

Inclosed find a color card, which is as near the color of our butterine as the printer's art can represent. Our aim in sending you this card is to aid you in selecting the proper color suitable to your trade. Mistakes are easily made, but hard to remedy.

In nearly every section of the country there is a difference in the color of butter, and even in certain seasons of the year there is a change, as you will have noticed. In winter butter is of a lighter color than in summer. In many sections this is the result of the difference in feed or pasture.

We can give you just what you want at all seasons if we know your requirements. As an example, No. 1 has no coloring matter, No. 2 a little coloring, and so on to No. 8, which is the highest colored goods we turn out. Preserve this card, order the color you want by number, and we will send you just what you want.

Yours, truly,

W. J. MOXLEY.

Here we have positive evidence that the manufacturer, the man who makes the article and puts the coloring matter in it, is the one who is responsible for the fraud and the one who makes it possible for the fraud to be committed. He makes it possible for the retailer to force this article upon the public, and he gives every possible assistance to the retailer to enable him to meet the conditions that prevail in his particular locality at any given season of the year. It will be noticed that in the letter that Mr. Moxley sends out he says:

In nearly every section of the country there is a difference in the color of butter.

He does not say that there is a difference in the color of oleomargarine and that the people want oleomargarine colored different shades at different seasons of the year, but that there is a difference in the color of butter in different sections and in different seasons of the year, and therefore the retailer must order according to the season of the year and the section of the country in which he is located, and the manufacturer supplies him with just the article required to deceive the people.

Let me call your attention to another point which shows that the manufacturer is the primary party to the fraud perpetrated upon the consumers of butter. I hold in my hand a list of the manufacturers of oleomargarine in this country. There are 26 in all. Nearly one-half of them have adopted a peculiar name. Some do business under the name of the individual, like William J. Moxley or the G. H. Hammond Company, or something like that; but many of them have chosen a name which will aid them in deceiving the people.

We have first the Fall City Dairy Company, of Louisville, Ky.; then the Capital City Dairy Company, of Columbus, Ohio; the Illinois Dairy Company, of East St. Louis; the Union Dairy Company, of Cleveland, Ohio; the Elgin Butter Company, of Indianapolis, Ind. Is there any gentleman from Indiana here who knows whether there is a town of Elgin within the corporate limits of Indianapolis? Then we have the National Dairy Company, of Washington. Now, why do they all adopt the name "Dairy Company" or "Butter Company?" What is the object of those who manufacture oleomargarine in calling their company a "dairy company?" Are they running a dairy? Are they selling cream, or milk, or butter? No; they do it for the purpose of advertising their product and making the people believe they are manufacturing butter. It has been demonstrated that practically all of the oleomargarine sold in this country is sold, not as oleomargarine, but as butter, and at a price equal to the value of butter, and that such fraudulent sale is made possible by inserting coloring matter in oleomargarine, thereby making it resemble butter.

It is proposed by this measure to impose a tax of 10 cents per pound upon all oleomargarine when so colored. The cost of oleomargarine, including the tax, is about 9 cents per pound. It therefore ought to be sold at retail for from 12 cents to 15 cents per pound. As a matter of fact it is sold from 20 cents to 22 cents per pound, according to the price of butter. The large profit which the retailer is thus able to make is a strong inducement for him to engage in this trade. If we impose a tax of 10 cents per pound upon the colored article the cost to the retailer will be practically equivalent to the cost of butter, and the profit accruing to him in the sale of this article will not exceed the profit which he would make in the sale of honest butter. By removing the incentive to commit fraud I believe we will largely prevent the fraud and thus protect not only the producers of butter, but the consumers as well.

Mr. FLEMING. Will the gentleman allow me to ask him a question?

Mr. DAVIDSON. Yes.

Mr. FLEMING. Does not the substitute bill have provisions in it which would make it impossible for a man to sell oleomargarine as butter?

Mr. DAVIDSON. In my honest judgment it does not. Mr. Chairman, I want to be fair about this. I want to say that I have as much respect for the able chairman of the Agricultural Committee, who drafted the substitute bill, as anyone, but in my judgment the substitute bill will not prevent this fraud, and no bill which simply provides for branding and marking and wrapping of oleomargarine will ever prevent it.

We now have a law which provides for wrapping and marking oleomargarine, and yet it is violated every day. I hold in my hand a photograph of an alleged dealer in butter in Chicago. You will notice this dealer has a large sign, which reads, "Pure grass butter." Below this he quotes prices as follows: "Pure dairy butter, 15 cents per pound;" "Pure Elgin creamery, 18 cents per pound," and "Rock River creamery, 20 cents per pound." To my certain knowledge every pound of these goods was oleomargarine. This dealer never had a pound of butter in his store. He is one of the notorious oleomargarine dealers of Chicago. No law short of the most drastic one will reach him. That is why I am not in favor of the substitute bill. If I thought it would be effectual, I would vote for it. That is all I want.

Mr. FLEMING. Will it not prevent fraud from being carried on by the wholesaler, such as the merchant in Chicago, who has been mentioned?

Mr. DAVIDSON. He is a retailer.

Mr. FLEMING. But they sell the article in large quantities.

Mr. DAVIDSON. I bought it by the pound. I called for a pound, and got it. I could have bought any amount that I wanted at retail.

Mr. HAUGEN. In view of the statements which have been made, let me say for the information of gentlemen here that every pound of this supposed butter which is sold is contained in a wrapper marked "Oleomargarine;" yet, although the wrappers disclose that it is oleomargarine, it is, as a matter of fact, sold and advertised as pure butter.

Mr. WADSWORTH. By the retail dealer—not by the manufacturer.

Mr. ALLEN of Kentucky. What did the gentleman from Wisconsin say was the price in Chicago?

Mr. DAVIDSON. Fifteen, 18, and 20 cents.

Mr. ALLEN of Kentucky. What was genuine creamery butter worth then in the market?

Mr. DAVIDSON. I presume from 22 to 24 cents.

Mr. ALLEN of Kentucky. Does not the gentleman think that the discrepancy of price must convince any man of ordinary intelligence that he is not buying creamery butter?

Mr. DAVIDSON. The advertisement of the retail dealer quoted "creamery butter" at 20 cents; pure "Elgin creamery," 18 cents; and pure "dairy butter," 18.

Mr. ALLEN of Kentucky. Is it not a fact that the great majority of the best creamery butter sells in the market generally at about 35 cents?

Mr. DAVIDSON. Oh, no, sir; not in the markets with which I am acquainted.

Mr. ALLEN of Kentucky. I mean on the average.

Mr. DAVIDSON. On the average it sells in Milwaukee and Chicago at 22 to 25 cents.

Mr. ALLEN of Kentucky. Is the gentleman familiar with the statement made before the Senate Committee, that some parties sell creamery butter as high as 55 cents?

Mr. DAVIDSON. I am not familiar with any such statement. I do not know any place in the United States where such butter sells at 55 cents, although there may be such places.

Mr. GAINES of Tennessee. I take it that the price varies in different States and different communities.

Mr. DAVIDSON. Of course; that is the case with all products. There is not any food product nor any article of clothing that does not vary in price at different places.

Mr. GAINES of Tennessee. I want a little information about this bill. The imposition of a small tax is first alluded to, I believe, on page 3, in lines 17, 18, and 19. I wish to ask what is the object of levying this tax of one-fourth of 1 cent per pound? Is it levied as a police regulation—to pay for the execution of the law?

Mr. DAVIDSON. That argument was urged in favor of the tax, and also that some tax was necessary in order that the Internal-Revenue Department might have supervision over it, which possibly it could not have if no tax was imposed.

Mr. GAINES of Tennessee. I find the next proposition of the bill in lines 19 to 22:

But when made in the imitation of butter the tax to be paid by the manufacturer shall be 10 cents per pound, to be levied and collected in accordance with the provisions of said act.

Now, why is that tax levied?

Mr. DAVIDSON. For the purpose of driving the fraudulent article out of competition with the honest article.

Mr. GAINES of Tennessee. But the language is "when made;" it does not say "when made and sold in imitation of butter." Under the bill, as I understand, a man could not make oleo butter and color it like cow butter without paying a tax of 10 cents a pound, irrespective of whether it was made for sale or not.

Mr. DAVIDSON. Oh, yes; he could.

Mr. GAINES of Tennessee. Is there any language of the bill which so provides?

Mr. DAVIDSON. There is.

Mr. GAINES of Tennessee. I am against fraud anywhere I find it, and am trying to find some way of framing legislation so as to prevent the fraud of selling oleo as butter produced from milk. That is the point and evil. I want to do what I can to crush it out.

Mr. DAVIDSON. That is a mere matter of detail. The tax of one-fourth of 1 cent on the uncolored article gives the Internal-Revenue Department an opportunity to inspect all oleomargarine manufactured, and consequently an opportunity to see that no fraud is perpetrated. Except for that I should have been in favor of removing the entire tax on the uncolored article.

If the Internal-Revenue Department could have complete supervision without the aid of this tax on the uncolored article, I would say take it off, because I believe that if oleomargarine is a wholesome, nutritious article of food, then when not made in imitation of something which it is not, it should be sold on its merits, and ought to be sold just as cheaply as possible. Those who desire to use oleomargarine should have a right to purchase it at its true value, and I know of no reason why the miners in the district represented by my able friend from Ohio [Mr. GROSVENOR] should pay more for oleomargarine than it is actually worth. If they want to use it, why should they not be entitled to purchase it at retail at from 12 cents to 15 cents per pound instead of paying a much higher price, as they do now.

The present tax on all oleomargarine is 2 cents per pound. This bill provides that the tax on uncolored oleomargarine shall be one-fourth of 1 cent per pound, a difference of 1¾ cents per pound,

which ought to reduce the price of the article by that much to those who want to purchase it.

In answer to some suggestions which have been made in reference to the position of laboring men upon this question, I want to say a word in regard to those residing in my district. Last year resolutions were sent to all of us by different labor organizations in opposition to this bill. The language of the resolutions indicated that they had been prepared by some one who was not familiar with the bill or the purpose for which it was presented. When I went home I took some of these resolutions and presented them to the laboring men of my district, and talked the matter over with them.

When they clearly understood the situation, every one with whom I talked expressed himself in favor of the measure and was ready to support any proposition which was intended to prevent fraud and misrepresentation.

I want to say to the gentlemen from Ohio, and to every other member on this floor who, in opposing this measure, thinks he is representing the laboring man, that, in my judgment, the laboring men of this country are as anxious to have wholesome legislation enacted, are as anxious to have legislation which will prevent fraud and misrepresentation in the sale of food and other products, as any other men in the United States. The laboring men of our country have no desire to get anything by fraudulent means, and as consumers they have a right to demand that such legislation shall be enacted as will give them and everyone else an opportunity to know that the article which they are about to purchase is what it is represented to be, whether it is butter or oleomargarine, whether it is a food product or an article of clothing. It should be sold upon its merits and not for something which it is not.

Mr. MOON. Will the gentleman permit me to interrupt him?

Mr. DAVIDSON. Yes, sir.

Mr. MOON. I want to say that I feel friendly to this bill, and will be glad to see it perfected; but it occurs to me that there is some trouble in the third section, and I will ask the gentleman what he understands by "butter?" What is the meaning of butter? What is its color?

Mr. DAVIDSON. Was the gentleman brought up on a farm?

Mr. MOON. Yes; I was brought up on a farm. But this is a judicial question, and judges do not know things as farmers do. They have to know them from the actual proof.

Mr. DAVIDSON. I do not think it is necessary for me at this time to undertake to demonstrate the judicial definition of the word "butter."

Mr. MOON. I do not want the gentleman to misunderstand me. This act provides that oleomargarine shall not be made in imitation of butter.

Mr, DAVIDSON. Yes.

Mr. MOON. When you come to a judicial consideration of this question, the court must know what butter is, and oleomargarine must be shown to be an imitation of butter or like butter. The gentleman has just demonstrated clearly that oleomargarine can be colored in seven or eight different ways. Butter certainly has not more than one or two or three or four different colors. It could not be demonstrated to have more. Therefore, if it should occur that the oleomargarine was colored in some way that was not an imitation of butter, could it not still be imposed upon the public, notwithstanding this act?

Mr. DAVIDSON. Yes.

Mr. MOON. Well, then, is not the act as here proposed defective in its attempt to protect this industry in that respect?

Mr. DAVIDSON. No; because the whole attempt of the oleomargarine manufacturers and retailers has been to make their product a substitute for butter and to put it on the market as butter, and to sell it as butter.

Mr. GAINES of Tennessee. They call it butter when they sell it. They do not call it oleo.

Mr. MOON. Oh, no; they call it oleomargarine.

Mr. DAVIDSON. A great many of them do not.

Mr. MOON. Suppose they call it butter and it does not look like it and is colored differently from any butter you ever saw, is it a violation of the law then?

Mr. DAVIDSON. If it is not contradictory to the terms of the law, then it is not a violation of the law.

Mr. MOON. How are you going to know whether it is or not? You have got to define an offense before you can punish it.

Mr. DAVIDSON. The original act, to which this is an amendment, defines oleomargarine, and the courts have held that act constitutional.

Mr. MOON. Oh, there is no trouble about the definition of oleomargarine.

Mr. DAVIDSON. And the courts have had no trouble in determining the difference between oleomargarine and butter.

Mr. HAUGEN. The original act also defines butter.

Mr. DAVIDSON. The gentleman suggests that the original act also defines butter.

Mr. Chairman, in my judgment no more meritorious measure will be presented in this House at this session than the one we are now considering. I have some pride in this, because I had the honor to introduce the first bill on this subject. In the Fifty-fifth Congress I presented a bill which provided for a 10-cent tax on oleomargarine colored in imitation of butter. I reintroduced that measure in the Fifty-sixth Congress, and Governor Grout also incorporated the same proposition in the bill which he introduced at the same session. All of us who are interested in this legislation united in support of the Grout bill, which passed the House last year. I have watched the growth of public sentiment throughout the country in favor of this legislation, and notwithstanding the protests of the gentlemen from the cotton-seed and cattle-raising districts, I am firmly of the opinion that its enactment into law will be of material benefit to the people of the country.

This has been called class legislation. I deny that assertion, unless we are to understand from that term that this legislation is demanded by a very large class of all the people in the country. It has been suggested that this legislation is in the interests of the "butter trust." I deny that assertion, unless the 5,000,000 individual farmers owning cows and producing butter from as many individual farms can be called a trust. That the producers of butter are interested in this legislation there is no doubt. They have a right to be interested and they have a right to be heard on this floor. They do not ask us to destroy any legitimate industry. They do say to us, and they have a right to say to us, that their industry shall not be destroyed by any illegitimate means. One gentleman the other day criticised those of us who favor this measure and insinuated, if he did not say, that we are influenced by unworthy motives.

I have no criticism to make to the position of any man upon this measure. You who are opposed to it are undoubtedly representing the wishes of your constituents. You who come here from districts where the people are engaged entirely in the production of cotton and are anxious to have a market for cotton-seed oil undoubtedly represent the wishes of your constituents in opposing this measure. You who come from districts given over to grazing and the raising of cattle undoubtedly represent your constituents in opposing this measure. I believe you are mistaken in what you think the effect of this legislation will be on your people. I believe the passage of this measure will not result in injury to your constituents, but, on the contrary, will be very much to their benefit. However, I do not criticise the position you take.

I accord to you the same right which I claim for myself. I represent a district which is largely interested in the dairying industry. I have a map here which represents the butter and cheese industry of the State of Wisconsin. The red dots on this map show the cheese factories and the black dots the creameries. If you look at this map, gentlemen, you will see to what extent the dairy interest has been developed in our State. You will find that during the last year there were in operation 1,186 creameries, which produced 80,000,000 pounds of butter, valued at $16,000,000, and 1,575 cheese factories, which produced 60,000,000 pounds of cheese, valued at $6,000,000 Wisconsin produces one-fourth of all the butter produced in the United States, and I think, gentlemen, that I have a right to stand on this floor and in this presence say to you that the dairy interest of Wisconsin is not only entitled to be heard but is entitled to have such legislation as will enable it to compete with the honest dairy products of other States, and not have the market stolen from it by a false and fraudulent imitation. [Applause.]

Mr. KLEBERG. The most forcible argument we have heard in opposition to your position is that the poor people who live in the cities are denied the opportunity of buying oleomargarine for consumption by their families. Now, before you sit down, suppose you elucidate this proposition, that there is nothing in your bill that prevents the poor man in the city from buying oleomargarine uncolored and color it at home if he deems proper.

Mr. DAVIDSON. He would have a perfect right to do that if he does not color it for the purpose of selling it to some one else to make a profit thereby.

Mr. SLAYDEN. What percentage of olemargarine is uncolored?

Mr. DAVIDSON. A very trifling per cent.

Mr. SIMS. I would like to ask the gentleman a question.

Mr. MANN. Will the gentleman permit me to make another inquiry in the line of the question that has just been asked?

Mr. DAVIDSON. Yes.

Mr. MANN. On the question that the poor man can not buy uncolored butter. Under your bill, if it is passed, there will have to be a retail license of $48 a year, and he can not buy it unless he buys it from a wholesaler, who is compelled to pay a large wholesale license. The manufacturer of uncolored and the manufacturer of colored oleomargarine must also pay a large license. You

do not pretend to take off any of that in the interest of the poor man?

Mr. DAVIDSON. No; because the manufacturer of oleomargarine can pay that license and still make a good profit.

Mr. MANN. Nobody who manufactures oleomargarine will agree with you in that.

Mr. DAVIDSON. Wait just a moment. I want to answer the gentleman from Illinois. I will read from a pamphlet sent broadcast by the Standard Butterine Company, of Washington, D. C. It is a prospectus of the company, in which they give the cost of the production of oleomargarine and in which they say that for each 100 pounds of oleomargarine manufactured the oleo oil will cost $3.04; neutral lard, $1.44½; cotton-seed oil, 85 cents; milk, 17 cents; salt, 3½ cents; moisture, 10 pounds. Water costs nothing. I suppose they get it out of the Potomac.

Mr. MANN. That will color the oleomargarine.

Mr. DAVIDSON (continuing). Labor, parchment paper, tubs, $1.38; internal revenue, 2 cents per pound, $2; total cost, $8.92 for 100 pounds.

Mr. MANN. The gentleman knows that the same man can make figures which would show that a man could make a fortune in farming.

Mr. FEELY. Mr. Chairman, the gentleman from Wisconsin just stated that he was the pioneer of this legislation; we all admit that he was the gentleman who first sought out the proposition of the 10-cent tax. Can the gentleman enlighten this House now on the question as to whether that 10 cents is to be for revenue purposes or a repressive tax, as stated before the committee by the ex-governor of Wisconsin?

Mr. DAVIDSON. Oh, yes; I can do that, and I will not hesitate to say that it is for the purpose of suppressing an illegitimate industry.

Mr. ALLEN of Kentucky. Then why not embody that in the title to the bill?

Mr. DAVIDSON. Because it is not necessary. I believe this is the only way you can prevent the fraudulent practice of imposing on the people something they do not ask for. I believe when you add 10 cents to the cost of colored oleomargarine you put it so high that you take away from the retailer the incentive to commit fraud. When you have done that you have practically prevented the fraud, and after that oleomargarine—if people want it, and I presume some do, and if people like it, and I have no doubt some do—will be sold for what it is. If people want it and want to buy it, they will buy it uncolored, because color is not a natural part of the product. It does not belong there in any way. There is not a thing that goes into the manufacture of oleomargarine that gives it a yellow color or a yellow shade. They have substituted something absolutely foreign to the product itself for the purpose of giving it a shade which would enable somebody along the line to sell it for butter.

Mr. FEELY. Will the gentleman deny that the element of color enters into the taste of butter; that it enters into the palatability of butter?

Mr. DAVIDSON. Certainly I deny it; I do not believe it at all.

Mr. FEELY. Why, then, do you color butter?

Mr. DAVIDSON. I have been told they do it to give uniformity of shade. There is this fact that should be borne in mind: That no butter produced from cream will ever be white. You can call it winter butter, or white butter, but if you put it beside a white sheet of paper you will find it has a yellow shade. The shade varies all the way from bright yellow in June, which is produced by green grass and sunshine, and nothing else in the world, down to the light shade of winter butter.

You follow that all the way through, step by step, and you will find that the shade of color varies only according to the food the cow is fed upon. If you go back to the small farmer in the country who is poor and keeps only one or two cows, who cures his hay dead dry and feeds it to the cows in the winter without any grain or corn meal, you will find that he produces very nearly white butter. It will not be absolutely white, but it will be close to it. But if you feed the cows as progressive farmers now do, with ensilage made of green corn, clover, and other products, and which is cured so that it is practically green when fed in the winter, you will get yellow butter at that season.

Mr. SIMS. Will the gentleman allow me right there?

Mr. DAVIDSON. Yes.

Mr. SIMS. Take butter made each month in the year and blend it, and you would get the average color, would you not?

Mr. DAVIDSON. Yes.

Mr. SIMS. Then for eleven months in the year you color it to the color of the butter for one month?

Mr. DAVIDSON. The gentleman will not find in actual experience any two creamery men who give their product a bright yellow June color. They do not do it. You can not sell January-made butter for June butter.

Mr. SIMS. Then why color it? Why not sell it on its merits?

Mr. DAVIDSON. Because it is a matter of taste. People have got into the habit of having the butter colored, and they want a uniform shade.

Mr. SIMS. Now, to be honest, if I want January butter, why not make every man sell the butter in the color it is when he manufactures it and not attempt to bolster up one industry over the prostrate form of another?

Mr. DAVIDSON. Because January butter will sell itself.

Mr. SIMS. Not if you color it, it will not.

Mr. DAVIDSON. If you go into any grocery store in the city of Washington and put last June butter beside January butter, you or any other man can tell the difference. Butter has a flavor of its own. You can not substitute anything that will have the same flavor; and you can not give the flavor of new butter to old butter.

Mr. McCLEARY. Will the gentleman allow me a single remark? The coloring is not for the purpose of making the buyer think that the butter is June butter——

Mr. DAVIDSON. No, sir.

Mr. McCLEARY. Because the article would bring a lower price if it were known that it was June butter.

Mr. SIMS. I would like to ask the gentleman from Minnesota [Mr. McCLEARY] a question.

Mr. DAVIDSON. He has just left the Hall.

Mr. SIMS. Very well, then, let me put the question to the gentleman from Wisconsin [Mr. DAVIDSON]. Why is butter colored any other color than the natural color if the object is not to make it appear to greater advantage than it would without the coloring matter?

Mr. DAVIDSON. The natural color of butter is yellow. The only object of having coloring matter is to give a uniformity of shade. There is not a creamery in the United States producing butter that will produce from the cream as obtained from the farmers the same shade of butter one day with another.

Now, the creamery has a market. It sells its product at a certain place, and in order to give the uniformity of color which the customers expect the makers put in coloring matter which will give the butter that uniformity of color day by day. The object is not to make January butter look like June butter, because that is the worst thing that the maker could do. No man would take fresh January butter and add coloring matter to it and then advertise it as butter which was made in June. Neither can you take old butter made in the winter and by adding coloring matter sell it for fresh June butter. It is not for the purpose of changing the butter in any way that the coloring matter is added. It is not for the purpose of selling it for oleomargarine. It is not for the purpose of imposing it on the consumer for something which it is not. It is butter all the time, no matter what its shade or color may be.

This distinction should always be borne in mind. When you add coloring matter to butter, the product is still butter, and must be sold as such. When you add coloring matter to oleomargarine you intentionally give it an unnatural appearance, and, while it is still oleomargarine, it need not be sold as such. The coloring matter, although it does not change the product, does change its appearance, and this change of appearance makes the deception possible. The coloring matter is not added to oleomargarine to give it flavor, or even uniformity of shade, but in order that it may at all times so closely resemble the shade of fresh butter that it can be sold as such. Mr. Moxley's advertisement shows that it is necessary to have the shade different at different seasons of the year.

Mr. MANN. I understood the gentleman to say that cows fed upon dry hay give milk which produces nearly white butter——

Mr. DAVIDSON. Yes, sir.

Mr. MANN. But if the cows are fed upon a high class of grain the butter will be more highly colored?

Mr. DAVIDSON. If the cow is fed upon the proper kind of grain, it improves the color of the butter.

Mr. MANN. Is it not a fact that in cream which comes from cattle fed upon a high grade of grain there is a larger percentage of butyric acid than where the cow has been fed upon dry hay?

Mr. DAVIDSON. Yes, sir.

Mr. MANN. And is not the object in coloring butter to produce the impression that the butter is produced from cows fed upon grain which has a large percentage of butyric acid, and is not the purchaser thereby defrauded?

Mr. DAVIDSON. Not at all. It is impossible to produce any deception in that way, because the flavor and the aroma of butter advertise it for what it is, and no man can be deceived in that respect.

Mr. MANN. Does the gentleman claim that the ordinary purchaser of butter can tell by the aroma whether it is butter artificially colored or whether it is butter which has the natural color?

Mr. DAVIDSON. Ordinarily he can tell whether it is colored or not by its appearance, and the flavor and aroma will tell its other qualities.

Mr. MANN. Well, in the business of my life I have found that I can not tell.

Mr. MOODY of Massachusetts. Allow me to ask the gentleman from Wisconsin [Mr. DAVIDSON] a question. I understood him to admit that the purpose of this tax is to destroy a fraudulent industry.

Mr. DAVIDSON. Yes, sir.

Mr. MOODY of Massachusetts. That is an object for which, of course, we all stand. Now, the question upon which I would like to hear the gentleman is whether the power of taxation is a proper agency with which to accomplish even so desirable a purpose as that which he has stated.

Mr. DAVIDSON. I think it is.

Mr. MOODY of Massachusetts. Is it not a dangerous method to adopt?

Mr. DAVIDSON. No; it is not dangerous. It may be severe, but experience has shown that when you have dangerous elements to deal with you are compelled to resort to severe measures. When an industry defies every species of legislation, when an industry defies the laws of 32 States and goes to its customers and says to them, "We will protect you; we will stand back of you; we will pay your fines; we will pay your costs of prosecution," it becomes so dangerous to the community that severe legislation is justified.

Mr. MOODY of Massachusetts. The gentleman's idea is that you can not enforce the law unless you do employ taxation for the purpose?

Mr. DAVIDSON. No; it is the only power.

Mr. LITTLEFIELD. You mean you can not accomplish the purpose?

Mr. DAVIDSON. That is the idea. You can not accomplish the purpose without it.

Mr. LITTLEFIED. Your idea is that the other laws have proved to be nugatory. That is the theory?

Mr. DAVIDSON. Absolutely nugatory and ineffectual for the purpose.

Mr. MOODY of Massachusetts. I will say to the gentleman that I asked the question for information. I voted for the bill before.

Mr. SNOOK. The gentleman has shown by the map which he has exhibited here that the State of Wisconsin is one of the largest dairying States in the Union.

Mr. DAVIDSON. One of them.

Mr. SNOOK. It has been stated by gentlemen on the floor of this House that there has been an immense lobby in Congress on behalf of the dairymen of this country to secure the passage of this measure. Is it not a fact that in the production of butter milk is one of the principal factors in the cost, and that the farmers occupying the various farms around these dairies are the people who own the cows and sell the milk to the dairymen?

Mr. DAVIDSON. Yes.

Mr. SNOOK. Therefore the people who are interested in the passage of this measure are the farmers and not the men from the factories.

Mr. DAVIDSON. The farmers are the ones who are interested, and I am glad the gentleman called my attention to it, because I know of no lobby in behalf of this bill in any offensive sense. I do not know what the gentleman referred to when he referred to the lobby that was crowding the corridors. There have been representatives of the National Dairy Union, a voluntary organization of men interested in this industry, from different States of of the Union here. There have been representatives here who have advocated the passage of the bill, who have appeared before the committee and argued for it, the same as the oleomargarine manufacturers have had representatives here who have appeared before the committee, and I presume have walked through the corridors and argued against it. It is no reflection on them.

Mr. MANN. Will the gentleman permit me to ask him one more question?

Mr. DAVIDSON. Yes; if I may have the time. I have taken more time than I intended to.

Mr. MANN. I do not suppose there is anyone on the floor of the House who has given greater consideration to the subject than the gentleman who has the floor.

Mr. DAVIDSON. I thank the gentleman, but many gentlemen have given it as much or more study than I have.

Mr. MANN. I ask this question because I have more faith in the gentleman's judgment than in the judgment of any others whom I have heard speak on this point. Is it your opinion that this bill, if enacted into law, will increase the price of butter?

Mr. DAVIDSON. I have never believed it would to any great extent.

Mr. MANN. If it does not increase the price of butter, how will it benefit the dairymen?

Mr. DAVIDSON. Simply because it puts them on a plane of equality. It will widen the market unless your contention is true that the people who are eating oleomargarine are doing it knowingly, intentionally, and with the desire to eat it. If they do, then there will be just as much oleomargarine made hereafter as there is now, and the butter market will not be extended at all, and there will not be any change in the price of butter. If it is not true, and if, as it is claimed, a fraud is perpetrated upon the people in the sale of the colored article, then if we stop that fraud there will not be as much oleomargarine used, and for a time the price of butter may be increased; but just as soon as you have done that you will find that the people will more extensively produce butter. A larger number of people will engage in the butter industry, and the result will be that there will be a greater production, and the price will be regulated thereby. Now, that is my theory on all of these propositions.

Mr. MANN. I asked the gentleman a question, because I have faith in him and faith in his ability and frankness. Irrespective of the general benefit to the country, which the gentleman has just stated, I would like his opinion as to whether this will increase the price of butter if enacted into law. If it will not increase the price of butter, who does it benefit? The man who now makes the butter?

Mr. DAVIDSON. It may for a short time increase the price of butter. I do not believe it will be very much, or for a very great length of time, because I believe the butter market, like every other market or anything else, is regulated by the law of supply and demand. But I believe that if the farmers of Wisconsin who are engaged in the butter business knew that it would not increase the price of butter one-fourth of 1 cent they would be just as much interested in having me urge the passage of the bill because they want everything to stand upon its own merits.

Mr. MANN. They desire to prevent the consumer from being defrauded.

Mr. DAVIDSON. They desire to prevent a fraudulent article taking the place of their honest product.

Mr. MANN. That is in the interest of the consumer, because if it does not affect the price to the seller, why, it does not make any difference to him.

Mr. DAVIDSON. It is in the interest of the consumer, of course, but also in the interest of the producer.

Mr. MANN. Does not the gentleman think it remarkable that in a matter of this kind, where the consumers of oleomargarine are mostly found in the large cities, that there is no member upon the floor of this House from a large city advocating the passage of the bill?

Mr. DAVIDSON. I think you will find members from cities advocating the bill, not those from the vicinity of the stock yards of Chicago, but from other cities.

Mr. MANN. No man from any large city has thus far advocated its passage.

Mr. DAVIDSON. I am from a city of 30,000, and I am satisfied the people of my city favor the passage of this bill.

Mr. SLAYDEN. You made a statement, if I did not misunderstand you, that even if this measure would not increase the price of butter a fraction of a cent, that still, in the interest of honesty, the farmers of Wisconsin would like to see the bill passed.

Mr. DAVIDSON. Yes, sir; I believe that.

Mr. SLAYDEN. Then, how do you reconcile that with the statement of the head of the dairy organization, ex-Governor Hoard, when this bill was under consideration, when he said it was to drive the oleomargarine people out of the business?

Mr. DAVIDSON. I do not think ex-Governor Hoard was correctly quoted or understood.

Mr. SLAYDEN. The stenographer caught him exactly.

Mr. DAVIDSON. The same statement was made as to Mr. Adams. You will find, however, that in his remarks he was then talking about the sale of oleomargarine for butter, and it was that illegitimate industry he proposed to stamp out.

Mr. SLAYDEN. They correctly quoted Governor Hoard, and his language admits of no other construction.

Mr. DAVIDSON. I have not examined the matter, but I have no doubt that is what he meant.

Mr. COWHERD. I have the language here.

Mr. SNOOK. I would like to ask the gentleman this question, if he will permit me.

Mr. DAVIDSON. Certainly.

Mr. SNOOK. I would like to ask him how this affects the farmer? Is it not a fact that while heretofore the sale of oleomargarine has been almost wholly within the large cities, would not the sale of it reach into the little country towns and take the market which the independent farmer is now having for himself?

Mr. DAVIDSON. They are doing that now.

Mr. SNOOK. Then, will not the passage of this bill maintain for the independent farmer the market that he now holds for his butter?

Mr. DAVIDSON. Undoubtedly.

Mr. Chairman, I have taken much more of the time of the

House than I intended to take. I have tried to answer the questions propounded to me fairly and honestly. I am in favor of this measure because I believe it is a meritorious one; because I believe no injury can be done to any legitimate industry, while, on the other hand, its passage will afford protection to the consumers and to the producers of dairy products. This legislation is demanded by the producers of butter. They represent a very large proportion of the taxpayers of the country. They do not enjoy the benefits of our national protective system as much as do those who are engaged in manufacturing. Their benefit comes largely from the fact that a home market is provided for the products of the farm. That home market they think they are entitled to supply with whatever it demands. They claim the right to furnish butter to those who want to use it, and in their name and in their behalf I appeal to you to pass this bill. [Loud applause.]

Rural Free-Delivery Service.

SPEECH

OF

HON. ASBURY F. LEVER,

OF SOUTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 8, 1902.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 11728) to classify the rural free-delivery service and fix the compensation to employees thereof—

Mr. LEVER said:

Mr. CHAIRMAN: My district is almost entirely agricultural. Its people live on the farm, and their daily bread comes from the soil. I am a country boy, sent here in a large measure by country boys, therefore I feel a peculiar interest in the fate of the bill under present consideration, for it directly and materially affects the large majority of my rural constituency. I believe I represent the mind of the country people of my district when I rise here to protest against the passage of this bill, whose object is to revolutionize the existing system of rural free delivery, putting it under the contract system—in the same category with star-route delivery, whose miserable inefficiency has been so keenly felt by our people.

Rural free delivery under the present system is eminently satisfactory to the rural population of the country receiving its service. No word of criticism has ever come from those who have once felt its beneficent effects. The carriers are polite, efficient, and accommodating to the patrons of the service, and are, possibly, to a larger degree than any other cause, responsible for the increasing popularity of the service.

Until February 1 of this year, carriers were selected upon the recommendation of Congressmen. The Department, however, concluded it was for the best interest of the service to divorce it as much as possible from politics, and to that end promulgated certain regulations governing the appointment of carriers on rural routes. These regulations, in brief, require a kind of civil-service examination of the applicants for carrier on a given route, and the appointment is made in accordance with the results shown by the examination. It is provided by these regulations that, all things being equal, one of the persons nominated by the petitioners for an initial service will be given preference by the appointing power. This puts the matter of selecting carriers as nearly in the hands of the people whom they are to serve as it is possible at this time to get it. This is about as fair as it can be made, and is entirely democratic in idea. It removes the system as far away from politics as it is possible to take it without completely denying to the carriers their inalienable political rights.

The bill brought in here by the Post-Office Committee proposes to revolutionize all this, and substitute for it the contract system of selecting carriers. It is proposed to abolish this system which is doing such a splendid work and give us in its stead the contract system—a system whose skirts in the past have been soiled by corruption and fraud, and whose practical workings, even now, are in many cases disgraceful. I honestly believe the adoption of the contract system will, if it does not entirely destroy the rural-delivery service, at least greatly hamper its development and the spread of its benefits; and it is as the friend of the rural-delivery service, believing in its right to live because of its inherent merit and works, that I oppose this bill.

There is another reason why I am afraid of this bill, and that is its strongest advocate has never by his action on the floor of this House shown himself a friend of rural delivery, and when he stands here now and protests that he is introducing and pushing this measure in the interest of the rural service, I take his word with no little suspicion. I always examine the food in the spoon handed me by my enemy, and most especially so when he "doth protest too much" about the great good it is going to do me. Men do not put themselves to the trouble to aid a service which they do not like, and when I see the distinguished chairman of the Post-Office Committee arguing with such zeal for the contract system on the ground that it will help the free-delivery service, I am forced to think of the well-known tale of the spider and the fly. Our friend weaves a beautiful web and sings a siren song, but they will fail to catch. The fly has learned his lesson by experience, and such lessons are never forgotten.

Mr. Chairman, it will not be amiss to review briefly the history of rural delivery in order that we may form a better idea of the possibilities of its ultimate development if left undisturbed by hostile legislation.

Europe has known the service for long years, and it has there reached a very high stage of development, giving to the people unequaled postal facilities.

Its struggle to get a foothold in this country is but the struggle of every advanced idea to take root in unplowed ground. It had a hard birth, and, in fact, it seemed at one time that false prophets would stifle it.

Its first appearance upon the floor of this House brought down upon its head the wrath of the great Post-Office Committee, then headed by the Hon. John S. Henderson, who denominated it a scheme entirely visionary and wholly impracticable, to inaugurate which it would cost $20,000,000. In 1894—remember, that was only eight years ago—Postmaster-General Bissell—and the scales have not yet fallen from his eyes—absolutely refused to spend the appropriation of $10,000 which Congress had made for the purpose of having the feasibility of the plan tested, on the ground that such expenditure of public money was wasteful and unwarranted. The Hon. William L. Wilson, the author of the Wilson tariff bill, and a man of great ability, succeeded Bissell. Congress, at its next session, insisted that the Department make some experiment with rural free delivery, and doubled the appropriation of the preceding Congress.

Postmaster-General Wilson, who was skeptical of the practicability of the system, found an excuse for not making the experiment. All along Congress seems to have foreseen the development of the plan, for it kept doubling the appropriation for experimentation each year, making it $40,000 in 1896. There was no other alternative for the Postmaster-General but to follow the expressed wish of Congress, and accordingly he took steps to test the system, giving to the work the scanty enthusiasm of a disbeliever. Forty routes, in different parts of the country, and without any regard whatever to local conditions, were selected, and the service put into operation. Many of these routes were failures because of the lack of knowledge and system attending their inauguration. But where the conditions were about average country conditions, the service became very popular, and the people in adjoining territories petitioned largely for its extension.

The Hon. Perry Heath became First Assistant Postmaster-General, and at once began an investigation of rural delivery. Young, brainy, active, and energetic, he dared give the system a fair trial, and since that time it has won its own way, inspiring its friends with courage and striking terror to the hearts of its enemies. The First Assistant Postmaster-General became its most enthusiastic friend. In his able report following his experiments, he says: "The operation, in connection with the establishment of rural free delivery, had attracted so little attention that it was almost with surprise that I learned that there was such an experiment in progress and that Congress had made an appropriation of $50,000 to give it further test.

"An examination of the reports on file led to the conclusion that great possibilities of social, industrial, and educational development lay behind the projected extension of postal facilities in rural communities, and that with proper care in the selection of localities the service could be extended far and wide with great benefit to the people and without any serious tax upon the revenues of the Government, inasmuch as the increase of postal business which had hitherto followed the granting of additional postal facilities in every well-selected route would go far toward the payment of the extra expense incurred," etc. Here is the optimism, the enthusiasm of a man, the greater part of whose life lay in front of him. He was strongly supported in Congress. It was my own distinguished predecessor who made the fight to double the appropriation for the fiscal year 1897-98, and each Congress has added its endorsement of the system by increasing the appropriation from year to year.

Thus we trace the legislative and departmental trials of the service. Looking at the system as it at present stands developed, we can hardly believe that it could ever have had arrayed against it the judgment and wisdom of a great House committee and two succeeding Postmaster-Generals. But it has lived amid all these drawbacks, making friends each day and hour.

Mr. Chairman, let us see how well the system has lived and to

what purpose. Remember, it is only ten years ago when the Post-Office Committee set the seal of its condemnation on the scheme. It is only six years ago when Postmaster-General Wilson was driven into making the experiment. It is only five years ago when it was taken up by its first real friend in the Post-Office Department. It is only three years ago when there were only 383 routes in operation, of which South Carolina had 21. Note this wonderful growth. It is unequaled in the postal history of the world.

In December, 1901, there were 6,009 routes in operation, supplying over 4,000,000 of our rural population with an efficient daily mail service. The First Assistant Postmaster-General, in his report, estimates "that at the end of the present fiscal year rural free delivery will be in successful operation over not less than 8,900 routes, serving a farming population of 5,700,000." What a marvelous story of postal development! How almost impossible to realize its magnitude! The justice so long denied the farmer is at last within reach! It has come as a result of advanced civilization, as one of the mighty strides in the grand march of progress! From the shunned and abused outcast, it has risen to that point of power where the Congress, the Department, and the President are glad to be numbered among its devotees. The farmer for once in his life is in the saddle, and he is there to stay!

The system is here to stay. There will be no backward step. The people, having felt its beneficent influence, will not do without it. And I want to say to that man who is foolhardy enough to stand up here and by vote or act, directly or indirectly, oppose free delivery or attempt to hamper it in its operation, that it would pay him to choose his pallbearers now, for he is going to have a political funeral in his district this fall.

It is hardly necessary, Mr. Chairman, for me to go into an elaborate enumeration of the blessings which the system is bringing to the farmer. It is giving him the best mail facilities he ever had, and adding value to his farm lands by putting them in touch with the markets of the world, thus making them more attractive to reliable and intelligent renters.

It is becoming a potent factor in the good road making of the country and promises to go far in the solution of that question. It is making his home happier and his family more contented and satisfied with farm life. It gives to him the daily market reports, enables his wife to find the best market days for eggs and butter and the small pickings around the farm, and gives the daughter the best days for frills and flounces. But above and beyond all these, it teaches the farmer's son the independence and respectability of farm life—a lesson of incalculable value to the boy himself and the boy's country. It is instructing, educating the farmer, bringing him in touch with the best literature and thought of the world, giving him an insight into the past and capacitating him to prognosticate the future. It is breaking down the artificial barriers and prejudices of society, bringing the people to a better knowledge and fuller appreciation of each other, widening the horizon of their vision and broadening their ideas. It is second only to the college and pulpit as an educational and moral factor.

Yet this system, with all these blessings to the farmer, is inexpensive from a comparative point of view. The gain in postal revenue from the added postal facilities in well-regulated routes—and the better regulated the routes, the greater the increase of revenue—is significant of the fact that the expense of operating the system will never become dangerously large and will become proportionately less and less as the system is perfected and improved by experience.

This, then, is the system. It is cheap, satisfactory, and popular. Hardly a day passes that petitions for the service no not reach me, and the only complaint that I have to make is that we can't get it fast enough. There are petitions from my district now which have been awaiting the action of the Department for nearly twelve months, and I find such cases are not confined alone to me, but are quite general with the members.

I have never heard but one complaint from the patrons about the service, and that was in reference to the price of boxes. I think the Government should set a maximum price of not exceeding $1 in any case for boxes, and my colleague [Mr. JOHNSON] has given notice that he will offer an amendment at the proper time to effect that end. The people should get the boxes at exactly what they cost.

Mr. Chairman, I have gone thus lengthily into the birth and development of the system in order that we may the more clearly discuss the advisability of grafting it onto another and entirely different system. Shall we run the risk of ruining a system, now so satisfactory and efficient, by attempting to run it by the machinery of an entirely different system? Will the contract system give to the people the efficient service which the present system is giving them? I believe not.

We have had, and are having, practical demonstrations of the relative merits of the two systems in South Carolina. The contract system in my part of the country has not only proven a failure generally, but in many cases it is an actual disgrace to the Government. I have seen the rickety cart; I have seen the mule so poor that you could count his ribs a hundred yards away; I have seen the sleepy negro, perched up in the one and occasionally grumbling his commands to the other, delivering the mail to the people in my district, and I have involuntarily said every time I have seen such a spectacle: "Deliver us from such a service!" This is the contract system as it is most generally known with us, and it is to this that the advocates of this bill, if successful, will bring the rural delivery service. The routes will be let to the lowest responsible bidder, and the responsibility of the bidder is to be passed upon by a partisan judge of responsibility. In other words, two men of like character, having equal facilities to perform the contract, each having the unanimous indorsement of the patrons of the route, happen to bid for the same route. One is a Democrat and the other is a Republican.

The Postmaster-General, who, under the terms of this bill, is to be the judge of the comparative responsibility of the bidders, is a Republican. Is it unreasonable to expect him to think the Republican is the least bit more responsible than the Democrat? The Department is the absolute judge of the responsibility of bidders, and it is most certainly within the range of possibility that some of our routes would be served by carriers of such color and character as would not for a moment be tolerated by their patrons. The carrier becomes a daily visitor to the homes of his patrons. In his official capacity he must necessarily come in contact with the members of the family. Such a man ought, above all things, to possess a high degree of moral character, having the entire confidence of his patrons. Is it possible, at all times, to get such a man under the contract system? Would the people be satisfied to allow the kind of carrier already referred to as a possibility under the contract system to enter their homes and to come in contact with their wives and children?

There is the danger in the contract system, and it does not exist in the system as we now have it, for under the present arrangements the petitioners nominate a number of men, any of whom would be acceptable to them, from whom, after an examination, the special agent selects a carrier. So that under the present system there is no danger of having objectionable carriers forced upon the patrons of the rural delivery routes. Under the contract system we may get good men, for there are a good many contract carriers down there who are good men, some of them my friends, or we may have thrust upon us carriers whom we would be afraid to allow in our homes. The possibility of this danger lies in the one system and does not in the other, and I am not willing to run the risk by passing this bill.

We can not get as good service under the contract system as we can under the present system, because the same motives actuating special effort on the part of carriers under the salaried system will not exist under the contract system. The carrier under the present system is the direct agent and appointee of the Government. He is, in fact, a governmental official, subject to its discipline and immediate control; he holds his commission at the pleasure of the Department, and is directly responsible to it for every act in connection with his work; he is selected because it is thought he will give the people the best possible service; he knows the tenure of his position depends upon the character of the service given the patrons of his route; he knows the Government demands of its employees the best service of which they are capable; he knows also that if he fails in the discharge of his duties he can be immediately disciplined by the Government, and if the case warrants it he can be discharged and the route put into the hands of another.

A person knowing these things will most likely use his best efforts to please the patrons of his route and thus please the Government. Such a man will spare no pains to accommodate his patrons, will make no hesitation in going out of his way to do little kindnesses and providing himself with every convenience which may add to the efficiency of his efforts and to the commendation which he hopes to get from his patrons. The result of this personal and immediate responsibility of the carrier to the Government is seen in the high personnel of the rural carriers now in the service. In my district we have a very high type of men carrying the mail. There are in the service ex-college men, schoolteachers, farmers, and the sons of farmers, and merchants. They come from that great class in society which has ever been its safest bulwark, and their intelligent zeal in their work is winning for themselves and the system the unstinted praise of its patrons.

No such a service, nor such a class of carriers, could be gotten under the contract system, where the contractor or carrier owes no responsibility to the Government and is out of reach of its authority. So long as he keeps within the letter of the contract—and it is the spirit of the contract which gives it life—the discipline and control of the Department are inadequate to reach him for any lack of accommodation or for any slight but annoying

failure to do the full measure of his service to the patrons. He is a contractor—a lowest bidder. He is awarded the contract because he is the lowest bidder. The sharp competition for these routes will necessarily leave but a narrow margin of profit for the successful bidder, each bidder making the very closest calculations as to the probable cost of doing the work.

The consequence must be that the successful bidder is going to squeeze every point in order to get every cent out of his contract which its terms will admit. He is going to serve the route with the least possible expense to himself. He will give the people the cheapest service, and that means the most inefficient and the least satisfactory service. Short cuts will be in order, little accommodation, cheap equipage, and a lack of personal pride upon the part of the carrier in his work. The splendid service now being given to the people will be degraded to the pretense of the service, in so many instances, given under the star route or contract system. Under the proposed arrangement the carrier may be guilty of the most flagrant and violent inattentions and the Government can not get rid of him, except by giving him a reasonable notice and then discharging him. The route must again be let to the lowest bidder, the same possibilities of danger as in the first case being always present. The confusion resulting from such a change must always work to the detriment of the service and the injury of the patrons.

The contract system will put the service on a different salary basis in different parts of the country. In the North, where the standard of wages is higher and where cheap labor is not so common, the unit of salary for given districts will be one amount, while in the South, where the standard of wages is lower, in consequence of the white bidder having to compete with the negro bidder, the unit will be a much smaller sum. Because of the peculiar conditions existing in the South, where there is such a large population with such a low standard of living, giving rise to such a low standard of wages, a 25-mile route will be served on a $200 or a $300 basis, while in the other parts of the country, where these unfortunate conditions do not prevail, a $750 or $800 basis would exist. So that a Southern white man would have to do a certain amount of work for two or three hundred dollars, while white men in other parts of the country would be doing exactly the same service, no more nor no less, for seven or eight hundred dollars.

I do not propose by any vote of mine to open the door for any such discrimination against our people, either as to the salaries paid them for their services or as to the efficiency of the service afforded them by the Government. If this discrimination, in favor of one locality against another, is not the purpose of the framers of this bill, and there is strong circumstantial evidence that it is, it will at least have this effect.

Mr. Chairman, it is a principle running all through the postal service that wherever the mail is handled individually a salaried officer is necessary. When the mail is handled in bulk it is usually done by contract. The mail comes to the railroads and steamboats in great bulk, and mail transport is under the contract system. So it is with the star-route contract. The mail comes to the carrier in locked pouches, and is so delivered to the postmasters at the other end of the line, and he never handles it personally. But when the pieces of mail are handled individually the necessity for the salaried officer arises and the principle above referred to—and it is a century old—is applied.

Thus it is with the railway mail clerk who assorts the mail on the train. He is paid a salary. So, too, it is with the postmaster who comes in personal contact with his patrons. He is on a salary basis. The carriers for cities, doing individual work, have the same principle applied to them. If the Post-Office Committee would be consistent, it would favor putting all carriers and all postmasters under the contract system, and thus relieve itself of the charge of discrimination against the rural carriers, who are walking postmasters with a larger responsibility than the railway mail clerk, the city carriers, or the postmasters. Let the committee be consistent. Let us feed all our children with the same kind of a spoon, always equally filled.

Mr. Chairman, one of the two arguments I have heard in favor of the passage of this bill is that it is in the interest of economy. No man can be a true Democrat who is not also an economist in the expenditure of the people's money. It is one of the strong pillars in the Jeffersonian creed. It is a cardinal doctrine of the Democratic party, and the one thing upon which we all agree. I don't believe the change will effect the economy claimed by its friends. Any reduction in the cost of carrying the mail in the South will be offset by the increase for carrying it in the North and East, and the South will be the loser, both in the way of reduced salaries and efficient service. The friends of the bill are forced to this dilemma—either the change will not effect an economy, in which case there is no need for the change, or else it will result in economy, in which case it must follow that the present high efficiency of the service will be impaired, for no one can afford to work day in and day out, twelve months in the year, feeding a family, furnishing his outfit, giving his labor for any less sum than that now given the carriers.

The moment you reduce their salaries that moment you strike a blow at their capacity for doing first-class service. It is against what must be an inefficient service in the South, if this bill passes, that I protest. I object to Congress forcing upon our farmers a cheap service. If you can not give us the best service, don't give us any. If you can't give us what you give the cities, we don't want anything. We are entitled to as good service as this great Government can give, and this is all we are asking for. It is strange to me that Members can not correctly spell the word "economy" until the friends of the farmer ask some recognition of his rights. Then the word stands out before their eyes in blazing letters and their mouths overflow with it.

This Congress appropriates over fifteen and one-half million dollars per annum to furnish free delivery for 886 cities and towns, and none of these "economists" who go into hysteria at the idea of spending four or five million per annum to give the country people a daily mail service open their mouths to say it; nay! These same gentlemen, who now want to begin their economy on the farmer, are silent as a midnight graveyard when it comes to voting $60,000,000 for river and harbor purposes, or expending millions to carry on the damnable outrages in the Philippines. No word of protest comes from him, save when the farmer asks for something; then the erstwhile indifferent and napping statesman becomes a raving, ranting, hair-tearing economist. You are willing to vote your taxes and duties upon us, but you are not willing to divide the benefits of the Government with us.

If it is right to give $15,000,000 to furnish a from three to nine times' daily delivery of mail to our urban population, it is equally right to furnish it to our rural population and the people in small towns; and if it costs the Government something, then let it cost. Either let every man walk to the post-office for his mail or else let the mail come to every man's door. Let us treat them all alike. They are all equally deserving. There are 48,000,000 people in this great land crying out for better mail facilities. The sharp competition in industrial, commercial, educational, and professional life demands it. Our advanced civilization calls for it, and the American Congress is expected to give it. We can not be driven from our purpose by any false cry of economy. Stinginess is never economy.

Mr. Chairman, there is one other argument the friends of this bill use—that it will place upon the Government an army of salaried officers, who will have the power to organize themselves and coerce Congress into doing their bidding. Judging the future by the past, I don't believe there is any danger from this source. There is already an army of salaried officers in the United States in every department of the Government, and they have never marched up Capitol Hill to overawe Congress into raising their salaries to an unreasonable extent. There are over 16,000 carriers now in our cities. They have never organized to coerce Congress, nor do I believe they could coerce Congress if they did organize for that purpose; neither do I believe the rural carriers can force Congress to do anything not in keeping with its best judgment concerning the public interest.

I like political life, as do most young men, and I would like to stay in Congress a while, but I want to say that whenever I feel myself so weak in backbone that I am not able to stand up and resist the fleecing of my constituents because I am afraid of the fleecers, whenever I am not strong enough to protest against the robbery, no matter how strong and influential the robber, then I will go home and let a man come here who does have the backbone.

I have a splendid set of carriers in my district, and I will do all that I can for them. I am willing to give them fifteen days' annual leave—all they ask for—because all other governmental employees are getting more than this, and I see no reason for discriminating against the country boy. But there is a limit to which I am willing to go in helping them, and that is marked by the point where it begins to hurt the people, and I don't believe they are going to ask me to go beyond that point.

As before said, there are over 16,000 city carriers getting anywhere from eight hundred to a thousand dollars year for eight hours' daily service.

A MEMBER. Eight hundred dollars to $1,400.

Mr. LEVER. The salary of city carriers, I am informed, ranges from $800 to $1,400. I ask why it is that the Post-Office Committee is not solicitous about them? Why single out the farmers to economize on, and why single out the rural carriers as such a dangerous political weapon? Is he more dangerous than the city carrier?

But suppose that he does become a partisan in politics, is there any assurance that we can obviate this danger by putting him under the contract system? You can not padlock men's mouths any more than you can stifle the impulses of their consciences. But the truth is there is less political danger from the carrier under

the present system than there would be under the contract system, because under the contract system the carrier is responsible to no one save himself, and there is no one to call a halt upon his pronounced partisanship, while the rural carrier is now under the civil-service provisions, subject to the discipline of the Government and to a possible discharge for pernicious political activity under the recent Executive order. The danger must come from the contract carrier, not the rural carrier.

Now, Mr. Chairman, I have the greatest sympathy for my political friends, and especially my friends from the West, who are so afraid of the rural carriers. One of the first lessons I was taught in politics—and I am not so young in politics as I look to be, I am older than I appear—one of the first lessons the leaders of my party in South Carolina taught me was to cast my eyes westward. They told me that we were going to see a light in the West. Democratic hope was high, the pulse beat strongly, I turned my youthful eyes in that direction and sure enough there was a light like a burning brush heap there, sputtering high in the air and giving much promise of success. I have been looking in that same direction ever since, and it has been getting darker, the light has been growing less and darker, and less and darker for Democracy, until at last my eyes see only darkness and dreariness over there. I wish we could save our friends of their unreasonable fears in respect to the supposed dangers that lie in the continuance of the present system of rural delivery. The hobgoblin they are conjuring up is purely an imaginary creature, unwarranted by the facts and the logic of the situation. The more you educate the people the less likely they are to be deceived by Republican policies and false teachings. Turn on the light; it will help our Western friends.

To sum up, this bill will not save a single dollar to the people. If it does save a single dollar, it will be at the expense of the efficiency of the service. It will not lessen the dangers from a political point of view; it may put upon our people a cheap service wholly inadequate to their wants; it may place undesirable and worthless carriers upon the routes; it may give white people, negro carriers, and this we will not stand; it will cause a discrimination in salaries against the South in favor of the other parts of the country; it can do no possible good and may do inestimable damage, discrediting, disgracing, and possibly ruining the system. The service is entirely satisfactory, cheap and popular, and will ultimately carry its blessings into the home of every farmer in these United States. There is no demand for the change either from the Post-Office Department or the people themselves. The hand that would interfere with the system as it stands now is either the hand of a blind friend or of an open enemy to the system. A wise policy is: "Let well enough alone." [Applause.]

Indian Appropriation Bill.

SPEECH

OF

HON. CHARLES CURTIS,

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 18, 1902,

On the bill (H. R. 11353) making appropriations for the current and contingent expenses of the Indian Department and for fulfilling treaty stipulations with various Indian tribes for the fiscal year ending June 30, 1903, and for other purposes.

Mr. CURTIS said:

Mr. CHAIRMAN: In view of the fact that one of the members of the committee during the debate on the Indian appropriation bill criticised the Secretary of the Interior for performing his duty in the collection of taxes in the Indian Territory, I deem it but just and fair to the Secretary to have printed in the RECORD the opinion of the Attorney-General, the opinion of the Assistant Attorney-General, and the decision of the court of appeals of the Indian Territory upon the question of the collection of taxes in that country. A reading of these papers and of the opinion will convince the members of the House that the Secretary is but performing his duty and protecting the interests of the Indian tribes and of the Government of the United States in the collection of taxes from the people doing business in the Indian Territory.

The opinion and papers above referred to are as follows:

[Maxey et al. *v.* Wright, United States Indian Inspector, et al. (Court of appeals of Indian Territory, January 6, 1900.)]

INDIANS—OCCUPATION TAX ON WHITE MEN—TREATIES.

1. Under the Creek Indian treaty of 1856 (article 15), guaranteeing to the Creeks, so far as compatible with the Constitution of the United States, the right of self-government and declaring all persons in the Creek Nation without its consent intruders and subject to removal by the Government, except such parties as may be permitted by the Creeks to reside within the nation, a lawyer, who is a white man and not a citizen of such nation, is required to pay an occupation tax imposed by the laws of such nation; and if he refuses payment thereof, he is subject to removal by the Interior Department.

2. Act of Congress June 28, 1898 (30 Stat., 495; Ind. T. Ann. St., 1899, 57q–57z, 91), entitled "An act for the protection of the people in the Indian Territory," though authorizing creation of cities and towns in the Creek Nation and extinguishing Indian titles to lands embraced within such municipal corporations, does not affect the Indians' right of occupancy of the lands, nor the treaties giving them the right to exclude white men therefrom.

Appeal from the United States court for the northern district of the Indian Territory, before Justice John R. Thomas, July 29, 1899.

Action by N. B. Maxey and others against J. George Wright, United States Indian inspector, and others. From an order sustaining a demurrer to the complaint plaintiffs appeal. Affirmed.

W. T. Hutchings and Thomas Marcum for appellants. P. L. Soper, United States attorney, and L. F. Parker, jr., assistant United States attorney, for appellees.

Clayton, C. J. This is an action brought in equity in the United States court at Muskogee, Ind. T., to enjoin J. George Wright, United States Indian inspector for the Indian Territory, and J. Blair Shoenfelt, United States Indian agent for the Five Civilized Tribes, from collecting from plaintiffs, who are all noncitizens of the Creek Nation, and attorneys at law residing in the Creek Nation and practicing law in said court, an occupation tax imposed on them by virtue of the laws of the Creek Nation, which, among other things, provides that a tax of $25 per annum shall be collected from each lawyer residing and practicing his profession in the Creek Nation who is not a citizen of the Creek or Seminole nation. To the complaint the following demurrer was filed: "Come now the said defendants, by Pliny L. Soper, United States attorney for the northern district of the Indian Territory, and demur to the complaint of the plaintiffs, and for ground therefor state (1) that the court has no jurisdiction of the subject-matter of the action; (2) that the complaint does not state facts sufficient to constitute a cause of action against these defendants, or for which any equitable relief may be granted." The court below sustained this demurrer, and, plaintiffs refusing to plead further, the cause was dismissed. Exceptions to the sustaining of the demurrer and dismissal of the complaint were duly saved, and the cause regularly appealed to this court.

It is contended by the appellants, first, that the Creek Nation has no power to enforce this tax on a citizen of the United States residing in that nation, because it is claimed that the Creek Nation is not possessed of such sovereign powers as would permit it to levy a tax upon the person or occupation of any other than its own citizens; and to support this contention we are cited to the opinion of Attorney-General Wirt on the right of the Cherokee Nation to impose a tax on traders (1 Ops. Attys. Gen., 645). This opinion was rendered in 1824, at which time, by virtue of the treaties then existing between the Cherokee Nation and the United States, the Cherokee Nation had relinquished that right. That opinion is based exclusively on the treaty of 1785. The Attorney-General says: "The time has passed away in which it would be tolerated to treat these people as we please because we are Christians and they are heathens. If the tax is to be resisted, we must find some solid ground for that resistance which law and reason will support and which we can justify both toward God and man. If, by the treaties into which they have entered with us, they have debarred themselves from imposing this tax, they can not justly complain if we insist on the fulfillment of these treaties and the withdrawal of the tax as far as it shall be found in conflict with their own stipulations." * * *

Now, the stipulation of the treaty of 1785 is that "the United States in Congress assembled shall have the sole and exclusive right of regulating the trade with the Indians, and managing all their affairs in such manner as they think proper." The right thus conferred on the United States is sole and exclusive. Consequently, neither the Cherokees nor any other nation had the right thereafter to touch the subject which was thus solely and exclusively given to the United States. What was the right thus solely and exclusively given to the United States? The right of regulating the trade with the Indians. What does this mean? The right of regulating the conduct of the citizens of the United States in carrying on this trade? This can not be the meaning, because this right the United States had before, and it required no treaty to give it to them. The treaty meant to give a right which did not exist before, and this could only be the right to prescribe the whole system of regulations, on both sides, under which the trade should be carried on. * * *

But if it were conceded that the Cherokee Nation might prohibit this trade altogether, it would not follow that they might, under these treaties, tolerate it under such regulations as they might institute, for, whether the power of entire prohibition has been given to Congress or not, the sole and exclusive power of regulation has been given to them, and so long as these treaties remain in force it seems manifest that the Indians have no power to interfere with these regulations, either by addition or subtraction; and what is a tax upon persons authorized by Congress to trade without it but a new and distinct regulation superinduced upon the regulations provided by Congress? It is clear that the Attorney-General founds his opinion upon the fact, as he finds it, that the Cherokee Nation had "debarred themselves from imposing this tax." But no stipulation and abrogation of the rights can be found in any treaty between the United States and the Creeks, but, upon the contrary, in all of their treaties with the Government, and more especially by the treaty of 1856 (Revision of Indian Treaties, 111), they have carefully guarded their sovereignty and their right to admit, and consequently to exclude, all white persons except such as are named in the treaty. Article 15 of the treaty reads as follows:

"ART. 15. So far as may be compatible with the Constitution of the United States, and the laws made in pursuance thereof, regulating trade and intercourse with the Indian tribes, the Creeks and the Seminoles shall be secured in the unrestricted right of self-government and full jurisdiction over persons and property within their respective limits; excepting, however, all white persons, with their property, who are not by adoption or otherwise members of either the Creek or Seminole tribe, and all persons not being members of either tribe found within their limits shall be considered intruders and be removed from and kept out of the same by the United States agents for said tribes respectively (assisted, if necessary, by the military), with the following exceptions, viz, such individuals, with their families, as may be in the employment of the Government of the United States, all persons peaceably traveling or temporarily sojourning in the country, or trading therein under license from the proper authority of the United States, and such persons as may be permitted by the Creeks or Seminoles, with the assent of the proper authorities of the United States, to reside within their respective limits without becoming members of either of said tribes."

The last clause of the treaty above set out clearly confers upon the Creek Nation the power of admitting into its territory, with the consent of the proper authorities of the United States, such "other persons" than those named by it; and, if it has that power, it is equally clear that it may prescribe all reasonable terms upon the compliance of which such persons may be admitted or excluded. More especially so when it is remembered that by the provision of the same treaty it is provided that "so far as compatible with the Constitution of the United States and the laws made in pursuance thereof regulating trade and intercourse with the Indian tribes, the Creeks * * * shall be secure in the unrestricted right of self-government; and, further, that all such persons as may be in the Creek Nation without the consent of that nation are deemed to be intruders, and pledges itself to re-

move them." Attorneys practicing in the United States courts are not persons who come within the exceptions, for they are not "in the employment of the Government of the United States," or "persons peaceably traveling or temporarily sojourning in the country, or trading therein under license from the proper authority of the United States."

Article 7 of the treaty between the United States and the Choctaw and Chickasaw nations (11 Stat., 613) is, upon the question here involved, identical with article 15 of the Creek treaty; and the question as to whether these nations had the power to enforce their permit laws was passed upon by Attorney-General Wayne MacVeagh in 1881. He says: "The validity of such permits is recognized by the concluding clause of article 7 of the treaty of June 22, 1855, which is not inconsistent with the terms of the later treaty." (17 Ops. Attys. Gen., 134.) Upon the same subject Attorney-General Phillips, in 1884, says: "In absence of treaty or statutory provision to the contrary, the Choctaw and Chickasaw nations have power to regulate their own rights of occupancy, and to say who shall participate, and upon what conditions, and hence may require permits to reside in the nations of the United States, and levy a pecuniary exaction therefor. The clear result of all the cases, as restated in Beecher *v.* Wetherby (95 U. S., 526; 24 L. Ed., 442), is, "The right of the Indians to their occupancy is as sacred as that of the United States to the fee."

I add that, so far as the United States recognize political organizations amongst Indians, the right of occupancy is a right in the tribe or nation. It is, of course, competent for the United States to disregard such organizations and treat Indians individually, but their policy has generally been otherwise. In such cases, presumptively, they remit all questions of individual right to the definition of the nation, as being purely domestic in character. The practical importance here of this proposition is that in the absence of express contradictory provisions by treaty, or by statutes of the United States, the nation, and not a citizen, is to declare who shall come within the boundaries of its occupancy, and under what regulations and conditions. * * *

(a) Article 7, 1855, secured to the Choctaws and Chickasaws, amongst other things, "the unrestricted right of self-government and free jurisdiction over persons and property within their respective limits, excepting, however, all persons or their property who are not by birth, adoption or otherwise, citizens or members of either tribe," etc.

I submit that whatever this may mean it does not limit the right of these tribes to pass upon the question, who (of persons indifferent to the United States, i. e., neither employees nor objectionable) shall share their occupancy, and upon what terms. That is a question which all private persons are allowed to decide for themselves; and even wild animals, not men, have a certain respect paid to the instinct which in this respect they share with man. The serious words "jurisdiction" and "self-government" are scarcely appropriate to the right of a hotel keeper to prescribe rules and charges for persons who become his fellow-occupants. It is therefore improbable that the above proposition in the treaty of 1855 has any relation to this plain, natural right and natural instinct of an Indian nation. (18 Ops. Attys. Gen., 36, 37.)

We fully agree with these opinions and hold, therefore, that unless since the ratification of the treaty of 1856 there has been a treaty entered into or an act of Congress passed repealing it, the Creek Nation had the power to impose the condition or occupation tax, if it may be so called, upon attorneys at law (white men) residing and practicing their profession in the Indian Territory. And, inasmuch as the Government of the United States in the treaty had declared that all persons not authorized by its terms to reside in the Creek Nation should be deemed to be intruders, and had obligated itself to remove all such persons from the Creek Nation, the remedy to enforce this provision of the treaty was a removal by the United States from the Creek Nation of the delinquent as an intruder. Whether the Creek Nation, since the establishment of courts in the Indian Territory and of the passage of the so-called "Curtis bill," could recover the amount specified by the Creek statute by a proper action in the courts, is not necessarily now a question for us to decide, because the treaty provides a remedy; and whether this remedy is exclusive of the courts or only cumulative is not material.

The superintending control of the Interior Department over the Creeks is nowhere abolished, but on the contrary all recent legislation has confirmed and even enlarged it, leaving all of the powers of that Department of the Government to remove from the Indian Territory for the causes specified by the treaties and statutes as they existed before that time. The act of Congress approved June 7, 1897 (30 Stat., 83), provides "that on and after January 1, 1898, the United States courts in the Indian Territory shall have original and exclusive jurisdiction and authority to try and determine all civil causes in law and equity thereafter instituted, * * * ; and the laws of the United States and the laws of Arkansas in force in the Territory shall apply to all persons therein, irrespective of race, the said courts exercising jurisdiction thereof as now conferred upon them in the trial of like causes."

While it is true that this act had the effect of abolishing the courts of the Indian tribes, which of course included those of the Creek Nation, and of relegating all causes of actions to the United States courts for trial, yet the executive and legislative departments of the Indian governments were retained, and the treaty provisions and intercourse laws and other statutes relating to the Indian Territory remained in full force. The full control of the Indian Department over these Indian tribes as they then existed was not interfered with, nor were the Indian statutes annulled, except in so far as that all jurisdiction was taken from their courts and transferred to those of the United States. The power to remove intruders for the causes assigned by treaty provisions or statutory law still remains, as before, in the Interior Department of the Government, and the act of Congress approved June 28, 1898, entitled "An act for the protection of the people in the Indian Territory, and for other purposes" (30 Stat., 495; Ind. T. Ann. St., 1899, 57q–57z, 91), commonly called the "Curtis bill," from beginning to end recognizes this continued authority of the Interior Department, and in many instances enlarges it.

The contention that the Creek Nation is not now an Indian reservation is not tenable. Whatever effect the Curtis bill may have upon the Creeks, it has not yet been carried into operation, so far as it changes their title to their lands or their tribal relations to the United States. The mere fact that the Creeks are at some future time to hold their lands in severalty, instead of in the name of the nation, or in common, is not incompatible with and does not change the legislation which gives to them the exclusive right of occupancy of their country; nor can it be successfully maintained that, because the United States at one time bought from the tribe of Indians who first occupied that country, thereby extinguishing the then Indian title to this land, and afterwards sold it to the Creeks, giving to them a fee-simple title thereto, therefore it is not in possession of the Creeks as an Indian reservation.

When the Government, in 1825, bought the lands from the Osages, who occupied them under the "original Indian title," they became a part of the public domain, subject to be appropriated by the Government and set aside for Indian reservations, or for any other purpose which it might designate. And by the act of Congress of May 28, 1830 (4 Stat., 411), Congress authorized the President to set it apart for the reception of such tribes of Indians as might be willing to exchange for it the lands where they then resided, and remove upon them. The statute is as follows:

"That it shall and may be lawful for the President of the United States to cause so much of any territory belonging to the United States west of the River Mississippi, not included in any State or organized Territory, and to which the Indian title has been extinguished, as he may judge neccessary, to be divided into a suitable number of districts, for the reception of such tribes or nations of Indians as may choose to exchange the lands where they now reside and remove there; and to cause each of said districts to be so described by natural or artificial marks as to be easily distinguished from every other."

Clearly this is a reservation of so much of the lands as the President might thereafter designate for the purpose set forth in the statute, and pursuant to the change which was afterwards made by which the Creeks surrendered their right of occupancy of the lands they then held in Alabama for those which they now possess. The land was conveyed to them with the limitation that they should not alienate it without the consent of the United States. By numerous treaties and statutes, including the intercourse laws, their right to the exclusive occupancy of the country was assured to them. No white men, except such as were allowed to go upon other Indian reservations, were permitted to enter the Creek Nation.

By the most solemn pledges they were to be protected from the intrusion of white men. But, whether strictly an Indian reservation or not, the Creek Nation is so far clothed with sovereign powers as that the treaties made between it and the United States, until abrogated, are binding; and as already shown, the treaty provides that, as to all but the classes of persons therein designated, the Creek Nation is clothed with the power to admit white men or not, at its option, which, as we hold, gave it the right to impose conditions. Nor does the fact that Congress, by the provision of the Curtis bill, has provided for the creation of cities and towns in this nation and the extinguishment of the Indian title to the lands embraced within the limits of such municipal corporations alter the case, because this provision of that bill has not yet been carried into effect. The Indian title to such lands still remains in them, and it is yet their country. What effect the provision of this statute relating to cities and towns, when fully consummated, may have we do not now decide.

But it is claimed that because Congress has enacted a statute establishing United States courts in the Creek Nation, and as attorneys practicing in such courts are officers thereof, therefore they are excluded from the provisions of the treaty, first, because they are officers; and, second, because, as courts can not perform their duties without the aid of attorneys, they are therefore a necessary and a constituent part of it, and, if taxed, they might refuse to pay and leave the country, or be removed therefrom by the agent, and, as every man charged with crime is entitled to be heard in the courts by counsel, he would be thus deprived of this constitutional right. In ex parte Yale, 24 Cal., 241, the supreme court say:

"An officer, as defined by Webster, is 'a person who performs any public duty.' An attorney at law is not such an officer. And in our opinion he is not an officer in the constitutional sense of the term, and does not hold a public trust. On this point we agree with Justices Crocker and Norton in Cohen *v.* Wright, 22 Cal., 293."

Mr. Justice Platt, in a case relating to an oath of an attorney (In re Oaths to be Taken by Attorneys and Counselors, 20 Johns., 492), says:

"The point is simply whether an attorney or counselor holds an office of public trust, in the sense of the Constitution." * * *

"In my judgment an attorney or counselor does not hold an office, but exercises a privilege or franchise. As attorneys or counselors, they perform no duties on behalf of the Government; they execute no public trust."

Cooley, Taxation, 576, says:

"Practitioners of law and medicine are not uncommonly taxed a specific sum upon the privilege of pursuing their calling for a year or other specified time. Such a tax is not a poll tax, and may therefore be levied when poll taxes are forbidden. Sometimes the tax is graded by the supposed value of the privilege. The right to impose an occupation tax on practitioners of law has been much contested, as being in effect a tax on the privilege of seeking justice in the courts; but it has nevertheless been sustained with only faint dissent."

To the same effect, see Languille *v.* State, 4 Tex. App., 312; Simmins *v.* State, 12 Mo., 271; State *v.* Hibbard, 3 Ohio, 63; Young *v.* Thomas, 17 Fla., 170; Cousins *v.* State, 50 Ala., 115; Wright *v.* Mayor, etc., 54 Ga., 645; Stewart *v.* Potts, 49 Miss., 749; Tied. Lim. 84–101; Weeks, attys. (2d ed.), 41.

In ex parte Williams (31 Tex. Cr. R., 262; 20 S. W., 580; 21 L. R. A., 783), the court say:

"But, conceding them to be officers, still that would be no ground for exemption from taxation. * * * But, in the second place, the contention that the legislature may cripple or destroy the judicial department is more plausible than sound. * * * The objection goes to the existence of the power, rather than to any probability of its exercise. It is, indeed, an objection that could be urged against any exercise of the taxing power. Thus, the legislature ought not to have the power to tax land, for fear it might confiscate; nor personal property, because the tax imposed might exceed its value; nor any occupation, business, or pursuit, because they could be taxed out of existence, and the livelihood of many be destroyed. * * *

"There is certainly no force in the proposition that by the imposition of this tax some defendant may be deprived of counsel. The presumption is absolute, says Judge Deaderick in the Tennessee 'lawyers' tax cases,' that all good citizens will obey their State's laws and pay the taxes imposed. There will always be lawyers who obey the law and pay their occupation taxes. The person accused of crime will always be within reach of lawyers in a position to defend him by reason of having paid their tax. Until the criminal can show that he has actually been deprived of legal counsel by reason of this occupation tax, the lawyer can not interpose this plea, that can only inure to the benefit of the defendant. It is a defense peculiarly personal, and this court would not declare the occupation-tax law unconstitutional on the ground that some criminal might be deprived of counsel by reason of the law, although no such case arose or ever will arise.

"This contention is utterly without foundation, for the reason that this provision was put in the bill of rights, not to operate upon contingencies, but upon actual occurrences; and we have none such here. Many reasons could be urged against this proposition, but it is deemed so frail that it is not necessary to deal with it further than to draw a plain parallel. We might with equal propriety charge the legislature with murder because some person gets snake bitten and can get no whisky to drink for it, and dies on account of the legislature imposing an occupation tax on liquor dealers, as to say that a criminal is deprived of the right of appearing by counsel on account of the legislature placing an occupation tax on lawyers, or might with some propriety accuse the legislature with murder because some persons die on account of a tax on traveling physicians. The cases are about on a par."

We agree with the authorities and hold that attorneys at law are not relieved from the payment of the amount required by the Creek statute for the privilege of remaining and practicing their profession in the Creek Nation because of the fact that they are lawyers. On the whole case we therefore hold that a lawyer who is a white man and not a citizen of the Creek Nation is, pursuant to their statute, required to pay for the privilege of remaining and practicing his profession in that nation the sum of $25. That if he refuse the payment thereof he becomes, by virtue of the treaty, an intruder, and that in such a case the Government of the United States may remove him from the nation, and that this duty devolves upon the Interior Department. Whether the Interior Department or its Indian agents can be controlled by the courts by the writs of mandamus and injunction is not material in this case, because, as we hold, an attorney who refuses to pay the amount required by the statute by its very terms becomes an intruder,

whom the United States promises by the terms of the treaty to remove, and therefore in such cases the officers and agents of the Interior Department would be acting clearly and properly within the scope of their powers.

The complaint challenges the right of the Indian agent to collect this tax, but at the hearing before us this point was waived by appellants in open court because, as stated by their counsel, the object of the suit was to get a judicial determination of the question as to whether, under the law, they were liable at all. We are of the opinion, however, that the Indian agent, when directed by the Secretary of the Interior, may collect this money for the Creeks. The intercourse laws (Rev. Stat. U. S., 2058; Ind. T. Ann. St., 1899, 4268) provide that:

"Each Indian agent shall, within his agency, manage and superintend the intercourse with the Indians, agreeably to law, and execute and perform such regulations and duties, not inconsistent with law, as may be prescribed by the President, the Secretary of the Interior, the Commissioner of Indian Affairs, or Superintendent of Indian Affairs."

In this case the Indian agent was acting in strict accordance with directions and regulations of the Secretary of the Interior, in a matter clearly relating to intercourse with the Indians; and when it is remembered that up to the time that the United States courts were established in the Indian Territory the only remedy for the collection of this tax was by removal and that the Indian nations had no power to collect it except through the intervention of the Interior Department, it is quite clear that if, in the best judgment of that Department, it was deemed wise to take charge of the matter and collect the money and turn it over to the Indians, it had the power to do so under its superintending control of the Indians and the intercourse of white men with them granted by various acts of Congress, and, in our opinion, that power has not been taken away by any subsequent act of Congress or treaty stipulation. The decree of the court below, sustaining the demurrer to the complaint and dismissing the case, is affirmed.

Townsend and Gill, justices, concur.

DEPARTMENT OF THE INTERIOR,
Washington, February 4, 1902.

Hon. CHARLES CURTIS,
House of Representatives.

SIR: Referring to your conversation of yesterday, wherein you handed me a copy of House of Representatives resolution No. 115, apparently relating to the collection in Indian Territory of permit or license taxes from persons not members of the Indian tribes and to the exclusion as intruders of those who, under the Indian laws, are liable for such taxes and refuse to pay them, I beg to say that the Department is acting in conformity to the decision of the court of appeals of Indian Territory, rendered January 6, 1900, in the case of Maxey et al. *v.* Wright, inspector, et al., reported in 54 Southwestern Reporter, page 807; to two opinions of the Assistant Attorney-General for this Department, dated July 13, 1900, copies of which are herewith transmitted, and to the opinion of the then Attorney-General, John W. Griggs, rendered September 7, 1900, a copy of which opinion is herewith inclosed. No one has been called upon to pay such a permit or license tax, except where he was liable therefor under the laws of the nation in whose territory he was carrying on business or practicing a profession, and such persons have been removed as intruders only where, after appropriate and repeated demands, they have refused to pay this tax.

Very respectfully,

E. A. HITCHCOCK, *Secretary.*

DEPARTMENT OF THE INTERIOR,
OFFICE OF THE ASSISTANT ATTORNEY-GENERAL,
Washington, July 13, 1900.

The SECRETARY OF THE INTERIOR.

SIR: I am in receipt by your reference, with request for an opinion upon the legal matters presented therein, of a letter from the Indian Inspector assigned to the Indian Territory, setting forth that certain parties doing business in towns in the Indian Territory have refused to pay the permit tax or license fee imposed by the laws of the several nations, this refusal being based upon the claim that they have purchased town lots and by such purchase have acquired the right to reside within the limits of the nation in which such lots are situated, and upon the further claim that section 14 of the act of June 28, 1898, confers or recognizes such a right of residence within the limits of incorporated cities and towns in the Territory.

The question is not directly as to the right of these people, not citizens, to occupy the property they have bought, but is as to their right to carry on a business in one of those nations without first obtaining a permit therefor, as required by the laws of the nation. The right of these nations or tribes to prescribe regulations requiring those not citizens engaging in business within the nation to pay a permit tax or license fee has been recognized by this Department and sustained by the courts. In the case of Maxey *v.* Wright, decided January 6, 1900 (54 S. W. Rep., 807), the court of appeals of the Indian Territory upheld the right of the Creek Nation to require the payment of such a tax or fee and the power of this Department to take charge of the matter, collect the money, and turn it over to the Indians, or in case of refusal of anyone to pay the same to enforce the penalty of removal prescribed by laws of the nation.

It seems that many persons engaged in business in these nations, especially in the Choctaw and Chickasaw nations, have become purchasers of town lots at sales made under the provisions of the act of June 28, 1898 (30 Stat., 495), and now refuse to pay the tax or fee imposed by the laws of the nations upon noncitizens carrying on business there. Their position is not clearly set forth in the papers submitted, but it seems to be that a lot so purchased is no longer the property of the tribe, and that the owner may conduct on such lot any business that he may see fit to engage in. The purchase of a town lot does not make the purchaser a citizen of the nation within whose boundaries such town may be located, nor does it necessarily operate to confer upon him a license to follow a pursuit in disregard of the laws of the nation requiring a noncitizen to secure a permit before engaging in such business. In the case of Maxey *v.* Wright (supra) the court declared it unnecessary to then decide as to the effect of the law of June 28, 1898, authorizing the sale of lands in cities and towns upon this question, saying:

"Nor does the fact that Congress, by the provisions of the Curtis bill, has provided for the creation of cities and towns in this nation and the extinguishment of the Indian title to the lands embraced within the limits of such municipal corporations alter the case because this provision of that bill has not yet been carried into effect. The Indian title to such lands still remains in them, and it is yet their country. What effect the provision of this statute relating to cities and towns, when fully consummated, may have, we do not now decide."

Important changes have been made both as to the conduct of the internal affairs of these nations and as to their relations with the outside world. These changes are largely the result of the law of June 28, 1898, supra, which, among other things, provides a plan by which lands in cities and towns may be sold to others than citizens of the nation. As said before, a purchase of such lands does not, however, give the purchaser any special privilege or benefit in the manner of engaging in business in such nation. Such a purchaser bought the property with the knowledge of the provisions of the tribal law and the conditions imposed thereby upon anyone wishing to engage in business in such nation and that he could remain within the boundaries of such nation and occupy the property thus purchased only in conformity to and compliance with the laws of that nation.

The contention that the purchase of a town lot in one of these nations exonerates a noncitizen wishing to engage in trade or business from compliance with the laws of such nation and gives him a license to engage in business therein in defiance of such laws can not be sustained. A noncitizen has, in this respect, the same status after such purchase as he had before, and must afterwards, as before, meet the requirements of law if he desires to engage in business there. He is also subject to the same penalty for refusal to comply with the law after such purchase as he was before. If there is any hardship in the matter it does not grow out of conditions arising subsequently to his purchase, as there has been no change in the laws of any of said nations in this respect since provision was made for the sale of town lots. He voluntarily placed himself in the position he occupies and must bear the incident responsibilities.

The question as to the powers and duties of this Department in the premises is necessarily presented. Relative to that question the court in the case of Maxey *v.* Wright (supra), used the following language:

"On the whole case we therefore hold that a lawyer who is a white man and not a citizen of the Creek Nation is, pursuant to their statute, required to pay for the privilege of remaining and practicing his profession in that nation the sum of $25; that if he refuse the payment thereof he becomes by virtue of the treaty an intruder, and that in such a case the Government of the United States may remove him from the nation, and that this duty devolves upon the Interior Department. Whether the Interior Department or its Indian agents can be controlled by the courts by the writs of mandamus and injunction is not material in this case, because, as we hold, an attorney who refuses to pay the amount required by the statute by its very terms becomes an intruder, whom the United States promises by the terms of the treaty to remove, and therefore in such cases the officers and agents of the Interior Department, would be acting clearly and properly within the scope of their powers."

At another place the court said:

"We are of the opinion, however, that the Indian agent, when directed by the Secretary of the Interior, may collect this money for the Creeks. * * * In this case the Indian agent was acting in strict accordance with the directions and regulations of the Secretary of the Interior in a matter clearly relating to intercourse with the Indians. And when it is remembered that up to the time that the United States courts were established in the Indian Territory the only remedy for the collection of this tax was by removal, and that the Indian nations had no power to collect it except through the intervention of the Interior Department, it is quite clear that if, in the best judgment of that Department, it was deemed wise to take charge of the matter and collect this money and turn it over to the Indians, it had the power to do so under the superintending control of the Indians and the intercourse of white men with them granted by various acts of Congress, and, in our opinion, that power has not been taken away by any subsequent act of Congress or treaty stipulation."

The powers and duties of this Department in the premises are so fairly set forth and defined by this language as to justify its adoption by the Department as a correct statement thereof. The statements are as applicable now as when that decision was rendered, and are as true of all the nations as of the Creek.

Section 14 of the act of June 28, 1898, authorizes the incorporation of cities and towns in the Indian Territory, making the provisions of Mansfield's Digest of the Statutes of Arkansas applicable, and further provides as follows:

"All elections shall be conducted under the provisions of chapter 53 of said Digest entitled 'Elections,' so far as the same may be applicable; and all inhabitants of such cities and towns, without regard to race, shall be subject to all laws and ordinances of such city or town governments, and shall have equal rights, privileges, and protection therein. Such city or town governments shall in no case have any authority to impose upon or levy any tax against any lands in said cities or towns until after title is secured from the tribe. But all other property, including all improvements on town lots, which for the purposes of this act shall be deemed and considered personal property, together with all occupations and privileges, shall be subject to taxation. And the councils of such cities and towns, for the support of the same and for school and other public purposes, may provide by ordinance for the assessment, levy, and collection annually of a tax upon said property not to exceed in the aggregate 2 per cent. of the assessed value thereof, in manner provided in chapter 129 of said Digest, entitled 'Revenue,' and for such purposes may also impose a tax upon occupations and privileges."

These are provisions for establishing and maintaining municipal governments enacted to meet the changed conditions in the Territory, and while they recognize the right of persons not citizens of the tribe or nation to reside in such towns, to participate in such governments, to enjoy the benefits and protection thereof, and also their liability to contribute by payment of taxes to the expenses of such government, they do not relieve such persons from observance of and compliance with the laws of the nation. The payment of a license fee imposed by a municipal government upon a certain occupation would not relieve one of the obligation to pay a like fee imposed by the State government. While the relations between these municipal governments and the Indian nation are perhaps not precisely the same as those ordinarily existing between a city and the State, yet they are so similar that the same rule obtains. As said before, the question is not as to the right of noncitizens to reside in these towns, but is as to their right to carry on a business in the nation in violation of the laws thereof. The provisions of said section 14 do not in my opinion operate to relieve inhabitants of cities or towns in these nations from the payment of the permit tax or fee prescribed by the laws of the nation in which such city or town may be located.

The papers submitted are herewith returned.

Very respectfully,

WILLIS VAN DEVANTER,
Assistant Attorney-General.

Approved July 13, 1900.

THOS. RYAN, *Acting Secretary.*

DEPARTMENT OF THE INTERIOR,
OFFICE OF THE ASSISTANT ATTORNEY-GENERAL,
Washington, July 13, 1900.

The SECRETARY OF THE INTERIOR.

SIR: I am in receipt of your letter of the 6th instant, requesting an opinion upon the legal matters presented by a letter of the Commissioner of Indian Affairs "relative to the refusal of certain noncitizens residing at Ardmore, Chickasaw Nation, to pay their tribal merchandise tax." The question, as formulated by the Commissioner of Indian Affairs and quoted in your letter of reference, is as follows:

"Whether or not, in view of the fact that the Choctaw and Chickasaw agreement provides that the Choctaw and Chickasaw tribal governments 'shall continue for the period of eight years from the 4th day of March, 1898,' and that section 26 of the Curtis Act provides, 'That on and after the passage of this act the laws of the various tribes or nations of Indians shall not be enforced at law or in equity by the courts of the United States in the Indian

Territory,' it is incumbent on the Government to collect or assist in collecting taxes from merchants and others in accordance with the laws of the Choctaw and Chickasaw nations."

It is believed that the opinion rendered to-day upon a former reference involving the same questions with respect to the Indian nations generally in the Indian Territory answers the question here submitted as to the Choctaw and Chickasaw nations, and the papers submitted are herewith returned with a reference to that opinion.

Very respectfully,

WILLIS VAN DEVANTER,
Assistant Attorney-General.

Approved:

THOS. RYAN, *Acting Secretary.*

DEPARTMENT OF JUSTICE,
Washington, D. C., September 7, 1900.

The SECRETARY OF THE INTERIOR.

SIR: I have the honor to reply to your note of August 13, 1900, requesting my official opinion upon several questions there stated, arising from conditions now existing in the Indian country, occupied by the Five Civilized Tribes of Indians, and which conditions are stated, in substance, thus.

Without referring specially to the tax legislation of these Indian nations, they generally require that persons not citizens, or members of any Indian tribe who reside or carry on certain kinds of business within their limits, shall procure and pay for a permit or license to do so.

Many persons of this description have bought, under the act of Congress referred to below, lots in the towns and cities in these nations, and many of them are engaged in mercantile, professional, and other kinds of business, and refuse to pay such tax, claiming, among other reasons, that the act of Congress referred to in authorizing the sale of such lots to persons not Indians or connected with any tribe has recognized this right to so purchase and to reside and carry on business on said lots, and has exempted them from such tax.

In addition to this, vast herds of cattle owned by persons not citizens of such nation nor connected with any Indian tribe are, by their owners, kept and grazed upon the public lands of these nations, and the owners refuse to pay the tax imposed on account thereof; and the questions propounded relate chiefly to the power and duty of the Department of the Interior to enforce payment of these taxes, and to remove from the limits of such nation as intruders those who refuse payment thereof. On account of the number of persons, the vast amount of property, and the consequences involved, the question is, as you suggest, one of great magnitude and importance.

Without referring specially to the different treaties with these Indian nations, it may be stated that they provide that all persons not citizens of such nations or members of any Indian tribe found within the limits of such nation should be considered as intruders, and be removed from and kept out of the same by the United States. From this class of intruders are excepted the employees of the Government and their families and servants, employees of any internal improvement company, travelers and temporary sojourners, those holding permits from any of the Indian tribes to remain within their limits, and white persons who, under their laws, are employed as "teachers, mechanics, or skilled in agriculture."

It is apparent, therefore, that, save the excepted classes, no one not a citizen or member of a tribe can be lawfully within these limits without Indian permission; and equally apparent that all may be so with such permission. And it follows that the same power that can refuse or grant such permission can equally impose the terms on which it is granted.

So far as concerns the Choctaw and Chickasaw nations (and the same rule applies to the others), this question was passed upon by my predecessor, Attorney-General Wayne McVeagh, who held (17 Ops., 134) that such permit and license laws with their tax were valid and must be enforced. The same doctrine was held by Acting Attorney-General Phillips in 16 Ops., 24. Both these opinions are cited by the court of appeals of Indian Territory in Maxey *v.* Wright (54 S. W. Repr., 807), which distinctly affirms the validity of this legislation. I quite agree with these opinions, and have no doubt that it is competent for those Indian nations to prescribe the terms here being considered upon which they will permit outsiders to reside or carry on business within their limits.

Nor does the act of June 28, 1898 (30 Stat., 495), either deprive these nations of the power to enact such legislation or exempt purchasers of town or city lots from its operation.

This was also decided in the case last referred to. So far as affects any question here, that statute provides a plan for the organization of cities and towns, for the sale of town and city lots, and the extinguishment of the Indian title. This last has not yet been consummated, but, as said by the court in Maxey *v.* Wright, supra, decided January 6, 1900, "the Indian title to such lands still remains in them and it is yet their country."

But, however this may be, and even if the Indian title to the particular lots sold has been extinguished, and conceding that the statute authorizes the purchase of such lots by any outsider and recognizes his right to do so, the result is still the same, for the legal right to purchase land within an Indian nation gives to the purchaser no right of exemption from the laws of such nation, nor does it authorize him to do any act in violation of the treaties with such nation. These laws requiring a permit to reside or carry on business in the Indian country existed long before and at the time this act was passed, and if any outsider saw proper to purchase a town lot under this act of Congress, he did so with full knowledge that he could occupy it for residence or business only by permission from the Indians.

I do not say that Congress might not violate its treaty promises and authorize the outside world to enter upon and occupy the lands of the Indians without their consent, but do say that provisions very different from any contained in this act would be required to justify the imputation of any such intention. All that this act does in this respect is to give the consent of the United States to such purchase with the assumption that the purchaser, if he wishes to occupy, will comply with the local laws, just as in other cases. The United States might sell lands which it holds in a State, but it would be a strange contention that this gave the purchaser any immunity from local laws or local taxation. The case is much like that of a Federal license to manufacture and sell spirituous liquors, which, while good as against the United States, confers no right where such manufacture and sale are forbidden. This act was passed with the full knowledge of these laws of the Indian nations approved by the President and having the full force of laws, and had Congress intended to nullify these laws or take away the power to enact them, or to exempt the purchasers of lots or any other persons from their operation, it is quite safe to say it would have done so by provisions very different from these in the act of 1898.

The treaties and laws of the United States make all persons, with a few specified exceptions, who are not citizens of Indian natives (nations) or members of an Indian tribe and are found within an Indian nation without permission intruders there, and require their removal by the United States. This closes the whole matter, absolutely excludes all but the excepted classes, and fully authorizes these nations to absolutely exclude outsiders or to permit their residence or business upon such terms as they may choose to impose; and it must be borne in mind that citizens of the United States have as such no more right or business to be there than they have in any foreign nation, and can lawfully be there at all only by Indian permission; and that their right to be or remain or carry on business there depends solely upon whether they have such permission.

As to the power or duty of your Department in the premises, there can hardly be a doubt. Under the treaties of the United States with these Indian nations this Government is under the most solemn obligation, and for which it has received ample consideration, to remove and keep removed from the territory of these tribes all this class of intruders who are there without Indian permission. The performance of this obligation, as in other matters concerning the Indians and their affairs, has long been devolved upon the Department of the Interior. This power and duty are affirmed in the two opinions referred to and as directly in Maxey *v.* Wright, supra. In that case it was said on page 812:

"Upon the whole case we therefore hold that a lawyer who is a white man and not a citizen of the Creek Nation is, pursuant to their statutes, required to pay for the privilege of remaining and practicing his profession in that nation the sum of $25; and if he refuses the payment thereof he becomes, by virtue of the treaty, an intruder, and that in such a case the Government of the United States may remove him from the nation; and that this duty devolves upon the Indian Department."

And in another place—

"We are of the opinion, however, that the Indian agent, when directed by the Secretary of the Interior, may collect this money for the Creeks * * *. In this case the Indian agent was acting in strict accordance with directions and regulations of the Secretary of the Interior, in a matter clearly relating to intercourse with the Indians."

That the United States has the power to perform its treaty stipulations in this regard can not be doubted; and as already said, and in the opinions referred to and above quoted, the execution of that power and duty devolves upon the Interior Department.

This power of removal is expressly conferred by Revised Statutes, sections 2147 to 2150 inclusive with the right to use the military force of the United States, when necessary for its accomplishment. And a power of this nature carries with it the duty of its exercise.

But as to persons other than purchasers of town or city lots, residing or carrying on business thereon, no question arises under the above act of 1898, and persons who are pasturing cattle upon, or otherwise occupying part of the public domain of either of these Indian nations, without permission from the Indian authorities, are simply intruders and should be removed, unless they obtain such permit and pay the required tax, or permit, or license fee.

In one of the questions submitted, you ask, whether your department has "authority in the case of a merchant refusing to pay such tax, to close his place of business, or to remove his stock of merchandise beyond the limits of the nation?"

To this I answer, your Department may and should remove such merchant unless he has a permit to reside or remain there, and close his place of business and his business, unless he has a permit to carry it on, in all places where such permit is required by law. The question of the right to remove his stock of merchandise beyond the limits of the Indian nation is a different and more doubtful one. While he has no right to remain or carry on business there without a permit to do so, his want of right to keep his goods there or the right of the Department to remove them is not so clear. While the law excludes him and authorizes his removal, it does not do so expressly, at least as to his goods. And as the whole evil which is sought to be remedied is so done by the removal of the owner and the closing of his business, it is recommended that his goods be permitted to remain, if he so desires.

Your question whether the lands of any Indian nation in which a town or city is situated will cease to be Indian country, etc., when the lands in such town or city are sold, is not one involving any present existing question or one which I am authorized to answer.

Your last question asks: "What is the full scope of the authority and duty of the Department of the Interior in the premises under the treaties with these nations and the laws of the United States regulating trade and intercourse with the Indians?"

As applicable to the cases here in hand, which is as far as I am authorized to answer the question, and which is designed also as a comprehensive answer to all the other questions save the one last referred to above, it may be said generally that the authority and duty of the Interior Department is, within any of these Indian nations, to remove all persons of the classes forbidden by treaty or law, who are there without Indian permit or license; to close all business which requires a permit or license, and is being carried on there without one; and to remove all cattle being pastured on the public land without Indian permit or license, where such license or permit is required; and this is not intended as an enumeration or summary of all the powers or duties of your Department in this direction.

In view of the number of persons, the magnitude of the interests involved, and also as tending to a more ready and better adjustment of the difficulties, it is suggested that public notice be first given to all persons residing or carrying on business without an Indian permit or license, where, for such residence or business, such permit is required, that unless such permit or license be obtained by a short day to be named, such persons will be removed and such business closed; and in case of cattle pastured, without permission where permission is required, such cattle will be removed from within the nation.

I return herewith the printed copy of the constitution and laws of the Chickasaw Nation, transmitted with your note.

Respectfully,

JOHN W. GRIGGS,
Attorney-General.

War Revenue Taxation.

SPEECH
OF
HON. WILLIAM C. LOVERING,
OF MASSACHUSETTS.

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 17, 1902,

On the bill (H. R. 10530) to repeal war-revenue taxation, and for other purposes.

Mr. LOVERING said:

Mr. CHAIRMAN: What the people of the country want, sooner or later they are sure to get, and woe betide the party that throws itself across the path when the bugle call of public sentiment sounds "on to victory."

There is no mistaking the temper of the people at this moment.

They demand that something shall be done for Cuba, and done promptly. For my own part, I believe that the ultimate solution of the Cuban question is annexation, but the time has not yet come for it. The initiative must come from Cuba herself, and it is doubtful whether this will come until she has had an opportunity to try her hand at self-government.

Meantime we owe something to her and can not stand her off by dangling before her eyes the glittering advantages of American citizenship.

If Cuba is ever to be territory of the United States, her people must be captivated by ministering to her self-interest and material prosperity. The same stroke by which we delivered her from her oppressors cut her off from the chief market for her products. We are absolutely and morally bound to make some terms by which she can enter our markets. I believe this can be done.

We are told on the one hand that anything less than 75 per cent reduction in the tariff on her sugar will be of no avail to the Cuban planters, and on the other hand we are told that any reduction will ruin the cane and beet sugar growers of this country. Now, I doubt both of these statements. I believe the truth lies between them, and some intermediate ground can be found that will be fair and yield some profit to both.

The Republican party in the end always does the right thing. It is not given to indecent haste, nor thrown out of its course by unseemly clamor, but it seldom fails to obey the imperative commands of a great aroused public sentiment.

If I thought for one moment that this bill was brought in here to prevent or delay favorable action regarding Cuba, I should vote against it. I do not believe that there is any such purpose in the minds of the committee, and I am therefore willing to give my vote for the bill and hope it may pass.

Rural Free Delivery.

SPEECH

OF

HON JOHN H. SMALL,

OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, March 10, 1902.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 11728) to classify the rural free-delivery service and fix the compensation to employees thereof—

Mr. SMALL said:

Mr. CHAIRMAN: The general interest of the country and of this House in the rural free-delivery service has been attested by the length of the debate upon the pending bill. The general debate, extending throughout several days, was remarkable in the fact that advantage was not taken of the rules which permitted discussion upon other subjects, and that each gentleman confined himself to the merits of the measure. No one has indicated his opposition to the continuance and development of this service, but with unanimity they have lauded its merits and encouraged its development throughout the rural sections of this great country. There have been, however, two discordant notes to disturb the harmony. Some of our Democratic members, particularly from the Western States, have expressed the fear that the carriers under this service would be appointed from the dominant party, and that they would use their positions in a partisan spirit in Congressional and other elections, and thus would be built up another potential machine, tending to thwart the will of the people and to defeat Democratic candidates. I would not minimize the evil results which would follow if this prophecy should be fulfilled, and if no remedy was proposed to check this evil I should be the more inclined to be influenced by such arguments.

Since the 1st day of February the appointment of carriers has been under the classified civil service, and their appointment has been subject to civil-service examination, both as to their character and competency and acceptability. The professed object is not only to maintain and elevate the character of the service, but to make it entirely nonpartisan. If this result shall follow, then the ominous prediction of a partisan political machine will fail to materialize, and the probability of a proper and nonpartisan administration of the civil-service rules is only to be considered. My past environment and associations have not tended to impress me most favorably with the administration of the civil-service regulations, and yet my experience as a member of this House and my closer observation of the vast and intricate machinery of this Government have convinced me that the administration of its affairs would be greatly improved if we had an honest civil service, administered by capable and conscientious officials and applicable to the bulk of the clerical and subordinate positions under the Government.

It appears that I must select between the contract system for the appointment of carriers, under which the service shall be let to the lowest bidder and which would, in my judgment, demoralize and weaken its efficiency, and the appointment of carriers under the provisions of the civil service, and paid a salary at least somewhat commensurate with the labor involved and the competency and character required. I prefer the latter alternative as promising better results for the development and extension of the service. I believe that the members of this House and their constituents will have the fullest opportunity to observe its administration, and their interest in the service will not only induce them to be vigilant but to be critical of any maladministration. I am of the opinion that members of Congress and their constituents have it in their power to enforce the proper administration of civil service in their respective districts. The principles of the civil service have grown so steadily in the esteem of a large body of our citizens and have been ingrafted so strongly into our governmental policy that no Administration, however partisan, could afford an exposure of any flagrant violations. Speaking for the present Administration, I prefer to believe that President Roosevelt is honest in his expressed sentiment to enforce an efficient civil service, and such belief is justified not only by his utterances but by his past official acts.

The other note of dissatisfaction to which I refer presents to my mind a more serious condition. I advert to the complaints relating to the unfair distribution of the service throughout the country. In the last report of the First Assistant Postmaster-General upon the subject of rural free delivery I find a rule adopted for the establishment of this service, and I quote therefrom: "Inasmuch as it has been and is a physical impossibility to establish all the service applied for as rapidly as the people desire, the Department has aimed to make an equitable distribution of the service among the States and Congressional districts on the basis of 50 per cent of the applications filed." I do not believe this is the fairest method of distributing this popular service throughout the country. Local conditions in some States tend to increase the number of applications. To illustrate, in one locality the public roads may be in better condition, the population may be more dense, the proportion of illiteracy may be less, and the proportion of favors received from the Government heretofore may have been in some sections so small as to create little hope of favorable consideration in answer to petitions. While all this is true, yet in the less-favored localities the necessity for this service may be equally as great.

Again, it is contended that even this rule adopted by the Department has in some States been more honored in the breach than in the observance. I shall append to my remarks a table showing by States and Congressional districts the number of representatives under the new apportionment, the petitions for rural free-delivery service received, the routes established, adverse petitions, petitions pending, and routes ordered, but not established. This table shows the condition of rural free-delivery service throughout the country up to February 1, 1902. I call attention to the disproportion of the service in several of the States. In California, 150 petitions have been received and 96 routes established; in Connecticut, 165 petitions have been received and 112 routes established; in Maryland, 236 petitions have been received and 181 routes established; in New Hampshire, 121 petitions have been received and 86 routes established; in North Carolina, 398 petitions have been received and 56 routes established. By an examination of the table of the Congressional districts in each State the unequal distribution will be more apparent.

The rural free-delivery service was established for the benefit of rural communities, and the only fair ratio of distribution would be in proportion to the rural population of the several States and Congressional districts. It was for the purpose of overcoming this well-founded objection to the present administration of the service that I introduced earlier in the day an amendment which was intended to equalize the benefits of the service among all the rural communities. I will read again the amendment proposed, as follows:

The Postmaster-General shall establish rural free-delivery service in the several States in the proportion, or as near as may be, which the rural population of each State shall bear to the aggregate of the rural population in all the States, and the same ratio shall be observed as far as practicable in the establishment of such service in the several Congressional districts of each State: *Provided*, That if the applications on file for such service from any State or district are not sufficient to enable the Postmaster-General to maintain the ratio herein provided, then he may establish the service in other States, observing the same ratio as far as may be practicable.

I was gratified at the large vote in favor of the amendment, but was distinctly disappointed at the fact that gentlemen upon the other side almost unanimously voted against it. Their action gives color to the charge which has been made that they are not willing that this service shall be distributed impartially over the entire country. I do not wish to be a prophet of evil, but I feel very sure that the sentiment in favor of such a provision in the law will continue to grow until the people will demand such

legislation of their representatives. It can not be said that the amendment is impracticable, because it specifically provides that the Postmaster-General shall not be compelled to observe this ratio of distribution unless petitions are actually on file from the States and Congressional districts, and have been investigated by special agents and favorably recommended. Thus if any section fails to receive the benefits of the service, they will be made to understand that such failure is not due to any partiality or discrimination, but to their own dereliction. Thus the subject will be brought to the homes of the people of such sections and the necessary conditions for the establishment of rural free delivery will be impressed upon them. Such a provision in the law would be an additional incentive to the building of good roads and to their maintenance and improvement and the more intelligent of the people would be induced to disseminate information as to the service and to convert all doubters of its benefits.

I do not wish to be understood as making any captious criticism of the officials of the Post-Office Department who have had the responsibility of the establishment of this service and under whom it has grown and multiplied and popularized itself among the people. I can appreciate how difficult it is for a Government official to withstand the importunities of an influential Senator or Member of Congress of the dominant party, who are constantly demanding the introduction of this service into their States and districts. It may be that almost unconsciously the evil to which I advert has grown and gotten beyond the control of the Department officials. This condition must necessarily continue as long as the Department has the liberty of exercising discretion in sending special agents into Congressional districts and States. It would not only be in the interest of the service and promote its healthy growth, but the existence of a law controlling the distribution of routes would be an actual relief to the Post-Office Department. While rural free delivery has passed its experimental stage and is now a permanent feature of the postal system of our country, yet Congress must continue to exercise a fostering care. We must not only be content to make an annual appropriation, but such laws must be framed as are dictated by wisdom and experience.

Congress is now enjoying an opportunity to bring some of the benefits of this great Government to the homes and firesides of the farmers. We have done very little, comparatively, for this class of people, and unfortunately there are very few laws which bring to them positive benefits. We can best serve the agricultural interests of the country by avoiding the enactment of any law for the benefit of other classes or which discriminates against the farming interests. Therefore, when this opportunity is offered for their benefit, it is not only the duty, but it should be the pleasure of Congress to give them the very best service possible under existing conditions. We must not only provide competent carriers and pay them a proper compensation for the service, we must not only provide proper schedules and most convenient routes, but we must so distribute this service that the charge of discrimination shall cease. It will be many years before every rural community shall have the benefit of free delivery of mails at their homes, but we can at least show them that the benefits of the service are being extended equally to all communities and to all States. [Applause.]

APPENDIX.

RURAL FREE DELIVERY.

Oleomargarine Bill.

SPEECH

OF

HON. HERMAN B. DAHLE,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 10, 1902.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 9206) to make oleomargarine and other imitation dairy products subject to the laws of the State or Territory into which they are transported, and to change the tax on oleomargarine—

Mr. DAHLE said:

Mr. CHAIRMAN AND FELLOW-MEMBERS: In the consideration of the subject of oleomargarine legislation the first question to be discussed is that of fraud in the traffic in oleomargarine. As it is on account of fraudulent practices that this legislation is asked, it is certainly necessary that a strict examination of this feature of the question should be conducted, in order that we may arrive at the correct understanding of the nature and extent of the fraud, and thereby be well informed as to what kind of legislative procedure is the best for the situation.

Shortly after the introduction of oleomargarine into this country it soon came to light that there was fraud carried on in the traffic in this substitute for butter, and it was not very long before pressure was brought to bear to have this fraud eliminated. In 1886, after the matter was presented in a strong light, Congress enacted the oleomargarine law which we now have, and it was doubtless considered at that time that the law was sufficient for the needs of the case, and that it would be sufficient for some time to come. But those engaged in the fraud found ways to evade it, and did so, either openly or in secret, until the cry of fraud was as strong as before.

The result was that the Fifty-sixth Congress found itself confronted with the question, and was compelled by the universal desire for the correction of the fraudulent practices, as manifested through thousands of letters, postal cards, and petitions, to take some action in regard to it. After very extensive hearings by the Agricultural Committee, during which the oleomargarine interests, as well as the dairy interests, were thoroughly represented, the Agricultural Committee reported the bill known as the Grout bill, which, as is well known, was passed by the House, after thorough debate, but was not passed by the Senate because of lack of time for its proper consideration and consequent action, wherefore several bills bearing on the same subject were among the first introduced at the beginning of this Congress. These were referred to the Committee on Agriculture, where consideration of same commenced at once.

Owing to the fact that the printed hearings of the committee of last year were accessible to all members of the committee, the dairy interests did not ask for any particular time in which to present their side of the question, as it had been thoroughly gone over during the previous Congress, but the oleomargarine representatives asked for time, which was granted. The result of the proceedings in the Agricultural Committee was the unanimous adoption by the friends of the dairy interests of the bill now before us for consideration, H. R. 9206.

It has been constantly asserted by gentlemen who appeared before our committee at different times that there is no fraud practiced by the manufacturer in the disposal of his product.

Judge William M. Springer, appearing before our committee, stated as follows, page 174:

> I take it for granted that in the retail business there have been and are committed from time to time, and from day to day, many frauds, in reference to the sale of oleomargarine and butter. In the State of Illinois, where I live, there have been a great many complaints of retail dealers selling oleomargarine for butter. There there is a law prohibiting such sales. How can you expect a man in Pennsylvania, for instance, to sell oleomargarine when the law makes it such a criminal offense as it does? He admits himself a criminal as soon as he hands out to his customer something called oleomargarine.

We find in the Judge's statement, pages 186 and 187, under the heading, "How to prevent fraud in oleomargarine," that the following is a part of the proposition that the Judge submits, declaring his belief that same would accomplish the desired object of stopping fraud if it could be enacted into law:

> SEC. 7. That each manufacturer of oleomargarine shall pay a tax or a license of $2,500 per annum, which shall include his license as dealer, and that all dealers in oleomargarine shall pay a seller's license of $10 per annum.

Gentlemen, when I think of this it certainly presents itself to me as though the object sought was precisely the opposite of that which is claimed for it. We find the Judge has just stated that the kind of fraud which he acknowledges is committed is done by the retail dealer, and it seems to me a self-evident fact that by lowering the license of a retail dealer to $10 per annum would cause a condition whereby we would have many times the number of these lawbreakers compared with what we have at the present time, and I can only take it that a $2,500 per annum license on manufacturers would drive out of the trade all the smaller manufacturers and help build up a trust or combine of the larger ones. I certainly know of no better way of bringing about such a change than by advocating just exactly what the Judge here advocates.

We find further on that Judge Springer tries to bring out the fact that there is danger of disease being carried in butter. In one place, on page 213, he quotes as follows:

> As a consumer of butter and a citizen of the United States, I think I have a right to come before the committee and ask you to protect me and my family in the consumption of an article of every day use, and which comes to every family in the land, and in speaking of this I think I am doing a public service and it ought to commend itself, in my opinion, to your judgment.

After this last statement we, the friends of the bill before us for consideration, feel that we are striving to accomplish the object which the Judge claims he is working for, and feels that it is his right and duty to work for. He must surely have forgotten himself when he speaks of butter as an article which comes to every family in the land. Gentlemen, this is what we are trying to bring about, in a measure; that is, we hail the day when the consumer who wishes butter may have it, and may not have to take in its place that which he does not want. Cleanliness in creameries is certainly a thing that should not be lost sight of, but as I have said before, where cleanliness is not exercised the effect brands itself at once in the flavor of the butter, and if such off-flavor gets too bad and the product totally unfit for use as butter it can be neutralized and used in the manufacture of oleomargarine.

Other gentlemen who appeared before us made statements, all tending to establish the belief that there is very little fraud, if

any, on the part of the manufacturer. Allow me to call your attention to the actual figures taken from the Internal-Revenue Department's report, and which show that instead of only 1 per cent being illegally disposed of the total amount of fraudulent disposition of this product is about 80 per cent. The revenue report is as follows:

Yellow oleomargarine sold contrary to law in 1899.

Mr. Adams, State dairy commissioner of Wisconsin, states as follows:

Right across the line in the next State are those large oleomargarine manufacturers. They are pounding at the doors of Wisconsin all the time. The agents of these big companies come into the State and go to the retailers in our State and say: "We want you to sell this oleomargarine. You can make more out of it than you can out of butter, and you can make more out of it than you can out of uncolored oleomargarine." The retailer says, "But we will get into trouble." "Oh, we will stand behind you; that is all right." But the retail dealer answers, "But you won't be here when I am prosecuted," and the agents of those people have sometimes said, "Here is a check for $500; we will stand behind you." For years they have been coming into our State endeavoring to induce our own citizens to break down the law of our State. We do not like it. It is one continuous struggle.

I have read at different times that this same Mr. Adams has been conducting prosecutions in our own State for illegal sale there, and well he may, for he advised us in his speech before our committee that about one-half of the 700,000 pounds of oleomargarine sold there is colored and sold in violation of the law, his chief trouble being, he informs us, in getting juries and judge to convict. My own experience is that the colored product is sold in Iowa, where, however, it is sold as oleomargarine, while in Chicago, with its 2,500 dealers, I have gone from store to store, in company with Mr. Knight, secretary of the National Dairy Union, and with Mr. HAUGEN, of Iowa, where we found that the article sold us when we asked for and paid for butter proved to be oleomargarine in every case. The fact is that the fraudulent sale of this article there is so extensive that the dealer in the honest product of the cow has had to lay down his business.

Under these circumstances it seems that no fair-minded man would attempt to convince a body of intelligent men that there is no fraud on the part of the manufacturer. There are 32 States in our Union which have laws against the sale of oleomargarine colored in semblance of butter. No one will deny that the oleomargarine manufactured is disposed of in some manner. If it is not sold largely in the States which have laws against such sale, then where is it sold? If it is sold there, it certainly is sold illegally.

This fraud is by no means confined to the manufacturing class. It is necessarily carried on by the wholesaler, the retailer, and the parties who furnish it directly to the consumers, the latter class including the hotel keepers, restaurant keepers, and boarding-house operators, who place oleomargarine upon their tables as butter.

Anyone going into the oleomargarine business must necessarily go into it with the understanding that he can not confine the sale of his products in such States only where his product is allowed to be sold, colored or not colored. In order to be successful he must overstep his bounds and do as the representative of the Western manufacturer informed us that his company did and as is also done by the Standard Manufacturing Company, namely, have salesmen all over the country. Especially do we find that the sale of this product can be carried on on a very large scale in our larger cities, where juries will not convict and where even the courts are so corrupted that the fraudulent sale of this product is carried on in defiance of all law and its defenders.

Next to the manufacturer we have the wholesale dealers. I find that we have such located in each of the following States where the sale of this colored product is by law forbidden: Alabama, Colorado, Connecticut, Georgia, Illinois, Kentucky, Maryland, Massachusetts, Michigan, Minnesota, Missouri, Nebraska, New Hampshire, New York, Ohio, Oregon, Pennsylvania, South Carolina, Tennessee, Virginia, and Wisconsin. There is but one conclusion that we can reach, and that is that these wholesalers, locating on forbidden ground, start in with the knowledge that their traffic is illegal and lawless from the very start; that they can not thrive in a business way without throttling the words and spirit of the law, no matter what they sell their goods for, whether oleomargarine or butter. The transaction in either case is illegal, unlawful, and certainly fraudulent when sold where forbidden.

We then come to the retail dealers, who comprise a still larger number and are the class whom our opponents strive to lay all the blame of fraud upon. Such dealers we find are doing a thriving business in the States where their traffic is by law forbidden and where parties back of them and with them are able to so control courts and juries that prosecution is impossible.

We have one more class—the largest of all—and that is the class which illegally and fraudulently furnishes oleomargarine where butter is called for and wanted. This is the very large class who are engaged in furnishing meals for others.

Closely dependent upon and connected with the matter of fraud is that of color. It is because oleomargarine is colored to look like butter that such a widespread demand for this legislation has arisen.

Again and again have gentlemen made the assertion that oleomargarine is not colored in semblance of butter, but that the use of coloring substance originated with the oleomargarine manufacturers, and that the makers of butter followed their example because they perceived that the appearance of butter would be materially improved by the addition of coloring matter. The history of butter making shows that this kind of statement is entirely without foundation. Ever since the early days of the manufacture of butter it has been customary to mix coloring matter of some sort with the butter in order to preserve a uniform shade the year around.

It is the God-given color of butter, but varies with the season. When the grass is fresh and green and the cow is fresh and gives a large flow of milk, the butter from such contains less curd and is of a richer, darker tint, while in the winter season, when the cow is a stripper and the food not as sustaining, the butter produced from the milk contains less coloring and more curd, the butter is of lighter shade. Since the shade of butter is darker during the summer months the demand originated before my day for a uniform color the year throughout.

Let me give a brief history of the growth of the dairy industry in my own State. When I was a small boy in the sixties nearly all the butter that was made in southern Wisconsin, where my parents lived, was brought to the store in rolls and there exchanged for merchandise. If the quality and also the color of such was fair it was rolled in cloth and shipped to the markets in that way. If it was poor, and especially in the summer season, it was packed in half barrels or firkins and shipped, afterwards ladled, resalted, and colored to suit the demands of the market.

The next step was that dairymen having enough cows so they could pack their product in tubs were instructed to do so. This product would bring a price in accordance with its quality and color. The color part was very essential. It was taught to us as dealers by commission merchants to whom we shipped and in turn by us to the dairymen. There was a mutual object of gain in this. When we got the product of good flavor and properly colored we could dispose of such to advantage, and could consequently allow the farmer more for same, while if the farmer knew nothing of the necessity of such coloring we would pay him less for his product, but not enough less but what there would be a loss to us, so that we naturally more and more brought out the fact that the farmer must produce a product of an even color the year around.

The next step was establishing routes throughout the various country districts, where a butter gatherer visited the farmer at regular intervals, gathering the fresh churned butter, which was brought to the country store, there prepared for the market by salting, coloring, working the buttermilk out of same, and packing it in suitable packages for the market.

The next step is the creamery, which in our particular part of the country is operated by the dairyman bringing his milk directly to the creamery, where it is separated, the skim milk being returned to the farmer and the cream made into butter. In other places creameries are operated by having routes through the country, where the milk is skimmed from milk cans and taken to the creamery, where it is treated in like manner. In still other places the farmers have their individual hand separators, so that the cream is separated from the sweet milk, and is either taken to the creamery and there prepared for the market or else made into butter by the individual farmer and shipped to the market direct.

I can imagine that this same condition of affairs has existed in other parts of the country. I learn from New York market reports that next to creamery in price there are State dairy tubs, wherefore I must conclude that there are several individual dairies in that State and neighboring States.

Having witnessed the evolution in the manufacture of this product before oleomargarine was conceived or born, I can only say that I feel absolutely sure that oleomargarine has robbed butter of that yellow-tinted cloak which by all rights belongs to butter. Let me also quote you from others who are posted on the situation.

First, Mr. L. S. Taylor, secretary of the Elgin Board of Trade, writes:

Elgin Board of Trade was organized in 1872. Ever since then members have used butter color, and it was used by creamery men and farmers before that time.

Second, from statement of the president of the Chicago Butter and Egg Board:

Have handled butter in Chicago market for twenty-eight years, and during all that time it has been colored.

Third, George W. Linn, president of the Illinois Dairy Union, says:

I have been handling butter on this market over thirty years, and during all that time much of it was colored.

Fourth, from the firm of Egbert & Case, one of the oldest houses in this trade in New York City, I will read the following:

Have sold colored butter for forty years—long before oleomargarine was made. This is literally true. This house has been in the butter trade since 1855, and one of the original members is still connected with it. During our connection with the trade butter has always been colored. Oleo has been colored to imitate the appearance of butter in order to deceive the consumer.

Fifth, from John S. Martin & Co., one of the oldest butter houses of New York City:

We learn that the oleomargarine interests are representing that butter was and is colored in imitation of their article. One can scarcely believe that any sane individual would make such a statement or accept the responsibility for such an untruth, and still those engaged in the butter business (we have been established nearly fifty years) know there is no statement so wild and untrue that will not be made by the supporters of this miserable fraud on the consumer.

Sixth, Wells, Richardson & Co., Burlington, Vt., the standard manufacturers of butter and oleomargarine color of both this and other countries, who have been in business since before oleomargarine was invented, advised me that butter color was used in the United States before oleomargarine was used, and that the oleomargarine manufacturers, when they came in the field, also adopted their butter color and are using it to this day.

I began last year as thorough an examination as I could as to the value of the plants and machinery used in the manufacture of oleomargarine in the United States. Changes have taken place since then, so that I have again gone over the same work, and the result of my work shows a value of about $3,000,000 being invested in this industry. The reason I did this was that I might compare such result with the value of plants or money invested in plants for butter making, and I find that the State of Wisconsin, which I have the honor to represent, has over 1,000 creameries, worth in the aggregate more than all the oleomargarine factories in the United States. I cite these figures that you may be able to conceive the very much larger extent of the dairy industry over the oleomargarine industry.

WHO ARE ASKING FOR THIS LEGISLATION.

Bills were introduced into our House both from the East and from the West along the lines of the present bill which is before us for consideration. We have received hundreds and thousand, and I presume millions, of letters, of postal cards, of petitions, asking that legislation be passed that may put a stop to the fraudulent traffic in oleomargarine. There is no other subject that has come before the Agricultural Committee, of which I have the honor of being a member, or before the House where there has been as strong pressure brought to bear for the necessity of action as along this line.

The Woman's Industrial and Patriotic League of the District of Columbia was represented before our committee through its president, Charlotte Smith, who so vigorously and earnestly plead in behalf of the consumer that oleomargarine might stand on its own merits, and that the purchaser of butter might now obtain what he wished for as in the good old days when same was made by the women for the markets of the world.

We also heard from the National Grange through its master, Mr. Aaron Jones. Allow me to quote from his speech as follows:

We have a membership something over 500,000 of the farmers of the United States. We have county organizations to the number of 1,500 scattered all over this country from the Atlantic to the Pacific coast. I want you to understand that this membership is composed of Democrats, Republicans, and men of all shades of political opinion and all classes of the farming population. We have 1,500 of those organizations, representing counties that have considered in detail this bill, and have urged and memorialized Congress for the passage of a bill embracing this principle. We believe that Congress should protect us from the adulteration or the imposition of a bogus article being palmed off on the public for the genuine article. We believe that it is injurious to the markets of this country and injures our business, and that we are entitled to protection at the hands of the Congress of the United States. We believe that this law embraces that protection and with a unanimity that we have never had upon any other measure, we come to Congress asking that this bill become a law, and we hope—we believe—that the justice of the members of Congress, representing the entire people, will recommend the measure that is now pending before you for the principle involved therein.

We also heard from the National Dairy Union, through its president, Governor Hoard, of Wisconsin, who stood before our committee for nearly three hours speaking and answering questions. He was a sick man at the time; but even though he was, he did not shirk his duty, but stood at his post, although the strain on him proved so severe that he was laid up for several days.

Besides these, the dairy interests of the country, in which 5,000,000 or more farmers are interested, have also spoken to us through their individual dairy commissioners. As for our own State commissioner, he appeared here in person; and I have previously quoted from his speech, so that nothing further is necessary to be said regarding him.

Following are extracts from the letters from other dairy commissioners:

The sentiment of the dairymen of our State in relation to the Grout bill, so called, is, as far as I am aware, that they are unanimously in favor of the passage of this bill. My own opinion is that its passage will be a great benefit to the dairymen of the country. I hope that the bill, or something of a similar nature, may be pushed with sufficient force to pass it at the present session of Congress.

B. WALKER McKEEN,
Secretary Agricultural Department.

AUGUSTA, ME., *December 23, 1901.*

I am sure there has been no change of sentiment in regard to the 10-cent-tax feature of the bill, unless it has been an increase in the earnestness with which our people desire the same.

B. P. NORTON, *Dairy Commissioner.*

DES MOINES, IOWA, *December 27, 1901.*

From information received it seems to be the desire of the Dairy Union of this State that there be no change in the oleo legislation of the Grout bill, which passed the House of Representatives of the Fifty-sixth Congress.

JESSE K. COPE,
Dairy and Food Commissioner.

HARRISBURG, PA., *December 24, 1901.*

In reply to yours of the 20th instant, I beg to say that I have heard no complaint in this State concerning the Grout bill, and if there is any demand for a change from this bill it has not made itself manifest to me.

A. B. CHANDLER, *Governor.*

ATLANTA, GA., *December 23, 1901.*

The dairymen of Connecticut are looking at this question very much as the dairymen of the West—that a stronger national law would be of great help.

Connecticut dairymen are very strong in their wish to have the Grout bill or some similar bill become a law. HENRY, the member from the First district, is favorable for it, and will make a good fight for its passage.

J. B. NOBLE, *Commissioner.*

HARTFORD, CONN., *December 24, 1901.*

The various organizations representing the farmers of the State, such as the State Dairymen's Association, State Grange, and State Board of Agriculture, have taken action in favor of the Tawney bill, so called, and will use their influence to secure its passage.

N. J. BUCHELER,
Secretary Board of Agriculture.

CONCORD, N. H., *December 24, 1901.*

At the annual meeting of the State Dairy Association, of which I am secretary, held the 1st of this month, a resolution was unanimously adopted favoring the passage of the Grout bill. This is also the sentiment of the dairy people all over this State.

C. P. SHERWOOD, *Secretary.*

DESMET, S. DAK., *December 27, 1901.*

Having had some six years' experience as deputy collector of United States internal revenue at St. Louis, Mo., and being somewhat familiar with the workings of the law of that State, which is like this and most of the States in regard to the color clause, I am thoroughly convinced that it is almost impossible to secure conviction under this clause. The prosecuting attorneys in most cases, if they can avoid it, will not prosecute. While in the Internal-Revenue Department, of more than 50 cases reported I have never lost one, while the commissioner of one State informed me that he had dismissed 100 cases because he was convinced that he could not secure conviction. I should advocate each State enacting laws similar to those of the United States, especially if the proposed Grout bill passes. I do not think it wise to take off all tax on the uncolored. Let there be at least a small tax, so as to force the

manufacturers to report the number of pounds made. This office is doing all it can to have the law enforced. It has just instituted suit against the Eastern Packing Company for manufacturing colored oleo and offering it for sale.

B. S. NEWLAND, *Deputy Commissioner.*

DENVER, COLO., *January 2, 1902.*

Our butter makers are very much in favor of the Grout bill. The free hand in which oleomargarine is sold in this State now has well-nigh ruined our dairy interests. Our farmers can not make butter on the farm and sell it in competition with oleomargarine. Oleomargarine is sold here at 15 cents per pound and branded as Virginia butter. Our people want a law requiring oleomargarine to be sold as oleomargarine, and not colored in imitation of butter and sold as butter. Our able and efficient member of Congress from this district, Hon. JOHN C. LAMB, will cooperate with you in his usual energetic way in securing the passage of a bill protecting the "honest cow."

G. W. KOINER,
Commissioner Department of Agriculture.

RICHMOND, VA., *December 24, 1901.*

The dairy interests of this State seem very anxious to have this measure (the Grout bill) passed. They have not been as active as they should have been when the importance of the measure is considered. I do not know of anyone, interested, either directly or indirectly, in the dairy business, who does not desire the passage of this bill.

Personally, I am in favor of the bill. I appeared before the Senate committee in Washington last Congress and expect to appear before the present Congress in favor of this measure.

JOSEPH E. BLACKBURN,
Dairy and Food Commissioner.

COLUMBUS, OHIO, *December 27, 1901.*

No pressure has been brought to bear by this department, either directly or indirectly, nor by the butter makers in this State, that we are aware of, either directly or indirectly, to change the wording of the so-called Grout bill in any sense whatever. Personally the commissioner of agriculture of this State does not like changing the bill. He does not deem it wise at this time to stir up dissensions in the ranks of those in favor of the general principles in this bill, but believes the dropping of the one-fourth of 1 cent per pound tax on the uncolored oleomargarine to be unwise.

G. L. FLANDERS,
Assistant Commissioner.

ALBANY, N. Y., *December 24, 1901.*

The Grout bill, as I understand, reduces the revenue tax on oleomargarine from 2 cents per pound to one-fourth cent per pound, and increases the revenue tax on oleomargarine colored yellow to 10 cents per pound. This measure our people were in favor of when before the last Congress and are still of the same opinion; there has been no change of sentiment in regard to this matter. At hotels, restaurants, and boarding houses guests call for butter and are served oleomargarine at butter prices, and the fraud is perpetrated because the product is colored yellow in semblance of butter. There are only two ways to prevent the fraudulent sale of oleo as and for butter; one is to prohibit the coloring of the product yellow in semblance of butter; such a law would be effective if enforced. Experience has proven that it is exceedingly difficult to enforce such a law in the State courts.

The other method is to tax the product colored in imitation of butter in such an amount as will do away with the great incentive to fraud, which in this case is the large profits allowed the retail dealers. When a retail dealer can make from three to five times the profit in selling a pound of oleo that he could in selling a pound of butter, there is great incentive for a certain class of dealers to push the sale of the most profitable article, and this they do. Let the revenue tax be made 10 cents per pound on colored oleo; then those who wish to buy and use uncolored oleo will be able to purchase at oleo prices, which will be much less than at present, while the great incentive to to the sale of the fraudulent article will be done away with. We are not opposed to the sale and use of oleo as such, but we are opposed to its fraudulent sale and use. This matter now before Congress is being watched with most intense interest by all persons interested in the dairy industry.

I have heard no discussion in regard to the repeal of the tax on uncolored oleo, the thing most desired being the 10-cent tax on the product colored in imitation of butter. Personally I am in favor of the one-fourth cent tax on the uncolored article, for the reason that we shall still know how much of the product is manufactured, and also its component parts. This I deem important. If we tax the colored article, as proposed, there will still be a large sale and use of the uncolored, and it will be used as a substitute for butter. If under the control of the revenue department the public can easily be kept informed as to what it is composed of; if untaxed, the opportunity for fraud and deception in its manufacture will be largely increased, and especially is this true from the fact that oleo is bound to be an article of interstate commerce—that is, manufactured in a few States only, but sold in all the States.

S. C. BASSETT,
Secretary and Treasurer Nebraska Dairymen's Association.

GIBBON, NEBR., *December 27, 1901.*

Let me briefly mention the principal opponents of this bill: Oakdale Manufacturing Company, Providence, R. I.; Vermont Manufacturing Company, Providence, R. I.; Goshen Manufacturing Company, Providence, R. I.; Freidman Manufacturing Company, Chicago, Ill.; Swift & Co., Chicago, Ill.; William J. Moxley, Chicago, Ill.; Braun & Fitts, Chicago, Ill.; Chicago Butterine Company, Chicago, Ill.; Illinois Butterine Company, Chicago, Ill.; Standard Butterine Company, Chicago, Ill.; J. J. Murray Butterine Company, Chicago, Ill.; Arthur Jordan Company, Indianapolis, Ind.; Kingan & Co., Indianapolis, Ind.; The G. H. Hammond Company, Hammond, Ind.; Armour Packing Company, Kansas City, Kans.; Swift & Co., Kansas City, Kans.; Harrison Butterine Company, Kansas City, Kans.; Falls City Dairy Company, Louisville, Ky.; Illinois Dairy Company, East St. Louis, Ill.; Standard Oleomargarine Company, Washington, D. C.; The National Dairy Company, Washington, D. C.; The Ohio Butterine Company, Cincinnati, Ohio; Dold Butterine Company, Kansas City, Mo.; Capital City Dairy Company, Columbus, Ohio; Union Dairy Company, Cleveland, Ohio; Holland Butterine Company, Pittsburg, Pa.

The above is a list of the oleomargarine manufacturers as I have got it from the Internal Revenue Department; these, we must all agree, are the beneficiaries under our present law.

Our opponents have attempted to bring up the discussion of the renovated butter. We object to this at this time, because the question has not been studied into as it should be before final action. Let me say, however, that I have visited the process or renovated butter factory in this city, which is operated by responsible parties. A few words on the methods of conducting this factory may not be out of place.

The plant is a very new one; in fact, not yet fully completed. Its cost is to be $70,000. The butter that is renovated in this plant is the ordinary roll butter, some of it coming from Virginia, as well as Indiana, Ohio, and even my own State of Wisconsin. I was shown an invoice of butter there from S. C. Strauhl, Greenbay, Wis. This roll butter, after being brought here, is melted and the curd, water, and foreign substances all allowed to settle to the bottom of the melting tanks. This is led into certain tanks and the clean oil into other tanks, where air is forced through it in order to clear away any rancid flavor. The former is run through a Danish-Weston separator, where all foreign substance is separated from any oil that it may contain. The product is then mixed with milk and run into cold water, where the oil takes up the milk and the product forms into granules, which separate from the butter.

This is taken out and churned, salted, and colored, and process butter is the result. The product is clean, and is composed solely of butter and milk, without the addition of any kind of matter foreign to butter.

I am not now in position to say whether legislation on this product is necessary. There seems to be no reason why it is not perfectly healthful.

The introduction of this matter into the discussion is merely an attempt to divert attention from the main question before us, and constitutes, in a way, a tacit admission that fraud exists in the oleomargarine trade.

The object of the legislation proposed in the bill we have before us is to provide the very best possible means for protecting the people from unscrupulous dealers in oleomargarine. Testimony before our committee showed that it was considered possible, even by manufacturers themselves, to build up a trade in the uncolored oleomargarine if the colored were removed from competition. So that the argument that this bill's passage will kill the oleomargarine business entirely seems not to be based on actual anticipation of such a result, but upon a wish to be allowed to continue the sale of the colored article merely for the reason that because it is a close imitation of butter it can be sold at butter prices and bring a large profit.

I am strengthened in this idea when I think of the fact that one of the largest and no doubt most perfect oleomargarine factories is built within sight of the Capitol. If the promoters of this concern did not feel quite safe that they could go on and make money, prospering in their business whether or not we passed antilegislation, it seems to me they would not have ventured their money.

A few words as to the claims of the two opposing sides to this question. According to my views the people who are interested in pure butter have appeared in entirely a different way in order to bring about necessary legislation to stop the fraud and illegitimate sale of this product than the other side has seen fit to do. The friends of this measure, the parties who are asking for legislation along this line, have used reason, coolly and calmly, with such convincing effect that the opposition have also seen fit to bring in a bill having the same purport; but, gentlemen, the friends of this minority bill have not worked like we have and studied like members of our committee have studied to perfect a bill that might be construed to mean just exactly what we mean.

When in our work we found that there was a deficiency in the old bill we set right to work studying and then talking over and agreeing as to the wording of our bill in all its different sections. After the committee members had visited the Standard oleomargarine factory and there seen how easy it is to color the uncolored product, we immediately concluded that we had to be very careful or our new law would be more inadequate than the old law, as retail dealers and hotel proprietors and the like might buy the white oleomargarine and color it themselves, either again selling same or furnishing it to others to eat, wherefore, our present bill specifies that any person guilty of such act shall be deemed a manufacturer within the meaning of the law, and the fine for such act, where such parties do not have manufacturer's license, is from $1,000 to $5,000—a sum so large that no wise man will undertake the job.

The same with the other sections of the new bill. They are inserted to make it easier for the Internal Revenue Department to carry out the provisions of the oleomargarine law.

I wish to briefly consider some of the evidence that has from

time to time been presented to our committee from the other side, that you may in a way measure the unfairness and exaggeration of such testimony.

First and foremost among these let me quote you from the statement of Mr. A. Larson, general manager of the Standard Butterine Company, of Langdon, D. C. Question by Mr. SMITH, of our delegation: "Do you make any white butterine?"

To which Mr. Larson answered "Yes." You can imagine how surprised we were when we visited the factory of which he is the manager and found that they do not manufacture a single pound of white oleomargarine for consumption. The information we received at the factory was that one or two shipments of white (uncolored) butterine had been made, and that either all or a part of same was returned to the factory, and that this was the last trial made by the company in the line of white oleomargarine. Asked again by Mr. SMITH:

"About what proportion?" (White oleomargarine.)

"Very near half of our output." Certainly false, since none is made.

Mr. Larsen informed the committee that the output of his factory is about 700,000 pounds a month, and about half of this amount uncolored. Another falsehood, since no uncolored is made. Asked by Mr. HENRY:

Does your uncolored find a ready sale in the market?

Mr. LARSEN. You have to work harder to sell the uncolored goods than you do to sell the colored goods.

Mr. LAMB. For it is more expense?

Mr. LARSEN. Yes.

Another falsehood, since none is made. Mr. Larsen produced two samples of oleomargarine, claiming them to be one each of the two different brands made for the trade, one with cotton-seed oil and the other without, which is another false statement, because I have gone on the market and bought samples of each of the two brands made by this factory, and had the same analyzed by Dr. Wiley, Chief Chemist of the Agricultural Department, who reported that the result of his investigation shows that both kinds contain cotton-seed oil.

In answer to a question by myself as to whether in the manufacture of white oleomargarine the same method is carried out, Mr. Larsen said, "Yes; the same thing." Another falsehood, since none is manufactured.

I understand that this same Larsen, whose every statement as here copied was a barefaced falsehood, explained in some way to the committee afterwards that he did not fully understand the questions and had been mistaken in his statements. Well might he do so after the committee found out that his every statement was false.

I also wish to quote from the statement of Prof. George M. Kober, page 40 of our hearings, under the heading, "Butter adulteration," he states:

The popular demand in this country being for a yellow article the year round it is customary to secure this color out of season by the addition of annotto, and other harmless vegetable colorings.

In answer to this, as I mentioned once before, the almost exclusive manufacturers of butter color is Wells, Richardson & Co., whose color is used both in butter and cheese, and is what Dr. Wiley, whom the professor later refers to, classes as mineral coloring, never mentioning either annotto or other harmless colorings. Dry annotto was the coloring that I sold when a little boy, and not that of the present day.

The professor goes on and states that "apart from the sophistication in color," and here is where I feel that the common business man like myself knows more about this sophistication than the scientist. I feel that my evidence on that subject must stand, because besides my own experience I quote from the best authority in the land. So that the sophistication is the yellow cloak of butter that is worn by oleomargarine, and which helps it that it may sneak in, even into our own throats, where it is not wanted.

The professor then goes on informing us that the more common forms of adulteration in butter consist in the addition of salt, and, among other things, the retention of as much water as possible. This shows to me clearly that this scientist either does not know what he is talking about or else argues from a very partial standpoint—not in any way doing justice to butter. If he had ever been a butter manufacturer he would soon have learned, had he tried it, that the salting of butter must necessarily be so exact that every pound of butter that is put upon the worker to be worked is weighed before being dumped upon the worker, and the salt is also weighed which is added to the same, that the quantity may be exact. If any butter maker neglects that rule, and also the rule that the water must be worked out of the butter, he will find that the purchaser will soon understand where the trouble is, and that the consequence is that such butter will not command top price, so that such butter maker is necessarily bound to do his best or else he will bring ruin to his proprietor, if his proprietor does not see fit to grant such party indefinite leave of absence.

The Doctor goes on naming other forms of adulteration, as the addition of starch flour, lard, and suet, that a greater profit may be realized. Also, he quotes from others, naming gelatin and gilt-edge butter compound. Allow me to read the definition in our present oleomargarine law as to what shall constitute butter:

It is the food product which is made exclusively from milk or cream or both, with or without common salt, and with or without additional coloring matter.

I will also read the definition of oleomargarine as per section 2:

That for the purposes of this act certain manufactured substances, certain extracts, and certain mixtures and compounds, including such mixture, and compounds with butter, shall be known and designated as "oleomargarine," namely: All substances heretofore known as oleomargarine, oleo-oleomargarine oil, butterine, lardine, suine, and neutral; all mixtures and compounds of oleomargarine, oleo, oleomargarine oil, butterine, suine, lardine, and neutral; all lard extracts and tallow extracts, and all mixtures and compounds of tallow, beef fat, suet, lard, lard oil, vegetable oil, annatto, and other coloring matter, intestinal fat, and offal fat made in imitation or semblance of butter, or when so made calculated or intended to be sold as butter or for butter.

Wherefore we perceive that all persons who are tempted to venture such adulteration are not butter makers; their product is not butter, but bears the same name, "oleomargarine," the same which the Doctor himself is interested in the manufacture of, which he speaks of on page 53, where he states that he regards it as a beneficent industry. Oh, how differently he looks upon it than I possibly can do! The adulteration of butter that he speaks of is not alone in law the same as that he is interested in, but in fact. In the place of being beneficent it is certainly a fraud in every case where such oleomargarine is fixed up to look like butter, to sell like butter, and does sell like butter.

I also find on page 21 that the Professor advances arguments under the heading "Process or renovated butter." That subject I have mentioned before. I have, however, left out one fact, and that is, that if there is any competitor that packing stock or poor roll butter has it is the oleomargarine factory, because butter, no matter how poor, can be neutralized so that it will have no flavor and will yet hold up better than any other product that goes into oleomargarine, and judging by the cost of low-grade oleomargarine we must conclude that such is the kind of butter that is apt to be used in the low grades of oleomargarine on account of its cheapness.

On being closely questioned by Mr. GRAFF as to his general opinion whether oleomargarine is sold pretty generally as butter, the Doctor answers "yes," and later on states that every product should be sold for what it is and at its true value. Gentlemen, I can not make this in any way harmonize with the statement where the Doctor speaks of the beneficent industry, this industry where, when Mr. GRAFF gets the Professor cornered, he acknowledges that it is sold for that which it is not, and more than that, acknowledges that things should be sold for what they are. I know of no other article of the magnitude of oleomargarine where there is so much fraud and illegality of transactions as in this article.

Upon being pretty closely examined as to whether or not scrap fat and grease can be used in the manufacture of oleomargarine the doctor starts out by trying to explain that such can not be used, but after being questioned more definitely we find he does not know anything about it. Of the hearings before our committee this year we find that one-third of same is made up of scientific figures and tables and statements of the professor. I have tried to explain some of the statements, while the figures I do not think that anyone either of the committee or the House who may have read same have lost any sleep over.

Next we have statements of W. J. Lambert, attorney for the Standard Butterine Company, who advises us that he believes in being absolutely as fair as he can in treating of the question before us for consideration, stating that no fair-minded citizen can arrive at any other conclusion than that, from beginning to end, while Governor Hoard has charged fraud, deception, dishonesty, and so on, there is not a particle of truth of any fraud or deception being practiced by the oleomargarine people.

Whatever little scintilla of alleged evidence is shown in the document exists in the shape of the grossest kind of hearsay testimony, concerning which there is not a lawyer at this table who would not say it is absolutely foreign and should be thrown out, and that the person who advanced it should be criticised for having interpolated it into the discussion.

What a contrast to first listen to Governor Hoard, the president of the National Dairy Union, with his manly form and ready wit, who addressed us first; this man who has been in the business of instructing the dairy people of the United States more years than any other party that I know living, who has appeared before large and intelligent audiences of dairy people, instructing them in the different branches of dairying, he himself having a most thorough knowledge of the situation after having studied it for years and years. Not only has he imparted his knowledge to the dairyman, the farmer, the stock grower through words, but through pen as well, in having been the editor and proprietor of Hoard's Dairyman, which, together with Charles Y. Knight's Chicago Dairy

Produce and other dairy papers, have done so much to educate along this line. In contrast to this we have a bright-looking, small, young man, who presents himself, advancing the idea that this venerable worker's ideas should be thrown out as worthless.

This gentleman goes on stating thus:

I say it is the duty of the Legislature, first, to find out whether it can not devise a system or a law to protect the citizens against an imposition of that kind before it comes and strikes a blow at the heart of a legitimate and an admittedly legitimate industry, and crush out of existence the hundreds of wage-earners and the thousands and millions of dollars that people have honestly put into the manufacture of a proper industry.

Try your laws first. Do not strike, as the people who want to annihilate an industry would have you believe it is proper to do, at the heart of an industry and crush it out. It has not been tried, and that is what the people and those who have honestly followed a line of action in this connection are first entitled to, I submit, at the hands of your representatives.

Reading this part of Mr. Lambert's statement calls back to my mind his first statement, where he starts out by alluding to the fairness with which he intends to handle this question. It would be more natural for me to conclude that this is all taffy. We have tried State laws, now having them on the statute books of 32 States of the Union, and yet we find that there is nearly as much oleomargarine sold in the one State of Illinois against the law of that State as there is legally sold in all the States of the Union that have no laws against its sale. I can not see where this gentleman can expect in any way to convince a single member of our committee by advancing such arguments. His first statement also comes back to my mind, where he says that there is not a particle of proof of any fraud or deception being practiced by the oleomargarine people. Had this gentleman had the experience and the reputation of our Governor Hoard, he would not have presented such charges. He would have had so much at stake that he could not afford to have done so, and it certainly has hurt the oleomargarine industry rather than helped it when their representatives have appeared before us and made the declarations of this young man.

I find that Representative HAUGEN, of our committee, that friend of the farmer who has fought with fairness and judgment and untiring energy, yea, even like the energy of the Vikings of old, and yet in that characteristically pleasant manner which is a stock in trade with him, whereby to overcome the enemy, gets after this attorney of the oleomargarine institution. Mr. HAUGEN has proved both through the report of the Internal Revenue Department, as well as by Mr. Adams, dairy commissioner of Wisconsin, that three-fourths or more of the oleomargarine that is sold in the United States has been sold in violation of law. The effect of this is that Mr. Lambert now tries to shield himself, acknowledging that oleomargarine is sold at different places in imitation of butter, but says that condition prevails as to nearly all food products.

He is further questioned as to how oleomargarine colored yellow can legally be sold in the States where the laws are against the sale of such colored product. Here Mr. Lambert is also brought to time by answering, "You can not do it; that is a self-evident proposition."

After being questioned further, Mr. Lambert explains the situation among oleomargarine manufacturers to be that they wish to be let alone, and further acknowledges that the oleomargarine manufacturers are not adhering to the laws of a State if they solicit orders in States where same is forbidden.

It has been charged that in attempting to put a stop to the fraud we will, intentionally or otherwise, drive the oleomargarine makers out of business. There is no intention that I know of to legislate oleomargarine out of existence. It is not the industry that we want to kill but the fraud; we are not here to destroy but to correct. Our bill is the only one which gives any promise of effectually doing away with the fraud. The minority bill simply seems to express the idea of the oleomargarine manufacturers in the cry, "Let us alone. We merely want to be let alone." I do not wonder that they wish to be let alone. If by some process an article may be manufactured at half the usual expense of another article and be sold for that other article at many times the profit of the genuine, then in the course of human events we find parties will always appear who will manufacture the imitation, and it is not strange that they will wish to be "let alone."

It has also been asserted that the passage of this bill will mean the loss of some $62,000,000 annually to the stock raiser by depriving him of a market for his stock through the destruction of the oleo industry, which makes use of what he has for sale. This is a remarkable condition of things. A little investigation will show the absurdity of such an allegation. As a matter of fact, the total value of the ingredients used in the manufacture of oleomargarine last year was about $7,000,000. I will be an interested witness to that process of reasoning or mathematics which can demonstrate how even the total destruction of the oleo industry will be able to deprive the stock raiser of nine times as much wealth as is represented in the total value of the ingredients entering into the finished product. The statement is simply one of the many ill-advised attempts which have been made so frequently to bolster up the cause of fraud.

It has been the desire of this committee to frame a bill which will, if passed, be as nearly perfect as possible in dealing with this question, and we believe that we have done so.

We believe the second section of our bill to be very necessary. We visited the factory of the Standard Butterine Company, near this city, and there learned that it is possible to color oleomargarine very easily and quickly. This being the case, it would be a temptation to the hotel, restaurant, and boarding-house keepers to buy the uncolored product and color it themselves. Therefore, we thought it wise to incorporate this second section into our bill. It will prevent fraud of this particular kind because it makes manufacturers out of parties carrying on such practices and renders them liable to the fine which may be imposed on manufacturers, and this is so large that no one with good judgment would attempt any such fraud.

Section 3 is introduced in the bill, the first part imposing a tax of one-quarter of a cent a pound on uncolored oleomargarine, making it compulsory with the manufacturer that correct books be kept by them, showing the ingredients and the amount of each ingredient used in such manufacture, also showing the amount manufactured and to whom sold, which books shall be open to to inspection of internal-revenue agents, just the same as the requirements of the present law. The tax on the colored product is raised from 2 to 10 cents a pound, the object being the placing of colored oleomargarine on an equality in price with butter, thereby taking away the present strong incentive for committing fraud by selling such oleomargarine for butter at nearly butter prices.

Section 4 of the present bill is incorporated that the Internal-Revenue Department may have no trouble in getting access to the books of the oleomargarine manufacturer, which has been some trouble to the Department in the past.

We have no hesitation in supporting this bill in all its provisions, because we believe that they will all prove as efficient as it is possible to make them, and that they are all necessary to the proper construction of an oleomargarine law which shall be stable, just, and approved by the majority of the people. Every section was unanimously agreed upon by the members of the committee who were friends of the dairy interests, and every section represents the result of much study and research into all the problems connected with the question. In behalf of honest legislation against the dishonest traffic in oleomargarine we ask the passage of the bill; in order to obtain the greatest good for the greatest number of people we ask the passage of the bill; we ask it conscientiously believing that it is actually needed, and not from a sentimental prejudice in favor of the great American cow, who is, however, one of the greatest wealth producers of the country, and on whose account a certain amount of sentiment might be excusable. It is not our wish to destroy industry which is legitimate, wherever found, but to make illegally directed energy exert itself in legitimate channels. We seek for complete justice to the interests concerned in this discussion, and in behalf of that justice we submit that this bill ought to be enacted into law.

Rural Free-Delivery Service.

SPEECH

OF

HON. SPENCER BLACKBURN,

OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, March 10, 1902.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 11728) to classify the rural free-delivery service and fix the compensation to employees thereof—

Mr. BLACKBURN said:

Mr. CHAIRMAN: "Thrice armed is he that hath his quarrel just." To my mind it is a condition which confronts us and not a theory. In this great country we have two distinct classes of citizens; one is the urban population, the other lives in the rural districts. The people of the cities enjoy many comforts and opportunities not possible to the people in the country. We have under consideration now a measure which, whether so intended or not, would, if acted upon favorably by this Congress, work incalculable injury to the people who are not so fortunate as to be inhabitants of cities of more than 10,000 population. Within the last few years there has been inaugurated by the Post-Office Department of our Government a system of mail delivery which to the people of the country districts means more than any other consideration ever received by them at the hands of the Government.

Rural free delivery is comparatively new, but not so young as to be only experimental. There are now in the country, I am informed, more than 8,000 carriers, whose business it is to go each day, with the exception of Sunday, through the districts heretofore isolated from post-offices and post-roads and carry to the population their letters and papers and receive from them such mail as they desire to post. These carriers are appointed by the Government, paid by the Government, under bond, insuring to every patron of the route which he travels prompt delivery of his mail and security against destruction, theft, or fraud on the part of the carrier. These carriers, as they are now selected, are men of character and responsibility.

The people of the cities enjoyed this convenience long before it was conceived or dreamed of for the benefit of the people of the rural districts. Their mail was delivered to them daily; in many cities several times a day.

It seems to me that as far as practicable the people of the country should be as generously treated by the Government as those of the cities. The bill under consideration does not, upon its face, antagonize our present system of rural free delivery, to which the country people now look with hope and confidence for their promotion and enlightenment; but the method sought to be inaugurated in supplying the country population with carriers to my mind would prove absolutely disastrous to the system and render it entirely inefficient. It is my desire to give to the people of the rural districts the same advantages, as far as possible, as those now enjoyed by the people in the cities, and the only question is how shall it be done.

I submit that from my observation and experience, if we seek to secure this result through the contract system of letting the routes to the lowest bidder, as now proposed by the gentleman from California [Mr. LOUD], the rural free-delivery system will not be successful, and its attempted establishment and further extension upon this basis would prove a most dismal failure. Our experience with the contract system in connection with the star routes in this country should be a sufficient object lesson to convince the most skeptical that the consideration of this question in connection with this system would be unwise in the extreme, and the only effect of the proposition submitted by the bill now before us would be to render rural free delivery as inefficient and unreliable as the star routes themselves are. Under the present arrangement, paying to the carrier $600 a year, which is a sum small enough for the smallest route, we secure efficient service and satisfactory results. If the object of the bill is to destroy the rural free-delivery system, which is disclaimed by its advocates, its object will be most effectively accomplished should this measure become a law.

In the district which I have the honor to represent, which is almost entirely rural, where the only means of procuring mail by my constituents is through the medium of the star routes, the contract is taken at such an inadequate price that the contractor is unable to render the service required at his hands, and in many instances wholly unable to deliver the mails at all. Oftentimes the postmaster is required to supply the service for days and weeks until the original contractor or some one of the many subs to whom he has let it appears upon the scene and relets it to another party whom he is able to dupe into the belief that he can meet the demands of the Department and make the schedule time; or the people are left absolutely without any service, and the mail facilities upon these routes is absolutely paralyzed.

I know in my district one route, a distance of 32 miles, over which the carrier must go daily, supplying more than one entire county, carrying hundreds of pounds of mail matter, for which he receives within the neighborhood of $400 per annum—a little more than $1 per day, requiring the service of at least 4 horses and 2 carriers. I know of another route which is let for a distance of sixty-odd miles, for which the carrier gets less than $900 a year. For this sum he is not able to keep his horses in good condition and hire a carrier who is in any wise responsible. The result of which is the inconvenience of the patrons of the line and the absolute inefficiency of the service.

With my knowledge of these facts, which continue to exist each succeeding year, I shall never consent to destroy by my vote a system which is now being introduced into the country for the benefit of that class of citizens who stand in need of it. There are in my district 40,000 voters and 200,000 American freemen whose interests are more to me than that of any other citizenship in this great land, and to those interests I shall not knowingly prove false.

Some days since I voted for an appropriation to spend millions of dollars—hundreds of millions of dollars—to build a canal connecting the two great oceans, and I did it freely, because I thought it was for the public good. I voted for an appropriation of $500,000 to provide shelter for our soldiers in the Philippine Islands against the ravages and ills of that climate, and I did it cheerfully. And when I vote upon this proposition I shall vote for the interests of the people who sent me here and whose confidence I enjoy and whose interests I shall endeavor to guard as long as I remain in the capacity of a public servant. I shall vote against this proposition and for our people in the rural districts, who ask for less at the hands of legislative assemblies than any other citizenship in the world, and who in times of trouble respond most cheerfully to their country's call.

We are sending hundreds of teachers to the Philippines to aid in the enlightenment and intellectual and Christian development of the natives of those islands. By the final arbitrament of war they have fallen into our hands, and it is our duty to enlighten and Christianize them. While this is the case, there are thousands and thousands of American freemen, my blood and my flesh and my bone, who are looking to me to guard their interests, and I shall endeavor so to do. Whether the opposition intends to destroy this great system, which means so much to the rural population, this bill, if passed, will prove as effective in so doing as a measure actually directed at its repeal. I read with considerable interest the speech of the gentleman from North Carolina [Mr. KLUTTZ] in advocacy of the further extension of the rural free-delivery system and its advantages to the people in the rural districts, and I thought that he might have added an extra reason why he and the distinguished gentlemen of like faith in our State should be heartily in favor of the present system of rural free delivery.

I would suggest to him that a further reason for my opposition to this measure, which I think would prove detrimental to the rural free-delivery system, is that under a law which his party forced upon the people of my State by intimidation, fraud, force, and murder, under an election law which disregarded contemptuously the rights of all opposition to the machine Democracy of our State, that no freeman, however intelligent he may be, after the year 1908, six years from now, will be able to vote in any election in our State unless he is able to read and write to the satisfaction of a Democratic registrar any section of the constitution of North Carolina. In the absence of school facilities and the means of our people to educate their children it is appalling to think of the consequences following in the train of a constitutional amendment, the only object of which was to give the dominating party in our State permanent lease on political life, and which we must meet and realize long ere we are ready for it. My information is that, approximately, 33 per cent of the white population of my State is illiterate. May we hope, without schools better than we now have, to educate, within the next six years, all the boys who are now 15 years of age and upward?

With this awful condition confronting us, and the gentleman himself being responsible, so far as his influence and efforts are concerned, it is no wonder to me that he should be heartily in favor of this measure and seek now, when too late, to remedy an irreparable wrong which his party has inflicted upon a helpless though honest people.

So far as I am concerned, I hope that these mail facilities rendered through the operation of the rural free-delivery system may be extended to every home throughout the length and breadth of my State. In the absence of the school facilities such as we need there is a ray of hope that by extending these facilities and keeping the people in touch with the newspapers and other sources of information many an honest freeman and aspiring youth may get sufficient education and information to save him from the humiliation and disgrace of being made to stand aside six short years from now with the vicious negro, simply because he can not read and write. The curtain is falling upon the first act now, and the citizen who is unable to pay his tax before May 1 of this year will be a serf on a level with the common criminal.

May the hand of God shield us from the scenes of the second act when 33 per cent more will be added to the number already sacrificed.

I want to maintain the present system because it injures no one and benefits thousands. It comes with life and light and sunshine, and gives hope and inspiration. It has been suggested by gentlemen upon this floor who favor this bill that within the next few years there will be 30,000 carriers and millions of people supplied by this system at an immense expense to the Government. So far as I am concerned, I wish we had them now. The millions in our vast cities are already enjoying the benefits of free delivery; to that no one has objected, nor would anyone do so. At the same time may we not give to our constituents in the country—the bone and sinew of our land, the great conservators of peace, law, and order—some of the advantages enjoyed by the people in the great cities? It is said that in the great marts of trade where the fortunes are accumulated, that within these generations business would be paralyzed and thousands of enterprises hampered except for the fact that up from the country comes new blood and new life to take the places of those who are city-reared and city-bred through the beneficence of their ancestors, who likewise came from the country to make the fortune which they have squandered. [Applause].

If this be true, why not then place within the reach of the youth of the country every advantage possible for us to place there?

There is no education like the public press, and what I desire to do is to put, as far as possible, in the hands of every citizen in the district which I have the honor to represent some means of enlightening himself, informing himself upon the public issues of the day, making himself a better and more intelligent citizen. Should this bill become a law and the contracts let to the lowest bidder, the result will be that the routes will be let to men who can not do the service, the rural free delivery will be rendered inefficient, unreliable, and the great mass of our people whose object it is to aid, elevate, and enlighten—the best citizenship of our land—will be denied the recognition to which they are entitled. [Applause.]

In conclusion, Mr. Chairman, I desire to register my vote unmistakably in favor of the welfare of as true constituency as ever charged the citadel of fraud or wrenched victory from defeat—citizens whose liberty is as dear to them as their lives and little ones, and who will resist to the last fatal ditch any encroachment upon their rights; and hail with equal delight whatever small consideration may be shown them in the race of life. I shall cast my vote with the hope of giving one extra ray of light to the citizenship of the community in which I was born, as true to the flag as the steady fixedness of the North Star to the pole—as devoted to their country as Arnold Winklereid, or the Scottish highlander who followed Wallace and Bruce for the love of his Mary and his native heath. For the urgent needs of the great common masses, their welfare, and their hope—the people of the country—I stand and plead.

Ill fares the land, to hastening ills a prey,
Where wealth accumulates and men decay;
Princes and lords may flourish or may fade—
A breath can make, as a breath has made—
But a bold peasantry, their country's pride,
When once destroyed, can never be supplied.

[Applause.]

Oleomargarine Bill.

SPEECH
OF
HON. JAMES T. McCLEARY,
OF MINNESOTA,
IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 5, 1902.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 9206) to make oleomargarine and other imitation dairy products subject to the laws of the State or Territory into which they are transported, and to change the tax on oleomargarine—

Mr. McCLEARY said:

Mr. CHAIRMAN: The House is always delighted when it is afforded the opportunity of listening to the gentleman from Illinois [Mr. BOUTELL]. As he said of another at the beginning of his address, whatever subject he touches he illumines, and we enjoy him whether he speaks soberly or in a jocular tone.

I noticed that the early part of his address was jocular, and I could not help thinking of an address on a somewhat similar subject given by Josh Billings, of perennial fame, who was announced to deliver an address on "Milk." He appeared before his audience. Upon the lecture table was a glass of milk. He drank the milk and proceeded with his address, but with no further reference to the subject of milk. Some one said, "I paid my money to hear you deliver an address on milk." "Well," said he, "didn't I deliver that address—on milk?"

I want the attention of the committee to the fact that during the closing part of my friend's address, when he discussed so ably national finances, he talked soberly. I can only assume that like many another skillful public speaker he began his address in jocular vein, when he was talking upon the subject of the bill under consideration, and that in that connection he did not intend us to take him seriously.

AGREEMENTS AND DISAGREEMENTS.

Mr. Chairman, persons in the gallery who have attended these meetings for only one day are probably possessed of the idea that among those discussing this bill there are many and serious disagreements. But those of us who have followed the discussion carefully and have analyzed, as it proceeded, the remarks made, can hardly fail to be impressed with the fact that there are more points of agreement than of disagreement.

The practical question before each member of the House is this: "When the Committee of the Whole concludes discussion and the time comes to act, which of two bills am I going to vote for?" For among all those who have spoken I have heard no one who did not express the expectation to vote for one or the other of these two bills, the question being, "Which of the two shall I vote for?"

Now, let us note some of the things about which all seem to agree.

First, no matter which bill we support, the starting point of each, the spoken or unspoken major premise, is the proposition that there is great fraud in the sale of colored oleomargarine.

Second, everyone follows with the proposition that national legislation is needed at this time to check that fraud.

And, third, all agree that this legislation should, in the first place, prevent the fraud; and, in the second place, not interfere with any legitimate industry. On all of these points we seem to be agreed.

Mr. BOUTELL. Does the gentleman say we are all agreed in the necessity for national legislation?

Mr. McCLEARY. So far as I have heard, no one has taken issue with that proposition.

Mr. BOUTELL. There was where I was perfectly sober and serious, when I emphatically denied any necessity for national legislation.

Mr. McCLEARY. I did not take it seriously, because the gentleman mixed it with so much fun. [Laughter.] But I would remind my friend that there has been a national law on this subject for nearly sixteen years, the law whose weak places we are now proposing to make strong. So that if nothing is done now we shall still have a national law on the subject. The question, then, would be, "Shall we keep the present law unchanged or shall we make it a better one?"

The only disagreement, then, is as to the method of accomplishing improvement.

SOME HISTORY.

At this point it may not be amiss to revert for a short time to the history of this kind of legislation.

Oleomargarine, so far as we can learn, was first made in France about the year 1868, as an experiment. In the Franco-Prussian war the industry was encouraged by France, for the time being at least, in the hope of furnishing a suitable substitute for butter for the men in the field. The industry took root in the United States about 1873. So that the industry in this country is about twenty-eight years old. As time progressed State after State found it necessary, in defense of its citizens, to pass laws restricting the sale of this colored oleomargarine. At the present time there are 32 States in the Union having such laws, more or less restrictive, and these States contain four-fifths of the population of the United States.

About sixteen years ago it became evident that the State regulation was inadequate to meet the conditions, and on August 2, 1886, after months of consideration, an act of Congress was passed supplementing the work done by the State legislatures. That act of August 2, 1886, is still in existence. It is that law which is to be amended by the pending bill.

The bill which resulted in the act of August 2, 1886, as introduced into the House, provided for a tax of 10 cents a pound on oleomargarine, whether colored to resemble butter or not. As reported by the Committee on Agriculture and as passed by the House the tax was reduced to 5 cents a pound. In the Senate the tax was reduced to 2 cents a pound, and thus it became a law.

Now, by 1888, when the business had been in existence only fifteen years, the product of oleomargarine in the United States, notwithstanding the restrictive legislation I have spoken of, amounted to 34,000,000 pounds per year. State legislation more rigorous in character was adopted, but by 1901, thirteen years later, the product had amounted to 104,000,000 pounds in round numbers, or more than three times what the product was in 1888. The bulk of this immense product is believed to be sold fraudulently as butter and largely at about the price of butter. This explains in part the need of further national legislation, as judged by the majority and almost unanimously conceded by the membership of this House.

THE CASE ANALYZED.

Now, here is fraud being committed. Here is a disease in the body politic. The skillful physician called to attend a sick person endeavors first of all to diagnose the case in order to determine the nature of the disease and the causes thereof. Let us analyze then, briefly, the nature of the fraud and its causes.

Its nature? It consists essentially in selling to people who desire butter a product which is not butter, but so closely resembles butter that it is sold as butter and at about the price of butter.

By whom is this fraud committed? My friend Mr. WADSWORTH was right when he said that it is not committed immediately by the manufacturer. It is committed by great numbers of retailers supposed to sell butter, and by very many keepers of hotels, restaurants, and public boarding houses.

Illustrations of the methods of fraud were given so fully yesterday by my friend from Wisconsin [Mr. DAVIDSON] that I shall not trespass upon your time to consider them further to-day.

What is the motive of the act? When we reach the motive we get very near to the application of the remedy. The motive of the act is gain. Those guilty of the fraud sell the colored oleomargarine because of the difference between the wholesale price of oleomargarine and the retail price of butter.

What makes the fraud possible? It is accomplished through the color of the article.

Right here, then, we have the elements of our problem. We have, first, the motive, which is gain; and second, the means, which is color. The purpose of the bill reported by the committee is to strike at the motive through the means.

Let us consider briefly the two bills before us to ascertain how each bill endeavors to meet the difficulty. We shall thus discover wherein the bill reported by the committee is the better bill.

THE WADSWORTH BILL.

The minority bill, or, as it is called, "the Wadsworth bill," amends sections 3 and 6 of the act of 1886, to which I have referred. Section 3 refers simply to the license fees and is not so very important. The amendment proposed to section 6 contains the gist and the germ of the differences between the two bills.

By the way, I need hardly say that the Wadsworth bill must have some good, strong points about it, otherwise it never could have secured the indorsement of men like JAMES W. WADSWORTH, of New York; WILLIAM CONNELL, of Pennsylvania; CHARLES F. SCOTT, of Kansas; JOHN S. WILLIAMS, of Mississippi, and HENRY D. ALLEN, of Kentucky, the members of the Committee on Agriculture who favor the Wadsworth bill. These are men whom we all know to be gentlemen of the highest character and of very superior ability. In the nature of the case this bill must have great merit or such men would not approve it and support it. This very merit is what misleads some of our friends into its support. While it has merit the bill reported by the other 12 gentlemen of the committee, gentlemen of equal character and ability, contains still more merit, as I hope to show.

The main paragraph of the Wadsworth bill is the one which amends section 6. Briefly, it provides that the maker of oleomargarine shall sell that product, whether colored or uncolored, in 1-pound and 2-pound packages; and that each package shall be marked by the manufacturer with the word "oleomargarine" plainly impressed into each 1 or 2 pound piece. Around each package a paper must be wrapped, upon which is marked the name "oleomargarine." Then around that another stronger wrapper, made of wood or other substance, as the manufacturer may choose, is to be placed for the protection of the package, and that must be marked plainly "oleomargarine." And around the package thus made up is to be strapped the revenue stamp of the Government. And no broken package is to be sold for use. Each package must go into the hands of the consumer unbroken.

Now, the merit of that bill is this: It does put a restriction upon the practice of such a man as the grocer in retailing that product to the consumer. He must sell the oleomargarine in one or more unbroken packages. Through the marking referred to the purchaser is fully advised that the article is oleomargarine and not butter. In the case of the man who buys for consumption in his own home the bill does seem to have a great deal to be said in its behalf. It does seem to be pretty nearly effective in protecting the consumer who buys from the dealer for his own use.

But knowing that he is getting oleomargarine, the purchaser would of course not be willing to pay as much for it as if he thought it to be butter. To increase his profit the dealer is tempted to deceive the purchaser. And I can not see why a dealer disposed to practice fraud might not unwrap the package, take out the oleomargarine, pack it in a tub, and then out of that tub sell it as butter. Of course it would be a fraud, and if caught at it the man would be punished. The bill, I understand, provides penalties for that offense. But the chances of being caught are so small as not to be much of a deterrent.

Then there is another class of people, and a very large one, too, who are utterly unprotected by the bill. You and I are boarding. Very few of us can afford to keep house here in Washington; it is too expensive. Most of us are boarding. Think of the number of people all over this country who are unmarried and who are boarding. Think of the habit which is growing up even among married people of boarding part or all of the time. Think of the number of people who are traveling to and fro. You rarely go upon a train without finding it filled with people. Americans are great travelers. So I might go on enumerating people of this class. Now, my friend [Mr. WADSWORTH] will hardly claim that for this class of consumer there is one particle of protection in his bill.

Mr. WADSWORTH. I think there is ample protection, but I will not consume the gentleman's time by answering him at present.

THE COMMITTEE BILL.

Mr. McCLEARY. Now, let us look a moment at the bill of the committee. As I said, the thing that causes the trouble is the very natural desire for large gain or profit. The desire for unusual gain is the cause of the whole trouble; and the instrument of the fraud is the color of the product. The heart of the bill which the majority has reported consists in this—that it removes the temptation; the effort at least is to get at the root of the matter by removing the temptation.

The bill consists of four sections.

Section 1 provides that oleomargarine carried into any State or Territory shall be subject to the laws of said State or Territory, even if the oleomargarine is sold in the original packages, thus obviating the effect of the "original package" decision of the Supreme Court. By the way, the effect of the Wadsworth bill would probably be the very opposite—namely, to break down the laws of the 32 States on the subject.

Section 2 extends the definition of "manufacturer," as used in the act of 1886, so as to include all persons making the colored oleomargarine for sale; such, for instance, as boarding-house keepers who buy the oleomargarine uncolored and then color it for boarders.

Section 3 raises the tax on colored oleomargarine to 10 cents per pound and reduces the tax on uncolored oleomargarine to one-fourth of 1 cent per pound. This is the central and essential paragraph or section.

Section 4 amends the McKinley Act by providing for better reports from wholesalers of oleomargarine.

Mr. LESSLER. Will the gentleman allow me a question? I want to get some information which no member thus far in the debate seems to have given.

Mr. McCLEARY. Certainly; I yield for a question.

Mr. LESSLER. Will the gentleman clearly tell me what the consumer who wants yellow butter or yellow oleomargarine will do when 10 cents a pound taxation is added to the price of the commodity? I refer to those who can not afford to buy 35-cent butter.

Mr. McCLEARY. I will endeavor to reach that point in due course; I have it in my mind to be considered. The gentleman's question is a perfectly pertinent and proper one.

MAKING FRAUD UNPROFITABLE.

How shall the trouble be reached—the desire for and hope of unusual gain? The principle of the committee bill on this point is illustrated by a story. I remember hearing once of a man who was running what is known in common parlance as a "blind pig." The story is located at the home of my friend on my right, the gentleman from South Dakota [Mr. MARTIN].

Mr. MARTIN. Probably its actual location was over the line—in Minnesota. [Laughter.]

Mr. McCLEARY. The incident might have occurred over in my district, but we always locate it in South Dakota when we tell the story.

Mr. MARTIN. The reason of that is plain.

Mr. McCLEARY. Obvious. We never claim what does not belong to us.

The man was arrested, tried, convicted, and fined. He went back and engaged again in the business. He was again arrested, again tried, again convicted, again fined. Again he returned to the business. This process was repeated many times. Finally the magistrate asked him one day, "How long are you going to keep this thing up?" "Why," replied he, "just as long, your honor, as there's 8 cents profit in a 10-cent drink." [Laughter.]

Well, that is exactly the situation here. This fraudulent sale of oleomargarine for something that it is not will be kept up just as long as there is such an enormous profit to be made by practicing the fraud.

Mr. MONDELL. Will the gentleman allow me a question?

Mr. McCLEARY. Certainly.

Mr. MONDELL. Following the line of the illustration which the gentleman has just given, I wish to ask him this question: Does he believe that he will eliminate fraud from the sale of oleomargarine by making the incentive to fraud not 2 cents a pound, but 10 cents a pound? In other words, would the judge have closed the "blind pig" in South Dakota or Minnesota, whichever it might have been, if by some hocus-pocus he had increased the profit on the drink from 8 cents to 80 cents?

Mr. McCLEARY. The question is ingenious, but I do not see what it has to do with the case. [Laughter.]

Mr. MONDELL. The gentleman's argument, as I understand, is that the intent of this legislation is to prevent fraud by taking away the incentive to fraud. But instead of that, this legislation, as I understand, multiplies the profit, and thereby the temptation to fraud, five times.

Mr. McCLEARY. There would be little change in the retail selling price of the colored oleomargarine. It could not be raised much without making it equal to the selling price of butter. But the 10-cent tax on the manufacturer would decrease his profit by that amount, removing from him the temptation to make the colored article. This is our purpose.

Mr. FOSTER of Illinois. Will there not be the same incentive to commit fraud? Can not a man take uncolored oleomargarine into his store and color it himself? And can he not, if arrested

and punished, go on committing the fraud just the same as before, and continue paying the fine, as in the case of the man who ran the "blind pig?"

Mr. McCLEARY. I will try to answer that question in the course of what I have to say. But I desire to follow out as nearly as possible the order of thought which I have mapped out.

Let us endeavor, if we can, to find out now why the State laws have failed of their purpose.

WHY STATE LAWS FAIL.

Mr. Chairman, we know from unimpeachable testimony, some of which was given yesterday in the admirable speech of my friend from Wisconsin [Mr. DAVIDSON], that the manufacturers have offered the retailers protection against all prosecutions in case they sell these products.

Here, for example, is an extract from a letter sent out August 2, 1899, by Braun & Fitts, of Chicago, to dealers in butterine or oleomargarine:

Every licensed butterine dealer in Chicago has received circular letters from the secretary and attorney for the Illinois Dairy Union, promising all sorts of trouble to dealers in butterine (that honest and pure article of food). Well, now, don't you believe a word of it; there is a law against blackmailing, and we want now and here to go on record to the assertion, as an affidavit, that we shall civilly and criminally prosecute any man or party of men interfering unlawfully with the butterine business in this or any other State. We know exactly where we stand: we are properly advised on the subject, and now we make you a "fair offer:" "Handle our goods as you always have; we, in turn, promise and guarantee full protection against the State law (which has been declared unconstitutional) to the extent of paying cost of prosecution, fines, and paying all costs pertaining thereto." In declaring the law unconstitutional one of the judges stated to the effect "that the butter ring were, in his opinion, liable to prosecution to recover damages done an honest industry." Fair enough, isn't it? Renew your efforts, and be assured that we will be prepared to fight any number of rounds in any kind of a legal fight to the finish. Handle our butterine and be safe.

One great difficulty in the execution of the State laws is right there.

Another is found in the reluctance of reputable citizens to get into the courts. Suppose that you or I go into a store that handles oleomargarine and call for butter. If we are strangers to the merchant, he will naturally be cautious lest we be inspectors trying to entrap him. The chances are that we will get butter if he has it at all, or he will say that he has none. But let some one he knows, and whom he does not suspect to be an inspector or some one seeking to entrap him—let him call for butter, and the chances are nine out of ten that he will get colored oleomargarine.

Suppose you go and buy this product for butter and find it is not butter. What will you do? Do you want to get into trouble, or do you want to keep out of trouble? You want to keep out, and the manufacturers of oleomargarine and the dealers in it count on that. They know that each sale is a small thing, and that it is the nature of the law-abiding citizen not to get into the courts; and they assume that thereby their wrong performance will go unprosecuted.

But if it does get into the courts, they have such skilled attorneys that they can drag the case along until the man who is endeavoring to prosecute them finds it is an almost impossible task to convict them. It is this experience of the States that makes them come to Congress and ask Congress to strike at the root of the matter instead of palliating the trouble by touching it here and there. We believe this bill does go to the root of it.

Mr. THAYER. I should like to ask the gentleman a question and to make a suggestion. I do not ask this question or make this suggestion in opposition to the general principle which is involved in this bill, namely, for the purpose of doing away with the manufacture of oleo in imitation of butter; but I do believe that this bill, if it goes into effect, will be a breeder of contention in the courts. The oleomargarine men are not going to sit quietly by and stop making oleo. On the other hand, they are not going to pay 10 cents a pound as a royalty for making a commodity which does not cost more than that. Now, I want to suggest to the gentleman this: Suppose, as we are told here, that at the fashionable resorts in New York and other places the people are eating the whitest butter that they can get.

In the winter season throughout the North the butter made is almost white in its natural state. That being so, and oleomargarine, as heretofore made, being of about the same consistency as butter and about the same weight to its volume, and having a little of a yellow cast without being colored, suppose a person is put on trial on the 1st day of January in a Northern State for making oleomargarine in imitation of butter, and he brings in witnesses and shows that he has simply put the proper ingredients into it for its manufacture, without attempting to color it otherwise; that he has manufactured his oleo in that way, and as a result of that manufacture, without any artificial coloring, that it was an imitation of butter. Ought he to be convicted or acquitted?

Mr. McCLEARY. That would be a question for the court.

Mr. THAYER. Now, Mr. Chairman——

Mr. McCLEARY. I beg the gentleman's pardon. I do not dare to let him ask another question. I fear that my time would expire before he would get through with it. [Laughter.]

Mr. THAYER. I am a friend to the theory of this bill, but I do think that as the oleomargarine men under the Massachusetts law get acquitted in almost every case, under this one they would in still more cases be acquitted.

The CHAIRMAN. The gentleman from Minnesota declines to yield further.

"TAXING AN INDUSTRY."

Mr. McCLEARY. Our friends on the other side of this question persistently speak of taxing an industry. There is no such thing contemplated in this bill. *The tax is on the fraud and not on the industry;* because, as is well known, the bill provides that the tax on uncolored oleomargarine shall be only one-fourth of 1 cent per pound, a sum simply sufficient to police the matter. There is no disposition to interfere with the manufacture and sale of oleomargarine as such; what we aim at is the sale of colored oleomargarine as butter.

Now, how would the bill work? It is understood from the evidence adduced at the hearings that oleomargarine itself costs somewhere from 7 to 8 cents per pound. If left uncolored it can be sold to retailers for 9 or 10 cents and by them to consumers at 11 or 12 cents, instead of 18 to 20 cents as now. This uncolored oleomargarine could probably have a large sale, as it does in Denmark.

If colored, the tax is added to the cost of the article. Colored oleomargarine, then, would have to be sold for something like 18 to 20 cents per pound to the retailers and by them at from 22 to 25 cents per pound. Now, a man could get good butter for that same price.

Mr. LESSLER. Where?

Mr. McCLEARY. Almost anywhere in the country, unless he wants fancy butter—for that, of course, he must pay a fancy price.

The profit to both manufacturer and retailer of the fraudulent article would be reduced. Thus the temptation to wrong-doing would be reduced.

Then there is risk to the man who sells oleomargarine if he sells it in any fraudulent way. There is loss of prestige to his store if it is known that oleomargarine is sold rather than butter. So there will be little temptation to engage in the sale of a thing which seems to have danger about it and no unusual profit. On the other hand, there would be the natural inducement to sell the real thing.

Then, again, the man who wants oleomargarine will be able to buy it more cheaply than he can to-day, because the tax on uncolored oleomargarine is reduced by 1¼ cents, so that the tax is practically nothing.

And to my good friend from Baltimore [Mr. WACHTER], who is so exercised over the workingman's interest, I would suggest, first, that the workingmen who last year sent so many petitions to Congress against this bill are not sending any this year. Now, the reason for that, in my judgment, is that they have thought it over and have found that if they want oleomargarine they can get it under this bill cheaper than they get it now.

THE WORKINGMEN BENEFITED.

Mr. WACHTER. If the gentleman will permit me, I desire to say that I believe the gentleman is mistaken when he says the reason the workingmen have not sent petitions here this year is because they have thought the matter over. They thought the bill was dead and did not think it would be dug up again so soon.

Mr. McCLEARY. My friend has too low an opinion of the acumen of the gentlemen who work by the day with their hands.

Mr. WACHTER. I have been one of them.

Mr. McCLEARY. They know better. They know the bill was never so much alive as it is to-day.

Mr. GAINES of Tennessee. Will the gentleman yield to me?

Mr. McCLEARY. Just in a moment, if my friend will permit me to cover the point about which I am speaking.

Mr. GAINES of Tennessee. Certainly.

Mr. McCLEARY. My friend from Maryland and other gentlemen speak in the interest of the laboring man, and they have a perfect right to do so. They represent them—they have them for their constituents, and so have I. Workingmen in my district do not buy oleomargarine; they buy butter. But to any laboring man in my district who should raise this question I would simply say:

"Which would you rather do, pay a high price for colored oleomargarine or get it for a low price? Would you rather have some other man color your oleomargarine and charge you a big price for doing it, or have the right to buy the uncolored product cheap and take it home and let your wife color it—which she can do practically without any expense—getting the raw material just as you do for any of your other food products? You do not buy bread already baked. You buy the flour from which to make the bread;

and your wife with her skill prepares it for your palate and puts it upon the table. With the same skill she can prepare this other raw material."

It has been discovered recently that the coloring does not have to be done during the process of manufacture. Oleomargarine can be colored after being made, just as butter can be colored after being made, and in practically the same way. All that the laboring man who desires colored oleomargarine has to do is to have his wife initiated, which will take about five minutes, and then, at little expense, he can have the very thing he wants served up in the usual way, by the skillful hand of his wife and at far less expense than he now has to meet.

Mr. WM. ALDEN SMITH. And of any color that he wants.

Mr. McCLEARY. Yes.

Mr. LESSLER. They will teach it in the schools after a while.

Mr. GAINES of Tennessee. Will the gentleman yield to me now for a question?

Mr. McCLEARY. Yes, with pleasure.

Mr. GAINES of Tennessee. On page 2 of this bill there is a proviso which I should be very glad to have the gentleman explain. I am opposed to this fraud—the sale of oleo to a man instead of butter when a man wants butter. Understand that now. I am opposed to that, as I am opposed to fraud generally, but I do not understand this language, and I am inclined to believe that some of the gentlemen who favor this bill do not understand it themselves. I think you do understand it, and I want you to explain it, if you please.

Mr. McCLEARY. I will try to do so.

Mr. GAINES of Tennessee. The proviso which I wish you to explain is this:

That nothing in this act shall be construed to permit any State to forbid the manufacture or sale of oleomargarine in a separate and distinct form and in such manner as will advise the consumer of its real character free from coloration or ingredient that causes it to look like butter.

Now, it is provided:

That nothing in this act shall be construed to permit any State to forbid the manufacture or sale of oleomargarine in a separate and distinct form.

Is that a proviso to prohibit the States from legislating on the subject of oleomargarine, a business which is carried on within the States?

Mr. McCLEARY. I think not. The history of that proviso, I would say to the gentleman from Tennessee, is, I have been advised, simply this: The original Grout bill, introduced many years ago, consisted of section 1 of the present bill, barring the proviso referred to. The gentleman from Mississippi [Mr. WILLIAMS], I understand (who lives on the side of the House occupied by my friend, and whose ability he will not question), thought that there should be a protection to the States, and the proviso was put in, I have been told, in the Fifty-fourth Congress to meet his objections to the bill.

Mr. GAINES of Tennessee. My heavens! It prostrates the States.

Mr. McCLEARY. My friend can argue that with the gentleman from Mississippi [Mr. WILLIAMS].

WHY TAX THE MANUFACTURER?

Mr. McCLEARY. My friend from Illinois [Mr. BOUTELL], who delighted us with his speech before I began my remarks, said that he opposed this bill, first of all, because that it was leveled against the man who did not commit the fraud, that it was leveled against the manufacturer, while it was the retailer who confessedly committed the fraud. The gentleman from New York [Mr. WADSWORTH] makes the same objection.

Now, when we undertake to strike at a trouble we should strike at the source of the trouble. In this case the trouble begins with the manufacturer. We tax the manufacturer of colored oleomargarine as a deterrent of fraud on the same principle that we punish the maker of counterfeit money, even if he does not circulate a dollar of it.

Referring to the chief manufacturer of oleomargarine in this country, the Moxley Company, of Chicago, here is a pertinent extract from one of the company's letters to dealers in oleomargarine, dated August 2, 1899—a very recent letter, it will be noted:

The Internal-Revenue Department looks after their own business and the State after theirs, and should this so-called dairy union interfere with your business in the way of prosecution as to the State laws, we hereby guarantee you protection to the extent of paying all fines, costs, etc., until the color law is decided unconstitutional in the supreme court of the State of Illinois, and will further, on receiving complaint, take such action for damages as will make it unpleasant for some of those who are attempting to interfere with your and our own legitimate business.

* * * * * * *

We strongly recommend you to pay no attention to those circulars. We have always been in a position to protect our customers from injustice and blackmailers, and will be ever at your service should you require our aid.

There is no man who makes oleomargarine colored in the semblance of butter who does not know when he makes it that the bulk of it will be sold as butter. He knows that if that were not true there would not be so much of it sold. Why, what do our friends continually say? They do not speak five minutes without saying we are striking at an industry. What does that confess? It is an open and unmistakable confession that unless oleomargarine can be made and sold in semblance of butter it can not be made and sold at all. That is their judgment. The only way to sell the product is to sell it as butter. It is the color that makes it possible to do that. Why, the man who makes oleomargarine——

Mr. BURLESON. Will the gentleman permit me one question?

Mr. McCLEARY. I have not time to yield to the gentleman. If I do not cover the question of my friend before I get through, I promise to yield to him if my time permits. I am always sorry to disoblige him, because he is so courteous himself.

We wish a tax upon the manufacturer, because we want to strike where the fraud begins. My friend from Wisconsin [Mr. DAVIDSON], who spoke so well yesterday, showed you the advertisement of one of the manufacturers, Mr. Moxley, in the form of a pamphlet showing the different colors in which he could furnish oleomargarine, and in the letter which he sent with it he said he could furnish the oleomargarine of the color of the butter used at any season in the locality where the merchant was selling goods. The whole purport is that the manufacturer intended by this to make the dealer the instrument of fraud. So far as I can see, no other construction can be put upon the language.

Mr. WADSWORTH. But the gentleman would not punish the whole flock of sheep because there was one black sheep in the flock. This is the only case that has been brought before our committee, the one of Mr. Moxley, and it is by such means that the business has been brought into disrepute; but this is the only manufacturer that has ever been named before our committee in two winters' hearings.

Mr. McCLEARY. But my friend will remember the letter of Braun & Fitts, from which I quoted. He also knows that there are companies making and selling colored oleomargarine that use names such as would mislead people. Here are some of the names used by such makers: Falls City Dairy Company, Louisville, Ky.; Capital City Dairy Company, Columbus, Ohio; Union Dairy Company, Cleveland, Ohio; Illinois Dairy Company, East St. Louis, Ill.; National Dairy Company, Washington, D. C. Now, what is the purpose of using such names if it is not the purpose of misleading people?

Mr. WADSWORTH. I do not know.

Mr. McCLEARY. Moxley is not the only manufacturer who is doing this. He claims to be the greatest manufacturer of this product in this country. He claims that he is making about 12½ per cent of all that is made. So probably he is the greatest sinner of all.

I have heard of but one man who voluntarily obeyed the law, and that was Armour. When he found it was against the law of his State to make colored oleomargarine, he ceased to make it. Phil Armour said: "I will not make a thing in the State of Illinois when the making of it is against the law of Illinois." Let this be said to his everlasting credit. These other manufacturers advertise, though probably not as conspicuously as Moxley does; but they know—and must know—that the purpose of coloring oleomargarine is to make the purchasers and consumers believe it to be butter.

Mr. FOSTER. Will the gentleman yield for a question?

Mr. McCLEARY. My time has pretty nearly run out, and I want to finish a certain line. If I do not cover the point, I will then yield to the gentleman.

Mr. LESSLER. Does not the gentleman think we ought to go further than that and look after the chicory manufacturer, and see that they do not supersede the coffee fellows?

Mr. McCLEARY. I have heard that question asked here often during the debate. I suppose my friend would answer that all fraud ought to be stamped out if possible. And, Mr. Chairman, in that I very heartily agree with him. But, my dear friend, will not you take one step in the right direction because you can not become an angel in fifteen minutes? [Laughter.]

Mr. LESSLER. I will answer you if you will answer the question that I have put, but have not yet had an answer to. What about the consumer? I am interested in him because he is in my district—the poor fellow who can not get pure butter, who has not the money to buy it; and you are taking the oleomargarine that he can get away from him. Now, I would like an answer to that question.

Mr. McCLEARY. My friend must have been thinking of something else, or else my poor tongue is unequal to the answer, because I distinctly said, and I tried to emphasize it, that under this bill he can get the colored oleomargarine cheaper than he gets it now if he is willing to do the coloring himself or have his better half do it. All in the world he has to do is to carry on his proceedings in this matter as he does in any other. He buys the

flour and his wife makes the bread. He or she buys the eggs and the sugar and she makes the cake that pleases his palate. She can get the uncolored oleomargarine at about 10 to 12 cents per pound, and in two minutes she can color it to suit his taste.

Mr. LESSLER. The gentleman does not understand the condition of the large cities when he makes a statement like that.

Mr. McCLEARY. I intended to cover the ground in my answer, and I will yield to the gentleman to tell me wherein I am at fault.

Mr. LESSLER. Take the conditions in the great big cities, where you find tenement houses with 50 or 60 people in them, a tenement house with 50 families in it, having 2 rooms or 3 rooms, and perhaps only 1 room, with no stove or any of the household luxuries. They do not know how to do these things, they have no time to find out, no place to go to find out, and when you add 10 cents a pound to the product they want—whether they think it is butter or not—you are taking away from them something that they have a right to have. [Applause.]

Mr. McCLEARY. But we do not aim to add to the price that they now pay. Our purpose is to take profit from the manufacturer of the fraudulent article.

Mr. SIMS. Why not let the housewife color her butter in the same way?

Mr. McCLEARY. I am endeavoring to answer the gentleman from New York; sincerely endeavoring to answer his question. Now, is it very expensive to take a little piece of a shingle, or a piece of wood out of which to make a little paddle? Will that strain the resources of the various persons in your district?

Mr. LESSLER. I will say this——

Mr. McCLEARY. The smallest boy in the family can find all the material necessary to do this.

Mr. LESSLER. These people want the product, whether it is butter or oleomargarine.

Mr. McCLEARY. Have they not a spoon in the house?

Mr. LESSLER. I guess they have.

Mr. McCLEARY. Then that is all they need.

A MEMBER. Probably his constituents have got souvenir spoons with the gentleman's picture on them. [Laughter.]

Mr. McCLEARY. They ought to have, because he is their good friend, and I trust they will keep the pictures and keep him a long time here.

Mr. SIMS. I would like to ask the gentleman if they could not color the butter in the same way?

Mr. McCLEARY. Pardon me. I am trying now to answer the gentleman from New York and answer his question in good faith because he has asked the question in good faith.

Now, these people do not need any special implements. They can buy uncolored oleomargarine for, say, 10 to 12 cents per pound. Enough coloring matter to last all year can be bought for a few cents. They take the uncolored oleomargarine, mix into it a few grains of the coloring material (just in the way a farmer's wife sometimes colors butter to suit the taste of those to be served), and for 10 to 12 cents they have what would now cost them 18 to 20 cents. They do not need any unusual amount of time. In two minutes they can put in the coloring matter. They can do it with a spoon or a knife. The only instrument they need to do it with is always at hand. I trust I have answered the gentleman.

Mr. LESSLER. If the gentleman will pardon me, one thing more. The gentleman made this statement, the bill is aimed at oleomargarine sold at the price of butter. One of the gentlemen said the idea was to determine whether butter should be sold for 15, 18, or 20 cents, and you want to add 10 cents to the spurious article. Is that so? If this is yellow oleomargarine, he has got to pay 6 cents a pound and to charge 15, 18, or 20 cents.

Mr. McCLEARY. The gentleman misquotes me—unintentionally, of course. My proposition is that this bill will not materially change the cost of colored oleomargarine to the consumer if he goes and buys it already colored, as he does now. *But it will materially reduce the profit of the manufacturer of colored oleomargarine*, so that his inducement to make the colored article will be removed, and thus the fraud will be done away with. And if the purchaser is willing to have the coloring done at home the colored oleomargarine will cost less than now.

Mr. LESSLER. I took down the gentleman's language just as he said it—"oleo sold at the price of butter."

Mr. McCLEARY. My statement is that the 10-cent tax is directed solely at one thing—at the fraud in coloring the oleomargarine.

Mr. LESSLER. But the point I make is that in striking at the fraud you are striking at the consumer; he is the person who is hurt.

Mr. McCLEARY. My friend will allow me to say I am utterly unable to make my answer clearer.

I assume that most men prefer butter to oleomargarine if they can get it. But the consumer who desires colored oleomargarine can get it under the bill cheaper than he can get it now, getting big pay for doing the coloring at home.

To make this any clearer is an impossible task for me; somebody else may be able to make the matter clearer.

Mr. LESSLER. Let the gentleman charge the difficulty to my obtuseness.

Mr. McCLEARY. Not at all. The answer is, and there is no getting away from it, that colored oleomargarine—colored absolutely to suit the taste of the one who consumes it—is possible at the humblest home. All that anyone who wants the colored oleomargarine needs to do is to buy the uncolored article and then get a very small quantity of that very inexpensive coloring material called annotto and color the oleomargarine.

Mr. WM. ALDEN SMITH. He does not need to color it.

Mr. McCLEARY. Certainly not. I say he can color it if he wishes to.

My friend from New York claims that a man has a right to suit his taste in this matter, and I concede that such is his absolute right. The consumer has the right to color the article dark or light, according to his taste. For the extra price that would be paid for one pound of colored oleomargarine the consumer can buy enough annotto to furnish coloring material for the rest of the year.

Mr. LESSLER. If you told those people to buy annotto they would think you were inviting them to swallow poison.

Mr. SIMS. According to the argument of the gentleman from Minnesota, the hotel or restaurant keeper can buy coloring matter, and by its use can stuff oleomargarine down the throats of his guests under the pretense that it is butter. The gentleman tells such people how the fraud may be committed.

Mr. McCLEARY. The difficulty the gentleman mentions is the reason why section 2, to which I have referred, was added to the Grout bill.

And I want to say that this bill of the committee is practically the Grout bill, with two sections added to meet new conditions. There has been no newspaper report flashed out this winter from this city giving the proceedings of Congress, and there will be none sent out, that will give as much satisfaction to as many of the substantial people of this country as the announcement which will be made when the vote on this question shall have been taken that the Grout bill has again passed the House of Representatives.

Mr. LAMB. Does the gentleman refer to consumers or producers?

Mr. McCLEARY. I mean all right-minded people.

And now I desire to go back to a question which the gentleman from Tennessee [Mr. SIMS] asked me a few minutes ago. I will answer him frankly. My friend is so frank and straightforward himself that he has a right to expect the same quality in others.

The possibility just referred to became obvious only recently. At the time the Grout bill passed the House last year it was supposed by everybody that the coloring had to be done during the process of manufacture, and therefore the Grout bill of last year was ample to meet the conditions as they were then known.

In the committee this question was brought up by the gentleman from Kansas [Mr. SCOTT]. The gentleman from Kansas asked some one who appeared before the committee—Dairy Commissioner Adams, of Wisconsin, I think—whether it would not be possible to buy the white product and then color it; and the answer given was, Yes. The committee had investigated the matter last year and had reached a different conclusion. But in order to get a full understanding of the question the committee accepted an invitation given some weeks ago to visit a representative oleomargarine factory within a few miles of Washington. On Saturday, the 18th of January, they went out to that factory, and there they learned for the first time to a certainty that the thing which the gentleman from Tennessee suggests could be done.

On the way back my friend from Vermont [Mr. HASKINS], my friend from Michigan [Mr. HENRY C. SMITH], and my friend from New York [Mr. WADSWORTH], and others said, "There is a point where there is a possibility of fraud." Then the four lawyers of the committee, Messrs. HASKINS, SMITH, GRAFF, and NEVILLE, went to work and drafted a paragraph to be inserted in this bill, after receiving the approval of the committee, extending the definition of the word "manufacturer" so as to include any man who buys the uncolored product and colors it, and then directly or indirectly offers it for sale.

Mr. SIMS. But the hotel man who buys it in order to use it in his business is not offering it for sale.

Mr. McCLEARY. He most certainly is. That matter is especially covered by the paragraph. The provision on this subject has been carefully drafted by four skillful lawyers, who are members of the committee, with the view of covering the contingency referred to. It is framed so as to leave open all the right possibilities and to close absolutely if possible all the wrong ones.

Mr. SIMS. Suppose a hotel man buys uncolored oleomargarine and then colors it and serves it to his guests. How can the guest to whom it is offered know that it is not genuine butter? How is the prevention of such a fraud practicable?

Mr. McCLEARY. Well, the way the fraud is expected to be made impracticable is this: The hotel man knows that under the section he would have to become a manufacturer. The license of a manufacturer is high——

Mr. WADSWORTH. Six hundred dollars a year.

Mr. McCLEARY. Six hundred dollars a year.

Mr. WADSWORTH. Every year.

Mr. McCLEARY. Every year. And the penalty for an infraction of the law is also high. If he thinks it is profitable, he can become an oleomargarine manufacturer. But he will not be tempted to become such manufacturer, by reason of the fact that it is very expensive to become one. He will probably conclude that it is more profitable, and therefore better, to buy real butter and serve that.

Mr. WADSWORTH. Is there not a law against larceny to-day?

Mr. McCLEARY. Yes; and by reason of that law there is less larceny than there would be if there were no law.

Mr. WADSWORTH. But there is larceny every day, all the same.

Mr. McCLEARY. Certainly.

Mr. WANGER. Would my friend repeal that law because there is larceny?

Mr. WADSWORTH. No.

Mr. McCLEARY. Not at all. The purpose of that law is to reduce larceny to the minimum, and the purpose of this law is to reduce fraud to the minimum.

Mr. HAMILTON. That is right.

Mr. McCLEARY. And we believe the bill of the majority will do that more certainly than the bill of the minority, and at the same time infringe no man's rights. Therefore we are for the bill of the majority.

Mr. WM. ALDEN SMITH. I should like to ask you whether you deem it essential that oleomargarine should be colored in order to be palatable?

Mr. McCLEARY. I do not know. I presume not. I never ate any that was uncolored. I presume I have eaten some that was.

Mr. WM. ALDEN SMITH. But you are making it cheaper to sell the uncolored oleomargarine by the passage of this bill.

Mr. McCLEARY. Yes.

Mr. WM. ALDEN SMITH. Now, it seems to me that answers the very bad situation that the gentleman from New York [Mr. LESSLER] described to us, which he says exists in his own district. If they want oleomargarine they can get it.

Mr. McCLEARY. Yes. My friend from Michigan is correct. The gentleman from New York can say to them, "When you eat that, boys, you are right in style, because that is the color of what they eat at the Waldorf."

Mr. LESSLER. No; they will probably say to me, "You had in mind 500,000 farmers somewhere else, but you forgot us because we live in tenement houses."

Mr. McCLEARY. No; I believe my friend will make them his friends by reason of his vote on this bill, if he votes for it, rather than make them his foes. By patiently explaining to them how it benefits them he will in the end increase the confidence which they have in him, even if at first they oppose his action through misunderstanding.

Mr. BOUTELL. Will the gentleman yield to me?

Mr. McCLEARY. Yes; with pleasure.

Mr. BOUTELL. Just two questions for information. What is the latest evidence as to the proportion of colored oleomargarine that is fraudulently sold as compared with colored oleomargarine that is honestly sold as colored oleomargarine?

Mr. McCLEARY. My friend well knows that that is a question which is not capable of exact proof by the production of evidence.

Mr. BOUTELL. In the last Congress the percentage was given. I wish to know whether it appeared that there had been any decrease in the amount?

Mr. McCLEARY. The judgment of those who have studied the question most carefully is that practically all of it is sold fraudulently. I was a good deal instructed, and of course amused, by the statement of the distinguished gentleman from Ohio [Mr. GROSVENOR] yesterday that he has seen thousands of men in Ohio marching up to the counters and buying colored oleomargarine. Bless his dear heart, can he mean to be considered a participant in a wrong? Does he not know that such "business" is against the law of Ohio, and did he, as a legislator, stand up and see that done?

Mr. BOUTELL. I will say to my friend from Minnesota that that state of things does exist in the large cities, such as my friend from New York [Mr. LESSLER] refers to, and anyone who is at all familiar with the residence section of the workingmen in every large city knows that there is none of this delusion or deception that is alluded to. Butterine is the term they use; they go and ask for butterine, they want butterine, and they get butterine, and they want to be able to get it, because it is cheaper than butter.

Mr. LESSLER. And they have not the price to get anything else.

Mr. BOUTELL. My second question is this: The gentleman will doubtless agree that the star of empire moves westward. Now, what I want to ask is, if the taste that now prevails exclusively on the Continent of Europe and in the cities of the Atlantic seaboard for absolutely white and absolutely uncolored butter should ever spread all over our blessed domain, whether the butter men will come in here with a bill compelling the oleomargarine men to color oleomargarine?

Mr. WACHTER. Why, certainly they will.

Mr. McCLEARY. I will say to my friend that in this instance he is not original, as he usually is. That question has been asked before here half a dozen times.

Mr. BOUTELL. I want my friend's opinion of it.

Mr. McCLEARY. That is purely a hypothetical question that can not be answered. I can only say that I would expect the creamery men to ask nothing wrong or unreasonable; hence I would not expect any such proposition.

Mr. BURLESON. I would like to ask the gentleman from Minnesota to answer this question. Would you not abandon this bill before you would accept amendments prohibiting butter from being colored?

Mr. McCLEARY. My friend is usually very candid, so that I dislike to make the suggestion—but he has asked a question which seems to be intended to be smart rather than profound. He knows that under the practice of this House things that are germane are permitted to be attached to a bill and things that are not germane are put out on the objection of even one member.

Mr. BURLESON. Now, the gentleman will pardon me. He is not answering the question.

Mr. McCLEARY. I answer the gentleman's question by saying that I am against all frauds, and if some one will devise a bill which will make it impossible or which will reduce to the minimum the possibility of passing off upon the unsuspecting purchaser a grade of butter other than that he believes himself to be buying, I shall support the bill; but an amendment of that kind to this bill would not be germane.

Mr. WILLIAMS of Mississippi. Bearing upon that very point of germaneness, I call the gentleman's attention to the title of the bill, which is, "to make oleomargarine and other imitation dairy products subject to the laws of the States or the Territories, etc." How could it be ruled not germane? I understand that while I was out I was held to be responsible in some way for some provision in this bill.

Mr. McCLEARY. I understand——

Mr. WILLIAMS of Mississippi. I want to enter a general disclaimer of any culpability in the authorship of any part of this bill.

Mr. McCLEARY. I heard the general statement made in the committee meeting that this proposition to which my friend alludes was put in there to meet some objection of his. And, as he made no comment then on the statement, I assumed that he acquiesced in it.

Mr. WILLIAMS of Mississippi. It may have been put in to meet some objection, but when it was put in I thought it was as insane a thing as could be put in.

Mr. GAINES of Tennessee. I understood the gentleman from Minnesota to say that this was put into the bill by the gentleman from Mississippi.

Mr. McCLEARY. I did not mean it to be so understood. I intended to say that it was put in to meet his objections, and I understood that it did so.

Mr. SIMS. I should like to ask the gentleman this question: If a private family should have a couple of boarders, schoolgirls or men boarding at their house, and if they should buy uncolored oleomargarine and color it at home, would they be liable under this provision?

Mr. McCLEARY. They would come within the provision which requires a license to act as a manufacturer.

Mr. SIMS. Is not that a very severe penalty for that?

Mr. McCLEARY. "Old dog Tray" was not guilty of anything particularly vicious, but he came under the penalty. Legislation must be general in its provisions.

Somebody asked me a moment ago—I think my friend from Illinois—how much colored oleomargarine was sold fraudulently. My friend from Iowa [Mr. HAUGEN] calls my attention to the fact that 62,000,000 pounds were sold last year in States where such sales are absolutely forbidden.

Mr. HAUGEN. Or about 80 per cent of the total sales.

The CHAIRMAN. The time of the gentleman has expired.

Mr. LESSLER. I ask that the gentleman's time be extended.

Mr. WADSWORTH. I yield the gentleman five minutes of my time. I have twenty-seven minutes left.

Mr. McCLEARY. I thank the gentlemen for their courtesy, and shall endeavor not to trespass on their patience.

THE ELEMENT OF COLOR.

As I have said, Mr. Chairman, this bill reported by the Committee on Agriculture is the Grout bill, which passed the House in the Fifty-sixth Congress by the overwhelming majority of 104, with two sections added to meet recently discovered conditions.

To this general statement there is one minor, but not unimportant, exception—the change of the word "colored" to the word "made." The Grout bill made the law apply to oleomargarine "*colored* in imitation of butter." The bill reported by the committee makes it apply to oleomargarine "*made* in imitation of butter."

Of course I understand the purpose of the friends of the bill in the committee. It is to make the bill so comprehensive as to include not only the oleomargarine colored by means of some added substance, such as annatto, but also such as might, under the growing skill of the manufacturers, be colored by means of one or more ingredients used in making the oleomargarine. But in their eagerness to cover the ground in all its fullness—and experience has shown the necessity of taking every conceivable precaution—I fear that our friends have made a mistake.

The whole question of the fraud aimed at hinges on the idea of color. The word "made" contains no necessary suggestion of the idea of color. It might be construed to refer to texture or any other elemental idea connected with the subject. The bill should recognize color as the essential matter.

The committee evidently thought of this, for one form of the bill makes the proposed law relate to imitations of "yellow butter." It seems to me, Mr. Chairman, that the use of any term such as "yellow" to designate the kind of butter would be unfortunate. Such a term would seem to be intended to restrict the law's application. Under that wording the making of orange-colored oleomargarine, for instance, might well be held to be lawful. And most of the colored oleomargarine that I have seen is orange colored, rather than yellow.

Moreover, the moment we enter the field of specific color we begin to deal with technical terms, a dangerous thing for anyone, not having the special technical training, to undertake. Such words as "shade" and "tint" and "hue," are all terms of peculiar significance when used in relation to color. One may be thoroughly versed in their ordinary significance and yet wholly misuse them in their technical sense.

The purpose of the committee to use just the right terms—just and fair to all and easily comprehended by all—is beyond question. And I know something of the pressure that has been brought to bear on the committee to have certain terms used. The word "colored" seems to fill the bill completely. The first definition of "colored" given in Webster's Dictionary (which is recognized in the courts as standard) is "having color." So that whether the color is put in in the course of manufacture or afterwards, the case is covered. And in all kindness and in the common interest, I suggest that the wording of General Grout's bill, making the law apply to all oleomargarine "colored in imitation of butter" is the safest and wisest and the least liable to misconstruction by manufacturer or consumer, by officer or layman, by judge or jury, of all the expressions that have been suggested. Any variation from it is, in my judgment, fraught with danger to the bill and to the interests to be protected by it.

THE TAX ON UNCOLORED OLEOMARGARINE.

The only serious difference of opinion among the friends of this legislation has been as to whether or not the small tax of one-fourth of a cent per pound on uncolored oleomargarine should be retained in the bill.

One proposition was to remove entirely the tax on uncolored oleomargarine, on the ground that (among others equally valid) this was necessary to remove all opportunity for the opponents of the bill to call it "class legislation."

The other proposition was that, having reduced the tax on the uncolored product from 2 cents (the tax under the existing law) to one-fourth of a cent per pound, the friends of the bill had gone as far as it was necessary to go to obviate the use of the expression referred to; while, on the other hand, the small tax was vital to the successful operation of the law when passed, because only thus could the Treasury Department keep supervision over the entire product and reduce to the minimum the chances of fraud. The committee gave the matter careful consideration. It consulted the Commissioner of Internal Revenue, whose office would be charged with executing the law. From him the committee received the following opinion:

In reply to your inquiry you are informed that it is my opinion that this office can not require from manufacturers of oleomargarine the keeping of books and making of reports showing the quantity of uncolored oleomargarine produced by them in case the internal-revenue tax is entirely removed from such product.

An attempt had been made to impress the committee with the idea that the dairy people of the country wanted the tax removed entirely from uncolored oleomargarine, but the committee soon discovered that the judgment of the people of the country was overwhelmingly in favor of the retention of the tax. The people of the country will be pleased to learn that the judgment of the committee accords with theirs, and that the very necessary tax on the uncolored oleomargarine is retained in the bill.

Mr. Chairman, during the discussion of this bill it *has* frequently been referred to as "class legislation;" but it is worthy of note, sir, that of the opponents of the bill who have used this expression *not one*, so far as I have heard, has based his use of the expression on the retention of the small tax referred to. And it is fair and reasonable to infer that not one vote will be lost to the bill by reason of the retention of this tax.

CONCLUSION.

In the moment remaining to me it seems only proper that a personal word should be said.

This bill will probably be enacted into law in substantially its present form. For one reason or another verbal changes may be made here and there, but the essential features of the bill will undoubtedly remain unchanged.

The bill is believed to contain in it potentialities for good to untold numbers of people. It would therefore seem fitting that a few words be said at this time concerning those to whom the credit of devising this measure is due.

The bill had its origin in one introduced many years ago by Gen. William W. Grout, who for some twenty years was an able and influential member of this House from the State of Vermont. General Grout's original bill consisted of what is section 1 of the pending measure, barring the proviso. The bill in that form passed the House twice, I understand, but did not pass the Senate. The importance of this section has been pointed out.

The preeminently important provision amending the act of August 2, 1886, by increasing to 10 cents per pound the tax on oleomargarine colored to resemble butter is to be credited to Hon. JAMES H. DAVIDSON, of Wisconsin, still an honored member of this House, and to General Grout, before mentioned.

In the Fifty-fifth Congress Mr. DAVIDSON introduced a bill of one section increasing the tax on colored oleomargarine to 10 cents per pound, leaving the tax on the uncolored product unchanged at 2 cents per pound. This bill was referred to the Committee on Ways and Means, but was not acted on. At the beginning of the Fifty-sixth Congress Mr. DAVIDSON reintroduced his bill and it was again referred to the Committee on Ways and Means.

At the beginning of the Fifty-sixth Congress, without knowing that Mr. DAVIDSON had introduced such a bill and without consultation with anyone outside of his own district, General Grout, in reintroducing his original bill, added to it a second section providing for a tax of 10 cents per pound on colored oleomargarine and at the same time reducing the tax on uncolored oleomargarine to one-fourth of 1 cent per pound. This bill General Grout introduced on December 12, 1899, and had it referred to the Committee on Agriculture. This was the famous "Grout bill" which the dairy interests adopted as embodying the provisions so much desired by them and which was pushed so vigorously in the last Congress, and which demonstrated its strength and the practical wisdom of its provisions by passing the House by the remarkable majority of 104.

In the present Congress (General Grout not having been a candidate for reelection), upon demand of untold thousands of people in all parts of the country, the Grout bill was reintroduced verbatim and it became the basis of the bill now pending. The way in which the two paragraphs came to be added by the committee has already been told. These additions illustrate the painstaking care with which the committee has considered this legislation, "holding fast to that which was good" and adding the two paragraphs to meet the new conditions.

Mr. Chairman, the purpose of this bill is to preserve to the maker of genuine butter his legitimate market and to the person who desires to buy real butter the opportunity to do so with certainty. The bill is framed "with malice toward none and with charity for all," in the interest of fair dealing between man and man. Like all other productions of the human mind, it is probably not perfect, but it is as nearly so as honest purpose and intelligent effort can make it, and as such it is commended to Congress and the country. [Loud applause.]

Diplomatic and Consular Appropriation Bill.

SPEECH

OF

HON. WILLIAM H. DOUGLAS,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 25, 1902,

On the bill (H. R. 11471) making appropriations for the diplomatic and consular service for the fiscal year ending June 30, 1903.

Mr. DOUGLAS said:

Mr. CHAIRMAN: I move to strike out the last word. I do not think there has been any intention to criticise the gentlemen of the Committee on Foreign Affairs, although several gentlemen have brought this question into the debate. I can not quite agree with the gentleman from Ohio [Mr. GROSVENOR] nor the gentleman from Missouri [Mr. CLARK]. Those who have traveled in foreign countries will fully agree with me that the consular service of the United States is not what some of us say it is, and we ought to have reasonable revision of this important Government department. But, Mr. Chairman, my reason for especially rising in connection with this question is that I want to put these facts before the House. The consul-general at Cape Town is occupying a most important post. To-day that trade is increasing with enormous strides, and when the war in South Africa is over that gentleman will have very arduous duties to perform. It is a fact that the last consul-general, an able, fine man, Colonel Stowe, resigned because he was not paid a salary commensurate with his duties and one upon which he could afford to live decently, which can be confirmed by the State Department.

A gentleman by the name of Bingham was appointed to the position, and that gentleman is now in Cape Town. I have received letters from him within a recent date, in which he also says he can not live on the salary now paid. He has to do a great deal of work, and house rent and living expenses are very high, and a $3,000 salary is inadequate for him to live upon.

Now, Mr. Chairman, I would like to have the chairman of the committee consider this question, and I hope to give our friend from Missouri, notwithstanding his witty speech, some views on this subject which may be of value to the committee.

I ask, Mr. Chairman, to strike out the words "three thousand" and insert the words "forty-five hundred" as the salary of the consul-general at Cape Town, He only receives $600 for clerk hire, and he wrote me the other day that he could not get a clerk at any such price. I know that is correct, and that he can not obtain a clerk and stenographer combined that will do the duties properly for less than $1,200. He would probably be willing to stay there if he could get a reasonable increase in his compensation. He wrote me in a letter, which I showed to the State Department, that he had spent since he left the United States, seven or eight months ago, over $5,000 for himself and family, or over $2,000 in excess of what he receives. I hope the chairman of the committee and the House will agree to my amendment.

Mr. HITT. The conditions are such that I am compelled to object. I recognize and the committee know the truth of the greater part of what the gentleman has stated. The $3,000 salary at Cape Town is very attractive to applicants who want an office, and many applications are made for that office and have been for twenty years, and the men appointed are disillusioned by finding that it is a very expensive post.

The former incumbent, a most efficient man, who resigned, Mr. Stowe, has stated the facts truly. The consul there gets a greater amount than the gentleman from New York has stated. There are some notarial fees which go to him, and he gets $304 as his one-half of the fees of the agents. We have also given him $600 for clerk hire. If we had gone on to raise the salary of one $3,000 post to $3,500 like this, there would have been 50 gentlemen on the floor who would have insisted on equality and fair treatment, and that other consuls should be raised a like amount. The gentleman can see that if the committee allowed one amendment to go in there would be a dozen others.

Mr. DOUGLAS. Mr. Chairman, I recognize the truth of the remark by the chairman of the committee, and I withdraw my proposed amendment, and would further say the general public, rightly or wrongly—but in my judgment they are justified in their opinion—have conceived the idea that the consular service is capable of being greatly developed and improved, and that it should be done without delay, as beyond question improvements could be made which would redound vastly to the interests of our country, both in a commercial way and in upholding the dignity of the great nation we have grown to be.

This view is held by the greater number of intelligent travelers who have, as they journeyed abroad, and especially in the less frequently traveled sections of the world, taken care to investigate this subject, and have not merely been satisfied that the consul was a good representative if he has been agreeable in his social intercourse with them, and obliging in bestowing any favors in his power when asked, but most particularly does the sentiment for the betterment of existing conditions come from the leaders of the commercial industries of the country, who have had occasion to feel the need of new life and energy in the service, owing to their forced increase of correspondence with our representatives, through the needs of their business, or the necessities of searching the reports of the consuls for information which they desired and, I am informed, have usually not been able to obtain; but more particularly have they formed their judgment from the verbal statements made to them by the returning travelers they have sent throughout the world to push the products of the American workingmen's labor in the factories of our country from Maine to California.

The statements of these men, who have had the best of opportunity to form careful and proper conclusions, and who have mostly been men of capability, are almost uniform, I am told, and they say that we are far behind in the needs of this great service, which can be made so potent a factor for the advancement of our material interests and national wealth.

These reports are not so much, in many cases, a criticism of the man who may occupy the post, who often is doing as well as lies in his power, struggling against the adverse conditions he has to face, but in indignant condemnation of the niggardly policy of the United States Government itself, and that we do not appear willing, nor Congress agreeable, to arise to the national emergency and equip our consular officers with proper salaries and staff to aid them, also surroundings to upbuild their positions and enable them to give their entire time and energy to the requirements of their posts.

Everyone fully recognizes and admits the fact that it is very easy to find fault, but not so easy to apply the proper remedies; but it can not be contradicted, except by those who knowingly do so, that we have now been for a great number of years going along steadily in the same old groove, and while, undoubtedly, during the past twenty-five or thirty years the service has been advanced in some points to a better status, yet that has been an advance brought about by natural causes largely, and owing to the superior education of our entire community, which has reflected itself on the class of employees taking these positions; but that is not sufficient, and our needs, with a population of 80,000,000 people, are far different from when we had one-half that number, and our export business a quarter of a century ago was only in its infancy as compared with the stupendous figures of to-day and the probabilities of the future.

These various causes have led up to the great universal demand, which should not longer be ignored, that Congress should adopt a more liberal and intelligent policy, and that new rules and regulations should be put forward which will bring this Government Department up to the standard needed to meet the new order of things, and so that all may point with pride to the efficiency of our consular service.

It is all very well for some members of the House to defend this Department and to state that it stands as high as any other branch of our service and that the men who devote their time and labor to the interests of the country abroad are doing so in an intelligent and efficient manner, and no one desires to gainsay these facts or any such fair statements, or to condemn the service or the men employed, but when it is stated on the floor of the House, by not one but several, that our consular service ranks higher than any other in the world, and when members practically claim that there is very little room for improvement, they can not do so with any clear knowledge of the actual conditions, or could not have traveled extensively abroad and carefully studied the question, except from the level of a desire to avoid spending money to increase the efficiency of the service.

Beyond a doubt there are a fair number of able and capable men employed, but when we come to think of and look into the matter, they certainly are receiving very little return in the way of Government gratitude, where their work, if they are efficient, is deserving of just credit and much higher compensation. The result is that these men, after a short period of service, often become dissatisfied and fall out of the ranks, finding they can do much better in business or in other walks of life, and if they hold to the position they become indifferent and only do so from sheer necessity.

In the discussion of this subject one gentleman remarked that we have had, and have to-day, consuls abroad who have remained at one post for twenty years or over. This is probably correct, but it certainly does not appeal to anyone who will give the subject thought that such an instance is good for the service.

One or two things must have led to such a long term at one

station. Either the man himself could not have been a person of great force of character and energy or he would not have been satisfied to have remained there for practically a business lifetime on probably the wretched pay he received, and he undoubtedly had acquired and carried out a routine system of work which was lacking in vim and could not have been of any great benefit to the country or its commercial interests, or if his service was so meritorious as to warrant his being kept, in spite of custom and changes of Administration, in the consular service for so long a period, and his abilities were admitted and recognized by the Government, then we did not as a nation do our duty by him, but were derelict, as we should have advanced such a man to other stations of more commanding importance and value, so that he, personally, would have received recompense commensurate with his work and time devoted to our interests, and the Government itself could have benefited by his life experience and acquired knowledge.

Throughout the discussion there seems to have been a disposition to magnify our importance and to use vainglorious remarks about our country and the men who served us without getting down to any practical facts. One or more gentlemen appeared to think that the men from the backwoods were of such sterling quality and such intellect as to be able to fill any of these positions acceptably and well without any particular advance training, and while beyond question the men from the country districts of any section of the United States we will freely admit are of equal or superior abilities, if given equal opportunities, to the men going from the large cities, yet it does not present itself as an argument of any validity; nor can it be true that the man who is taken from some small town, or village, or hamlet, without the proper training, and who is sent abroad to represent this Government, can be anything but crude and incomplete in his work for a considerable period of time, no matter what may be his natural ability, his pride in country, and his integrity.

It has been further stated, and probably with a great deal of truth, that the desirable consulships, and especially those in Europe, are often by chance ably filled by good men, owing to the desire of some of our citizens to go abroad for pleasure and to educate their families, and having some money of their own they are willing and able to take these positions without great sacrifice, even if the compensation is not sufficient for them to live upon, as they can obtain thereby a certain status, and at least the Government is paying a fair share of their annual expenses and they lead an easy life, but certainly this can not commend itself either to anyone really interested in the advancement of the service, nor can it be properly claimed that this class of men should be generally employed, so as to save the Government a small amount of money annually, owing to being able to make the salary of that post less than the post is really worth.

Now and then such a man may prove himself the most efficient officer that we could secure, but generally the opposite would be the case. Going there for sightseeing, educational purposes, for the benefit of his family, and to have a pleasant time, the chances are that these purposes are served rather than looking closely and carefully after every Government requirement. It certainly strikes me that it would have been far better to have had in an office thus occupied a man who went abroad with the sole view and desire to make a reputation for himself and with no other object excepting a firm determination to serve United States interests and aid our citizens according to his ability, so that the activity he might show and the furthering of Government interests would in due course be appreciated, recognized, and tend to his material benefit.

It will be admitted, I think, by the Department of State that many of the United States consuls who go abroad find, on spending a reasonable time at their posts, that they are usually called upon to live at a rate which their salaries will not admit of doing; that the compensation they receive for clerk hire and expenses is inadequate, and consequently they either have to incur debts or restrict their living to a point which is almost penurious and beneath the dignity of any man who holds such an office. Merely to give one illustration, we will take the consul at Sydney, New South Wales. He comes under class 5 and receives $2,000 per annum. There may be some emoluments to the office, it is true, but the amount can not be very large.

Sydney is a large city, and while the cost of living may not be excessive, as compared with older cities, yet to ask a first-class man to try to exist on such a compensation is not just to the country nor to the man, and to claim that good men can be secured at any such price is not worthy of consideration, as everyone knows that it is simply misstating a condition. By accident a fairly good man may take the place and stay there for a period, but that is the best we can hope for; and many other similar conditions in other places could be pointed out.

While under federation of the Australian colonies, Sydney will not be the actual capital of the entire country. It will always remain the nominal capital of New South Wales, and heretofore has been the resident city of the governor-general sent out from England. Our consul, by reason of the dignity of his position, representing the United States, is invited to all functions given at Government house. He is entertained by his fellow associates, consuls from other countries, some of whom are receiving as high as $10,000 per annum from their governments, but it is impossible for him to reciprocate these courtesies on his salary, and I know of many instances where these men recognized and admitted the humiliating position they are placed in through these causes, and have felt it keenly.

Human nature is the same the world over, and the other consuls often have felt themselves above the representatives of the United States, knowing their status, although they have come from nations of comparatively no importance whatever in wealth and population or trade in comparison with our country.

Much has been said about the nondesire of having the man seek the place by reason of the compensation he might receive, but this false argument certainly can not appeal to anyone in the present discussion, and in any case it is always well to strike a fair average of salary, and certainly we have not reached such a point with those who represent us.

It is well known that there is a certain glamour or allurement about Government official positions, and thus we can understand how many a poor fellow has been attracted by a consulship who was worthy of a better fate, and has been led on to accept the Government pittance and go abroad to represent us in some out-of-the-way place, who never would have thought of going if the facts had been properly put before him as to the climatic and other conditions he was called upon to meet, and who has bitterly regretted the move taken.

Again, a great deal has been said regarding the question of the United States consul being free from commercial contamination or business entanglements, and yet it does seem as if we do our best to drive him into the very thing we apparently wish to avoid, if we are honest in our words and thoughts, and it is well known that a large number of our representatives undoubtedly are forced, when opportunity offers, to interest themselves more or less in commercial enterprises, really being obliged to do so by their absolute necessities. Some do it subrosa and some openly, and it is no uncommon thing for our consuls to become drummers for local merchants, being paid a fat commission on all sales made by the storekeepers to any United States citizen who may go to the consul for information where best to purchase the goods he needs for personal use or to take home as gifts to his family or friends.

Others associate themselves absolutely with business ventures, and do not hesitate to have samples of various kinds of merchandise in their rooms or in adjacent premises, and promote schemes of any kind for a consideration. Further, the temptation presents itself, beyond doubt, to accept compensation from those who may present arguments which look reasonable. As, for instance, a large commercial house in this country may feel that the good will, if he can not command the active interests, of the consul may be to his advantage, and it can be easily arranged, if the consul is open to such arguments, for a yearly compensation, to be given simply for the use of the opportunities which may arise to indorse the firm who may pay a bonus, or, if it is a manufacturer, for the recommendation of his line of goods. I do not care to assume and I trust that there is not much of this kind of thing done, but there have been at times statements made which warranted the calling of attention to this feature, and it is but another argument why at least a living salary should be paid to the end that temptations of all kinds need not be thrown in the way of men who represent us abroad.

While it is true, as has been previously stated, that owing to the desirability of the European positions we are, notwithstanding the small salaries paid, reasonably well represented in many of the positions, when you come to consider the posts that are unhealthy and many thousands of miles from the United States, also extremely undesirable for other reasons, there does not appear to have been given the attention which might have been to the raising of the salaries, at least in these places, to the end that proper representatives could be secured, and that these men should be paid according to the risks they run in going there and the hardships they were forced to meet.

Often such towns and cities are on the coast, and if a man has a family he would be forced to send them back into the country where the climate and surroundings were more healthy, and, if possible, he would have to live there himself, even if single; all of which entails expense; and to give a few illustrations of places of this description and the salaries paid, I mention: Belize, Honduras, $1,500; Bombay, India, $2,000; Ceylon, India, $1,500; Bahia, Brazil, $2,500; Lourenço Marquez, Africa, $2,000; Zanzibar, Africa, $2,000; Aden, Arabia, $1,500; Port Louis, Mauritius, $2,000—and could name many others, and it certainly seems incredible that men will knowingly take these places at such pay.

In some of these towns or cities it is almost impossible for a man to exist for more than a year or two without a change of climate, and the probability of sickness and fever of various kinds, besides the discomforts of living, are so great that one who takes the post certainly should be paid accordingly.

It has been said that it is not the duty of the consul to make himself practically the drummer, or at least the intermediary, for the various drummers sent out by houses doing business from America in foreign countries, and beyond question this is partly correct; but it certainly is his duty to be sufficiently posted as to the status of American business in the country or section he represents to give any American traveler reasonable information as to whether he can advantageously open trade relations with the country, port, or district, and to give all travelers seeking commercial information any reasonable facts they may require.

As regards the real duties of a consul, there is, of course, much question, but it does seem as if, to put it briefly, he is there to represent American interests in a commercial way above all others, and I fail to see how this can be lost sight of or contradicted. He should be thoroughly posted and should acquaint himself with the products which enter and go from the port or ports of the country in which he is resident. He should do all possible in his power to do away with any prejudice which may exist in relation to American goods, so as to increase their sale and aid in their importation. He should make himself acquainted with the credit and standing of the commercial houses in his district and be willing to impart this information. He should be absolutely free from all entanglements of any kind in any business way, so that rival manufacturers through their representatives can obtain the same information and favoritism would not be shown.

It should be his duty to post his Government thoroughly as to what is going on and being done by other consuls, and what efforts they are making for the benefit of their government. He should be in a position to entertain to a reasonable extent, so as to uphold the rightful dignity of his office. He should at once advise the Government of any laws enacted that might injure our trade or shipping. He should be careful to render any reasonable service to his countrymen as they travel in the territory he represented and be capable of making intelligent reports on all matters of interest. One of the greatest difficulties there appears to be in connection with the desire for reform is that the position is more or less dominated by political influences, and while some members have taken the high stand that no Senator or Congressman would possibly think of ever recommending for office abroad anyone who was not generally fitted and worthy to occupy the position, yet, surprising as it may seem, the public will not believe that this is correct, nor will this idea be likely, generally considered, as in order, even by the Representatives themselves.

There is no doubt whatever but that many men are recommended and obtain the positions who are not justified in securing them by their business training or warranted in having the appointment by any qualifications that they possess, and they have simply secured the offices in preference to better men through the influence of those who were pushing them and who desired to pay off, perhaps, some political debt, or for other similar motive.

It has been desired that a few suggestions might be made as to the possibility of improvement in the service and the methods necessary, and on these lines I would say that the first thing which must be taken up is the question of compensation, and a new system should be adopted of paying reasonable salaries. No man who is of the proper intelligence, education, and business knowledge and experience to represent the United States Government abroad at any post that does a large trade and where American interests should be watched carefully, should be allowed less than a salary of $4,000 to $5,000. He should then, perhaps, be able to at least maintain himself outside of the plane of absolute poverty.

He also should be allowed a proper compensation for clerk hire, as on this important issue as well the Government has adopted a theory of allowing only about one-half the amount necessary to enable the consul to secure even a halfway competent person to aid him and facilitate the work. A man should be employed, if possible, who understands stenography and typewriting, as this is essential, and it further should be required of the consul that this clerk should be taken from the United States, and the expense out and home should be paid by the Government.

At this point it might be well to state that there also exists an extremely bad system at present, which is the appointing of representatives of foreign countries to act in many cases as United States vice-consuls, which means that when the consul himself is absent by leave, through sickness, or other causes, which are continually arising, the interests of the United States Government are then left in the hands of a foreign citizen, and no matter how able or conscientious a man he may be, and undoubtedly a number of those who now thus represent us are upright men, yet, at the same time, it is not just to American interests to have this condition longer exist, as surely our country has grown beyond the need of such makeshift expediencies, and we should be willing and see to it that we have an American in every post where a vice-consul is required, owing to the importance of the post, and that he is sent from here and paid a reasonable salary, as I believe it is extremely unwise even to appoint American citizens who live abroad to such places, as it is bound to create jealousy unless such appointee happens to be interested in no commercial enterprises and is therefore free from the consequent criticism, and such men are not likely to care for the position. I certainly hope we shall have relief so far as regards this most important change for our benefit and not be told we can not afford the cost.

Such a commanding post as Cape Town, South Africa, where surely the United States Government should have a vice-consul, and one who could intelligently act as such if the consul was away, is represented by a local merchant of another nationality, and our interests there during the present war were represented by said vice-consul for a considerable period. As I mentioned this instance, I desire to add that the gentleman in question has done much good service for the United States, and deserves our full thanks, and that I do not wish to reflect upon him in any manner whatever. That, however, does not alter the force of the argument that this condition of affairs should not longer exist. To do away with this contingency, and as suggestions have been asked, I would state that it certainly appeals strongly to me, and as a further step to improve the service, that the Government should at once take up the training of such number of young men as may be necessary to occupy these subordinate positions.

I would consider as one means toward this end that the State Department should be authorized to employ, at a salary of not less than $1,000 the first year, with a yearly increase of $100 for a proper period, such number of men as may be desirable and necessary, their expenses to be paid out and home, and they to be sent to different stations to act for the first three or four years as clerks, and then, on their written application, be accredited, if they have proved efficient, to some post with authority to act as vice-consul when needed. During the years they would have been on trial they could have the proper opportunity of learning sufficient to qualify themselves for their somewhat higher offices, and should study and learn foreign languages whenever convenient. If they continue to remain in the service, it would be advisable to transfer them every two or three years, so that after a proper period of service, if they still signified their intention to remain in Government service, they would be then considered as entitled to be raised to the position of consul, and as opportunities arose it would be well to give them preference in these positions, if their record was such as to warrant their appointment.

The age at which they should be taken when they first enter the service to be not under 25 years nor over 30 years. By this system we would educate up to efficiency and value in the service a class of young men who would obtain a vast experience, and as I would protect them by having their positions secure, with prospects of advancement, they would have every incentive to remain in the service; and it goes almost without saying that such a man, with the experience acquired, certainly ought to be able to represent this Government far better than a person simply taken through political influence; and in any case, whether or not he obtained his position in this manner, one who had had no previous knowledge or training in the work he was about to undertake. Under a system of this kind, if adopted, the Government would have an eye on these men for a series of years, receiving proper reports yearly from their superior officers, and would know regarding their moral character, personal habits, and other qualifications. These young men could also be sent abroad to fill positions as clerks in the offices of our ministers as well, to such an extent as might be considered for the increased value of the service.

It has been suggested, and certainly commends itself to me, that it would be well to have the Secretary of State employ a reasonable number of efficient men who would make yearly inspections of every consular office, taking note of the situation of consul's office, and if suitable and convenient, how the office is kept, giving information as to the clerks, the system of books, and any and all particulars which might be of value to the Government, and particularly to consult with the consul as to the question of his ability to live on his salary, and verify his statements; also report if he would consider it advisable and wise to have the Government provide a suitable home at the place; state if site and building could be obtained at a reasonable figure, and make other suggestions of the kind which should be considered. It may be said by some that the consul himself can make all these reports and suggestions to the Government, which is undoubtedly true; but it must be borne in mind that in such a case the details would

come from an interested party, and it would therefore be best for an outside person with experience to pass judgment on such questions who is unbiased. In adopting this suggestion, there is no intention to make such an inspection as would humiliate or be objected to in any way by the consul himself, but simply to have proper records; and it does not appear as if any exception could be taken if this matter was handled with judgment.

In addition to the special clerks to be sent out it would be well to also have the Secretary of State employ for such larger consulates as required the services of several clerks a number of young men, to be known as second-grade clerks, who would receive a compensation of, say, $800 a year, with yearly increase for good service, who could work into the position of the high-grade clerks as they were advanced or transferred.

It is not desirable that consuls or even our ministers abroad should employ members of their own families, or to be influenced by friends to take their sons to occupy subordinate positions, or, what is worse, employ local men who can have absolutely no interest in their work so far as our Government's good is in question. This tends undoubtedly to do away with efficiency of the office, and it is most undesirable for the upbuilding of the service. It is well known that many of the minor offices, especially in Europe, are held by favor and often by young men with money and high station in life who have no desire in taking the position but to have a good time and dance attendance on society. There can be no objection to a reasonable number of such appointments in the highest and confidential grade of position, but it appears as if it is overdone, and certainly all our diplomatic and consular officers should have some young men working there to advance themselves, and with nothing to look forward to but such advancement for their future welfare.

The question of having permanent Government quarters in a large number of foreign places, and especially tropical countries where this is so necessary, should also be carefully gone into. In a great many seaports and inland towns at a very reasonable expenditure houses could be built or purchased in proper location and with fair amount of ground, which would at once provide a proper home for the different consuls as they reached their positions. This would also elevate the position itself, give a better standing to the office, and be of such unquestionable benefit to our Government and to the betterment of the service that it seems almost unnecessary to call attention to it. By doing this the salary could be adjusted in proportion and the Government would really be at no loss.

A consul unfamiliar with the country he is visiting on reaching his post often finds conditions are not favorable to securing proper quarters, and he has to pay for himself, and especially for his family, if they go with him, an amount which is extremely expensive and out of the way for the likely inferior quarter she secures.

It has also been suggested by some that it would be desirable to put the position of consul under civil-service rules of some description, and on this point I do not specially care to express a decided opinion, but I am inclined to think it is well to leave the appointing power in the hands of the President, as heretofore. In the case of the proposed first and second grade clerks, however, I certainly feel they should be justified in having their status defined and secured.

The idea of leaving well enough alone seems to have a greater hold on this consular question than on most any other which is brought forward, and it has been stated that the State Department have seldom been given the increase of salaries that they have asked for, and that representatives of the people have said as an answer that there were twenty men in their districts who would fill the offices gladly at the compensation paid.

The service should further be increased at once beyond question by having consulships at a number of places where the United States Government is not at present represented. The reports of the consuls as published yearly by the Department are in many cases creditable, but in others the information sent appears to be almost the same, year by year, and it looks as if the various consuls following each other had simply reported on the same lines as their predecessors, and undoubtedly these reports could be vastly improved by the home department adopting a series of strict rules governing information which a consul is supposed to submit, leaving him, of course, open to make such extra remarks in his report as he might feel warranted in doing.

There does not appear to be any branch of the United States service to-day on which an expenditure of money could be made which would be so much to the advantage of the country. The House of Representatives and the Senate do not hesitate to appropriate millions yearly for objects where the Government benefit will be of vastly less consequence to the importance of the country. Probably the expenditure of about $1,000,000 additional per annum would enable the consular service to be placed on the plane it should be, and likely the expenditure of about $500,000 per annum, which is an insignificant amount in comparison with the good it will do, would in ten years enable the Government to own its own homes for consuls in most of the important foreign tropical countries, leaving Europe out of the question. Certainly there is an immense outside wish and desire on the part of the public that these things should be done, and it seems that the committee in charge of these matters could accept suggestions of this kind, which are made in a liberal spirit and with no desire to criticise, without taking exception in any way or feeling for a moment that such views are advanced with any other desire than to benefit the diplomatic and consular department of the Government for the good of our people and our country. [Loud applause.]

River and Harbor Appropriation Bill.

SPEECH
OF
HON. JOHN L. BURNETT,
OF ALABAMA,
IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 19, 1902,

On the bill (H. R. 12346) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes—

Mr. BURNETT said:

Mr. CHAIRMAN: Having gone pretty fully into the merits of the amendment which I have just offered, in my remarks on last Tuesday, I shall ask but little more of the time of the committee.

What I do say shall be in reply to the remarks of the distinguished chairman of the committee, for whom I entertain the highest respect.

Nothing that I have said or shall say warrants the chairman in growing nervous or lecturing members about being young men. Logic and truth, whether it comes from the young or the old, will with fair-minded people always receive that consideration to which it is entitled.

The distinguished chairman, while reiterating statements made by Captain Judson, does not deny our assertion that Judson had never been over the obstructed part of the river, had never made a survey of it, had given no facts upon which he based his change of heart. Nor did he deny that the statements made by Captain Price, from which we quoted and which showed a 4-foot channel sufficient, were based upon a survey actually made by Price.

The chairman makes a statement of the assessed real estate values of the five counties bordering on the lower 68 miles of the river in 1890, but says nothing of the value of the personal property in these same counties, nor what the real and personal values are now.

But even if he had, Mr. Chairman, would it be fair when discussing the completion of the entire project to limit it to the five counties at the lower end of the obstruction? The very fact of the obstruction, anyone knows, contributes largely to these small valuations. Again, should not the other counties bordering it both in Georgia and Alabama be considered in the estimate? If so, then the committee should know that according to the census of 1890, from which the chairman himself quotes, the tax values of the other four Alabama counties are over $24,000,000, to say nothing of Floyd County, Ga., in which is the splendid city of Rome, and the other Georgia counties through which navigation would extend. But if the committee were going into the question of tax values as a basis for river improvement, it would have been well for them to have prosecuted it a little further into some of the counties in which they have made vast expenditures.

But, as I said the other day, in spite of the fact that we are thus hemmed in from river competition with the railroads, our country is improving rapidly. In addition to the industries of my home town, to which I referred the other day, I desire to say that at Round Mountain, Ala., right on the banks of the Coosa, there is a large wood alcohol plant; at Rock Run is located the Bass Furnace, the largest charcoal furnace in the South; at Gadsden is the Kyle Lumber Company, one of the largest sawmill plants in Alabama, which employs 200 men; the Queen City Lumber Company, employing 40 men; the Southern Manufacturing Company, employing 60 men; a large mining plant; one daily, two semiweekly, and one weekly newspaper; a large flouring mill, and many other manufactures which I have not time to mention.

At Attalla, 5 miles away, there are in operation a furnace, machine shops, two large mining plants, and many other smaller industries. I spoke the other day of the immense cotton factory at Alabama City. These, Mr. Chairman, give but a faint idea of my home towns alone. All along this stream are large industrial plants springing up, and when this splendid water course receives the recognition it deserves the Coosa Valley, from Rome to Wetumpka, will be one vast hive of industrial life.

Philippine Tariff.

SPEECH

OF

HON. HENRY D. GREEN,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, December 18, 1901.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 5883) temporarily to provide revenue for the Philippine Islands, and for other purposes—

Mr. GREEN of Pennsylvania said:

Mr. CHAIRMAN: Unexpectedly the remaining ten minutes of the minority's time has been placed at my disposal.

Had I expected this generous concession I would have fully prepared myself to make the best use of so short a time to discuss so important a subject, and one of such great scope. Under the circumstances I will content myself by making a few remarks which of necessity must be somewhat desultory and to which in the future when opportunity offers I may be able to add.

With a party of Congressmen it was my privilege to travel in the months of September and October over 2,500 miles in and around this archipelago. I returned just in time to be present at the opening of this session of Congress, and under these circumstances feel that I may have seen and heard and learned many facts of interest and importance about these islands and their people which may be of benefit to this body when considering not only the measure now before us, but when deliberating upon other measures which it will be our duty to act upon in the immediate future, by which we will declare our policy there and perhaps provide either temporarily or permanently for their government.

I regret that the presentation of this tariff bill was not postponed until we could have obtained all the information necessary to intelligently consider a law which will so materially affect the welfare of these people. We could at least have waited until the report of the Philippine Commission, already completed and at this time being printed, was available for a careful reading and examination. It would be hard to explain why, under these circumstances, there should be any rush about the matter, any unnecessary haste. It certainly would have been much more satisfactory had the members of this House at least had an opportunity to learn the Commission's views, which would have enabled them to arrive at more reliable conclusions.

The chairman of the Committee on Ways and Means frankly states that he and his colleagues have been obliged in drafting this bill to depend entirely upon information received some time ago from some of the Commissioners, and urges that we pass it for no other reason than that they recommend such action. From the statement of the chairman it is not at all clear what the Commission do recommend, and upon what facts, circumstances, or conditions they base their recommendations. The bill can hardly be said to have been considered by the committee itself.

They accept it in blind faith, and ask this House to pass the measure on equally blind faith in the supposed wishes and recommendations of the five kings into whose hands we have turned over the government of the 10,000,000 brown people living in those lands. This is surely a case of the blind leading the blind.

But why do they expect the bill to pass under these circumstances and conditions? Simply because the few leaders of the majority party have made it a party measure and propose to drive it through this body under the party whip and spur. Not an amendment is to be allowed to be presented and discussed; nor is time given at all sufficient to discuss the merits of any item, let alone the whole bill. This certainly furnishes a good example of how this supposed deliberative body acts without deliberation or discussion.

If the government of the islands is ever carried on in the same happy-go-lucky, slipshod fashion that characterized the construction and passage of this legislation, I can only say God help the Filipinos.

The Democratic minority of this House deem it their duty to learn everything that can be learned which may have a bearing upon this subject, and would have you discuss this legislation after careful deliberation. They would learn everything that can be learned about these new possessions, and then enact such tariff laws and all other legislation as will be best for the Filipinos and best for the interest of the American people.

I am satisfied that many Republican Congressmen do not approve of this way of proceeding, and would willingly have had this question fairly and intelligently considered. As it is, all that the minority, and all that these men in the majority, can do is to place the responsibility upon the shoulders of the majority leaders who have framed the bill and dictated the rule by which the measure is to be pressed through this body and eventually enacted into law.

Here let me protest against these great questions, involving the lives, the liberty, the happiness, and prosperity of so many million humans, being made party questions and discussed and considered with partisan bias and bigotry. In debating these new and difficult questions we should be governed by impulses of the broadest statesmanship and not by narrow partisanship. While listening to the forcible remarks of the gentleman from Iowa [Mr. HEPBURN] I could not help feeling sorry that he and all the members of both Houses of Congress could not have personally visited this new country, and from such an examination formed their opinions and drawn their conclusions. I am certain he would never have likened the probable development of these islands to the development of that portion of this country acquired by the Louisiana purchase.

Let me point out to him a few reasons why such possibilities can exist only in the realm of a most vivid imagination and will never be brought within the pale of a practical realization. The reasons I assign should be kept in mind whenever these islands, their people, their progress, or their possibilities are discussed, because they have the most important bearings upon all these questions.

First. We must not forget that the Philippine Islands lie in the Torrid Zone.

Second. That they are peopled, not by a homogeneous race, but by a mixed race, perhaps the most mixed on the face of the globe—Caucasian, Mongolian, and Malay mestizos, and in all probability African.

Third. That although their total area is less than 120,000 square miles the population is between eight and ten millions.

Fourth. These islands are neither contiguous nor even near to our country, but lie many thousand miles away from our nearest shores.

Fifth. They can not be peopled with our citizens and our wage-earners, and their families can never make them their homes.

Sixth. The white race can never mix with them and maintain its superior qualities. A mixture means mestizos or half-breeds. When we take into account these facts it is easy to understand why no results can be expected to be obtained such as were obtained by settling that vast area which was included in the Louisiana purchase with our surplus white population and that of immigrants coming from the white races of Europe.

These facts must demonstrate beyond the possibility of a doubt that the Philippine Islands and their people will never reach that condition of cultivation and enlightenment where we can with advantage admit them to statehood and citizenship. They will never make American States or American citizens; climate and racial conditions prevent. They do not now and never will stand on the same footing as the Sandwich Islands, which lie in the Temperate Zone and are suitable to be inhabited by our people.

The CHAIRMAN. The time of the gentleman from Pennsylvania has more than expired.

Mr. GREEN of Pennsylvania. Mr. Chairman, I ask leave to extend my remarks in the RECORD.

The CHAIRMAN. The gentleman from Pennsylvania asks leave to extend his remarks in the RECORD. Is there objection?

Mr. GAINES of Tennessee. I object.

The CHAIRMAN. The Chair hears objection.

Mr. GREEN of Pennsylvania. Mr. Chairman, I will whenever an opportunity occurs endeavor to discuss the Philippine question more at length and in detail.

Rural Free-Delivery Service.

SPEECH

OF

HON. JAMES P. CONNER,

OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 8, 1902.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 11728) to classify the rural free-delivery service and fix the compensation to employees thereof—

Mr. CONNER said:

Mr. CHAIRMAN: With the light I now have on this question, I find myself opposed to the contract system proposed in the bill of the committee and in favor of the continuance of the existing plan of selecting rural carriers. I do not say that conditions may not arise in the future which will justify a change from the plan now in force, but in view of the fact that the service is still in its experimental stage and that under the salary plan it is continually growing in favor and popularity, and, in addition, as no demand comes from the people or the Department for the adoption of the contract plan, I do not hesitate to say that the suggestion for the proposed change at this time is inopportune and that I shall vote against it.

I regret that in making this decision I am compelled to place myself on record against the almost unanimous recommendation of the committee reporting the bill. There is no doubt of the absolute good faith of every member of the committee recommending the change from the salary to the contract method in the selection of carriers, and that they are inspired by no other thought than the good of the service goes without saying. The record of the chairman of the committee from the beginning is one to be envied, and proves that he has, in all stages of the development of the rural service, been its true friend and loyal supporter. The country owes to him and other champions of this great movement an everlasting debt of gratitude. But, while bowing my acknowledgments to the committee for their efforts and good faith, I do not lose sight of the fact that the proposed change would be a grievous mistake and one that would seriously cripple the successful development of the service.

It is not out of place at this time to speak of the benefits and popularity of the rural delivery. It has been repeatedly said upon the floor during this debate that it is here to stay, and I may add that it is not only here to stay but to grow and develop until it shall extend to every populated section of the country. It is safe to assert that no other act of legislation has been so fruitful of good results and so universally popular. The expectations of the most sanguine have been more than realized in the actual growth and popularity of the service.

The farmers of the country are, in a large measure, the beneficiaries of the service. In no other way do they receive such direct returns for the taxes paid by them. It places them upon an equal footing with the residents of the cities and affords them the same opportunities. It removes time and distance and breaks down the barriers between the city and country. The farmer's life is no longer one of isolation and solitude, but of contentment and happiness. He reads in his daily paper what is going on in the busy world the same as do his neighbors in the city. He keeps in close touch with current events and is familiar with all questions of a public character. His horizon is extended beyond the limits of his immediate neighborhood and takes in all the world. In short, his life has been transformed and he is a new creature, with enlarged vision and increased capacity for work and for enjoyment. These are some of the blessings which have come as a result of rural delivery.

Let us not do anything or make any experiment which may impair the success of this great improvement, the crowning glory of the new century. Its past development is a sufficient guaranty of the safety of the plan now in force. We should let well enough alone, at least until it is demonstrated there is necessity for a change. Every argument urged for adopting the contract system in selecting rural carriers applies with equal force to the city carriers, and, for that matter, to railway mail clerks and many other employees of the Government. Why confine this new discovery to rural carriers alone? If it is a good thing, why not let it be extended to the city carriers and to employees of other branches of the Government? It is safe to assert that not a single member of the committee would favor an extension of the contract plan beyond the rural carrier. I hope it is not because their service is in the country and for the benefit of the farmer alone that this reform is urged; this cheap, discredited reform, which makes hirelings of men who otherwise should be responsible Government employees and public officials. It may as well be understood that of all that is good the farmer is entitled to the best. He is moving up to the front of the procession, and hereafter his place must be recognized.

It may be conceded that the contract plan will cost less than the salary method, but cheapness is not the only thing involved. Effectiveness in the service is of paramount importance. It takes good men for good carriers and good carriers for good service. In order to maintain the present standard in the service, the carriers should be respectable and responsible men. They should regard themselves and should be regarded by the public as Government officials, and not as mere hirelings, whose chief ambition will be to make their daily rounds and to draw their salaries. Our knowledge, obtained from the practice in the star-route service, warrants us in saying that if the plan of the committee is accepted we will have in the rural service a cheap man, a cheap horse, and a cheap wagon, and, as a natural and inevitable result, a cheap service.

It is important that we have the best men available as carriers, not only to discharge the duties devolving upon them, which are practically those of a postmaster, because it is their duty not only to deliver mail upon their routes, but, in addition, to collect mail, to sell postage stamps, to sell post-office orders, to give receipts for registered packages, and to perform other duties required of a postmaster. Not only should they be good men to perform these duties, but, because of the fact of the close and intimate relations they sustain to the patrons of their routes, they should be men of good reputation and moral character and worthy of the confidence of those whom they serve.

The salary should be enough to attract to the service capable and responsible men who will take pride in the discharge of their duties. My own opinion is that $600 per annum, for the present, will insure the selection of capable and desirable men. It is said that in some parts of the country school-teachers are seeking employment as carriers. I hope this is true, for no better class of men can be secured, and if they are willing to undertake the work at the salary which is paid it is an argument in support of the existing plan. It is safe to assert that few school-teachers will be employed in case a change is made in accordance with the recommendation of the committee, because a cheaper and less desirable class of men will compete for the contracts for carrying the mails. It is said by those who favor the contract method that within a few years we will have from fifty to sixty thousand rural carriers, and that their number will be so great and their influence so potent upon members of Congress that their salaries will be increased to an exorbitant amount.

I have a better opinion of the carriers than to believe that their only mission will be to secure an increase of their salaries, and it certainly is a sad commentary upon the American Congress to assume that it could not withstand the importunities of a few employees of the Government. If it should be conceded that members of Congress will be influenced by considerations of this character, we should not lose sight of the fact that while there may be 50,000 or 60,000 men asking for increase of salaries, on the other hand there will be several millions of taxpayers who will object to the salary being increased beyond what is reasonable. This suggestion, made by those who favor the contract method, is evidently made to frighten rather than to enlighten the members of this body. I hail with joy the time when 60,000 young Americans will be engaged in the service of rural delivery, because it means education; it means carrying to the people messages of joy and gladness; it means elevation for the farmers of the country; it means employment for American labor, and, I hope, at reasonable prices; it means that the more men there are employed in the service the more consumers there are for the products of the farm and factory.

If the number of carriers is increased to 60,000 it means that 300,000 people have become consumers, and this consideration is not without weight in considering the question of the expense of the salary system. It seems to me the question of expense should be a secondary consideration in determining what our action should be on the bill under consideration. The controlling question, as I have stated, is what will best insure the maintenance of this exalted standard of service now in force. In voting on this question let us not close our eyes to the fact that the welfare of rural free-delivery is involved and its destiny is at stake. We vote either to strengthen or to weaken it. We vote it up or we vote it down. I for one am in favor of a policy which means better men, better equipment, and consequently better service, and that rural delivery may in the future, as it has in the past, grow in favor and popularity, and that its benefits may be extended to and enjoyed by all the people of our great and glorious country. [Loud applause.]

Rural Free-Delivery Service.

SPEECH

OF

HON. GEORGE A. PEARRE,

OF MARYLAND,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 6, 1902.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 11728) to classify the rural free-delivery service and fix the compensation to employees thereof—

Mr. PEARRE said:

Mr. CHAIRMAN: It is apparent that this debate, continuing as long as it has, has perhaps thrashed out as well as could be expected any issue joined by the presentation of this bill between the committee or those who favor it on the one hand and those who are opposed to it on the other. That fact, coupled with the additional fact that I am this morning far from well, would induce me to desist from respectfully submitting any additional remarks before the Committee of the Whole, did I not believe that this is a matter of very serious import, especially to the rural sections and to the farming communities of the United States.

I may preface what I have to say, sir, with the statement that it is not entirely in advocacy of local rights and interests that I speak. My district is composed not only of agricultural counties, but also of mineral counties, one of the counties indeed being so endowed by nature with mineral resources that it would be next to impossible to benefit anybody in it, perhaps, by the introduction of the rural free-delivery system of mail. Its population is

gathered in small towns and settlements, each having a post-office. But, sir, my view is broader than mere local interest. It extends in sympathy to the whole agricultural interest of the United States. Now, Mr. Chairman, let us contemplate for a moment the source from which this bill comes. Has there been any public demand of any kind for it? Absolutely none. What is the usual origin of bills of any kind in the House of Representatives or the Senate of the United States? They usually come, first, from the initiative of the people, taken through petitions to one of the branches of the Congress.

They come, second, through a suggestion which arises from some glaring deficiency or inefficiency in the public service which immediately commands the attention of Congress and suggests a cure for the evil by legislation. They come next, Mr. Chairman, through the recommendation of the party platform, or the head of a department, or the message of a President of the United States. These are the sources from which bills of this sort and almost every other kind usually emanate. How was this bill born? Its birth seems to have occurred in the secluded recesses of the Committee on the Post-Office and Post-Roads, where, conceived in the virtuous desire of the gentleman from California [Mr. LOUD] to save his colleagues of the House from their political doom, it was brought forth. It was born, sir, of the travail of the generous soul of that gentleman and nursed, it appears, to its present strength and health in the genial incubator of the lofty and high public purpose of the gentleman from Mississippi. No interested neighbors were invited to be present at its birth.

No political party stood sponsor at its baptism; but begotten of a strange combination of Republicans and Democrats, of unique parentage and questionable ancestry, it is now, wrapped in the swaddling clothes of its own great purity of purpose, presented to this House for adoption. Will the House adopt it? I apprehend not, sir, but before I come to a discussion of the bill and the likelihood of its passage, I desire to register my great and unfailing confidence in the integrity and lofty public purpose of the gentleman from California who is the chairman of this committee. I am proud to call that gentleman my friend, but, sir, some men must be saved from themselves, and I entertain a profound fear that if we be not careful we will gather from the speeches of the honorable chairman and the other members of this committee that each one of them may, perchance, find himself in the divine solitude which oppressed Richard Brinsley Sheridan, the great Irish orator and wit, when the poet said of him:

Nature form'd but one such man,
And broke the die, in moulding Sheridan.

Mr. Chairman, I never have been informed that any State or district in the United States has ever been set aside by Providence, legal enactment, or public opinion as the reservation of political honor, political directness of purpose, and personal integrity. Before I had the honor to become a member of this body I entertained the opinion and conviction, which I shall endeavor to retain, that each man on the floor of this House was the peer of every other, at least in honor, purity of public purpose, and integrity, and yet the gentleman from California has charged every opponent of his unnecessary bill with a lack of courage in the performance of his public duty. The gentleman from California says that the members of the House know that it is as natural for him to oppose as it is for him to breathe. I quite agree with the gentleman from California, and I think that the membership of this House will bear out the correctness of my belief, with this modification of the gentleman's statement, that it is as natural for him to oppose as it is for him to breathe, except when the proposition under discussion is the child of his own thought and brain. Then he seems imbued with the fatuous notion that no man can mean well who differs with him. In short, as Falstaff said: "There live not three good men unhanged in England and one of them is fat and grows old."

Mr. Chairman, I listened with intense attention to the gentleman from California [Mr. LOUD], because I was deeply concerned in this subject and desired to secure light from the chairman of the committee, in whose experience and knowledge I have such confidence. I listened and heard with thrilling heart and moral exaltation the pathetic story told by the gentleman from California of the magnanimous charity with which he treated a letter carrier who had treated him badly. I believed that what the gentleman said was true, that in the magnanimity of his soul he could forgive and forget and could afford to overlook the attacks of a letter carrier upon him and help him to retain his place. But, sir, while listening to this I listened in vain for such arguments, such conclusive and logical deductions in support of the passage of this bill and in opposition to the present method of paying the rural free-delivery carriers, as I expected to hear from a gentleman of his experience and ability.

Mr. Chairman, what is the origin of this system of free delivery? Whence does it come? The delivery of letters by carriers began as far back as 1823, or perhaps even earlier, in New York City. It is true that the carrier in the city was compelled to collect his compensation, one cent per letter, or at times two cents per letter, from the receiver of the letter, and one or two cents a letter for every letter that was sent. It was not free delivery, because the individual who received or sent a letter had to pay for it, and the compensation of the carrier was made in that way.

In 1863, however, that city delivery system was changed so that the letters were received from and delivered to every citizen residing in a city of a certain population without price, without fee, and without tax of any kind except the general taxation of the Government.

This was the beginning of the free delivery of mail, which has grown and expanded until every citizen in towns of 10,000 or more population may now dispatch and receive all his mail at his own home without the trouble of going to a post-office, no matter how near it may be, without the cost of a penny.

Now, sir, these cities, therefore, have enjoyed this great privilege of free city delivery since 1863, at least. The boon was a great one and its advantages apparent and undeniable. This led the House of Representatives in 1894 to include a provision in the Post-Office appropriation bill of that year authorizing the Postmaster-General to use the appropriation given to experiment with the free delivery of mails in the country.

The members of that House could see that every argument of necessity and convenience that could be advanced in favor of city free delivery was reenforced an hundred times in applying that system to the rural districts. The farmer's need for the service was even greater than that of his city brother. Let us look for a moment at their respective situations. What had been done in the city, forsooth? Post-offices had been erected in the large cities at the expense of the Government. Those post-offices were provided with every modern convenience. More than that, paved streets led to the doors of the post-office, and street cars and omnibuses ran along at intervals of from five to ten minutes. The city man could very readily have gotten into a bus or car or stepped across the street to the magnificent post-office and there received his mail; but the Government of the United States said to the man in the city, "No; sit at your desk, remain at your home, and we will employ carriers at the public expense to bring the letters and lay them in your hands, and take the letters that you desire to dispatch to the post-office and dispatch them without trouble or expense to you."

What had been done for the farmer and the man who lived in the rural communities? Absolutely nothing. He was the man whose mail facilities required improvement. He lived a long distance from the post-office, sometimes 8 or 10 miles. When he wanted his mail in summer it was necessary for him to take a horse from the harvest and, perhaps, a hand and send to the post-office for it. In winter he, his boy, or a hand on the place had to go on horseback, making the same journey through the snow, sleet, and bitter cold before he could have a newspaper or a letter.

Now, it took exactly thirty-one years before the Congress of the United States was brought to extend those privileges, rights, and conveniences to the farmer who needed them most and ought to have had them first. The farmer had waited in vain for this convenience to come to him. When the system was introduced, no man dared to bring in a bill defining and establishing a system in one law, but it grew up by an appropriation in a post-office appropriation bill, designed and limited to experimenting with rural free delivery throughout the United States.

Mr. Chairman, there was no lobby behind that proposition. No great Department was behind it. The people spoke, and to-day, although many would like to wipe out this system, no man in this House dare openly raise his hand or his voice in favor of its abolition. It was an evolution of the people's desire. It grew up without political assistance. The outgrowth of this system, which the gentleman from Illinois [Mr. BOUTELL] objects to calling a system, was a spontaneous growth, the seed of which had been planted in the heart of the people out of the desire of the people in the rural communities to see their rights observed, in having the same conveniences in the delivery of mails as the people of the cities had. Now, my time does not permit or I would digress to the extent of endeavoring to show to this committee that the easy and rapid diffusion of intelligence is at the bottom of the preservation of republican institutions.

Why, sir, I assert that if it had not been for the telegraph and the rapid transmission of mails by railroad trains running 60 miles an hour no power on earth, no patriotic purpose in the United States, could have ever welded together the great West with the great East. It is of primary importance, therefore, sir, that the North and South, the East and the West, all sections and all climes of this expansive land, should be welded together by the easy transmission of intelligence between the various sections.

Nay, more, sir, the sovereign of the United States is the individual citizen. In so far as that individual citizen is an educated and intelligent man, in so far will the Government of the United States equal the wisdom which was projected for it by the framers of the Constitution.

The Government can not rise in point of intelligence and morality above the sovereign power, and you must educate the sovereign power. One of the best ways to educate is to disseminate periodicals and newspapers and general intelligence throughout every portion of the country, through the cities as well as the country, and you then have the sovereignty of your land, which is nothing more nor less than the collective will of individual freemen, a well-educated, intelligent, and moral sovereignty.

Has it ever struck the members of this committee that the Post-Office Department was not limited or restrained in any way when it undertook this experiment? It was not compelled, sir, to adopt the salary system in the payment of the carriers. No law said you shall or shall not pay a salary. Congress said find with this appropriation the best, the cheapest, the most satisfactory method of delivering mail to those in the country. It was a pure experiment, left to the discretion of the Postmaster-General without let, hindrance, or legal limitation.

Now, it has been administered by that Department since 1897. It was fair to suppose that the Postmasters-General that were administering this experiment were honest men; that they had no pet theory; that they were endeavoring to exercise the discretion Congress gave them in a way which would redound to the benefit of the people and the welfare of all concerned. They were not extravagant officials, because the gentleman from Illinois says that the other departments and divisions of the Post-Office Department are most economically administered. Therefore, when you find the result coming from a power which was not constrained or limited in any way in the method of the payment of these employees, and you find that that power has selected the salary system, it is fair to suppose that that is the proper, legitimate, and logical result of a fair experiment. Is not that true? With ample power to do so, why did not the Postmaster-General select the contract system as the method of payment? The experiment has been going on, improvements and changes have been made in the system every year, the messages of successive Presidents have come to Congress with various recommendations, but nobody has suggested any other method of payment than the method now employed. But the gentleman says that the expense of the present system is too great; that a contract system will be cheaper. This is the first argument he makes in favor of his bill. I think I can show, sir, that not only will the expense not be too great, but that it will not be greater than that of any of the economically administered bureaus of the Post-Office.

Mr. Chairman, is not the gentleman simply guessing? Has he submitted for the consideration of this committee any facts, any figures, any deductions upon which he has based that statement? I listened to his speech attentively, and have read it since, and failed to find any argument which shows that the rural free-delivery system with the carriers paid a salary as now will be more expensive than if the contract method of payment were introduced. Why, the gentleman admits in several pages of his remarks, as gentlemen of the Committee will remember, but I have not time to call attention to his utterances, that he did not believe that the contract system would reduce the cost.

Let us see. He said that it was the most extravagant bureau of any department in any government since time began, or words to that effect. Let us look at the administrative features of this system. Eight hundred and fifty thousand dollars is appropriated for the administration of the rural free delivery for the next year. Now mark you, sir, when the next year rolls around there will be 15,000 carriers, and for the administration of a bureau with these 15,000 carriers $850,000 is appropriated.

The CHAIRMAN. The time of the gentleman has expired.

Mr. PEARRE. Mr. Chairman, I hesitate to ask for any indulgence, but I should like a little more time.

Mr. SWANSON. There is a great pressure for time.

Mr. PEARRE. I do not often ask indulgence, but I should like to have about ten minutes more.

Mr. SWANSON. I can only yield the gentleman five minutes more, there is such a demand by members for time.

Mr. PEARRE. Why, Mr. Chairman, in order that I may not lose more time, I will continue. Here is the cost of the administration of the rural free delivery compared with that of the Railway Mail Service:

RURAL FREE DELIVERY.		RAILWAY MAIL SERVICE.	
General superintendent	$3,000	General Superintendent	$3,500
Supervisor	2,750	Assistant general superintendent	3,000
Chief clerk	1,800	Chief clerk	2,000
No corresponding office.		Clerk in office General Superintendent	1,800
7 division inspectors, at	2,500	11 assistant division superintendents, at	2,700
No corresponding office.		11 assistant division superintendents, at	1,800
No corresponding office.		22 assistant superintendents, at	1,600
45 special agents, at	1,600	109 chief clerks, at	1,600
25 clerks, division headquarters	27,300	180 clerks, division headquarters	200,000
2 route inspectors, at	1,200		
4 route inspectors, at	900		

Showing that in every instance in the administrative bureau of the Railway Mail Service of the United States the officials of the Government are paid more than they are in the same bureau of the rural free-delivery service, and that is a bureau which the gentleman from California [Mr. LOUD] said is the most extravagant in the history of nations. The total cost for the supervision of the Railway Mail Service is $537,400, as follows:

1 General Superintendent	$3,500
1 assistant general superintendent	3,000
1 chief clerk (office of General Superintendent)	2,000
1 clerk (office of General Superintendent)	1,800
11 division superintendents, at $2,700	29,700
11 assistant division superintendents, at $1,800	19,800
22 assistant superintendents, at $1,600	35,200
109 chief clerks, at $1,600	174,400
100 (about) clerks employed in division headquarters, although carried on the rolls as postal clerks, estimated	210,000
Total	479,400
Actual and necessary expenses, General Superintendent	28,000
Per diem allowances, assistant superintendents	30,000
Total cost for supervising Railway Mail Service alone	537,400
Cost of departmental supervision, office of Second Assistant	185,000
Total	722,400

The cost of the departmental supervision office of the Second Assistant Postmaster-General is $185,000, which, added, makes in all $722,200 for administration of Railway Mail Service, with only 10,500 postal clerks. Now, $850,000 has been appropriated for the next year for the administrative department of the rural free delivery. One hundred and fifty thousand dollars of that must be taken off for stationery, supplies, etc., leaving $700,000 for the administration of the rural free-delivery service, with 15,000 carriers, showing a difference of over $22,000 in favor of the departmental supervision of the rural free-delivery service. Further than that: What is the total population of the United States? Seventy-eight million.

In the rural free-delivery cities there are 32,000,000 people served by the free delivery. The rural town population is estimated at 24,000,000, and the rural population outside of cities and towns to be served is 22,000,000. 4,000,000 of whom are now served by rural free delivery. The balance of the rural people unserved is 18,000,000, and we must provide for them. How much will it cost? I will tell you by the figures. It will require 50,000 carriers at $600 a year. But, the gentleman says, these people come and clamor at the doors of Congress to make us increase their salaries. They have had mighty poor luck in making the gentleman from California, the chairman of that committee, report any increase of salary, either for the clerks of the Post-Office, the clerks in the Railway-Mail Service, or the free-delivery carriers in the cities.

Now, I trust we shall long have the gentleman from California at the head of that committee, but I do not apprehend, sir, that if some fell misfortune should overtake him, courage, virtue, and honor would disappear from the face of the earth. [Laughter.] I have confidence in the ability of the people of the United States and this magnificent civilization which is the consummation and concentration of all the political wisdom of ages; I have confidence in that civilization being able to furnish a man who, with the same courage and the same fearlessness and the same intelligence, will take hold of the management of the affairs of that committee and resist any improper importunities leading to extravagance. [Applause.]

But to return to the estimate of what it would cost to furnish rural free delivery to the remaining 18,000,000 of our rural population still unserved. It is estimated that it will require 50,000 carriers to serve them. These, at $600 a year, would cost $30,000,000. But a deduction must be made from this figure of the saving made in the discontinuance of star routes and fourth-class post-offices in the introduction of rural free delivery, a large number of which are always abolished. In Frederick County, Md., for instance, there are 56 rural free-delivery carriers, and 49 post-offices and 32 star routes have been discontinued. It has been carefully estimated that the saving from this source will be $6,000,000. This deducted from the $30,000,000 leaves $24,000,000. A deduction, however, has to be made by reason of the enormous increase in revenues of the Post-Office Department by the introduction of rural free delivery.

In Carroll County, Md., alone, which has a full county system, the aggregate revenues of the first three quarters, after the service was fully adjusted, were $20,489.19, and of the succeeding three quarters, ending September 30, 1901, $22,553.46, an increase of $2,064.27, or a fraction over 10 per cent. (See report of Postmaster-General for the fiscal year ending June 30, 1901, page 134.) Quoting again from the same report of the Postmaster-General, page 134:

In Table 1 of the Appendix will be found a statement showing separately the postal revenues for the three years of 35 post-offices with rural free delivery and 35 post-offices without rural free delivery, the towns and villages in each class having about the same population. This statement shows gratifying results in favor of the offices having rural free delivery, where

the percentage of increase of 1900 over 1889 was 10.3 per cent, and that of 1901 over 1900 is 11 per cent. On the other hand, the increase in the 35 towns without rural free delivery was 4.7 per cent for the year 1900 over 1899, and 4.6 per cent for 1901 over 1900.

Again quoting from the same report on the same page:

An analysis of the gross postal revenues of the United States for the year 1901, which were $111,631,193.39, shows that $74,295,394.47 came from 866 free-delivery cities. The remaining 3,600 Presidential offices yielded $16,063,251.81, while the 72,479 fourth-class offices produced $18,913,519.21. These amounts show an increase over the preceding year as follows: Free-delivery offices, $7,519,490.81, or 11.11 per cent; Presidential offices, $552,265.58, or 3.56 per cent (nonfree delivery); all fourth-class offices, $405,678.46, or 2.19 per cent—

Showing a difference of between 7 and 8 per cent in the increase in the revenues of these respective offices in favor of the free-delivery offices. On page 135 of the same report the Postmaster-General says:

These unsatisfactory conditions disappear as rural free delivery, with its attending benefits, reaches out into the country, giving the people equal postal facilities without regard to locality, which has the effect of increasing the revenues at a rate at least equal to that maintained in the free-delivery cities, where during the past five years it has averaged 8 per cent. It may then be reasonably claimed that a general extension of rural free delivery will increase the postal revenues from year to year at such a rate that eventually the service will become self-sustaining.

The city free delivery is more than self-sustaining now.

It therefore appears beyond doubt that the amount of revenue in the Post-Office Department has increased in proportion to the increase of the facilities furnished the citizen to dispatch and receive his mail. From these figures and along these lines it has been estimated that there will be at least an increase of $10,000,000 in the revenue arising from the increased business of the Department, due to increased and improved postal facilities. Deducting this again from the twenty-four million above remaining, and a balance of fourteen million will be left as the net cost of furnishing the farmers of the United States, and others living in the rural districts, the same advantages and blessings that are now enjoyed by their more fortunate brothers of the city. Indeed, one does not have to claim to be a prophet to foresee that eventually the rural free-delivery system will cost the Government nothing, but will be absolutely self-sustaining.

This $14,000,000, the cost of establishing rural free delivery through those portions of the United States now unprovided with it, is not so appalling as the gentleman from California would lead us to believe when compared with the present cost of the city delivery system, which, according to the estimates of the First Assistant Postmaster-General, at page 103 of the annual report of the Post-Office Department for the fiscal year ending June 30, 1901, appear to be $18,745,450, nor does this amount stand out in such horrid relief, as the chairman of the committee would have us believe, when compared with the present cost of our railway-mail service, the sum necessary for maintaining which, as set out by the Second Assistant Postmaster-General, on page 332 of the same report, is $11,098,496. These figures certainly do not justify the extravagant statements of the gentleman from California in his speech on this bill delivered March 3, in which he said that "rural free-delivery service completed through the country would cost $60,000,000."

While upon this point of the comparative cost of the salary method and contract method of payment of the rural free-delivery carriers it may be well to direct the attention of the gentleman from California to the fact that when the Postmaster-General (if this bill should become a law) would ask for bids for the carrying, collecting, and delivery of the mails, as now performed by the rural free-delivery carrier, he would find that the bids would be very much higher proportionately than those now made by contractors for star routes. Formerly star-route contractors simply carried the mail from the railroad to the post-office in closed pouches. He was required to collect no mail and deliver no mail to any individual. Within the last year the Second Assistant Postmaster-General has issued an order requiring that star-route contractors shall deliver the mail to those who leave requests therefor at the nearest post-office; and since that additional requirement has been made there has been an increase in the cost of carrying the mail by star-route contract.

The Second Assistant Postmaster-General, on page 317 of the Annual Report of the Post-Office Department for the fiscal year ending June 30, 1901, from which I now read, says:

The average rate per mile traveled on June 30, 1901, under the old contracts, was 3.87 cents. The average rate per mile traveled on July 1, 1901, under the new contracts, was 5.26 cents—an increase of 1.39 cents per mile, or 35.91 per cent.

This increase of nearly 36 per cent in the cost under the contract system has arisen since the three new requirements have been added to the contract:

First. That the contractor shall live on or in the neighborhood of his route, and shall personally perform the work.

Second. That he shall deliver the mail to individuals along his route, making proper arrangements therefor.

Third. That he shall accept mail from an individual along his route for deposit at the next post-office.

In addition to these duties the rural free-delivery carrier is compelled not only to accept mail when handed to him by individuals, but to collect it from their boxes.

Second. To carry stamps and sell them, to sell money orders, and register letters.

If the contract service will increase in cost nearly 36 per cent by the addition of about one-third the duties of the rural free-delivery carriers, it is safe to say that it will at least double when all the duties of the rural free-delivery carrier are imposed upon the contract carrier who is contemplated by this bill.

Mr. Chairman, I listened with close attention and much surprise to the discussion between the gentleman from California and the gentleman from Illinois, in which the gentleman from California tried to sustain his statement that—

every star-route contract let a year ago, going into operation on the 1st of last July, in the first section, which embraces New England, New York, Pennsylvania, Maryland, West Virginia, and Virginia, every single star-route contract obligated the contractor to deliver and collect the mail from every resident on his route, and he is doing it to-day.

I was, I say, surprised to hear the gentleman make this contention, because, unfortunately, it is incorrect. The star-route contractor in the first district, under the new contracts, is not required to collect mail from every resident on his route. And he is not doing it to-day. He is required to deliver mail into boxes along his route at the risk of the addressee, and then only upon the written order of that person upon the postmaster at the nearest post-office.

I turn to page 318 of the report of the Second Assistant Postmaster-General in the annual report to which I have already referred, and read from the terms of the advertisement for star-route contracts:

The carrier is not required to collect mail from the boxes, but there is no objection to his doing so if it does not interfere with his making the schedule time. The law provides that every carrier of the mail shall receive any mail matter presented to him, if properly prepaid by stamps, and deliver the same for mailing at the next post-office at which he arrives, but that no fees shall be allowed him therefor.

This is the advertisement. Let us see what the contract itself provides, to which the gentleman from California so often and so vigorously referred the gentleman from Illinois. I read from the fourth paragraph or provision of a "Contract for Mail Service," which I secured from the Second Assistant Postmaster-General:

Fourth. To take mail matter from any post-office now on the route, or that may hereafter be established on the route, and carry the same to, and deposit it into, the proper box now on or that may hereafter be placed on the line of the route for this purpose (or on any route that may hereafter be established and to which this contract may be extended, as hereinafter provided), when requested so to do, as contemplated by the terms of the advertisement pursuant to which this contract is made.

It will be observed that he is only required to deposit mail in post-office boxes when requested so to do, as contemplated by the terms of the advertisement pursuant to which this contract is made. The advertisement, pursuant to which the contract is made, says nothing about collecting mail from boxes, except that he is not required to so collect it, nor is there a suggestion in the contract which could be construed into a requirement upon the contractor to collect the mail. As a matter of law, if he stands upon his rights, he can not be required, either under the advertisement or under the contract with the advertisement read into it, to collect mail from anybody or any place except the post-offices along his route.

Moreover, Mr. Chairman, the gentleman from California has overlooked the fact that these improvements in the star-route service have only been made in the first section, embracing the States which I have already mentioned, and in that section only, since July 1, 1901. The advantages of the rural free-delivery system had become so apparent and had made such a deep and favorable impression upon the people that it became a case of "Help me, Cassius, or I sink." This miserable old star-route system, with its characteristic rickety wagon and ricketier horse, driven by a man not there for the accommodation of the people, but determined to earn the amount of his contract with as little trouble as possible, saw that it would be entirely superseded by the sprightly and modern rural free-delivery service. The officers took hold of it then and began, for the first time since 1793, to make some improvements in it, copied after the rural free-delivery service, and now the gentleman from California would have us adopt it instead of its superior prototype.

I now come, sir, to the second argument of the gentleman from California, which is that there is so much politics in the present system that he fears for the safety of his colleagues and their continued service in the House. He threatens us with an army of rural free-delivery carriers sweeping down upon us and so making slaves of every member of Congress; that they will have their will in legislation, increasing their salaries, and that we will not dare oppose them. The gentleman from California stoutly denies that any such fear will possess his soul, but seems to intimate that while he has the fortitude to resist such assaults he fears for the virtue of his weaker brothers.

There can be very little argument, sir, in this. There are 10,500 postal clerks in the United States and they are thoroughly organized. There are 17,789 letter carriers in the cities and towns and they are thoroughly organized. There are 72,479 fourth-class postmasters in the United States, each of whose post-offices is a town or village center from which radiates political and other influences. If Congress were in danger of being controlled by these influences against its duty, it would certainly have so been controlled by these agencies ere now. The railway postal clerks, the letter carriers, the post-office clerks, all separately organized, have separately petitioned Congress on numerous occasions to increase their compensation, and I believe justly so, but these petitions have not yet so improperly controlled a sufficient number of Congressmen to pass bills increasing their respective salaries, which could be looked upon, even by an economist, as a raid upon the public Treasury.

The fourth-class postmaster has not organized, as far as I know, but he could if he would, and could, perhaps, be more potent in exercising politics for or against a member of Congress than any of the other agencies. These men have a perfect right to lay their grievances before Congress and to present to their Congressman or to the whole body of Congress the reasons why they believe their compensation should be increased. It is not only the right, but the duty, of Congress to give such petitions, respectfully made, careful consideration, and, if the reasons appear to be good and the salaries too small, to correct the injustice by increasing the salaries. This much rural free-delivery carriers could do, and no more.

The right to petition is an ancient one, for which the Anglo-Saxon has shed much blood and endured much suffering, and I for one will never vote to curtail him of that privilege; nor will I permit the probability of the exercise of that right by any set of men to prevent my voting in favor of a system which I believe to be good, simply because the officers of that system might desire to submit petitions to me. Why, Mr. Chairman, one fourth-class postmaster, with all the time he has to spare, with his store and post-office the center of attraction of the town or village in which he lives, with opportunities to see not only the people of the town, but those who come into his store from the country, could do more good or injury to a member of Congress in one day than a rural free-delivery carrier, hurrying along his route, could do in a week. Such an argument is an imputation upon the manhood of the House, and I believe will be resented in the vote.

If it be wise, as the gentleman from California argues, that we put rural free-delivery carriers under the contract system in order to keep them out of politics and to protect ourselves, why not put the railway postal clerks under the contract system, the fourth-class postmasters under the contract system, the post-office clerks under the contract system, and especially the 17,789 letter carriers in the towns and cities throughout the United States under the contract system? Why pay the city carrier, whose duties are even simpler than the rural free-delivery carrier (because he does not sell stamps and money orders nor register letters), a salary and let the important work of the rural free-delivery carrier out by contract? I have listened patiently for a satisfactory answer to this question, Mr. Chairman, but have heard none in all this debate.

The third argument upon which the gentleman from California bases his advocacy of this bill, which is to put the rural free-delivery carriers under contract, and the one upon which, perhaps, he lays the most emphasis, is that it is impossible to adjust the pay of the rural carrier to the work that he does. Will you better adjust the compensation for the work by bidding? Hardly. The bidders will, in the first place, be largely ignorant of the amount of time required and the amount of work to be done. Some will bid too high. Then all the bids will be rejected by the Department. Some will bid too low, the contract will be awarded, and as soon as the contractor discovers that he has bid too low he will throw up the work. In both instances there will be great public inconvenience.

But, Mr. Chairman, the present system is so flexible that the Department can and does now adjust the salaries of rural carriers to meet local conditions as respects topography, time, etc. Under the present system the officers of the Post-Office Department are not constrained by any legal requirements as to the amounts of the respective salaries. This makes the system elastic and enables the Department to most justly and conveniently adjust the compensation to the existing conditions. The gentleman from California seemed to be under the impression that there had been no discrimination in the salaries paid to the rural carriers, or, at least, only in one or two cases. I will include in my remarks a list of the irregular salaries of rural free-delivery carriers throughout the United States, which I secured from the Post-Office Department, after hearing the gentleman express his doubts upon this subject. This list will show that the salaries of rural free-delivery carriers range from $180 to more than $500. From this it appears that the Department has adjusted, and very skillfully adjusted, the salaries to the work done.

Irregular salaries of rural letter carriers.

State.	Office.	Name of carrier.	Salary.
Alabama	East Lake	William D. Carroll	$360
	McCalla	T. J. Letson	360
	Morris	J. W. James	480
Arkansas	Fort Smith	Edward C. Brogan	480
California	Redwood City	Walter Knight	450

Washington	Centerville	Levi Thomas Leath	300

Moreover, Mr. Chairman, the Department has in operation a method which will enable it to determine as definitely, as accurately, and as justly as any other method that could be conceived about what it is worth to cover a certain route. Each carrier is now required to fill out a monthly time report showing, daily, at what hour and minute he reported at the office, at what hour and minute he left to serve his route, at what hour and minute he returned after serving his route, and the daily time on the route. Each day he fills in this information on spaces provided in the report. There are 31 spaces, one to cover each day in the month. At the end of the month he signs this report and turns it over to the postmaster. The postmaster must then approve it and promptly forward it to the general superintendent of rural free delivery and retain a copy or duplicate on his own files. If the work be done by the substitute, it is so indicated on the report.

From a review of these reports the superintendent of rural free delivery can readily ascertain in the course of a year how much time it takes to cover that route. Moreover, the postmaster or keeper of the postal station must at the end of each calendar month report to the First-Assistant Postmaster-General, on a blank prepared for that purpose, the number of registered letters and packages, letters, postal cards, newspapers, circulars, and packages delivered by each one of the carriers centering at his office, and also a list of the same collected by each of the carriers. In addition to this, the routes are inspected at stated periods during each year, and reports made by the inspector to the superintendent of rural free delivery.

These reports contain 36 questions, which the route inspector

has to answer in writing. These questions cover every conceivable feature of the service, going into detail. In addition to all this, the superintendent of rural free delivery sends inquiries to the postmasters, as a check upon the reports of the carrier, inquiring when the principal mail arrives in his office, when the principal afternoon dispatch leaves his office, at what hour the rural carrier reports for duty, which carriers have locked pouches, the number of star routes supplied by the office, whether each carrier has an available substitute, whether the postmaster has maps and descriptions of the existing rural routes on file in his office, what the condition of the roads traveled by the carriers is, whether the roads were impassible at any time during the past winter, if so, for how many days and what was the cause, etc.

This system of reports and inspections, it would appear, Mr. Chairman, places the superintendent of rural free delivery in possession of all the information that any man could secure with regard to the route and the time and trouble necessary to cover it, and therefore enables him and the First Assistant Postmaster-General to determine better than by any other method what the work is worth. Having ascertained this, they can, under the existing law, adapt the salary to it. The salaries now given are not unchangeable, as they would be if fixed by law, but can be adjusted to meet the conditions. The method of fixing salaries up to the present time has not been absolutely arbitrary, but has been at the rate of about $100 for each 5 miles. The information thus gained, I submit, enables the Post-Office Department to arrive at a more correct conclusion as to the value of the work than the man who has bid for it himself. The Government does not desire cheap service so much as good service. Good service is always cheap. Bad service is dear at any price. This has been our experience with the star-route system. The Government does not desire to squeeze the last cent out of the citizen by requiring him to be a competitive bidder, but is only anxious to know what the work is fairly worth, and is then ready to give that price.

The contract system is an obsolete system. The tendency of governments is to employ their own servants and agents, and to have them under government control and discipline. No other country in the world which operates a rural free-delivery system operates it under contract. On the contrary, in every government, including the United States, in which this system is in operation to-day salaries are paid to the carriers, and they are government agents, government officers. The difference between the services of a contractor and the services of an officer of the government is about the same as the difference between the work of a hired nurse and that of a member of the family. The government officer feels that he has been honored by appointment as a government official. He takes pride in the performance of his work, and in satisfying the requests and reasonable demands of his patrons. He has a wholesome fear of his superior officers, whose eyes are upon him and who have the power to suspend or dismiss him for dereliction of duty. He takes an interest in the work and tries to improve the service.

The contractor reads his contract closely and cuts off every corner in it that he can. He serves his patrons grudgingly and often rudely, knowing that mere impoliteness and lack of accommodation will not vitiate his contract. He cares not whether his patrons feel kindly toward him or look upon him as a good carrier or not, because he knows that whatever their opinions may be, his contract can not be vitiated except by some distinct violation of one of its explicit terms. If the people complain of a public servant, his superiors immediately call upon him to answer and will insist that he do his work in a spirit of accommodation rather than grudgingly. If the patrons complain of the contract carrier he silently points to his contract and claims that he has not violated it in any substantial manner. The one works like Portia in a spirit of kindliness and love for his work. The other, like Shylock, silently points to the terms denominated in the bond.

The modern tendency of governments is to employ their own officers at a salary rather than to let their work out by contract to the lowest bidder. Aye, more, the modern tendency of governments is to take absolute control of all methods of the transmission of public intelligence and to place it in the hands of its salaried officers. This tendency had its first manifestation in the United States in the establishment of the Post-Office Department at the very beginning of our Government, and even more modern manifestations of it appear from the fact that not only do all civilized nations so control their postal affairs, but that statistics from 75 of the principal nations of the world show that the government owns and operates the telegraph in all except Bolivia, Cuba, Cypress, Hawaii, Honduras, and the United States.

I fear that our people can not get much comfort out of the company in which we find ourselves upon this proposition. Moreover, Government control of telegraphic methods of transmitting intelligence through a postal telegraph has been indorsed by such men as Henry Clay, Charles Sumner, Hannibal Hamlin, General Grant, Senators Edmunds, Dawes, Chandler, N. P. Hill, and Gen. B. F. Butler, and Postmaster-Generals Johnson, Randall, Maynard, Howe, Creswell, and Wanamaker; Professor Morse, the inventor of the telegraph; Charles W. Field, the founder of the Atlantic cable and director in the Western Union Company; James Gordon Bennett, Professor Ely, Lyman Abbott, T. V. Powderly, and Samuel Gompers. Every country of Europe controls not only its postal facilities but its telegraphic facilities. France, Germany, Russia, Sweden, Norway, Denmark, Switzerland, and many other nations had their own lines at the start. In England the telegraph was originally in private hands, and after a three-years' fight it was taken charge of by the Government. I am not now going into a discussion of the wisdom of this policy, but simply advert to it to sustain the proposition that the tendency through all modern governments is to control all methods of the transmission of public intelligence through their own salaried officers.

Indeed, sir, the tendency has gone further. It has extended to the suggestion of the Government ownership of the railroads. By this plan the Government would control, not by contract but by its salaried officers, all railroad transportation, passenger and freight. This plan is not only being agitated, but has been dignified by a serious but not hostile discussion by the Hon. Martin A. Knapp, Chairman of the Interstate Commerce Commission, in an article in the Annals of the American Academy of Political and Social Science for January, 1902. I do not advert to this either by way of approval or disapproval, but simply to again sustain the proposition that the modern tendency of governments is to assume control of the great public utilities, which have become necessities for the citizen, and to operate them by their own salaried officers rather than to leave the work to the tender and uncertain mercy of private enterprise, or even to permit that portion of it which is the Government's own patronage to be performed by private individuals under contract.

The gentleman from California can give us no assurances of the result of this system. He does not point with any confidence to the operations of the star-route system, because he is compelled to admit that only recently they found it necessary to improve it by imitating the rural free-delivery service. His plan is but an experiment which has never been tried. The present system of rural free delivery has been tried without trammel as an experiment for five years. In that experiment the officers of the Post-Office Department, honest, capable, discreet, and economical men, have been endeavoring during that time to develop the best, the cheapest, the safest, and most satisfactory method of distributing the mail through the rural communities. In that experiment the Postmaster-General has been constrained by no precedent or legal regulation. He could just as freely have selected the contract system for his carriers as the salary system, and yet he selected the salary system, notwithstanding the fact that he had before him in operation in his own Department the star-route system, in which the carriers are under contract.

These star-route carriers were the only carriers who went through the rural districts. The Postmaster-General, in establishing the rural free-delivery routes, came into contact with them, and if his experience had taught him that the contract system in vogue with the star-route carrier was preferable to the salary system he would naturally have adopted it; but with the star-route carrier before his very eyes, with the star-route carrier to be superseded by the rural free-delivery carrier, instead of making the rural free-delivery carrier a star-route carrier by contract, with enlarged duties, he made the star-route carrier a rural free-delivery carrier, with a salary and enlarged duties. He had the amplest opportunity to contrast the two plans, and in his five years of experience he has selected the salary plan.

Mr. Chairman, it seems to me that this matter is too plain for argument. An attempt has been made to foist this bill upon this House when there has been absolutely no complaint of the popular and growing rural free-delivery system under salary; when the Postmaster-General, at the head of the postal affairs of this Government, after careful and conscientious study and ample experiment, has selected the salary system. Though no petition has come from the people; though no recommendation has come from the Department; though the full messages of the Presidents have come to Congress without any recommendation of this sort whatever; though the Civil Service Department, the Mrs. Grundy of American politics, finds no fault and makes no complaint, the business of the Government and the work of this House is delayed for days by what seems to be a determined effort to do something that nobody wants except the gentlemen on the Committee on the Post-Office and Post-Roads.

If, sir, it be cheaper for the Government and better for the public service to have the work of the Government done by contract, why waste time and money on the Post-Office Department at all? Why not have all of our postal facilities let by contract to the lowest bidder? Why not advertise every post-office in the United States and let the citizen come forward and offer his bid to manage

the affairs of the respective post-offices? Many citizens would doubtless bid and would be glad to do the service. Why not advertise for bids by the various railroad companies for handling and distributing the mails as they are handled and distributed by the railway postal clerks to-day? The railroads now enter into contracts with the Government for the carrying of the mail. Why not let them arrange and distribute it also, if the argument of the gentleman from California be good? Why not, indeed, if the contract system be cheaper and the service will be, therefore, improved, offer the work of city free delivery to the lowest bidder instead of paying salaries ranging from $600 to $1,200 a year for letter carriers in the towns and cities?

What difference can be found between a carrier in the city and a carrier in the country, or what argument can be advanced why one should be paid a salary and the other paid under contract? I submit, Mr. Chairman, that no argument can be advanced in favor of applying the contract system to the rural free-delivery carrier which does not with equal force apply to the carrier in the city, to the railway postal clerk, and to the postmaster himself. Indeed, if the Government desire, it could get bidders by the score who would be willing to take off the hands of the Government the management of all its postal affairs and the collection and distribution of its mails. No reasonable man would listen with patience for one moment to such a proposition. The mere statement of it I have just made shows its absurdity and ought to aid in showing the absurdity of the proposition in this bill to let the work of distributing the mails through the rural communities by contract to the lowest bidder.

I hope, sir, that I may live to see the day when every star route in the United States shall have been abolished, when the cadaverous horse and rattling wagon of the star-route driver shall vanish from the sight of man, and in its place, along every highway, the bright, energetic, and ambitious son of the sturdy farmers of the land may be seen with his well-fed, active horse and his trim wagon, hurrying the letters and papers of the people from post-office and postal station and delivering them into the mail boxes of every farmer in the land, planted in front of his own gate and protected by the power and the officials of the Government, collecting, as he goes, letters and packages from all those who desire them dispatched, selling stamps and furnishing money orders, the registration of letters and all the facilities of a post-office to every rural citizen of the nation. Thus, at last, some of the hardships of rural life will have been overcome, and in respect to the receipt and dispatch of his mail, at least, the farmer will stand on an equal footing with his more favored brother of the town and city.

Mr. Chairman, this is essentially a farmer's facility, a farmer's convenience, and a farmer's boon. Do not let us quibble about its cost or seek by insidious means to overthrow it. The growth of this system has been wonderful, and reflects distinguished credit upon the able gentlemen under whose administration it has been perfected to its present condition. Without guide, without suggestion, but developing it as the needs of the people's services required, with patience and great ability, the Hon. Charles Emory Smith and his able superintendent of rural free delivery, the Hon. A. W. Machen, have wrought out of nothing one of the greatest public utilities among the many that add to the comfort and convenience of the people of the United States. [Loud applause.]

River and Harbor Appropriation Bill—Amendment for Coosa River.

SPEECH

OF

HON. CHARLES W. THOMPSON,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 18, 1902.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 12346) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes—

Mr. THOMPSON said:

Mr. CHAIRMAN: I believe the Rivers and Harbors Committee is composed of honorable men, men of ability and good judgment, and that they have labored earnestly and faithfully to reach the result which they have submitted to this House for consideration. I do not care to gainsay the proposition that the bill which they have presented is an ably prepared document, the intention of which, as they claim, is to increase the transportation facilities of this great country, and to cheapen the transportation of its products. I am in favor of liberal appropriations by this Government for the improvement of our rivers and harbors, because I believe that system furnishes the only check we have against the great railroad monopolies and combines which are making unjust discrimination in freight charges, thereby encouraging elaborate trusts and combinations of all kinds. Therefore I heartily favor the bill these gentlemen have presented for our consideration, in the main. But as the distinguished gentleman from Texas [Mr. BALL] has said, the men composing this committee are human; they are not infallible, they are liable to err, and I claim that in the consideration of some of the claims presented to them they have erred, and that the section of country I have the honor to represent has been unfairly and unjustly treated by this committee.

The distinguished chairman of the committee [Mr. BURTON] said yesterday that the Coosa River, flowing through the district which I represent, was the least meritorious of all the projects presented to his committee, and he undertook to fortify that statement by a report recently submitted to that committee from an engineer who has been stationed in our section of the State for the past two years. This report, Mr. Chairman, is not consistent with the reports that have been made upon this stream for the past twenty-five years, and is not consistent with the report made by this same engineer two years. I can not imagine what has brought about this great and sudden change of heart in this engineer. No change has been made in the conditions in that section of Alabama, except in the way of progress, advancement, and development along all lines.

As shown by the report of Gen. Thomas L. Casey, Chief of Engineers, United States Army, in 1890:

Nine Alabama counties lie immediately upon the Coosa River and are cut off from water communication with the Alabama River. These are Cherokee, Etowah, Calhoun, St. Clair, Talladega, Shelby, Coosa, Chilton, and Elmore. Their area is about 3,563,272 acres, of which about 632,855 are in a high state of cultivation. There are great opportunities for stock raising and for dairy and poultry farming here. The population of these counties is about 200,000, the assessed value $45,000,600, with 700,000 acres in cultivation, producing 150,000 bales of cotton, 3,500,000 bushels of corn, 750,000 bushels of oats, half a million bushels of wheat and other farm products, as well as stock in proportion. The total annual tonnage of agricultural products grown in the portions of Alabama and Georgia lying immediately upon the Coosa River is 502,000, of which 50,000 tons are cotton, 100,000 cotton seed, 224,000 corn, 40,500 oats, 67,500 wheat, and 20,000 cattle, sheep, and hogs.

In the 9 Alabama counties that lie immediately upon the Coosa are 2,835,000 acres of unimproved land. This is clothed with virgin forests of the long leaf yellow pine, intermingled with white, red, and chestnut oak, hickory, and other valuable timber. These forests average not less than 3,000 feet of timber to the acre, or a total of 8,505,000,000 feet of timber in these counties, or about 20,000 tons, worth, perhaps, $65,000,000.

The mineral resources of this section are enormous. There are masses of rich red and brown iron ores and many other minerals. There is gold in Coosa County, a fine grade of kaolin in Calhoun and Etowah counties, abundant marble in Talladega County, plumbago in Chilton, and some tin has been found in Clay and Coosa counties; but brown and red iron ores, coal, and lime are the predominating minerals.

Inexhaustible deposits of iron ore are found on the banks of the Coosa, with an abundance of coal and lime. The present iron output of the Coosa Valley mines reaches 1,600,000 tons annually, worth $2,400,000. What would it be with the Coosa improved?

The lime interests in the Coosa Valley are remarkable, and the deposits perhaps the richest and most extensive in the United States. The lime assays 98 to 100 per cent pure in the cliffs along the river. The coal fields of the Coosa Valley are estimated to contain 350 square miles. There are great factories in the valley, including some 12 furnaces with an output annually of 670,000 tons, as well as cotton factories making 21,000 tons of cotton goods each year. Manufactories of car wheels, bar iron, and other products at Gadsden and Anniston aggregate 170,000 tons, worth $5,300,000, and at the same places 100,000 tons of iron pipe, worth $4,000,000, are made, while the output of the carpet and cordage mills at Anniston is 525 tons, worth a quarter of a million.

The recapitulation of the annual resources of the Coosa is as follows:

Agriculture, 500,000 tons, valued at	$16,000,000
Timber, 150,000 tons, valued at	5,600,000
Iron ore, 1,600,000 tons, valued at	2,400,000
Lime, 448,000 tons, valued at	416,000
Coal, 200,000 tons, valued at	300,000
Manufactory, 961,525 tons, valued at	28,050,000
Total, 3,859,525 tons, valued at	52,766,000

In addition to the above undeveloped resources of the Coosa River which lie slumbering and waiting for navigation, there was transported over the Alabama River, between Montgomery and Mobile, Ala., the following amount of tonnage:

In 1899, 76,529 tons of merchandise of estimated value of	$6,887,610
And in value of timber	2,500,000
In 1900, 85,567 tons, valued at	7,701,030
In 1900, timber valued at	2,500,000
In 1901, 119,634 tons, valued at	8,375,000
In 1901, timber valued at	3,000,000

A large portion of which would be carried to and from Wetumpka if you would give us an appropriation sufficient to complete lock 31 and open and build lock and dam 30. The people I represent in the Fifth district of Alabama are very much interested in this matter. They feel that their claim upon the Government for this appropriation, which has been so long neglected, is a just one.

Hon. W. R. Merriam, Director of the Census, in an able article in the Manufacturer's Record of February, says:

One of the Southern States that has done much toward utilizing her advantages as a manufacturing State is Alabama. The summary below shows that the capital invested in that State has increased during the past fifty years from $3,000,000, in round numbers, to over $70,000,000. The increase in the number of establishments from 1890 to 1900 was 88 per cent, and the increase in capital invested was about 53 per cent.

The population increased during these years from 771,623 to 1,828,697, or 137 per cent, while the average number of wage-earners employed in manufacturing establishments increased from 4,936 to 52,902, or 971.8 per cent. This growth of the wage-earning class has been very marked in the last two decades, and particularly in the decade 1880 to 1890, when the increase was 210.8 per cent, as compared with an increase of 19.8 per cent in total population. In 1900 the average number of wage-earners in manufactures constituted 2.9 per cent of the total population, as compared with eight-tenths of 1 per cent in 1880. But probably the best indication of the importance of the wage-earning class is afforded by the greatest number employed at one time during the year. In 1900 this was 76,931, or 4.2 per cent of the total population of the State.

The rapid growth of the manufacturing industries of Alabama during the last twenty-five years is due to the utilization of the State's rich mineral resources, which were neglected in the earlier years of the century. This development of the iron industry and of coal and mining has stimulated a variety of manufactures which are centered in the Birmingham district, in the northern part of the State, where the mineral deposits exist. The abundance of coal has made unnecessary any extensive use of the water power of the State on the Coosa, Tennessee, and Tallapoosa rivers, although on the Tallapoosa, near Montgomery, one of the largest water plants in the South has recently been constructed. It is noteworthy that the great development of manufactures in the northern part of the State has taken place largely without the advantage of navigable water for the cheap shipment of products. * * * It is estimated that water communication with Mobile would reduce freight charges on iron and coal 80 per cent.

Why, sir, it is a conceded fact that the region through which the Coosa River flows is one of the richest in the world. Col. A. K. McClure, the gifted editor of the Philadelphia Times, has repeatedly declared Alabama to be one of the richest States, naturally, in the world, if not the richest; and I believe that gentleman's estimate is practically correct. There is no place, Mr. Chairman, on the face of this broad earth where iron and coal can be found in such close proximity to each other as in the Birmingham district of Alabama; and Birmingham, Ala., fixes the price of iron for the whole world to-day. And yet this stream, flowing through the rich undeveloped mineral fields of this section, with coal and iron in great abundance, and leading out directly to the Gulf, has no merits in the eyes of the majority of the committee. On this stream millions and millions of tons would be transported if the Government would lend a helping hand and remove 72 miles of obstruction, thereby giving us a navigable water route 815 miles long, as is shown by the reports of the Government engineers in charge of this work for the past twenty-five years, which contradict the committee report recently made. I read from the report of the War Department made in 1901, less than two years ago:

The Coosa River has always been navigable for light-draft boats from Rome, Ga., to Greensport, Ala., an estimated distance of 162 miles. This part of the river is of such a character as to make its improvement by work of contraction and channel excavation entirely practicable.

From Greensport, Ala., to Wetumpka, Ala., a distance of 142 miles, the improvement requires the building of locks and dams in conjunction with works of contraction and channel excavation.

With the Coosa opened to navigation, there would be a continuous water route of transportation from Carters Landing, on the Coosawattee, to Mobile, Ala., a distance estimated at 815 miles.

This water route includes the Coosawattee, Oostenaula, Coosa, Alabama, and Mobile rivers, emptying directly into the Gulf through the Mobile Bay, and constituting the third longest water route in the United States.

The Alabama River is now navigable, Mr. Chairman, and is being used to transport the products of our section from Mobile to Montgomery, and of this 815 miles of accessible water there remains only 72 miles of obstruction. It has been estimated by the engineers for the last twenty-five years that $6,000,000 would remove all of these obstructions and give us a water route 815 miles long; and yet an engineer who has been there but eighteen months or two years, and who has made no survey, brings in a report to this committee purporting to show that it would require $20,000,000 to do this work. I would like to ask the chairman of this committee if Mr. Judson, who made this report, has ever made a survey of this work? I would like to know upon what basis he makes this report? Mr. Chairman, I am constrained to believe that "there is a nigger in the wood pile," and that some undue influence has been brought to bear in order, if possible, to blot the Coosa River off the map. But, sir, it will never be done. The Rivers and Harbors Committee of this House may throttle that great enterprise, but the time will come when Congress will recognize its merits. I call attention to a report made by the Chief of Engineers of the United States Army in 1882, volume 2, page 1855:

In 1876 an appropriation was made for improving the Coosa River between Rome and the Selma, Rome and Dalton Railroad bridge, and from this time work of improvement has been going on. The Coosa, though crooked, is very favorable for improvement. The bed and banks are generally of permanent nature, and the mean depth of the water is great when compared with the width.

In another report, made by the engineers in 1890, they make the following statement:

The river was originally much obstructed by rock shoals and sand bars between Rome, Ga., and Greensport, Ala., and below Greensport it was not navigable at all on account of the many shoals and rapids, formed by ledges of rock crossing the river bottom at points where the width of the river was greater than normal. The normal width of the river at low water is from 500 to 800 feet.

From Rome, Ga., to Greensport, Ala., an estimated distance of 162 miles' the river has an average slope of about 5 inches per mile, with banks which are firm and not easily eroded. From Greensport down to Wetumpka, Ala., an estimated distance of 142 miles, the profile of the natural river at low water exhibits a succession of deep pools, varying in length from one-half to 8 miles, separated by shoals formed of ledges of solid rock or loose stones and detached bowlders, which frequently rise above the surface. The shoals extend along the river for distances varying from a few feet to 12 miles, and have depths of water varying from a few inches to several feet. Velocity observations at Wetumpka showed a low-water discharge of 5,796 cubic feet, about the same as that reported for the Mississippi River at St. Paul. The abundance of water, the stability of the banks and bottom of the river, and the rock foundations for locks and dams, presented in all cases, make the lower portion of the river peculiarly susceptible of permanent improvement by a system of slack-water navigation.

By means of the Upper Coosa, the Oostenaula, and Coosawattee rivers there is now a stretch of 236 miles of navigable river above Lock No. 4, and by means of the Coosa and the Alabama rivers a stretch of 367 miles of easily navigable river below Wetumpka. The improvement of the 116 miles of river between Lock No. 4 and Wetumpka will therefore afford a continuous route of water transportation, 776 miles in length, from northwestern Georgia, through the mineral region of north Alabama, to the Gulf of Mexico at Mobile, Ala.

In another report, made in 1890, volume 2, page 1645, it is said:

In the meanwhile the coal and iron interests of Alabama have been rapidly developed, and the Coosa River coal and iron fields have become the objective of the more recent plans of improvement. The extension of the improvement to Wetumpka will unquestionably build up a large traffic in coal, iron, and farm products between north Alabama and Mobile and intermediate points and a large export business in coal from Mobile.

The present local business upon this river should not be taken as a measure of the value of this improvement.

The volume of business done annually in Wetumpka is estimated at $1,500,000, and in Montgomery at $40,000,000. At Tallassee, on the Tallapoosa River, which flows into the Alabama River at Montgomery, the annual business is $2,000,000. In Prattville, which is in close proximity to the Alabama, the annual business is estimated at $2,000,000. And yet Mr. BURTON would have you believe that the only thing to be taken into consideration in making this appropriation is the assessed value of of the counties of Tallapoosa, Coosa, and Chilton in 1890—twelve years ago—which he claims was $8,000,000.

In another report the Government engineer says:

The district of Georgia, which lies convenient to the Coosa River, had in 1885 an output of 32,924 tons.

The present iron production of the Coosa Valley region, extending from the neighborhood of Calera to Rome, Ga., is not much, if at all, below 200,000 tons.

The total iron production of the United States in 1885 was 4,529,869 tons. There had been very little increase since 1880. But in that time the output of southern furnaces had grown from 387,301 tons to 712,837. The most remarkable increase was in Alabama.

It is now conceded that the Alabama output will constantly grow in volume, since iron can be made cheaper here than elsewhere in the United States. If we now furnish transportation so cheap that we can, at Mobile, undersell any other point upon our coast, the result must be that Alabama, in a few years, will furnish millions of tons for market, and the greater part of it would pass down the Coosa River.

Another report in the same document, on page 1673, from Col. J. H. Simpson, says:

It is fair to assume that the opening of the Coosa River to navigation between Wetumpka and Greensport will be the virtual opening of a channel for direct trade between Rome, Ga., and Mobile, Ala., via the Mobile, Alabama, and Coosa rivers, by a water course 700 miles in length, available at all seasons of the year.

The opening and development of the rich and extensive coal and iron mines in the Coosa Valley will render this thoroughfare the great and important feeder of Mobile and the Gulf ports generally. The valuable products of the different counties bordering upon the Coosa River which now seek a market over rough and circuitous roads would naturally tend to this great highway, and the benefits of the great carrying trade thus created would be felt throughout the length of the river. Many products which are now neglected because of the difficulty in transportation would find a ready market and become a source of profit to the producer.

Maj. A. N. Damrell, in the report of 1881, on page 1222, says:

The improvement is believed to be of great local, national, and international importance for the following reasons:

It would give an unbroken water communication of about 800 miles from the Gulf of Mexico to the southern border of Tennessee and northwestern border of Georgia. It would supply a large local demand for fuel, iron, and building materials at rates much below the present. It would reduce immensely to the United States the cost of the large supplies of coal and iron which would be required by it on the Gulf of Mexico in time of war, and in time of peace it would result in a saving in the reduction of the cost of these items to the cities of this section generally, and to the steamers, both merchant and war, of all nations navigating the Gulf, which would soon reach the estimated cost of the work.

Mr. Chairman, I have other reports here which are just as favorable as those I have read from the engineers for the past twenty-five years who have surveyed this work, but which I will not take the time or patience of this House to read; but they all go to show the incorrectness of the report made recently upon this river by Mr. Judson.

In the memorial of the Coosa River improvement convention, referred to in the report, they say:

De Soto discovered the river in 1540, and marched down its entire length. After his discovery the region through which it passes remained undisturbed

except by the tribal wars of the Indians for nearly a century and a half. In 1813 and 1814 it became the scene of General Jackson's campaign against the Creek Indians, which practically terminated with the battle of Horseshoe, upon the Tallapoosa River, March 27, 1814.

MAGNITUDE OF THE RIVER.

The Coosa River rises in the mountains of north Georgia and flows south westerly and southerly until it helps to form the Alabama River a few miles below Wetumpka, Ala.

It is formed by a junction of the Ootanaula and Etowah rivers at Rome, Ga. From the most northerly navigable point the distance along these streams to the Gulf of Mexico is as follows:

	Miles.
Oostenaula River	108
Coosa River	315
Alabama River	390
Mobile River	50
Total	863

There would be a continuous water route of transportation over the bosom of these rivers to the Gulf but for the shoals and rapids on the Coossa River, distributed over a distance of only 142 miles from Greensport to Wetumpka, Ala., and these shoals and rapids are intermingled with long pools of deep water. However, of this distance there has been opened to navigation by the Government improvement of the river about 35 or 40 miles from Greensport down to Lock 4, Alabama.

The Coosa River is not one of those insignificant streams upon which often large sums of money are spent with no avail, but to the contrary, it is a deep, bold, running, and beautiful stream, its grandeur and beauty excelled by none, with sufficient water for successful low-water navigation for boats drawing 4 feet of water or over, if the water was properly concentrated over the shoals and rapids between Lock 4 and Wetumpka, Ala.

To give a more correct idea of the magnitude of the river and its possibilities, we quote from the report of Charles Frith, United States assistant engineer, in his report of November 24, 1888, in which he says: "Velocity observations taken at Lock 4 show a discharge of 3,921 cubic feet, with a velocity of 1.33 feet per second at a stage of 1.8 feet above low water. Similar observations at Wetumpka at low water show a discharge of 5,796 cubic feet, with a velocity of 0.9 feet per second."

In the Annual Report of the Chief of Engineers for 1879, page 1203, the low-water discharge of the Mississippi River at St. Paul is given at 5,800 cubic feet per second. In the report for 1880, page 482, the low-water discharge of the Hudson River between Troy and Albany is given as about 2,000 cubic feet per second, and in the report for 1881, page 1929, the low-water discharge of the Ohio River at Pittsburg is given as 1,666 cubic feet at zero of the gauge and as 5,810 cubic feet per second at 9 inches of the gauge.

Comparing these discharges with that of the Coosa at Wetumpka, it appears that the volume of water flowing in the Coosa at low water is about equal to that of the Mississippi at St. Paul, about 2.8 times greater than that in the Hudson at Albany, and about 3.5 times greater than that in the Ohio at Pittsburg.

NATIONAL IMPORTANCE.

The Coosa River, reaching like a bandeau across the State of Alabama from Rome, Ga., to Mobile, crosses every line of railway that extends from the Alabama cotton, coal, and iron fields and the great pine forests to the Gulf and South Atlantic. The cost of these elements of industry, commerce, and civilization is a fact that interests the people of every section of the United States.

The cheapening of the cost of transportation on these commercial necessities is a duty of the Government when it holds the paramount control of such a channel of navigation.

The Coosa River has claims to national care and consideration that are not possessed by any water course of the United States of similar length not yet open to steam navigation. On the banks of this river great geological systems are in contact with each other, the river draining each of them. Such a condition is not presented elsewhere in the United States, if it is found in any other country.

These systems, bearing the rich material of their full development, each contribute to industry and commerce the indispensable element of progress in agriculture and the arts that are in universal use. Among these are coal, iron, lime, marble, granite, the slates, kaolin, mica, asbestus, and many cognate minerals, with soils, clays, sandstone, and other useful minerals of great variety.

Such geological areas are found elsewhere in the United States in perfection, and each of them is indispensable in the grand aggregate of our material resources, but they are widely separated in other localities, and their transportation from one field to the other is so expensive that their value is much diminished.

Along the banks of the Coosa River these several formations meet, and that river is a natural conduit for their interchange. The forests and the productions of these several systems are indigenous to such formations, and are very rich and varied.

The use of the Coosa River as the commercial outlet to the ocean for this immense field of industry in agriculture, forests, quarries, and mines is a great national duty that is devolved on Congress. The United States being the paramount power entitled to improve this river, the States of Georgia and Alabama can not do this necessary work.

Congress has continuously prosecuted this national duty, and the only question is whether it shall now be abandoned or prosecuted to a success that is commensurate with its vast importance.

PRESENT IMPROVEMENT.

The present improvement of the Coosa River, now being carried on under the auspices of the War Department of the United States, was begun in 1870, but owing to the meager appropriations for that purpose this work has progressed very slowly, and frequently during this period, as is now the case, the work has been almost entirely suspended. Delays like this, with the work standing in an unfinished state, necessarily cause heavy damages to the work previously done, and so demoralize the forces, until it takes a good portion of the next appropriation to reorganize and place the work back on its former footing. Much of the appropriations have been spent in this way, while if sufficient sums of money were appropriated to push the work to completion, would save all this useless delay and expenditure of money. We have no criticism to make except as to the inadequate sums of money appropriated for this important work.

It has been suggested that it would be better to abandon this entire scheme rather than continue this wasteful plan of operations. To abandon this project would be to repudiate the purposes of our forefathers as far back as 1823, and throw away all the money that has been spent on this important stream. When we take into consideration these facts in connection with the magnitude of the river, the rich fields of agriculture, forests, iron, lime, coal, and manufacturing, through which this magnificent stream flows in such close proximity to the seaboard, the abandonment of this project can not be within the contemplation of any rational man.

The able engineers in charge of this work estimate that $6,000,000 will give four-foot slack-water navigation from Lock 4 to Wetumpka, Ala., which is the portion of the river now closed to navigation. This money can be more economically expended in six years than it could be in twelve, and more economically spent in twelve than in twenty-four. Therefore we recommend and ask that Congress place the work of opening the Coosa River to thorough navigation on the continuous contract plan, and appropriate $6,000,000 to be spent in six years in the opening of this important stream, the work to be done according to the plans and specifications previously furnished by the engineers in charge, and that the work be commenced at Lock 4, and continue down the river from there and at Wetumpka, and work up the river from that point, and continue in this form until completed.

At the outset of my remarks I alluded to the general argument in favor of river and harbor appropriations, in that they serve to facilitate waterway transportation, and thus act as a check on the great railroad monopolies and trusts.

This, Mr. Chairman, I consider one of the most important aspects of the question. The greatest peril to our national prosperity and the most sinister menace to our liberties, nay, even to our very existence as a free Republic, is from the gigantic trusts which have sprung up so suddenly and with such an appalling measure of strength in our land. These trusts, now about 100 in number, counting only the larger and more dangerous ones, have succeeded in obtaining a monopoly of the production and sale of almost all the articles which mankind ordinarily requires to possess, including meats, sugar, flour, salt, oil, coal, iron, steel, copper, leather, rubber, paper, and many other important articles of daily and universal use. The trusts have combined all the sources of supply and production in these lines, and have thus stifled all competition and forced the small individual manufacturer and dealer to unite with them and do their bidding or else be forced out of business or driven into bankruptcy by them. Having thus obtained a monopoly of the various leading lines of business, the trusts have next been able to arrange the prices to suit themselves, and the prices of everything to-day are advancing, as we all know. They are much higher than they were four or five years ago, when the trusts were on their good behavior and were feeling their way to the securing of absolute power through the Republican party and the Dingley tariff law.

I do not need to dilate upon the dangerous and terrible power of the trusts nor upon their evil effect upon the community at large. The people in general are beginning to understand these things pretty well, but it is very desirable to keep the people well informed as to the conditions which render the trusts possible and which tend to give them their great and increasing power. There are two principal causes or conditions to be mentioned. One is our present high tariff, which prevents our citizens from obtaining their needed supplies in outside markets at outside prices, and thereby enables the trusts to force the home prices up to the level of the foreign prices plus the amount of the tariff duty. In this way the trusts compel the American people to buy all the products of the trusts at an exhorbitant figure, and the result is that the comparatively few trust magnates become enormously wealthy at the expense of the masses of the people.

The other cause or condition greatly favorable to the trusts is the favoritism shown to them by our great railroad monopolies and combines in granting them wholesale discriminations and rebates in freights. This practice, Mr. Chairman, has become general, and has developed into a national scandal and disgrace. Many instances have been brought to light by the investigations of the Interstate Commerce Commission, and the testimony in recent hearings before the Industrial Commission has served to thoroughly awaken the public to the great importance of this subject. From this testimony it became apparent that "the most potent factor in establishing and maintaining monopolies has been preferential or discriminating rates of freight by common carriers given by rebates or otherwise." In brief, the railroad monoplies have made a practice and are making a practice of "standing in with" the trust monopolies and secretly giving them much more favorable rates of freight than are given to the smaller manufacturing concerns or to individuals and much smaller rates than the published tariffs of freight rates allow. In this way the railroads help the trusts to undersell and ruin their small competitors. This is a scandal of the first magnitude, and, as I have already said, it supplies one of the strongest arguments in favor of liberal appropriations for the improvement of our internal waterways.

It is a reflection on the business judgment and sagacity of the committee in charge of this important subject to even suggest the abandonment of this great project. While this report deals liberally with my State, it deals unjustly with my district and the Coosa River, which is by far the most important undeveloped waterway within her borders. I appreciate the liberal appropriations you have provided for the Warrior River, in the district of my distinguished colleague [Mr. BANKHEAD], who is a member of your committee, and also the other appropriations made for Alabama, but in behalf of justice, equity, and right I appeal to the members of this House to protect the million and a half already expended on the Coosa River, to save my people from

this gross injustice, and to consult the best interests of this whole country by voting for my amendment to keep this project alive, at least. To cut it off now would nullify all the work previously done and the $1,500,000 already spent, which has greatly benefited that section of the country in which this improvement has been made. The section that has been mostly benefited is on the northern end of the Coosa, represented by my distinguished colleague [Mr. BURNETT], who will follow me.

But, Mr. Chairman, I submit that if the Government is in earnest about opening this stream and giving the people of Alabama the benefits it will afford them, it does seem to me that the proper way to do this work is to begin at the mouth and work up, and then all the improvement you effect along this river would find an unobstructed outlet to the Gulf and would not be blocked by this intervening obstruction of 72 miles of shoals.

I shall, then, Mr. Chairman, at the proper time offer an amendment to the pending bill, and ask this House to give us an appropriation sufficient to enable us to build lock and dam 30 at Wetumpka, Ala., which is just above lock 31, which has just been completed or is now in the course of construction. The Government has at Wetumpka ample machinery, which has lain there idle for years, to do this work, the development of which would greatly facilitate the transportation of the products of that section of country, which are unequaled by the products of any other section of the United States.

As stated in the beginning of my remarks, I am in favor of liberal appropriations by the Government for internal improvements, and I shall vote for this river and harbor bill notwithstanding the fact that the improvement of the Coosa River has been temporarily side-tracked. I hope yet to be able to convince the distinguished chairman, Mr. BURTON, for whose judgment as a fair-minded business man I have great respect, that instead of the Coosa's being the least meritorious of all the streams in the country, as he has been unkind enough to say, it is one of the most important and the most meritorious; and when the new survey which he has been kind enough to give us is presented to his committee next session, he will, as he has done for the other streams in Alabama, provide a liberal appropriation for the continued improvement of the Coosa.

Commerce is an exchange and interchange of commodities between different and distant communities. Water transportation is one of the chief mediums of commercial intercourse. When the Coosa River is opened to navigation, untold advantages will accrue to the people not only of the district I have the honor to represent, not only of the great State of Alabama, but of the entire country. As stated in a recent editorial of the Montgomery Advertiser, one of the leading journals in the South—

It means, for one thing, the making of Mobile a mighty coal entrepôt whence coal could be distributed to the world, and it means making the Coosa a vast artery of commerce through which would flow the riches, natural and artificial, of one of the finest sections of the Union.

Steam vessels laden with the richest productions of a very fertile section of our State and with the valuable ores of coal, iron, lime, copper, and gold which lie slumbering and undeveloped in their wide, deep beds, will ply the waters of the Coosa and Alabama and sweep past the thriving cities of Rome, Gadsden, Cedar Bluff, Center, Riverside, Childersburg, Wetumpka, and Montgomery, the queenly capital of our State—also in close proximity to Cedartown, Anniston, Talladega, Birmingham, Shelby, Tallassee, and Prattville—down by Selma to Mobile, Alabama's great seaport, the lovely city by the sea.

The white-winged messengers of commerce will carry glad tidings of great joy from the people who live in the mountain regions of north Alabama to those who dwell on the shores of her southern Gulf, and then will our waste places bloom with a new and radiant life and smile in the light of a new and brilliant destiny. [Applause.]

Post-Office Appropriation Bill.

SPEECH
OF
HON. GEORGE W. SMITH,
OF ILLINOIS,
IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 13, 1902.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 11354) making appropriations for the service of the Post-Office Department for the fiscal year ending June 30, 1903—

Mr. SMITH of Illinois said:

Mr. CHAIRMAN: I do not care at this time to enter into a general discussion of the bill now under consideration, but I wish to submit a few remarks upon a subject directly connected with this bill and the postal service. That subject is 1-cent letter postage—a reduction of the letter rate of postage from 2 cents to 1 cent.

Some years ago I introduced in Congress a bill of this character, but did not press it at that time, believing that the revenues of the postal service would not then justify its passage. I, however, continued to present the bill at each succeeding Congress, and have reintroduced the bill during this session, as follows:

A bill to reduce letter postage to 1 cent per ounce.

Be it enacted, etc., That from and after July 1, A. D. 1902, the rates of letter postage shall be as follows: On all letters weighing 1 ounce or less the postage to be paid from any place or point in the United States to any other place or point therein, and on all drop letters, shall be 1 cent, and for each additional ounce or fraction thereof the postage shall be 1 cent additional.

Our postal service has so increased, our revenues from that service have so rapidly enlarged, and our business condition is such that, in my judgment, this is an opportune time and a proper time for the careful consideration of the question whether we can reduce letter postage from 2 cents to 1 cent.

This subject has been under consideration and discussion by various Postmasters-General at different times. Postmaster-General Vilas, in his annual report for the year 1895, strongly advocated the reduction at that time of the letter rate to 1 cent, and Mr. Wanamaker, in his report of 1890, discussed the subject fully and thoroughly. For the benefit of the country and of those in this House who may care to hear some of the facts in reference to this subject as stated by Postmaster-General Wanamaker I will read a few extracts from the annual report of that officer for the year 1890:

SHALL LETTER POSTAGE BE REDUCED TO 1 CENT?

There can scarcely be a difference of opinion as to the very general interest in the subject of 1-cent letter postage. Conventions and associations have declared for it, newspapers advocate it, and great numbers of the people believe in it and want it. With my short acquaintance with the postal business a year ago I did not feel competent to pass a judgment on the question beyond recording my conviction that the state of the postal revenues at that time would hardly justify the reduction. To some, who do not look far beneath the surface, the question may seem quite easy; but short inquiry will show that there are many obstacles difficult to overcome. I will try to give the result of my investigations.

If the postal revenue arising from the letter postage could be set aside for its proper uses the millions of letter writers of this country might quickly be permitted to enjoy a reduced taxation on letter writing. In point of fact, there is a clear gain of nearly $30,000,000 from letter postages. This large profit, with the annual deficit (which last year amounted to $5,768,300) appropriated out of the General Treasury, is all swallowed up by the losses on other classes of mail matter carried at less than the cost of distribution and handling.

* * * * * * *

That the subject may be properly understood, I have had prepared with as much care as possible a few tables of estimates to show the possible condition of the postal service when looked at from various standpoints. In the first place, there need be no conjecture as to the principal item of cost in trying to drop to a 1-cent rate. The amount received from letter postage last year was something over $38,000,000. This sum would be cut exactly in half, and we would therefore get but a little over $19,000,000. The deficiency for the current year is likely to be $4,530,000, which would make the total deficiency $23,500,000, and more. This large deficiency under a 1-cent rate would be reduced, first, by the natural increase of business; second, by the stimulus of a low rate of postage; and, third, by the completion of the pending legislation to collect proper postages from sample copies of so-called newspapers and from paper-covered books. It is estimated that by the sample-copy abuse over $1,000,000 is annually lost to the revenue, and in the transportation of paper-covered books considerably more than $1,000,000 is kept out of the postal income, or postal trust fund, for the benefit of certain book publishers. The deficiency under a 1-cent rate might be still further reduced by the adoption of improved devices, from time to time, which would save time and money.

He further states that:

One-cent postage will probably be delayed as long as any deficit appears in the books of the Department. Yet this deficit might quickly be removed by the passage of a few measures of legislation. It is only a question of time, therefore, when 1-cent rate will be successfully demanded. The money paid for postage by letter-writers is, according to my view, a trust fund, and it is not proper to use it for any other purpose than in paying the cost of the work performed, in extending the convenience of the service, and in reducing rates.

Past experience shows that a large increase of business has resulted from the stimulus of a lower rate of postage. The three radical reductions in the rates of letter postage since the foundation of the Government occurred in 1845, when the letter rate was established at 5 cents; in 1851, when it was reduced to 3 cents; and in 1883, when the rate was fixed at 2 cents. For a number of years prior to 1845, under the exorbitant and complicated rates then prevailing, the revenues were almost stationary in amount, being about $4,300,000 annually. For the first year following the reduction of 1845 the revenue was about $3,500,000, showing a falling off of about $800,000. For the year ending June 30, 1851, six years after the reduction, the revenue had grown to about $6,400,000, being nearly 50 per cent more than the revenue prior to the reduction in 1845.

For the first year under the reduction of 1851 the revenue was about $5,200,000, or about $1,200,000 less than the previous year under the old rate. Eight years later, in 1860, the revenue had increased to about $8,500,000, or nearly 65 per cent more than that of the revenue for the first year under the 3-cent rate. For the year ending June 30, 1883, the revenue was about $45,000,000. For 1884, the first year under the 2-cent rate, the revenue was about $43,340,000, showing a falling off of about $1,660,000. The revenue for the year ending June 30, 1890, was upward of $60,000,000, and this amount is about $15,000,000, or, say, one-third more than the revenue of 1883, the last year under the old rate.

It is interesting to note the following significant statement in the same report:

The reduction of the letter rate in 1845 was made in face of a small deficiency in the revenue, but the reductions of 1851 and 1883 were preceded by a small surplus of revenue over expenditures. The deficiency of the revenue for the first year under the reduction of 1845 was about 14.4 per cent, for the first year after the reduction of 1851 it was 27 per cent, and for the year after the reduction in 1883 it was 6.6 per cent.

I have read these statements from the report of Postmaster-General Wanamaker to give a clear idea of what might be expected in case letter postage should be reduced from 2 cents to 1 cent. We have a magnificent postal service. Our business has been rapidly increasing. We have improved our postal methods, are still constantly doing so, and expect to continue doing so.

Our postal service has been constantly and rapidly increasing. Rural free delivery has been established to supply the farmers with mail at their own doors. From the experimental service six years ago, with an initial appropriation of $40,000, it has grown by an appropriation of $50,000 for its second year; $100,000 for the third year; $1,750,000 for the fourth year; $3,500,000 for the fifth year, and this year in the bill now under consideration we provide the sum of $7,529,400 for this service. To-day every State and two of the Territories have this service. In addition to rural free delivery, delivery by star-route carriers has been inaugurated, by which these carriers deliver mail to those living along their routes and who desire the service, and is in operation in several States. Yet the annual deficiency in the postal revenues is insignificant. To-day we have the best and most efficient postal service in the world, and will keep it up.

The postal barometer is one of the best indicators of the business interests of the country. For the last four years we have had an era of prosperity never exceeded by any nation on God's green earth. The Post-Office Department should not be a money-making institution, but we should make it as nearly self-sustaining as possible. With our splendid prospects and rapid increase of postal revenues, notwithstanding enormous increases in the postal appropriations, I feel satisfied that with the anticipated saving to the Government by reason of the recent order of the Postmaster-General relative to second-class mail matter, which it is believed—as has been stated by officials in the Post-Office Department—will amount to between $12,000,000 and $15,000,000 per annum, that this is an opportune time to adopt 1-cent postage, and that this can now be done without material detriment to the revenues and no disadvantage to the continued betterment of the service.

Every man, woman, and child who writes a letter will be benefited by the reduction. The man who writes but a dozen letters a year would be benefited proportionately with the firm which writes 10,000 letters in the same time. The benefit would reach all.

My information is that the history of the reduction of postage in this as well as all other countries has been that for a short time only the revenues have been decreased, but as soon as it became generally known that a reduction had been made in the postal rates the revenues rapidly increased,so that eventually the decrease in amount of postage worked a very material increase in the amount of revenues.

It may be said by some that 2 cents is a small amount for postage on a letter, and that anyone who wishes to write a letter can afford to pay that amount, but to the poor man who makes but a bare living and has hard work to do that, to the old soldier, grizzled and bent from the hardships of war, past the day when he is able to labor for a living, and whose niggardly pension, sometimes grudgingly paid, is in many instances insufficient to pay his doctor's bills and purchase the necessary medicines to prolong a life made miserable through patriotic sacrifices in the service of a country which to-day stands as the envy of all nations of the earth. To such as these 1 cent saved in the pay of postage on a letter is worth much.

Without having at hand official figures, although I have endeavored to secure same from the Department, my information is hat in all the leading nations of the earth as postage has been decreased the postal revenues have increased. Such has been the history in our own country. Reductions in 1845, 1851, and 1883 all show that for a short time after the reduction of postage a decrease in the revenues was experienced, but that in each and every case the immediate falling away was quickly followed by a steady, large, and permanently increasing rise in the revenues. This has been the history of the past, and under the present circumstances and with such facts before us I firmly believe the time is now opportune for a reduction in the rate of letter postage from 2 cents to 1 cent per ounce.

I have here a large number of petitions and letters containing indorsements of this proposition from 17 States of this Union, and I am still receiving them every day at a rapid rate. Here are some petitions representing the sentiments of the business men of the country. They come from Connecticut, from Delaware, from Illinois, from Maine, from Maryland, from Massachusetts, from Michigan, from New Hampshire, from New Jersey, from New York, from Ohio, from Pennsylvania, from Vermont, from Virginia, from West Virginia, from Indiana, from Wisconsin, and Minnesota.

Mr. SHAFROTH. May I ask the gentleman how many signers he thinks are included in those lists?

Mr. SMITH of Illinois. Over 300,000; and every one of them a resident of a State or Territory from which the petitions have been received, and every one certified to be a legal voter in his State or Territory.

Mr. SHAFROTH. I am heartily in favor of the gentleman's proposition. I simply wanted to bring out that fact.

Mr. SMITH of Illinois. I have information by telegram and otherwise that within the next few weeks there will be sent to me from various other States, together with a portion from States from which these have been received, a million more. This statement will show the interest that is being taken by the people on this subject.

I do not care to occupy the floor longer, as I see my time is just expiring. I will ask that I may extend my remarks in the RECORD along this same line.

The CHAIRMAN. The gentleman from Illinois asks leave to extend his remarks in the RECORD. Is there objection? The Chair hears none.

Mr. SMITH of Illinois. I also ask to present and have referred to the Committee on the Post-Office and Post-Roads these indorsements and petitions which I have just referred to.

The CHAIRMAN. The gentleman also asks leave to refer certain documents to the Committee on the Post-Office and Post-Roads. Is there objection? The Chair hears none.

Urgent Deficiency Appropriation Bill.

SPEECH

OF

HON. HENRY D. GREEN,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 21, 1902.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 9315) making appropriations to supply urgent deficiencies in the appropriations for the fiscal year ending June 30, 1902, and for prior years, and for other purposes—

Mr. GREEN of Pennsylvania said:

Mr. CHAIRMAN: My attention has been called to the following section in this bill:

MILITARY POST.

For the establishment in the vicinity of Manila, P. I., of a military post, including the construction of barracks, quarters for officers, hospital, storehouses, and other buildings, as well as water supply, lighting, sewerage and drainage, necessary for the accommodation of a garrison of two full regiments of infantry, two squadrons of cavalry, and two batteries of artillery, to be available until expended, $500,000.

This item of appropriation for the first time this session brings up the question whether or not it is advisable or desirable for the United States to permanently occupy the Philippine Islands and maintain the present carpetbag government there.

Over a month ago I made a short speech on the subject of the Philippine Islands and their people when the tariff bill was under discussion.

I shall now take the opportunity to go more at length into the subject and discuss it with some detail.

MISAPPREHENSION ABOUT PHILIPPINE ISLANDS.

In the minds of the American people a great deal of misapprehension exists about the Philippine Islands and their people.

The confusion and error has been greatly increased by statements made in newspaper and magazine articles and in speeches, written and made by men who have received their information at second hand.

Had I not only carefully read the most reliable information published but also had the opportunity of visiting these new possessions last fall and made an extended tour through them, I would not have dared to occupy the time of the House in discussing this subject. But having seen the country as it lies spread out before the traveler; having visited many of the cities and large towns as well as small villages; having traversed rivers, bays, lakes, and channels; seen and conversed with the various tribes of native people in their homes; having visited their business places, dwellings, churches, and schools, I may be pardoned in believing that it may be possible that I may in a small degree at least, add to the knowledge of this body by relating things seen and heard and giving the opinions I formed on various subjects and the reasons upon which they are based.

It is very easy to understand how a man can go to these islands and by confining his observation and examination to the few large cities and their inhabitants, especially to the principal city and capital, Manila, obtain a very erroneous idea of the country and of its people, which, had he made a more extended tour and more careful examination of the several islands, would have been corrected.

This will explain, no doubt, the reason many statements have

been made by visitors there which do not at all agree with my observations. Whether I am capable of making a fair presentation of the subject-matter you must judge. Whether I have had opportunities of making extensive and general observations you must determine. And on this subject let me say that our party traveled under exceptional conditions, were accorded every convenience, advantage, and facility which could be placed at our disposal by both the civil and military authorities of the United States located there, and for these reasons were able to see more, travel farther, and learn more during our stay there of over a month than the traveler having only the ordinary facilities could have in a much longer time.

We visited the islands of Luzon, Samar, Cebu, Mindanao, Panay, and Jolo, and, in steaming through the channels, viewed from shipboard Leyte, Bohol, Negros, Mindoro, Marinduque, Burias, Masbate, Ticao, Basilan, Catanduanes, Luban, and innumerable of the smaller islands which dot the channels everywhere.

On most all, if not all, of these islands we could plainly see the towns, villages, and plantations, for it is a notable fact that by far the largest portion of the people of the Philippines live along the water's edge or shore line. These towns and villages are built on one general plan. In the center are located the churches and buildings belonging to those who have them in charge. They are invariably built of stone, substantial, often ornate and expensive. Then grouped around them are the business houses and homes of the wealthy and well-to-do citizens. Then the bamboo shacks of the common people, all built on streets and arranged in the same orderly manner as the houses in American towns.

In the country wherever you see a bunch of banana trees if you look carefully you will find a dwelling or group of dwellings. When you see one of these places you obtain a very correct idea of the others. We visited the three most important cities of the archipelago—Manila, Iloilo, and Cebu. In addition we visited Cavite, Santa Cruz, Nueva Caceres, Daet, San Fernando, Tarlac, Dagupan, and many smaller towns on the island of Luzon; Catbalogan, on Samar; Zamboanga, on Mindanao; Jolo, on that island, and many of the small towns in the neighborhood of these places.

We traversed the Pasig River from source to mouth and crossed the Laguna de Bay. We ascended and descended the Bicol River, in the province of Ambos Camarines. Saw many of the high mountains and the celebrated volcano of Albay. We passed over the only railroad on the islands from one terminus at Manila to the other terminus at Dagupan, and returned to Manila. In all we covered a distance of over twenty-five hundred miles.

If after this extended trip, under the peculiarly favorable conditions we enjoyed, a man is not able to form a pretty correct idea of the country and its people, as well as the conditions existing there, it could not be by reason of any lack of opportunity.

During the whole time our party was never in any danger from the insurgents, and only on one occasion, when we crossed the river at Pagsanjan to visit a native market, were we accompanied by an escort, which in this instance consisted of a single soldier. This was in the province of Laguna, where the Filipinos were still offering armed resistance to the American occupation.

MANILA.

Upon first entering the city of Manila the visitor obtains his most favorable impression of these islands, and, if he remains there, may return home and tell great stories of their wealth, fertility, and commercial importance, as well as of the great success and progress of the country under American rule. This was my first impression. The city was very lively. New stores and saloons were found on all sides. Conveyances were busy and hard to obtain at any price. Hotels were crowded, and, considering the accommodations, exceedingly expensive. Every article of consumption was double what you could buy it for in the States. Cigars alone were cheap.

Officers and soldiers of the United States Army, constabulary, and officers of the civil government swarmed everywhere and gave the town an American look. It seemed like an American picture in a Spanish setting. Everywhere you saw the Army wagon drawn by Government mules. The newly arrived American schoolma'ams and the nurses were prominent. In the river you found numerous steam launches belonging to the quartermaster and commissary departments of Uncle Sam's Army.

Many cascoes and bankos were huddled together in the Pasig River, especially below the Bridge of Spain, unloading freight and produce for use in the city, whence it was carried from nearby towns. Rents were high and rising. Filipino laborers had flocked into the city to get the advantage of the $1.25 a day paid by the Government, when they were able to make but about 25 cents growing rice and doing the usual work offered in the country districts.

The principal new buildings have been built by the United States authorities, of which the large cold-storage building, costing nearly a million dollars, is an example. The Luneta and the Malacon road after sundown are thronged with carriages of all sorts, and the sidewalk along the road crowded with pedestrians; here, too, the officers and their wives and sweethearts largely predominate. Newspapers printed in the English language are sold everywhere. It is surprising how completely the American has taken possession of this city.

Everything and everybody gave one the idea of extensive business transactions being carried on and great prosperity.

After a more careful examination into the causes, as well as an examination of the surrounding country, and the situation and conditions existing on the other important islands, the real reason of this actual or seeming prosperity in Manila became apparent, and it also became apparent that it was the result of artificial and not natural conditions. When this artificial stimulus is removed the city will lapse back into its quiet easy-going, nonprogressive condition.

What is the real reason? Immense sums of United States money have been spent there paying our troops and buying, transporting, handling, and distributing Army supplies of all kinds. The officials and employees of the civil government in large part spend their salaries and wages there; the fund out of which they are paid comes from the taxes gathered from the entire archipelago.

The idea that prosperous times, for a time, at least, would prevail has attracted many foreigners there to engage in business, chiefly retail. Many discharged soldiers, seeing a chance to make money, have with their savings and added capital received from home set up shops on their own account. Natives from the country and Chinese merchants from all over the island have gathered there. Money makes business, and United States money has made this city quite a busy one compared with what it was previously.

The result of the influx of the rural populatiou has caused much of the tillable land in the nearby country, especially along the railroad, to be neglected and uncultivated. The desolation of war has also decreased the production of the staple products to a considerable extent. Negros, for example, will produce much less sugar, as will the great sugar-producing province of Batangas, where the insurgents were still active. Samar will grow less hemp and scarcely any rice. The scarcity of the water buffalo will prevent many thousands of acres from being tilled which produced bountifully before the war.

From these and many other causes the net amount of the principal commercial products of the islands will be considerably less than it was in even average years before hostilities began. This surely would have had the reverse effect upon the principal shipping point of the islands, Manila. It is for this reason that I say the business activity and prosperity must be attributed to other than natural causes—those resulting from the increased productivity of the soil upon which all lasting prosperity must be based, as there are practically no manufactures on the islands.

The character of the imports which have largely increased in certain commodities prove this theory to be correct. What are they? Beer and liquors, canned goods and that class of fabrics and commodities bought and consumed by the American and foreign population and not by the natives. I have laid some stress upon this particular point simply because it has been so frequently asserted that in spite of the war the commerce has greatly increased during the American occupation, and the islands have been more productive and the people more prosperous. In other words, that commercially American occupation had been of great advantage to the native people by the development of their natural resources.

This I hold to be not only not true but the reverse to be the case. Whenever exports have increased of native products it has only been the shipment of such products which have been stored and withheld and not such as have been grown during the period. The total production has greatly diminished.

When the American policy of subjugating and annexing the country was first determined upon the chief excuse given for this course was that they were exceedingly rich and productive, and their wealth and productivity could be increased to an almost unlimited extent, so that commercially they would become most valuable to us in the future. It was never at that time doubted that it would be not only profitable for us to own them, but immensely profitable.

ARE THEY AND CAN THEY BE MADE PROFITABLE?

Let us examine this proposition and see whether instead of being profitable they, up to this time, have not only been exceedingly expensive, but under all known conditions and circumstances will each year that we maintain possession of them continue to be unprofitable, and that nearly all if not all of the money of the American taxpayer spent and invested there will be lost.

The principal products of the Philippine Islands which can be used for export are hemp, sugar, rice, and tobacco, and, as asserted by many, but, I think, believed by few, lumber. To increase the exports of these products appreciably a much larger

area of cultivation must be opened and worked. This is only possible by the army of laborers which will be required to do this character of work being increased. Some improvement may be made by the use of more modern implements; but where are the laborers to be found who can and will use these, to us, necessary agencies? No agricultural machinery known to us can be used in the cultivation of rice or hemp, and very little is used in planting and growing sugar cane.

I am satisfied that the most fertile lands of the Philippine Islands and those sufficiently near to the markets to be available for profitable production have recently been cultivated, and before the more remote territory can be made productive enormous expenditures of money will be required. The transportation alone of crops from the fertile country in the interior must be made over roads yet to be built, and unless these assume the form of steam or electric railroads this transportation must be done by beasts of burden, such as can be successfully grown and used in that country.

What are these means of transportation, and what have these means been in the past? Wagons drawn by the carabao or water buffalo, the slowest and clumsiest and least economical of all the beasts of burden that I have ever seen. He can be worked but comparatively a few hours each day, requires long rests, frequent access to water, not for drinking alone, but for bathing. If he is deprived during the heat of the day of frequent and continuous mud and water baths, this animal becomes uncontrollable and absolutely wild and ferocious. Besides this, at the present time he has become very scarce in the islands, as very large numbers during the past two years have died of the rinderpest, a disease which at all times is prevalent there, but which lately has carried off these beasts of burden to such an extent that the number killed is placed by natives who claim to know as high as 70 per cent of the whole number there.

It will take many years before, in this respect, the Philippine Islands will ever recover from this great disaster, and we must expect in the very near future to find that, by reason of this alone, the productiveness of these islands will be greatly diminished instead of being increased. I have been informed by men who know that the horse and mule, which are exceedingly expensive to bring there, too much so for them to be used generally in the cultivation of land, when brought there do not thrive.

This can be seen in the city of Manila, where the United States has introduced, by necessity, for the purposes of transportation, a large number of these animals. As long as they feed upon the hay which is imported there they seem to be able to maintain health and strength, but when the wet season comes on, which covers about one-half of the year, and when they feed upon the green provender grown in the country they are stricken down with glanders and diseases unknown to us, and perish in great numbers, and much time is lost by constant sickness, and much expense incurred for their treatment. Besides this they can not be used at all in plowing the deep, muddy soil, upon which is grown rice and sugar cane. For this work the carabao is especially adapted.

When one considers these conditions, he is bound to acknowledge that the drawbacks to the extension of agriculture are great.

TIMBER.

But it is said that there are enormous fortunes to be made in marketing the heavy growths of timber which are found there. If that timber was in America and in a place available to the market, I grant you that heavy profits could be derived. The timber available for commercial purposes which exists in these islands is not near the coast, but quite a distance in the interior, from whence it can not be floated down the streams and rivers, as the pine and hemlock is in my own State of Pennsylvania and in many other portions of the United States.

The truth is, that this timber is so heavy that it will not float at all. It is exceedingly hard to cut, and when launched upon a stream immediately sinks to the bottom. The result of this is that if it must be carried any considerable distance for shipment its transportation must be subjected to all the drawbacks that I have mentioned in connection with the transportation of agricultural products; and then one must consider the expense of loading it on lighters and transporting it, and again loading it into ships and carrying it many thousands of miles to markets where there is a demand for it, or where such demand can be created. Japan wants none of it; China wants none of it; India wants none of it; Africa wants none of it; Australia wants none of it.

Europe, and perhaps this country, would be its nearest market. Were it shipped in any large quantity, how much of it Europe would consume is problematical, as the wood is not of such a character that would come into general use. The expense to take it through the Suez Canal would be enormous. Very little of it, I am satisfied, would ever be brought to American markets even if the canal which would unite the Gulf of Mexico with the Pacific Ocean were built and in operation. We must not forget that there are enormous quantities of just as good timber, and of similar character, in Mexico and the Central and South American countries, little of which is ever brought to our markets by reason of the fact that the expense is so great as to make it unprofitable, and this, although those forests are many thousands of miles nearer New York and San Francisco and the great centers of population in the United States, than is the timber of the Philippine Islands.

Let me refer in this connection to two circumstances which, I think, may throw some light on this subject. When we went from one terminus—Manila—to the other terminus—Dagupan—of the single railroad of the Philippines, we found that they were fitting the road with new sills of teak wood, and upon inquiry of the officials of the road, it was learned that these sills were bought and shipped to Manila from Australia by reason of the fact that they cost less than timber of like quality could be cut and shipped in the Philippine Islands, although plenty of such timber was growing there.

Again, so far as we were able to learn by diligent inquiry, there were but three sawmills in operation in these islands, and these were small affairs, run cheaply and intermittently, and turned out only sufficient lumber for the local trade. A large part of the lumber used in building operations in the city of Manila is laboriously sawed out by hand, and until quite recently, on account of the building operations carried on by the United States Government, there has been but little demand for timber there. The native requires none for the building of his home, and even for his larger buildings.

He requires no barns, nor farm buildings, such as we have in this country, and all the buildings that he needs and uses, or will need and use, are cut from the bamboo, and it is surprising to find how rapidly and how cheaply, from this material, with no other implement than a working bolo, or heavy knife, he can erect a comfortable structure, sufficient for all his purposes in that country. This is so, not only throughout the Philippine Islands, but throughout the entire East, wherever the bamboo grows. Out of this wood the native not only builds his home but furnishes it with almost everything which is required. So, in my mind, those who are expecting to see and to make great fortunes from the manufacturing of timber in the Philippine Islands are doomed to disappointment, and at no time in the near future will timber figure as an important article of export.

COAL.

They say that there are large deposits of coal in these islands. I failed to obtain any reliable information to substantiate this assertion. I believe that coal could be found and mined there, but its quality is problematical, and its quantity and availability is more so. Suppose, however, that there existed coal both good in quality and sufficient in quantity, how is it to be mined and transported to shipping ports? The transportation alone, except in the most favored localities, in none of which places is it asserted that it has been discovered, would be enormously expensive, thus making the possible profit but small.

Then, again, coal must be mined by trained and steady labor, by men able and willing to perform for long hours and in dangerous places the most laborious kind of work. Where can this labor be found? Certainly not in the Philippines. I do not believe that in the whole world there is a single example of any large output of coal coming from countries where tropical conditions prevail. Certainly this coal could not be mined in competition with the coal of Japan, and the enormous deposits which we may expect in a few years to be developed in China, where there exists an abundance of labor and where there can be found every facility for its economical development and marketing.

GOLD, COPPER, AND OTHER MINERALS.

They say there are large deposits of minerals in these islands, and gold is much talked of. I admit that if the white man can ever be induced in any considerable numbers to come into the Philippine Islands and labor there, large deposits of gold alone will bring him, but we all know of what value to a country the mining population of that character is; it comes and goes.

Unless gold exists extensively, of which there never have been and are not now any indications, the few favored places will soon be bought up and run by mining capitalists. The mining of gold has always been precarious, and I believe the assertion is true that for every dollar taken out of the earth a far greater amount has been expended in the search for it. The discovery of iron or copper, or any other mineral that we may reasonably suppose exists there in paying quantities will be limited to but a few places, and the mining and marketing of such products will be subjected to all the expense and disadvantage that we have indicated in the mining of coal.

MANUFACTORIES.

As for building and operating any considerable number of manufactories there, that seems to me to be out of the question. In Manila are several large cigar factories, and I saw in the outskirts of that city a rope manufactory, where the machinery was

exceedingly crude and the motive power furnished by cattle used as we work them in a thrashing machine on the farms of my county. There were said to be small machine shops and boiler works, at which repairs were made. There were no manufacturers, so far as I observed, using machinery run by steam power.

To make manufactories profitable and successful abundant fuel and raw material are required. This abundant fuel has yet to be found, and its cost must be much less than any now used there. The raw material raised in the country would be virtually confined to hemp.

NATIVE LABOR MARKET.

In addition to all this, a reliable labor market is required. If there were no other drawbacks, that would be sufficient to dissipate all visions of building up large manufacturing and mining operations or extending to any great extent the agricultural productions.

There seems to be little difference of opinion among those who have examined this important question; all agree that the native as a reliable, steady, and intelligent workman, such as is absolutely necessary to new organized enterprises, is not only not a success but a positive failure. Whether he can ever be much improved in this respect is more than problematical. Like all people who inhabit hot countries, he is indolent, shirks hard work, and does not take kindly to even light employment. Nor is there much inducement for him to indulge in any great amount of physical exertion, as he is temperate and has few wants which can not be easily supplied. Rice, fish, and fruit constitute his ordinary diet; they can be readily obtained by spasmodic and easy work; nor in that warm country does he require fuel, or an abundant or expensive supply of clothing, and as for a dwelling, he, as I have said before, can build all he requires with little labor and a very small expenditure.

On this subject I mention an instance showing his habits in this respect. Steaming up the Pasig River we saw numbers of people fishing from the banks with rods and lines, and with a few rare exceptions these fishermen were women. The men of the family were sleeping, cooking, and tending the children at home, while the wife was at work in the hot sun trying to catch fish enough for the family meal. When a man becomes too lazy to fish what can one hope for?

Nor does the payment of good wages stimulate his effort to any extent. He works only when he must, if he is paid double wages. Governor Taft says he will work half as long and triple them, and in all probability his working one-third of the time will be the result.

He is no exception, however, to the native of the hot countries; and it is the rule, not the exception, that when men obtain the necessities of life easily they are not prone to hard work. Nor do I believe this would be possible where the temperature is hot all the year around and subject to no decided changes such as we have in the temperate zones.

In addition to these climatic results, the native Filipino under the rule of Spain has had all incentive to save and accumulate crushed out of him, and it will take a long time to undo the results attending Spanish misrule.

Where in the world will you find a reliable labor market in the Tropics? Do not understand me to say that the native Filipino does not work and can not work; he can work and does work, but only to the extent he must. Such labor as the wage earners of the United States do all the year round, day in and day out, from eight to ten and even twelve hours a day, he is not capable of and could not be by any means compelled to do. They say he makes a fair servant and will do light labor, but always sleeps in the heat of the day and frequently rests when working. He will leave his employment for the most trifling reason and often from none at all, and will return when he is ready, and often not at all. Employers say you can place no dependence upon him, and that they are constantly subjected to unnecessary and unexpected delays. He works with no ambition or desire to accomplish results.

The last man I saw when I left the Philippine Islands was Brewster Cameron, at one time an Assistant Attorney-General of the United States. He was the representative of American capitalists who sought profitable investments in the Philippines and were ready to make permanent investments in manufacturing plants, mines, or sugar plantations. Talking on the subject of labor, he said it was useless to make investments there of capital in productive enterprises unless the Chinaman, especially the Chinese cooly, was given free access to the country. Without them it would be impossible to obtain sufficient reliable labor to carry on any enterprise.

WHITE LABOR.

He admitted that not only could the natives not be depended upon but the white workmen from the United States could not live there continuously any length of time. He certainly could not bring his family there, maintain a permanent residence, and do the labor required. He asserted that the only possible hope was the introduction of the Chinaman.

A word about the possibility of whites maintaining permanent residences there. Despite what may be asserted by optimists or interested persons I am convinced that about two years is the average time a white man can reside continuously in those islands. This fact is recognized by the Army and Navy authorities of our Government. They have made a standing order that soldiers and sailors after a stay of two years should be brought back to the States to recuperate. This order was made upon the known result of the climatic conditions on the white man and after practical demonstration.

When a man is exceptionally strong and healthy and able to live under the most favorable conditions, he may remain a longer time, say three years. By favorable conditions I mean a good house to shelter him, good food and water, plenty of servants, abstaining from intoxicants, keeping himself sheltered during the heat of the day, sleeping and resting often and for considerable periods, bathing frequently, and working leisurely.

The members of the Commission and their families also furnish examples. Governor Taft is in the United States on account of sickness; Commissioner Ide is trying to recuperate in Japan; Commissioner Wright, when I left the country, was unwell, but pluckily holding on; Mrs. Taft and Mrs. Wright were seeking health in Japan, the favorite health resort of those who can afford it. A considerable number of Army officers and their families were there for the same reason. Surely all these people live under the most favorable conditions and can not stand the climate.

What must be the condition of men who must live surrounded by all the discomforts of cheap boarding houses, and who have to perform continuously the usual amount of daily work required to earn a living.

Physicians and men who should know frequently assured me that, trying as the climate was to men, it was much worse on women—a year at most greatly sapped their vitality and debilitated them, and two years often used them up.

Under such circumstances I regard it as a positive crime to send female school-teachers there, and think the Government should discontinue the practice. For more than one reason the country is not one for women to be sent to.

In addition to malarial fever and stomach and bowel troubles, all sorts of skin diseases are prevalent, and prickly heat and dhobie itch often make the foreigner's life miserable.

It is stated as a fact that a person's physical condition runs down quickly, and he loses his vitality and ambition; and when once affected in health in this climate it is almost impossible to recuperate. The only chance he has to regain lost health is to leave the country and seek a more salubrious climate.

It must be remembered during the hundreds of years the country was ruled by the Spanish that they maintained but a small army there, and few Spanish people reside there continuously any length of time; and this in spite of the proverbial avarice and cupidity of the people of this nation. From the experience I had, and what I saw and heard, I would not have agreed to spend the balance of my life there for the island of Luzon in fee simple, sovereignty, and all.

Many criticisms have been made on the $20,000 salary received by Governor Taft, yet when one understands the expensive surroundings he is obliged to maintain, and the conditions under which he is obliged to live and work, in my opinion these criticisms are not justifiable. The salaries of the commissioners are high, especially when one takes into consideration the limited wealth and productive possibilities of the country. I am satisfied that five commissioners are unnecessary; two, or at most three, are sufficient. Acting Governor Wright earns what he receives, I know, but then the entire responsibility of maintaining the civil government really rests upon the shoulders of Taft and Wright, and while the others may be useful, they are not at all necessary, in my humble opinion. Very large salaries are paid secretaries and subordinate officials; much larger than is paid for the same character of work by the United States, which is a thousand times more able to pay large salaries.

I believe it can rightly be said that the civil government, as a whole, maintained in the Philippines is excessively and unnecessarily expensive and a burdensome tax upon the resources of the people, and this should be promptly remedied.

CHINESE COOLY LABOR.

A word about the introduction of Chinese cooly labor into the islands. The wage-earners of the United States are loudly and unitedly demanding of this Congress the passage of not only legislation extending the present exclusion law, but asking that more stringent laws be passed. If the American workmen fear so greatly the influx of Chinese labor and the results of its being brought into competition with his own, a fear which, I believe, he is justified in possessing, how much more disastrous to the Filipino would the admission of the Chinese be to him.

He would be deprived of all opportunity to do the work which belongs to him, and instead of American rule being of advantage, as it is claimed, it would crush him. There are now too many Chinese in these islands; they monopolize all mercantile pursuits and are a constant drain on the country, for their gains are in great measure sent to China, and he stands ready at all times and on all occasions to catch every stray dollar floating about. The Chinaman may be brought there as a coolie, but he will not remain in that condition long. He is very quick to see and seize an opportunity for easier and more remunerative employment, and when his habits of industry and thrift are matched against the natives' habits of indolence and shiftlessness the result is easy to foretell.

The boast of our Government is that we are in the Philippines not with any selfish purpose, but with the sole object of benefiting and uplifting the native even against his will. If our real objects are what we claim, we can never consent to have the Chinaman allowed to immigrate to that country. The question of Chinese exclusion is a test of whether the Government is friendly to the people or more friendly to the exploiters.

RAILROADS, ROADS, HARBORS, AND CHANNELS.

But there are other questions which must not be overlooked in the matter of developing this country.

They are the roads, railroads, harbors, and channels.

RAILROADS.

As for railroads, and there is but one; that is owned and controlled by an English company. It is narrow gauge, 3 feet 4 inches, and 125 miles in length, with termini at Manila and Dagupan, and costing $20,000 gold a mile. It traverses the provinces of Bulacan, Pampanga, Tarlac, and Pangasinan, a fertile country traversed by water courses, and is laid over level country and sandy soil.

The road up to the present time, and it was finished in 1888, has never paid a dividend. The officials hinted that owing to the travel of United States officers and men and the transportation of supplies they expected to pay a small dividend in that year (1901) unless the road suffered more than ordinary damage during the rainy season. This road is quite well equipped, and we traveled on it at from 30 to 35 miles an hour. The company were making many repairs and improvements all along the roadbed where it had been impaired by the streams crossing it or was in danger from streams changing their courses. The manner of constructing these improvements was to plant numerous bamboo piles along these crossing streams and away back along the banks. We were informed that for a considerable time during the wet season the trains were obliged to stop running by reason of the fact that the water frequently undermined the roadbed and destroyed the banks and washed away the rails and sills.

One of the officers of this road informed us that the company was anxious for the Americans to remain in the country and control it. The road has a heavy claim for damages against the United States for injuries suffered during the war with the Filipinos by reason of wrecked engines and cars and injury done to the roadway by the insurgents. They have repair and construction shops at Caloocan, under the management of a Chinaman, and the chief mechanics are also Chinese. This company would build a small extension upon receiving some guaranties. If this road does not pay, I can not see where a paying road could be located. The field of railroad improvement is limited. Offers have been made to build lines with the proviso that subsidies of land to be selected at any place owned by the Government on the islands would be given the constructing company. So far as I could find out after diligent inquiry no private capital had offered to build roads without financial or other help from the Government.

The commissioners themselves doubted whether private capital could be obtained to build roads which were greatly needed, and doubted whether, if built, they could be made to pay a fair interest on the investment. I know that some members of the Commission had in mind suggesting that the United States should furnish the money to build, equip, and run roads to be built over important routes, or loan money on municipal bonds guaranteed by the present government—both principal and interest. Such a request would be asking this Government to do for the building up of the Philippines more than it had ever done in building up our own country. Railroad building will be slow in the Philippines, and the possibility of its earning a fair interest on the investment for some years to come is at least exceedingly doubtful.

WAGON ROADS.

The want of wagon roads is also a great drawback to any development of the country. There are very few on the islands, and some of the best have been made while the island has been under military rule. At Dagupan I saw one about 26 miles in length, which it was asserted had been built for $17,000 Mexican. When I asked what was paid for labor a day I was informed that the natives were compelled to work and received no pay, for the reason that they were most benefited by the road. Of course, if nothing was paid for labor, it can easily be seen how cheaply roads can be built.

Talking over the subject of roads with General Chaffee, whom I found to be an excellent officer as well as a brave, level-headed business man, he frankly said that the want of roads was a great drawback to the country, and in addition they were not only expensive to make, but when made were more expensive to maintain in good condition, owing to the great destruction done to them by the heavy rains in the wet season. He said that a superintendent would be required all year around for every mile of road built and maintained. Since the civil authorities have had control of the government they have spent over a million dollars for roads, and propose adding to them by additional expenditures each year.

HARBORS.

There are very few harbors of any value in the archipelago, and these will require the outlay of many millions of dollars to make them suitable for general commercial use. The principal ones are those of Manila, Iloilo, and Cebu. Some millions of dollars are now being spent on Manila Harbor, and many millions more will be required to make it reasonably safe for shipping. Manila Bay is a very uncertain body of water. It becomes heavily agitated under the influence of ordinary winds, and when in this condition it is absolutely impossible to load and unload boats. Besides, it is in the track of the heaviest and most frequent typhoons, which are very destructive on account of the openness of the bay. This never can be corrected and a safe harbor constructed by any expenditure of money, and will always be a drawback to Manila becoming an important mercantile port for general shipping.

A typhoon struck this harbor during the stay of some of our party, and it occasioned great destruction to the steam launches and tugs, cascoes, and bancoes, which were moored in the most sheltered part of the harbor; the Pasig River, between the Bridge of Spain and the mouth of the river. The city of Manila lies on both sides of the river here and gives it all possible protection, but notwithstanding this, great destruction was done, and shipping in the open bay suffered more seriously.

The harbors of Iloilo and Cebu are quite small and not at all safe or convenient. All large vessels must be loaded from lighters and small boats, which is a very slow and expensive proceeding, and great care must be taken both in going in and out, as the channels are shifting and the currents uncertain. Only by enormous expenditures can these be sufficiently improved so as to be advantageously used by large ships, such as carry commerce to distant points.

The channels separating the larger islands, I am informed, are quite dangerous, and no reliable charts have been made. The transport which carried us over these courses frequently lay at anchor during the night for fear of mishap. General Chaffee, when speaking about the necessity for accurate surveys of these channels and the coasts and harbors along them, estimated that if the full working force of the United States Government were employed it would take from forty to fifty years to complete the work.

In considering the commercial importance of these islands, we must not forget that they do not lie in the great lines of commercial travel. In going from United States ports to China and Japan they lie many hundreds of miles to the south; and even with the interoceanic canal built, they will still lie far away from the direct lines. So, also, the commerce which is moved north from Australia and the neighboring islands of that continent will never stop at Manila, for the great harbor and shipping port of Singapore is in the direct course. No more will the commerce of China and Japan, moving east through the Suez Canal to the Atlantic. This fact alone bars Manila and the Philippines of ever becoming of great commercial importance, and its trade will be limited to its local imports and exports.

I am convinced that all the United States can advantageously use in the Philippines is a naval station and coaling ports. These the people would cheerfully give us, and with a contented and happy people governing the islands, a people friendly to us, there would be no necessity of our maintaining any such fortifications as the British maintain at Gibraltar and Malta. All the wealth of this country could not completely fortify these islands, and what would be the advantage of it if it were possible?

As long as we seek to own and control them they will be the one vulnerable place in all our possessions—one so far away as to be absolutely useless should we come into collision with any great naval power.

Summing up the situation in the Philippines from an entirely commercial standpoint, I do not believe that we shall find it either more productive or richer than millions of acres yet untouched in the United States, the development of which would bring prosperity and wealth to our people and add to our strength and greatness among the nations of the world. The development of the Philippine Islands may be of advantage to the Philippine

people, if they can be taught to labor steadily and to work harder than they ever did, or than any other tropical race has ever done; but even in such case where are the people of this country to derive any great benefit from this great promised uplifting of the brown brother—an uplifting, by the way, which seems to be largely against his will, and is promised to be absolutely at his expense? Any manufactories we build up there will be in competition with those of our own country, and the labor of the American workman.

We can not in good conscience, and I am certain that we would not if we could, put ourselves in the place of Spain, where we would permit ourselves to prey upon his industry. We certainly can not mingle our blood with his and expect to produce a white people, a product such as the mingling of the blood of the different white races shows to be superior, and such an amalgamation as is possible would do him no good and would do our people positive harm. It seems to be written in the law of nature that the different races of the world can not be beneficially interbred, and could they be, are we ready and willing to make the sacrifice? In his improved condition, if that is in any great measure possible, what benefit would the Filipino be to us commercially?

His whole commerce is but a drop in the mill pond compared with that which we now and in the future expect to be able to carry on with the rest of the world, and there is no good reason, nor do I believe any good reason can be given, why that commerce would not be shared with the other mercantile nations of the world. In the past they have, in a large measure, monopolized the products he has imported from the markets in which he is a purchaser. It is so to-day despite the artful juggling of figures with which some of the officials of this Government seek to deceive and to entertain our people.

If we sell him more in the future, it will only be because we shall be able to furnish him with a better article for a cheaper price, and we can do that anywhere in the world. If his country is not to be treated as a part of the United States, and free exchange of products allowed, we might force him to take our products by a system of discriminating tariff legislation, in which the rest of the mercantile nations of the world were discriminated against in those articles which we could supply to him, but surely, for the paltry trade of the Philippines—double it, treble it, quadruple it, aye, multiply it twentyfold—we could not afford to put ourselves in such a position, when we stand at the head of the mercantile nations of the world, demanding not only an open door in China and in all parts of the Orient, but the opening of the doors as wide as possible to our products in all parts of the world.

The handwriting is upon the wall, and we can and must read it; and that is, that to enjoy the continued prosperity with which we are now blessed, the high tariffs which exclude in a greater or less degree other nations from participating in our trade must be torn down or similar obstacles will be erected in those countries which are now the great consumers of our products and our best customers in manufactured goods. It was perfectly evident to me, after I had made an examination of those lands, that there was every indication, amounting to an absolute certainty, that the Philippine Islands had been boomed in the same way, only to a much greater extent than thousands of towns and sections of country in the States.

This is a great age of exploitation; a great age for the speculator and the promoter; a great age for the sharper who lures owners of capital seeking investment to invest it in such a way that in a very short time they who had the experience will have the capital, and they who had the capital will have the experience. This very tariff bill seeks to do what?

After the Supreme Court has declared that the Philippine Islands belong to and are a part of this great country, to force them to pay a duty on all the goods which are furnished them by this country, and to also oblige our people to pay a duty on all the goods received from them; and instead of allowing this money to be applied to paying the expenses of running the American Government, it is proposed to hand it over to the Filipinos as a bonus to assist them in supporting themselves. From an American standpoint, was there ever a more ridiculous proposition brought before the Congress of any country?

The taxpayers of this country are to have all the burdens of assisting in the support of the Philippine people and none of the benefits which heretofore have always been gained by bringing new countries under our flag. No excuse can be offered for this proposition to the American people, and the only salve which I can see is offered to the Filipino lies in the fact that he must be satisfied that a very large proportion of the duties received from imports does not come from his pocket, but from the pockets of the American purchaser now temporarily living in his country.

INDEPENDENCE OR UNITED STATES CONTROL.

Mr. SULZER. May I ask the gentleman a question?

Mr. GREEN of Pennsylvania. Yes, sir.

Mr. SULZER. From your observations in the Philippine Islands, do you believe the people there want their independence or do you believe they want to become a part of the United States?

Mr. GREEN of Pennsylvania. I will answer the question of my friend from New York briefly as follows:

Foreigners and American residents there want the islands to become a part of the United States and be governed by the authorities of that country.

The natives to-day are united as never before, and not only want their independence, but peaceful and unwarlike people as they are, have been willing in the past and are now ready to fight for it, to sacrifice wealth, family, and life for self-government. What greater proof could they give? Such proof must be more convincing than the statements of interested people to the contrary. But I will take this matter up with more detail at some future time, when I expect to dwell upon the government as it is there, and give facts from which every member can satisfy himself to what extent the Filipino is fitted for self-government.

THEIR COST.

When the American people are convinced that the Philippine islands are neither a paradise for them nor a promised land flowing with milk and honey and studded with bonanzas of untold wealth, they will then consider what they have cost the Government.

When it is figured up how much of the American taxpayers' money has been permanently invested in these far-off islands, and the small return possible, at first they will grumble as they are beginning to do even now, and then they will rise in their might and discharge the financial agents who have recommended this investment, and through whose representations, promises, and advice their money has been sunk.

To future generations this speculation will be known as the Philippine Island bubble, and it will far exceed the once famous South Sea Island scheme we read of in English history.

At this time it is estimated that these lands have cost the United States over $300,000,000—$20,000,000 original purchase money. Add interest. Then $100,000 additional for an insignificant island with no harbor, lying, the Lord only knows, where. I saw hundreds said to be much more valuable, and I would not have given one dollar Mexican for the pick.

Then there is the cost of the war, which, for the support of the Army alone at the present time, when reduced to 30,000 men, amounts to $45,000,000 per annum—an average of $1,500 a head. This is a safe estimate, and you can figure up for yourselves what our military occupation cost. Then we must add some hundreds of millions more which have been, are now, and will be expended for pensions. All this, to say nothing of the suffering and the thousands of human lives which have been sacrificed in this reckless venture.

The Commission are asking the United States to hand over to them a little matter of seven and a half millions to buy the lands owned and claimed by the Spanish friars.

I know the friar lands are a serious bone of contention among the native people, and buying them, no doubt, is a short cut in settling the contentions. But is it not a hard proposition, from the standpoint of the American taxpayer, which asks him to put seven and a half millions of his hard-earned money into far-off real estate and take the chance of his getting his money back from the rental or resale of the property?

Mr. CANNON. If my friend will allow me, does he not understand that the title to these lands is to be extinguished by the insular revenues or by an insular loan, and does anybody propose anything different from that?

Mr. GREEN of Pennsylvania. The plan is a beautiful plan, for the United States is to guarantee the loan, principal and interest. When responsible men indorse bad paper of course they suffer no loss. If that is your experience it has not been mine, nor that of most of the members of this House. As for extinguishing them by the insular revenues, the revenues will be entirely used up in paying running expenses, if the government is continued to be carried on as it has been up to this time. Instead of a surplus, after you have exhausted the taxpaying abilities of the people living there, you will see a deficit, and the only question for the American public will be how deep will they have to go down into their pockets to pay the deficit.

Mr. CANNON. Does not my friend think that if we can once let the American citizen and the intelligent citizen everywhere get into these islands and build roads and help develop the country, with 75,000,000 acres of public lands that the United States owns there, it will be quite easy to furnish the money by loan and safely do it; to extinguish the title to these lands, and that with the increase of revenue they will be self-sustaining.

Mr. GREEN of Pennsylvania. Evidently the gentleman has not heard my statement.

The CHAIRMAN. The time of the gentleman from Pennsylvania has expired.

Mr. CANNON. I hope it will be extended a little more; say five minutes.

The CHAIRMAN. The gentleman from Illinois aks unanimous consent that the time of the gentleman from Pennsylvania be extended five minutes. Is there objection?

There was no objection.

Mr. GREEN of Pennsylvania. If the American or white man can not reside there permanently, he would not go there and stay there if you would make him a present of the public land. You would have to depend upon native labor to cultivate this land or you will have to introduce the Chinaman. I have dwelt at length on both these propositions and say to you the day will never come in your time, or in the time of your posterity, when a condition of affairs will be found existing in the Philippines as you evidently hope will exist there. I went to the Philippine Islands firmly expecting and believing that they possessed great fertility and wealth; firmly believing that they could be readily developed, and that great fortunes awaited the pioneers in that development.

I wished this to be true. But by the time I left that country I was satisfied that the United States had been buncoed into carrying on a most gigantic and most expensive foreign missionary scheme, in which the natives were being converted against their will and having so-called civilization and enlightenment forced upon them with the saber, the rifle, and the cannon; and the picture brought back to me memories of the days when with fire and sword the followers of Mahomet spread their civilization and their religion over northern Africa and southern Europe; with the great difference that the conquerors were citizens of a twentieth century Republic, whose motto had been virtue, liberty, and independence, who held themselves out to the nations of the world as the one great example of a stable, popular government founded upon the consent of the governed—a government of the people, for the people, and by the people—and the victims were a weak, oppressed, and peaceful Christian race.

River and Harbor Appropriation Bill.

SPEECH
OF
HON. SYDNEY J. BOWIE,
OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 20, 1902.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 12346) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes—

Mr. BOWIE said:

Mr. CHAIRMAN: Some time after I had had the honor of being elected a member of this House a friend of mine asked me what "programme" I had. I told him the only "programme" I had was to endeavor to keep my mouth shut the first two years after I got here if it was possible to do so, and I have up to this moment carried out that programme. This is the first time that I have appeared to address this House on any question pending before it, and I therefore crave the indulgence of this body while I reply just for a few moments to the address of the distinguished chairman of the committee.

At the outset, I wish to disclaim any idea of attacking the chairman or the committee on account of any supposed partiality or prejudice. I have not the slightest doubt that this committee has done the best it could with all the projects before it, and I have no criticism to make of it. So far as the expenditure for the 31 locks between Riverside and Wetumpka is concerned, the committee has made an appropriation of $10,000 for a further investigation into the matter, and with that action of the committee, in that respect, we are at this time satisfied.

I have no complaint to make on that score, nor do I come here and ask of this House that it shall appropriate $6,000,000, or enter upon any such appropriation as that at this time. The proposition which I submit to the House and this committee, and upon which I invite your careful attention, is entirely a different one from that which the chairman of the committee has argued. He predicates his opposition to this "Coosa River project," as he calls it, and his condemnation of that project upon the report of Captain Judson.

It is confessed that Captain Judson changed his report in the course of three months. And whereas he has made a report favorable to the general improvement of the Coosa River, he subsequently became converted, and "in a moment, in the twinkling of an eye," as it were, made a report condemning it; and upon that the chairman of the committee predicates the argument which he has addressed to this House.

Now, Mr. Chairman, I desire to state that for the purposes of this discussion I accept the report of Captain Judson, and I am perfectly willing, so far as this House is concerned and this session is concerned, to stand upon the recommendation of Captain Judson, and if this committee had come in and brought a report in accordance with the recommendation of Captain Judson, there would not have been a word of complaint from the friends of this much-maligned river.

I hold in my hand a copy of that report, in which he says:

For the reasons above given—

Those reasons alluded to by the chairman of the committee—

it is not now my opinion that the Coosa is worthy of improvement beyond the completion of Lock 4 and the construction of the dam without a lock a short distance below Riverside, Ala.

There it is, Mr. Chairman; "is not worthy of improvement beyond the completion of Lock 4."

He goes on to say:

The estimate for completing Lock 4 and for building a dam below Riverside is as follows:

For completing Lock 4	$192,000
For one timber rock-fill dam with abutments	95,000
Total	287,000

The above amount could be profitably expended during the fiscal year ending June 30, 1903.

The recommendation that Lock 4 be completed was also specifically indorsed by Lieutenant Raymond and Colonel Adams.

Now, Mr. Chairman, I do not ask at the hands of this House that they shall appropriate $95,000 for the timber, rock-fill dam. We ask merely that you appropriate $192,000 to finish the lock upon which the Government has already made much progress. We ask it in strict accordance with the report of Captain Judson and every officer of the Government who has investigated it at all. We believe the whole Coosa River project is entitled to better treatment. We believe it is entitled to be worked out in the future, and that great benefit would accrue therefrom, but for the present session we are satisfied with the recommendation of Captain Judson.

Now, I submit to this House whether it is fair to use the report of Captain Judson against a project which he has really approved. If his evidence is to be used to impeach the general improvement of the river, which is not before the House, why should it be rejected when it sustains the project that is before us? The truth is, that a report wholly favorable to the amendment under discussion has been made the basis of a bitter arraignment of it by quoting an attack upon a scheme confessedly involving millions of dollars, which was not in any sense before the House. Having put the witness on the stand, I submit, they are bound by his testimony.

Mr. Chairman, let me state for the further information of the House what the completion of Lock No. 4 means to that section of the country. I hold in my hand a statement from Mr. Lay, of Gadsden, Ala., in which he sets out the amount of commerce and business that will be affected by the completion of Lock No. 4. It reads as follows:

LOCK 4 AND DAM AT LOCK 5 ON THE COOSA RIVER IN ALABAMA—BENEFITS TO BE DERIVED BY THE COMPLETION THEREOF.

Lock 4 is situated 3 miles above Riverside, Ala., where the Birmingham division of the Southern Railroad crosses the Coosa River. It is the lower end of the present navigation of the Upper Coosa. Greensport is situated on the river 40 miles above Lock 4. Locks 1, 2, and 3 lie between Greensport and Lock 4. The completion of the dam at the location selected for Lock 5 is necessary to back the water up into Lock 4 before this lock can be operated. With Lock 4 and the dam at Lock 5 completed, 12 miles more of a very important portion of the river will be opened and river transportation extended to 10 towns and villages, and river and railway connection made at Riverside.

There are no towns or villages of any consequence between Greensport and Lock 4 except Ragland, a coal mining town, which is about 1½ miles from the river; but beginning just below Lock 4 there is a series of towns and villages on and near the river bank—10 in number—that will be directly benefited by the completion of Lock 4 and the dam at Lock 5 and river transportation extended within about 25 miles of Birmingham and a connection made with the Southern Railroad at Riverside.

These towns and villages are: Riverside, Lincoln, Seddon, Cropwell, Easonville, Eureka, Coosa Valley, Stemley, Ragin, and Beaver.

Their commerce about as follows per annum:

	Tons.	Value.
RIVERSIDE.		
10,000,000 feet of lumber	22,500	$155,000
Miscellaneous	1,630	68,600
Logs that would be handled on river if open	36,000	54,000
Total	60,130	277,600
LINCOLN.		
5,000 bales cotton	1,250	200,000
Cotton seed	2,500	50,000
Miscellaneous	5,244	200,000
Total	8,994	450,000

	Tons.	Value.
SEDDON.		
500 bales of cotton	125	20,000
Cotton seed	250	5,000
Lumber	3,337	18,000
Miscellaneous	320	12,800
Total	4,032	55,800
CROPWELL.		
2,000 bales of cotton	500	80,000
Cotton seed	1,000	20,000
Miscellaneous	312	10.000
Total	1,812	110,000
EASONVILLE.		
2,000 bales of cotton	500	80,000
Cotton seed	1,000	20,000
Miscellaneous	312	10,000
Dairy products	120	10,000
Total	1,932	120,000

The commerce of the remaining, which are villages, is about as follows:

	Tons.	Value.
Eureka	600	$37,000
Coosa Valley	500	30,000
Stemley	400	20,000
Ragins	1,000	60,000
Beavers	500	30,000
Total	3,000	177,000

As is customary in estimating the exchange of commerce in this country, we must expect in return for the above resources almost a like amount in value returned to these towns, though the articles so returned being in a more refined state, the tonnage of the incoming goods would be about half that of the outgoing. This would make an annual tonnage of both the outgoing and the incoming freight approximating 119,850 tons, valued at $2,378,800 per annum.

It is hard to say what percentage of this commerce would be handled on the river were it opened down to the site for Lock 5, but probably 20 per cent.

This would give 23,970 tons to be handled on the river annually, then with the river opened the entire log product would be handled on the river, which is 36,000 tons, making a total of 59,970 tons to be handled on the river annually from these two sources alone. If forsooth the river should not handle the proportion of the mercantile commerce allotted it in this compilation it would act as a check to regulate the present arbitrary rates imposed on this unfortunate region.

Then in addition to the above tonnage the brown iron ore and limestone that would undoubtedly be shipped down the river from Collins Spring, 6 or 8 miles above Lock 4 to Riverside, and thence to Birmingham over the Southern road, would be very extensive.

If you will notice the map hereto attached and look at Collins Spring, 6 or 8 miles above Lock 4, you will see what is known as the Daughdrill Mountain. This is a mountain of brown hematite iron ore, bordered on the north by a towering range of cliff limestone, which assays 98 to 100 per cent pure lime. It has been estimated that the Daughdrill Mountain will contain 50,000,000 tons of brown iron ore above the water level, and the quantity of this rich limestone can not be estimated. It is simply inexhaustible, and both these deposits lie immediately on the bank of the Coosa River, while just a half a mile back you will see the southern border of the Coosa coal field.

The juxtaposition of these rich minerals found here make Collins Spring one of peculiar commercial importance. There is but little brown iron ore to be found in the immediate Birmingham district. Hence large quantities of this valuable ore are shipped from different points in the Coosa Valley to the furnaces at Birmingham. The completion of Lock 4 and the dam at Lock 5 will open these rich deposits found at Collins Spring direct to the Birmingham market, and as a result we may naturally expect a very heavy tonnage through Lock 4 from this source, a tonnage that will probably reach hundreds of tons daily to be handled through this lock, to say nothing of the timber and other commerce aforementioned now knocking at the gate of this important lock for passage.

Any one who knows the demand for brown iron ore and limestone for fluxing in the Birmingham district can not doubt but the shipment of these products from Collins's Spring to Birmingham would soon, with Lock 4 complete, reach 500 to 600 tons daily. This, in connection with the other tonnage aforementioned, would give a total tonnage of 700 to 800 tons per day to pass through Lock 4 were it completed.

In the reports of Capts. W. V. Judson and C. A. F. Flagler, Appendix Q, 1901, they estimate that it will take to complete Lock 4 $192,858. Estimates have since been made that it will take $128,471 to build the dam at Lock 5. Then, in justice, we should have about $75,000 for channel work between Rome, Ga., and Lock 4.

This would make a total of $396,329 to do this much-needed work.

I beg that you take the map hereto attached as a part of this document and refer to it as often as you desire, and hoping that the importance of the Coosa River may be properly appreciated and that we may get an appropriation commensurate with the stream, I am,

Very respectfully, W. P. LAY, *Chairman.*

GADSDEN, ALA., *February 10, 1902.*

It increases the river transportation, which is now over 175 miles long, between there and Rome, Ga., by 12 miles. The completion of this lock would mean the opening of water navigation to ten towns and villages, among which may be mentioned Riverside, Lincoln, Seddon, and Easonville. These towns and villages are places of considerable importance. The work of the river improvement has gone on until it is almost in sight of them. We are then in the condition of a man who has a well 100 feet deep to the water and who has only bought 90 feet of rope to reach it with.

Suppose when he is told that he needs more rope he says, "No, I have bought 90 feet of rope and could not reach the water, and I do not propose to waste any more money on 10 additional feet." These people are in sight of water transportation, and it will be of great value to them; and yet, when they are just in sight of it, and when the Government has almost completed its work, they are told that because they have not done anything with the river above them they must not have it brought to a point where they can use it. Because 90 feet of rope will not reach water a hundred feet deep we must refuse to purchase the other 10. I submit that the argument is illogical.

The chairman of this committee has stated before this House and in his other speeches that he thinks the true plan, if the work is to be done at all, is to begin at the lower end of the stream and come up, so as to open the river all in that direction, all one way coming up. Well, Mr. Chairman, that would be a very good plan if it were not for the fact that we have up here more than 175 miles of navigable river already. We would like very well to have the work done on the lower end of the river and come up, but we realize the fact that we can not get it now. That is the project that will cost $6,000,000 and take six or seven years to complete, and we recognize that it is impossible now. This project that we ask for will only cost $192,000, and it will not take but twelve months to complete it.

Now, shall these people who want an improvement that will give them access to the markets at Gadsden and Rome on the northern part of the river be denied the improvement which is easy to obtain, merely because they could not get a six million dollar improvement that gives them access to the markets of Montgomery and Mobile? The argument, it seems to me, is absolutely illogical. We may be well willing to change the words of Mr. Greeley and say: "Go South, young man, go South," but the unfortunate people, who by reason of these 31 locks are precluded from going South, will doubtless think it is better to go North than not to go at all. And we are willing that they should, since they only want to go as far as Rome.

Now, the chairman of the committee referred in his speech on yesterday to the assessed valuation of the real estate in the four lower counties bordering on this river. He mentioned, I believe, the counties of Elmore, Chilton, Shelby, Coosa, and a part of Talladega. Why he should have omitted the assessed value of the personal property in these counties I am at a loss to understand. His statement was that if all the State, county, and municipal taxes collected on the real estate in these counties were applied to this improvement it would take fifty years to pay for the same.

Note now that he is still discussing a proposition not before you. And he uses the figures of the Eleventh Census (1890) at that.

In answer to that suggestion let me refer you to the valuations of those counties which border on the 12 miles of river affected by the completion of Lock 4, and I hope that the chairman of the Rivers and Harbors Committee will give me his attention. The four counties that will be affected by the improvement of Lock 4 are Talladega, Calhoun, St. Clair, and Etowah. The total values of those counties for 1890, as assessed for taxation, taken from the figures of the Eleventh Census, amount to $24,214,000.

Mr. THOMPSON. How much did the chairman of the committee say that that valuation was?

Mr. BOWIE. The valuation of the real estate in the lower counties to which he referred was, he said, about $8,000,000.

I am now asking attention to the valuation of the 12 miles of river affected by the specific appropriation under consideration. In those four counties the total valuation is over $24,000,000. At the rate of 1¼ per cent, the rate of taxation obtaining, not for State, county, and municipal purposes, but for State and county purposes alone, the sum of $192,000 would be raised in seven months and a half, instead of fifty years.

That, Mr. Chairman, is the difference between the case which the gentleman has stated in this House and the case as it actually stands. Seven and a half months as against fifty years! To defeat this appropriation, recommended by every engineer of the Government who has looked into it, he had to resort to the tax values of real estate in counties not affected by it and set the same off against the cost of a scheme not before us. Verily, they are hard pressed for an argument. If a good one existed, would resort be had to such as this?

I submit, Mr. Chairman, that when you look into the merits of it, this is a most worthy appropriation. The county of Calhoun, measured by tax values, is the fourth county in size in the State of Alabama. The county of Talladega is the seventh; the county of Etowah is not far behind. In these three counties affected by this appropriation—Etowah, Talladega, and Calhoun—nearly one-half of the cotton mills of the State of Alabama are located. All

of these counties are rich in iron ore, and the county of St. Clair is teeming with coal. In manufacturing in other lines they excel any portion of the State, Jefferson County only excepted.

The Coosa Valley, which will be affected by this improvement and which is now in sight of it, is one of the most fertile agricultural valleys in the State of Alabama, and it will be greatly benefited by it. As a concrete illustration of the importance and great value of this particular improvement—to show what a great flame a little fire kindleth—let me read you a special to the Age-Herald, Birmingham, Ala., under date of January 11, 1900:

[Age-Herald, Birmingham, Ala., January 12, 1900.]

LINCOLN, *January 11.*

The people of Lincoln are jubilant to-day over the events of yesterday. At 11 o'clock a. m. the *Willie C. Wagnon*, of the Georgia and Alabama Steamboat Line, in charge of Capt. George H. Magruder, arrived at Lock 4, on the Coosa, and began loading cotton. By 6 o'clock in the evening the little boat had on a cargo of 400 bales, consigned to the Howell Cotton Company at Rome, Ga.

She is now hastening home and will return about Saturday for another cargo of 400 bales. Six hundred and seventy-four bales of this cotton was shipped by J. C. Wilson & Son, of Lincoln, and 126 bales by Law & Davis, of the same place. This shipment of 800 bales is less than one-fourth of the cotton receipts, yet these enterprising merchants have made $1,000 in the increased price over other markets and means of transportation. Had they made the same trade on the other part of the cotton receipts, Lincoln would have saved $5,000 on this year's crop.

Twenty-five wagons did the drayage, at 2 cents per hundred pounds. Lock 4 is only 3 miles from Lincoln, and the road is about the best in the county. The farmers will gladly do the draying at the price named, and all of our next year's cotton receipts will probably be shipped to Gadsden and Rome, and the wholesale merchants of those cities will now put up a lively bid for Lincoln trade.

Captain MaGruder was pleased with wharfage facilities at Lock 4 and expects to make many more trips of like nature. This shows what the opening of the Coosa means for the people.

But, coming to the general improvement of the river, as one expert has testified, let me call attention to another expert—an officer of the Government of the United States and a gentleman of the highest character and professional skill—a man who came here and under the sanction of his oath made a statement before the River and Harbor Committee on the 15th of May, 1900. I refer to Capt. C. A. F. Flagler. I read from his testimony before the Committee on Rivers and Harbors:

The CHAIRMAN. Is the channel one which can easily be maintained when once it can be obtained?

Captain FLAGLER. Yes; it is by far the best I have seen on any river in the country in that respect. It is a very permanent river, and below Rome is very free from snags and logs that we generally have in most of the Southern rivers.

The CHAIRMAN. What would it cost to transport a ton of coal from Gadsden to Mobile?

Captain FLAGLER. From the ore fields from some distance below Gadsden from where they go, it would be about 22 cents, giving every possible margin I can to the boat company, and that would be the actual cost of transportation down there. Then these boats would carry other freight; they would carry passengers and other things, and I think from 22 to 25 cents would be the outside amount charged.

Mr. BURTON. Will the gentleman respond to a question?

Mr. BOWIE. Certainly.

Mr. BURTON. There is coal, is there not, on the 150 miles of the river from Lock 4 up to Rome?

Mr. BOWIE. Yes, sir.

Mr. BURTON. How, then, does the gentleman explain the fact that the commercial statistics for years back do not show that a single ton of coal was ever carried on that part of the river?

Mr. BOWIE. Because, Mr. Chairman, there is no sufficient market at Rome for the coal.

Mr. BURTON. Does the gentleman mean to say that the extension of the river for 12 miles additional, when it is already open for 150 miles, would afford any additional market for coal?

Mr. BOWIE. I was not discussing that particular phase of the case at this time. But it would. By means of this improvement we extend the river down to two railroads that are not now reached by it—the Southern Railroad, at Riverside, and the Birmingham and Atlantic, at Stemly.

Mr. BURTON. But is it not true that both those railroads go through fertile coal fields and get their supply from those coal fields, and will continue to do so?

Mr. BOWIE. Not all of it, by any means. There is no reason in the world for supposing that they would get it all.

Now, Captain Flagler continues:

The coal is now obtainable in this region at a dollar and a half a ton, and it can be delivered at the Gulf for $1.75 a ton, whereas, the last reported commercial statistics from Gulf ports I see coal has already increased to $5 a ton for foreign export. That is, apparantly, what coal is considered worth when exported. If coal can be brought down from the Coosa Valley and delivered at the Gulf ports at $1.75 per ton, it can certainly be sold at a figure that will increase the national export of coal tremendously.

Mr. BISHOP. What does it cost by rail?

Captain FLAGLER. The least it has ever been has been a dollar and fifty cents.

Now, Mr. Chairman, I wish to invite the attention of the committee to an extract from the testimony of Captain Lathrop, a great lumber manufacturer at Riverside, Ala.

People living up or down the river do not think the Government is able to open it up. They do not think the Government is able to do it, and they have abandoned that country and moved out. It is a fact, and I have traveled the whole length of the river, from Rome and from Cleveland, Tenn., down to Mobile. I have gone down in a rowboat, and it is just a huge forest of timber in that country that has not had an ax put to it since God made it.

That is just the condition of the timber business. There is timber enough on that river to pay for all the work that could be done upon it. * * * I have been over the stream from one end to the other, and have rowed down it in a rowboat. It is one of the finest streams in the United States.

[Applause.]

The waters of the Coosa River flow a distance of more than 800 miles in their course to the sea. Beginning at the northeastern portion of the State, near Rome, they flow into the Gulf below Mobile, at the extreme southwestern portion, and cross every railroad in the State. Open up this river to navigation its entire length and it will touch with the magic wand of water transportation every railroad system in Alabama. Who shall say that such a "consummation so devoutly to be wished for" is not worth all it will cost? As Major Flagler again so well says:

The commerce of that part of the river now navigable between Rome and Lincoln is $2,000,000 per annum, even without a water outlet; its tributaries drain the gold ocher and marble fields of Georgia. In northern Alabama it flows through mountains of iron ore (both mæmetite and limonite), vast beds of slate and coal, and all these covered by dense forests of long-leaf pine.

The commerce to and from cities in the valley of the Coosa exceeds $20,000,000 annually, and fully one-fourth of this will find its way to Mobile and the commercial world by the water route when the lower Coosa shall be opened. No appropriation has been made for the locks on this river since 1896, and this magnificent waterway, after the expenditure of over a million dollars, appears to be abandoned by Congress. On all other parts of the State where rivers merit improvement appropriations are made with lavish hand. Why is the Coosa, the key to nature's richest valley in the State of Alabama, forgotten?"

Here is a great river—as some one has well said, tied in the middle and loose at both ends—flowing through as fair a section as there is on this continent, a land abounding in mineral, timber, and agricultural resources, rich in all the elements that go to make a great State, needing only a tithe of the money expended on far less meritorious schemes, and which this Government deliberately proposes to abandon. Against this injustice, this act of folly and waste, I enter my earnest protest. [Applause.]

Oleomargarine Bill.

SPEECH

OF

HON. D. LINN GOOCH,

OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 10, 1902,

On the bill (H. R. 9206) to make oleomargarine and other imitation dairy products subject to the laws of the State or Territory into which they are transported, and to change the tax on oleomargarine.

Mr. GOOCH said:

Mr. CHAIRMAN: In discussing briefly the measure now under consideration I shall endeavor to keep clearly in mind the interests of the masses of the people whom I have the honor to represent, and my vote upon the pending measure shall be cast in accordance with my honest judgment of what is fairest and best for all concerned. I shall not go into any elaborate consideration of the relative merits of pure butter and oleomargarine. That the last-mentioned product, when made of wholesome ingredients properly compounded, is a nutritious and palatable food I do not doubt.

The real question, it seems to me, is whether the people shall have proper assurance that when they buy butter, butter will be delivered to them, and when they buy oleomargarine, the price paid will be reasonable. That in a great many instances, as the law now stands, oleomargarine is now sold for butter is true beyond doubt. In every one of these instances the person who buys butter and gets oleomargarine is imposed upon. Usually he is imposed upon in more ways than one. He does not get what he buys, and thus is the victim of deception, if not of downright fraud.

I know from personal experience that fraud upon fraud has been committed by the dealers upon the people in my district. I remember quite well having oleomargarine sold to me for creamery butter at the rate of 40 cents a pound, it being represented to me that it was the best and purest of butter, and I know personally that owners of company stores, where their laborers have no other chance to buy except at their commissaries, sell them oleomargarine, it being represented to them as creamery butter, at 35 cents per pound. I know this to be an absolute fact, and I believe that we should do all that we can to protect laboring men and their families from being thus deceived and imposed upon.

It has been found very difficult to prevent the sale, by unscrupulous manufacturers and dealers, of oleomargarine for butter, and experience has taught that to prevent wholesale imposition resort must be had to a law more minute in its provisions, and more stringent than the oleomargarine law now upon the statute book.

It is believed by many who have given the subject much earnest study that the bill now before us will accomplish the results desired. The condition of affairs which I believe ought to be brought about is that which will exist when commodities are sold for what they really are. I am not opposed to the manufacture of oleomargarine and would not cripple this extensive and useful industry, but I am opposed to the sale of oleomargarine for butter. Let it be sold for what it actually is. Then everyone desiring oleomargarine may buy it at its own price and not at the higher butter price. Then, too, those wishing to buy butter and not oleomargarine may get what they buy and pay for. In my judgment the result of the proposed legislation will not be to break up any legitimate industry, but to protect the people against the fraud and imposition with reference to these products—butter and oleomargarine.

Surely it can not be to the interest of anyone, however poor or however unable to buy anything but a substitute for butter, to have the price of that substitute put up because the substitute may be sold for real butter, and therefore may be priced accordingly. To the buyer of oleomargarine it is of interest to have the product sold at oleomargarine prices and not at butter prices. To the buyer of butter it is a matter of concern to get butter and not oleomargarine as a substitute for it.

In a certain grade of hotels and boarding houses the proprietor would resent a suggestion that his guests are served with oleomargarine instead of butter, when, in fact, it often happens that butter never touches the table. Indeed, if the scale of prices is high enough to warrant the guests in expecting to be served with butter and to induce the proprietor to claim that he does serve butter, and butter only, this proposed law in such cases can have none but a beneficial effect in furnishing the guests with butter or depriving the proprietor of the pretense that he serves butter. In another class of places where meals are served no pretense is made that anything better than oleomargarine is used, and yet as the law now stands the oleomargarine is sold at a higher price than it would command if much of the article were not dishonestly marketed as pure butter.

I am confident that this legislation will be at once beneficial to the producers of butter and to the consumers of oleomargarine, and can do no harm to the manufacturers of oleomargarine or the dealers in oleomargarine who are content to do an honest business for an honest profit. I know our farmers will be benefited by the passage of this bill, and they demand it, and, therefore, I am for it.

Mr. Chairman, it is seldom that the man who follows the plow appeals to Congress for legislation, and when he does come knocking at the door he should be heard, and if his request is reasonable it should be granted; therefore I am for the milkmaid and for protecting the cow, and for all legislation that will promote the tiller of the soil. The country can not do too much for the farmer, for unless the farmer is prosperous there can be no real prosperity.

Proposed Banking and Currency Law and Its Necessity.

SPEECH

OF

HON. JESSE OVERSTREET,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, April 7, 1902,

On the bill (H. R. 13031) to prohibit the coming into and to regulate the residence within the United States, its Territories, and all territories under its jurisdiction, and the District of Columbia, of Chinese and persons of Chinese descent.

Mr. OVERSTREET said:

Mr. SPEAKER: Availing myself of the privilege extended under the general debate upon the pending bill, I wish to offer for the information of members an explanation of the provisions of the bill (H. R. 13363) "to maintain the gold standard, provide an elastic currency, equalize the rates of interest throughout the country, and further amend the national banking laws," which has recently been reported to the House by the Committee on Banking and Currency. The bill has been drawn with great care and contains wise and needful provisions for the correction of defects in our financial laws that shall make them a proper and safe basis for the great and growing commerce of our people.

There are four purposes to be accomplished by the bill, namely, the further strengthening of the gold standard; divorcing the Government from the banking business; providing greater elasticity in our currency, and equalizing and making more uniform the rates of interest.

There are nine distinct features in the bill, but so intimately related as to mutually support each other. While some provisions are more important than others, each one is a factor in the proper and successful operation of the law.

The nine distinct provisions of the bill authorize the following:

First. The creation of a Division of Banking and Currency, consisting of three members, who shall perform the duties now imposed upon the Comptroller of the Currency.

Second. The gradual but certain retirement of United States notes.

Third. The issue of bank notes not secured by United States bonds, under specific limitations, and subject to specific taxes.

Fourth. The deposit with national banks of the excess of public money above $50,000,000, exclusive of the reserve fund, and also of the gold and silver held for the redemption of certificates, which shall be secured by United States bonds and subject to an interest charge.

Fifth. The chartering of clearing houses and the division of the country into clearing-house districts.

Sixth. The authority to national banks to establish branches.

Seventh. The coining of the silver bullion now in the Treasury and silver dollars, when necessary for public requirements, into subsidiary coins.

Eighth. The cancellation of silver certificates of denominations above $5 and the reissue of the same into one, two, and five dollar certificates.

Ninth. The maintenance of the parity of silver dollars by their exchange at the Treasury for gold.

DIVISION OF BANKING AND CURRENCY.

First. The creation of a Division of Banking and Currency to take the place of the present Comptroller of the Currency is deemed wise, for the reason that the duties of such position can be better discharged by a board of three than by one individual. The field of work under this department is so important, and constantly increasing, that the responsibility is best lodged in a board of three instead of being borne exclusively by one individual. The duties imposed by this bill are numerous and important and greatly increase the responsibility of such board.

The bill proposes to substitute a board of three for the Comptroller of the Currency, with the same authority now exercised by such Comptroller, with the additional authority and duties set forth in the bill. The effort to divorce the Government from the banking business will be greatly aided when the general oversight and control of banks shall be placed in the hands of a board of three members, holding their positions for a term of years, and confining their thought, energy, and effort exclusively to that field, separate and distinct from any work having relation to duties involving political consideration or intimately connected with the general line of policy of a specific Administration. Provision is made for the payment of the salaries of the members of this board out of the taxes upon the bank-note circulation.

RETIREMENT OF UNITED STATES NOTES AND ISSUE OF BANK-NOTE CURRENCY.

Second and third. The provisions of the bill for the gradual but certain retirement of United States notes and the issue of bank notes not secured by United States bonds are so intimately related, and operating in the first step simultaneously, that these two features can best be considered together rather than separately.

By these provisions national banks are authorized to issue notes, not secured by bonds, conditioned upon such banks first assuming to currently redeem United States notes equal to 20 per cent of their paid-up capital, and presenting to the Treasury for redemption and cancellation an additional amount of United States notes equal to 10 per cent of their paid-up capital. No bank shall issue in any one year an amount of its notes in excess of 10 per cent of its paid-up capital, except authority is given for two extraordinary issues of 20 per cent each, after the issues of such notes shall have reached an amount equal to 60 per cent of the paid-up capital of such banks.

A tax of one-eighth of 1 per cent upon the average amount of such notes in circulation within any period of six months is imposed upon the first two issues of 10 per cent each and a tax of five-eighths of 1 per cent upon the average amount of such notes in circulation within any period of six months is imposed upon the third, fourth, fifth, and sixth issues of 10 per cent each, while the tax upon the first extraordinary issue of 20 per cent is fixed at 1½ per cent and upon the second extraordinary issue of 20 per cent is fixed at 2½ per cent upon the average amount of such notes in circulation within any period of six months.

The notes are made redeemable in gold at the home office of the bank of issue, and through the system of clearing houses and clearing-house districts, authorized and controlled by the Division of Banking and Currency, can be easily and quickly returned for redemption.

Inasmuch as the issues of such notes are limited to easy and short steps, seven years would be required within which a bank could place in circulation an amount of its notes equal to the

full amount of its capital, while the heavy tax imposed upon the last 40 per cent issued would evidently restrict such issue to periods of great emergency and drive the issue out of circulation as soon as the emergency should pass. The long time (seven years) required for the issue of any bank to equal its capital would certainly afford ample opportunity for complete and safe inspection and full security against fraud, deceit, or serious danger.

While the present law authorizes banks to issue bond-secured notes to the full amount of their capital, the aggregate of such issues rarely exceeds 50 per cent of the aggregate capital of the banks. The aggregate capital of national banks at present is about $673,000,000, while the national-bank notes are about $350,000,000. As the bank-note issues under the proposed law, except the two extraordinary or emergency issues, would be limited to 60 per cent of the paid-up capital of national banks, it is quite apparent that there is no danger of inflation and that no radical changes are proposed or methods advanced which will increase the opportunities for loss either to the note holder or the depositor.

The notes proposed by the bill are made a first lien upon the assets of the banks issuing them, and no bank is permitted to have in circulation a greater amount of its notes of all kinds than the amount of its paid-up capital. It is believed that the gradual substitution of the bank notes proposed by the bill for the bond-secured notes will result in withdrawing the Government from the banking business, with advantage to both the Government and the commerce of the country.

The object of the bill in requiring banks seeking the privilege of note issue to assume the current redemption of a certain per cent of United States notes, and to present at the Treasury for redemption and cancellation a certain additional per cent, is to remove from the gold reserve the burden of the redemption of a certain proportion of the United States notes, and to retire at once $65,000,000 of such notes.

These two conditions operating simultaneously would result in the banks presenting to the Treasury $195,000,000 of United States notes, receiving gold for one-third of the same ($65,000,000), which notes would be retired, and assuming the current redemption of the remaining $130,000,000. The United States notes then outstanding would equal $151,000,000, against which, for redemption, there would be $150,000,000 in the gold reserve, the amount of United States notes now outstanding being $346,000,000.

While the bill provides for the assumption by national banks for current redemption of an amount equal to 20 per cent of their capital, and the immediate retirement of one-half that amount, yet it is specifically provided that when $130,000,000 of United States notes have been assumed, and one-half such sum—$65,000,000—has been retired, the remainder of the United States notes, namely, $151,000,000, shall not be so assumed, but whenever received by any bank shall be at once sent to the Treasury for redemption and cancellation out of the reserve fund of $150,000,000.

The aggregate capital of the national banks of the country at present is about $673,000,000, so that the apparent discrepancy between 30 per cent of this sum, namely, $201,900,000, and the $195,000,000 is explained by the specific limitation of the amount to be assumed to $130,000,000 and the amount to be immediately retired to $65,000,000, aggregating $195,000,000.

The banks having assumed the $130,000,000 in United States notes and obligating themselves to first redeem them over their several counters in gold before the United States Treasury would be required to ultimately redeem them, would evidently result in such $130,000,000 of United States notes being placed by the several banks in their respective reserves, which would operate successfully to remove them from any burden upon the gold reserve. If, however, a bank should pay out over its counter a United States note which had been assumed for current redemption, and such United States note should be presented at the Treasury, it would, of course, be the duty of the Government, upon demand, to pay out gold for the same; but under the terms of the bill the Treasury would at once notify the bank which had assumed to currently redeem such United States note to forward to the Treasury gold equal in amount thereto, and upon its receipt to return such United States note to that bank and reimburse the gold reserve in the amount which had been paid out for the redemption of that particular United States note.

The bill provides that when $130,000,000 of United States notes shall have been assumed by the banks and $65,000,000 have been canceled and retired, thereafter national banks which have not assumed any United States notes shall be accorded the same privileges of issuing their bank notes, without the deposit of United States bonds, as the other banks have enjoyed, except that such banks shall pay a tax upon their bank-note circulation of 1¼ per cent per annum, being 1 per cent per annum more than the tax required of banks which have shared in the current redemption of the $130,000,000 United States notes.

As the bill contains a provision that the United States notes which shall be assumed by the banks shall be called in for redemption by the Secretary only in the inverse order in which they have been assumed, the banks will have the additional inducement of making such assumption as early as possible in order that the reduced interest on their note issues may be enjoyed for the longest possible period.

In order to secure the prompt payment of any note in the event of a failure or liquidation of the bank issuing it, banks are required at the time they first make application for the privilege of issue, to deposit with the Treasury an amount in United States bonds, or gold, or both, equal to 5 per cent of the notes to be issued by such banks, which deposits shall comprise a fund to be known as the guaranty and redemption fund, out of which shall be paid the notes of any bank which may fail or liquidate, and which fund shall be by the Secretary of the Treasury reimbursed from the assets of the bank of issue.

The bill further provides authority to the Secretary of the Treasury to deposit public money in excess of a working balance of $50,000,000, not including the funds in the redemption division, with national banks, such deposits to be secured by Government bonds, at par, equaling the deposits, upon which deposits such banks shall pay to the Government interest at the rate of 1 per cent per annum, which interest shall be paid into and become part of the guaranty and redemption fund. The guaranty and redemption fund, therefore, will receive and comprise the original 5 per cent guaranty deposit at the time the banks apply for the privilege of note issue, all the interest on public moneys which may be deposited with national banks, and all of the taxes realized upon bank-note issues.

The bill then provides that when such guaranty fund as above defined shall reach an amount in excess of 10 per cent of the total amount of bank notes outstanding, such excess shall be applied by the Secretary of the Treasury in the redemption of United States notes which shall have been assumed by the respective banks, and such United States notes when called in for redemption and retirement, shall be called for in the inverse order in which they shall have been assumed by the different banks.

The operation, therefore, of these two features of the bill, namely, the retirement of the United States notes and the issue of the bank notes, operating as they will concurrently, will ultimately result in, first, the immediate retirement of $65,000,000 of United States notes out of the general fund of the Treasury; second, the assumption by the banks of $130,000,000 of United States notes, which notes will be gradually, but ultimately, called in and retired out of the guaranty fund in excess of 10 per cent of the bank notes outstanding, and finally the retirement of the remaining $151,000,000 of United States notes out of the gold-reserve fund as the same now exists.

The tax upon national bank-note issues and the interest upon the public money in excess of the $50,000,000 limitation will unquestionably maintain the guaranty fund in sufficient proportion to practically and sufficiently safeguard the possible failures of banks to redeem their own note issues and at the same time afford a source of revenue out of which the $130,000,000 of United States notes can be gradually but certainly paid and retired. The only possible extraordinary draft upon such guaranty fund would be in the event of the failure of many banks and the necessity to meet the payment of their notes as well as the United States notes which they may have assumed to currently redeem.

The history of the country, however, based upon carefully prepared statements made by the actuary of the Treasury Department, clearly shows that if these particular provisions had been ingrafted into law at the time of specie resumption the guaranty fund which would have arisen from the taxation upon the schedules herein provided, assuming that the national banks would not have issued any greater amount of such notes than the bank-note circulation during the period as above suggested, together with the interest upon public moneys in excess of the $50,000,000 limitation deposited with national banks, would not only have resulted in the full and complete payment of the bank notes of every national bank which failed during such period without the loss of a cent, but would have netted the Government many millions of dollars, which could have been utilized in the final retirement of an equal amount of United States notes.

However, the bill contains a further safeguard to the guaranty and redemption fund by providing for an emergency tax of not more than 1 per cent in any one year upon the circulation of banks to replenish such fund should it be reduced to an amount equal only to 3 per cent of the notes outstanding, so as to restore it to a point equal to 5 per cent, and the reimbursement to the banks of such emergency tax when the guaranty fund shall be properly restored by the regular taxes.

The easy stages, therefore, of 10 per cent issue a year for six years, safeguarded by a taxation which would enable full security, while at the same time affording better opportunity for profit to the banks than the present method of taxation, will prevent an

inflation of the currency, and allow a gradual operation which will afford every advantage of value and complete inspection, with no more dangers of loss either to the Government or to the note holders than exist to-day.

The emergency circulation of the 20 per cent between the 60 and 80 per cent burdened with a taxation of 3 per cent, and the extraordinary emergency circulation of 20 per cent between the 80 and 100 per cent burdened by the extraordinary tax of 5 per cent, will inject into our currency an elasticity which will be helpful at times when money is in great demand and operate to ease greatly the situation without increasing the dangers.

The present condition of the general fund of the Treasury will easily and safely warrant the immediate retirement of $65,000,000 of United States notes without requiring an encroachment upon the reserve fund of $150,000,000. Such retirement will discharge a portion of a Government obligation which must at some time be met, and will permit the release from the Treasury of $65,000,000 which, under the prosperous condition of the Treasury, is now withheld from circulation.

It is confidently believed that under the operation of the provisions of the proposed law banks which may at present have in circulation bank notes equal to the full amount of their paid-up capital will retire at once 10 per cent of the same and substitute therefor an equal amount of bank notes authorized under the bill, while other national banks which do not have in circulation the full amount authorized under the law will very probably increase their circulation to an amount equal to 10 per cent of their paid-up capital. It is not possible, therefore, under this bill for the circulation of bank notes to be very greatly increased during the first or second year of the operation of the proposed law, and at no time too rapidly to be easily absorbed by commerce and to afford safe and ample inspection.

DEPOSITS OF PUBLIC MONEYS WITH NATIONAL BANKS.

Fourth. The provision of the bill authorizing the Secretary of the Treasury to deposit with national banks any money in excess of a working balance of $50,000,000, exclusive of the funds in the redemption division, was necessarily touched upon in the consideration of the second and third provisions of the bill. The law under which the Secretary of the Treasury to-day deposits public funds with national banks is under authority, whereby he is authorized to make such deposits "except of moneys received from customs revenue," and the security for such deposits, under the terms of the law, is by collateral security of United States bonds "and otherwise."

The provision proposed by the bill would extend the authority to all moneys of the Treasury, exclusive of that held in the Redemption Division, but would limit the security to United States bonds. While there are always liabilities upon the Treasury, the Secretary would be able to meet the ordinary expenses and discharge the immediate obligations with a working balance of $50,000,000, leaving him free in times of large revenue and prosperity to deposit such funds in excess of such $50,000,000 with national banks, amply and completely secured by the use of United States bonds as collateral.

There is no requirement under the present law for the exaction of interest for this privilege. The proposed bill requires interest to be paid at the rate of 1 per cent per annum, which would afford a very creditable source of revenue for the benefit of the guaranty and redemption fund to secure the redemption of bank notes and the ultimate retirement of the United States notes. An additional benefit in this provision would be in affording a demand for United States bonds which may have been released upon the market by the retirement of national-bank notes under the present law.

CLEARING HOUSES.

Fifth. There is at present no law governing the establishment of clearing houses or providing for the chartering of the same. Clearing houses to-day are merely mutual associations whose duties are discharged through the medium of trustees agreed upon by the parties interested. This provision of the bill is to effect two purposes: First, to give definite governmental authority to the chartering of clearing houses under proper control of the Division of Banking and Currency; and, second, to arrange for a division of the entire country into clearing-house districts, within which national banks shall designate specific banks or agents, through which channel the bank notes may be properly and safely cleared and redeemed.

BRANCH BANKS.

Sixth. This provision of the bill proposes authority for national banks to establish branches or agencies under proper restriction and control of the Division of Banking and Currency. This step is in line with the principle of the extension of banking facilities so as to permit the easy flow of currency from centers enjoying a surplus to localities where the demand is greater than the supply. The most fluid capital known to commerce is bank capital. A channel through which such capital can, under proper restrictions and limitations, safeguarded by a complete system of inspection, flow back and forth will remove from our system the anomaly of having a surplus of funds in one locality and a dangerous dearth of funds in another, because of which unfortunate condition the interest rate in different sections of the country varies greatly, in some sections being much lower than in others. The system of branch banks is expected to result in a more nearly uniform rate of interest throughout the country, while the reduction of expenses to banks will permit the borrower to enjoy this benefit. Practically every civilized nation except the United States permits this system of banking, and the history of such countries clearly demonstrates the wisdom of the system and its operation to the benefit of the borrower.

COINAGE OF SILVER BULLION INTO SUBSIDIARY COIN.

Seventh. There is a constantly growing demand for a larger volume of subsidiary coin to meet the daily conditions of trade requiring small change. The numerous transactions in the markets of the people and the varying prices of commodities, especially in small purchases, necessitate the use of a considerable sum of subsidiary coin. The present law limits the issue of such coin to $100,000,000. This limit should be removed and permit the ordinary laws of trade to control the amount under a wise and cautious administration of the Treasury Department.

There is at present in the Treasury Department silver bullion amounting in its coinage value to about $55,000,000. Under the operation of the act of March 14, 1900, the Treasury note based upon the silver bullion was directed to be canceled and destroyed and, as canceled, silver dollars in equal amount to be coined and issued. Under the operation of this law, the Treasury notes have been reduced to about $35,000,000 and can easily be taken care of out of the general fund of the Treasury by redeeming them in gold, the same having been declared by the act of March 14, 1900, to be redeemable in gold.

The bullion, therefore, now in the Treasury can easily be put to this use without creating the slightest burden by reason of the Treasury notes at present outstanding. This provision of the bill further authorizes the Secretary of the Treasury to coin, when public requirement shall make such coinage necessary, silver dollars into subsidiary coin. This authorization merely provides against any future demand for a further increase of subsidiary coin, which could be met by coining silver dollars without reducing the volume of currency, and still providing a full and satisfactory use for our silver coinage.

SILVER CERTIFICATES.

Eighth. This provision of the bill provides that silver certificates of denominations above $5 shall no longer be issued. The present law, namely, the act of March 14, 1900, provides that silver certificates shall not be issued in denominations above $10, except an amount equal to 10 per cent of the total amount of silver certificates may be in denominations above $10.

The purpose of this provision of the proposed bill is to provide that the full field of trade among the people requiring change of $5 and under shall be given for the use of the silver currency. It is clearly demonstrated by properly prepared statements that the daily market of our people, or the pocket trade, will require an amount of money somewhat in excess of that represented by the total amount of our silver currency. Therefore, by limiting the silver either to one, two, and five dollar certificates, or the silver coin itself, this pocket trade will absorb the total output of our silver coinage, and while giving ample use to the same will remove this silver almost entirely as a burden upon such reserve fund as shall be necessary to maintain the parity of the silver with gold.

EXCHANGEABILITY.

Ninth. This provision of the bill directs the Secretary of the Treasury to exchange gold for silver dollars when the same shall be presented in sums of $100 or multiples thereof, and is for the express purpose of maintaining the parity of the silver dollars with gold. Its object is to make certain the gold standard and to remove all doubt from the validity and stability of such standard.

The first section of the act of March 14, 1900, in which the declaration of gold as the standard is made, directs that the Secretary of the Treasury shall maintain all forms of money issued or coined by the United States at a parity of value with the standard, but the law fails to recite the method or process by which such maintenance shall be preserved.

Every silver dollar which the Government has issued has been upon receipt by the Government of the equivalent of the face value of such dollar in gold. Good morals as well as good business require the Government to maintain that dollar at a parity with gold. The demand for gold in exchange for silver dollars will not arise except in one of two instances: Either a doubt as to the

value of the silver dollar will force it to the Treasury for gold, or a redundancy of such silver dollars will result in their return to the Treasury at which time gold would be demanded.

If the Government has forced upon the people a coin which is not as good as its best coin, the law should compel the Government to pay upon demand, by exchange, its best coin when the poorer coin is presented. If the Government has coined and issued a greater amount of silver coins than the trade of its people can absorb, the Government should by law provide against the evils which would arise from such redundancy. In either event the obligation upon the Government is plain, and the wise method of relief in either emergency is the direct method of maintaining the parity of the metal by standing ready to exchange gold when the same shall be demanded.

The Government has received the equivalent of gold for every greenback and silver dollar issued, and in the event either is discredited the holder will have a right in equity, if not in law, for an exchange in value equal to that received by the Government. The acceptance of both these forms of money by the Government at all times for customs dues establishes an indirect method of redemption and fixes a smooth channel through which both can be easily returned to the Treasury. The standard will not be secure nor free from strain until the burden of the greenback shall be removed and the silver coinage so regulated that its value as measured in the standard shall be definitely fixed and its flow to the Treasury for redemption can be checked.

When the United States note shall be taken care of as above outlined and its retirement provided for, and when the silver certificates above $5 in denomination are discontinued and the silver bullion now in the Treasury coined into subsidiary coin, the exchange of gold for silver can be authorized without danger, and the certainty of its operation will completely remove the demand for such exchange. In order, however, to fully safeguard this provision, the proposed bill provides that the Treasury shall keep on hand a fund in gold equal to 5 per cent of the total amount of silver outstanding, which shall serve as a guaranty fund with which to meet demands for such exchangeability.

As a further safeguard to this provision and to completely remove any danger of a possible "endless chain" by its operation it is expressly provided that the silver dollars for which gold shall be exchanged from the reserve fund shall be held in said reserve fund and not paid out except in the manner provided in regard to United States notes under the act of March 14, 1900, and the provisions for the maintenance of such fund now authorized with regard to the United States notes are made applicable to silver dollars in said reserve fund. If, therefore, gold should be exchanged for silver dollars, the silver dollars so received would be paid out only in exchange for gold.

The careful removal of the causes for a draft upon the gold reserve, the certain establishment of a field for the full use of silver, and the assurance of the ability of the Government to meet the demand at all times will make exchangeability practicable and easy, and close the only gap remaining between doubt and certainty with regard to our standard of value.

Defects in financial laws are rarely noticed in times of business activity, and doubts of money standards are always obscured by general prosperity. And yet a period of prosperity affords the most opportune time for the correction of such defects and the removal of such doubts. This country has never been so prosperous as it is to-day, and the Treasury has never been stronger than it is to-day. It is the best of all times to complete the financial legislation so splendidly begun by the enactment of the law of March 14, 1900.

A boat built only for fair weather is of no use upon a stormy sea. A ship so strongly built and well equipped that she is safe in any sea can be trusted in a calm. Our financial laws are drawn with too much regard to fair weather and too little regard for storms. Easy of operation in periods of prosperity, but strained and of doubtful stability in times of panic. Already the trade of our country is broadening into a world commerce. The necessity of exchange upon London embarrasses the American merchant shipping goods to China or to South America.

The business development of our people is rapidly heading to a condition when bills of lading will be direct from our exporters to their customers without the need of transfers through foreign agents, and their settlement sheets will be through the medium of exchange upon American banks. The great and increasing trade of this country with the peoples of the earth will require money centers for the settlement of balances where the exchange in which such balances are made shall be based upon such a standard of value as shall be quickly recognized as the safest and best. We have it in our power to complete this legislation and so strengthen the gold standard and fortify our financial laws that our money centers will become the chosen clearing houses of the world wherein the balances in trade will be settled in American exchange.

Chinese-Exclusion Bill.

SPEECH

OF

HON. GEORGE W. CROMER,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 5, 1902,

On the bill (H. R. 13031) to prohibit the coming into and to regulate the residence within the United States, its Territories, and all territory under its jurisdiction, and the District of Columbia, of Chinese and persons of Chinese descent.

Mr. CROMER said:

Mr. CHAIRMAN: I am in favor of this bill, with a few amendments which I believe the Committee of the Whole ought to make, because it is in the interest of American citizenship and for the protection of American labor.

This question of Chinese exclusion is a difficult one upon which to legislate, in view of the universal desire on the part of all our people and on the part of our Government to retain the same friendly business and commercial relations in the future and for all time to come with China that have existed for more than fifty years past. Whilst we desire to protect American laboring men from unfair, unequal, and unjust competition from Chinese coolies by excluding from our country Chinese laborers, who rob American workingmen of their employment, decrease their wages, and lengthen their hours of toil, yet it is the desire and interest of all to retain our friendly business relations with China in order to find a market for the surplus products of factories and fields. Both capital and labor alike are mutually interested in preserving our trade relations with China. Trade with China gives employment to labor and a market for our products. Our country has reached a period in its development when foreign markets must be found for our surplus products. To-day, by the skill of American workingmen and by the labor-saving machinery invented by the genius of American minds, we produce much more than we consume, and it becomes necessary for us to seek foreign markets in which to sell our surplus products. For more than fifty years we have had friendly business relations with China. We desire to retain these friendly commercial relations with that country.

It may help us some in the solution of this question to know the history of our treaties with China and to thoroughly understand the provisions of our legislation on this question in the past.

In 1844 we secured by treaty and without force the same trade relations with China that England obtained a short time prior by violence. In that year a treaty was made between our Government and China which gave us the same concessions in trade with that country which England compelled from them by force of arms. By the terms of that treaty, in the making of which an eminent statesman, Mr. Caleb Cushing, was at the head of our commission, and as a result of that treaty, peace, amity, and commerce were recognized and established between the two nations.

In 1856, as a result of war with China, Great Britain secured other important concessions from that country, including religious freedom for foreigners and the suppression of piracy on the seas. Again, our Government in 1858, by sending a friendly agent to China, obtained from her a new treaty, containing many of the articles of the old treaty of 1844, and in addition thereto secured the right to have a representative of our Government in China, to protect American interests there, and to secure to our citizens residing there protection to property, religion, and person; our Government by the terms of this treaty granting the same rights to Chinese residing here. In truth, through peaceful means, by the terms of this treaty our commercial, shipping, and political relations were to receive the same treatment as those of the most favored nations. It will be observed from reading these two treaties with China that nothing was said in either of them about Chinese immigration, although a great many Chinese had already come to our shores. In 1860, two years after the making of the last of these two treaties, there were in round numbers 35,000 Chinese in the United States. Both of these treaties recognized and established the most friendly commercial and political relations between the two nations. The evil effects of Chinese cheap labor were not so keenly felt at this time, as by the discovery of gold in California and in the settlement and development of the Pacific coast there was ample work for all in the mines and in the construction of railroads.

Our trouble from Chinese immigration dates from 1868, when our relations with China became so friendly that an American diplomat, Mr. Anson Burlingame, resigned his position as minister to that country, came here with Chinese officials and dignitaries to make a new treaty between the two nations, and, if

possible, to establish more friendly relations. Everywhere this commission was enthusiastically received by the American people. As a result of this visit a new treaty was made, known as the Burlingame Treaty, by the terms of which Chinese not only were invited but earnestly solicited and encouraged to come to our shores. That we may the better understand the close, friendly, political, and social relations existing between the two nations at this time I will read as a part of my remarks, for the information of the committee, Articles V and VI of this treaty. They are as follows:

ART. V. The United States of America and the Emperor of China cordially recognize the inherent and inalienable right of man to change his home and allegiance, and also the mutual advantage of the free migration and emigration of their citizens and their subjects, respectively, from one country to the other for the purposes of curiosity, or trade, or as permanent residents. The high contracting parties therefore join in reprobating any other than entirely voluntary emigration for these purposes. They consequently agree to pass laws making it a penal offense for a citizen of the United States or Chinese subjects to take Chinese subjects either to the United States or to any other foreign country, or for a Chinese subject or citizen of the United States to take citizens of the United States to China or to any other foreign country without their free and voluntary consent, respectively.

ART. VI. Citizens of the United States visiting or residing in China shall enjoy the same privileges, immunities, or exemptions in respect to travel or residence as may there be enjoyed by the citizens or subjects of the most favored nation. And reciprocally Chinese subjects visiting or residing in the United States shall enjoy the same privileges, immunities, and exemptions in respect to travel or residence as may there be enjoyed by the citizens or subjects of the most favored nation. But nothing herein contained shall be held to confer naturalization upon citizens of the United States in China, nor upon the subjects of China in the United States.

Mr. Chairman, it will be observed from the reading of these articles of the Burlingame treaty that our relations with China at this time had become so friendly that it was thought necessary by the high contracting parties to write into this treaty as one of the conditions thereof a provision enjoining upon both Governments the enactment of laws making it a penal offense for citizens or subjects of each to take the citizens or subjects of the other into the country of which they were not respectively citizens or subjects without the consent of the citizens or subjects so involuntarily taken. This provision in the treaty was insisted upon by both nations to prevent the further bringing into this country of Chinese laborers under the contract system, which was not desired by China and which was repugnant to our institutions and to our civilization. Labor being scarce on the Pacific coast, this practice was resorted to at this time in order to secure hands with which to construct the great transcontinental railroad, which brought the Pacific States in closer touch with all parts of our great country.

After this treaty was finally ratified in 1870 our trouble began. It soon dawned upon the minds of the American people that we had made a grave mistake by inviting the Mongolians of the Orient to come among us. The Chinese came in great numbers. Immediately a yellow tide of pagans streamed through the Golden Gate and flooded the Pacific coast. We realized after it was too late that we had invited to come to our country a people whose presence here corrupted society, threatened our civilization, and trampled upon the rights of American workingmen. The evil effects of this yellow horde were first felt in California, where they were found in great numbers. The people of the Pacific coast sounded the alarm, and the whole country heard their voice and was aroused. Steps were taken to stop the great tide of immigration. At first we endeavored to restrict it by legislation. A law was passed by the Congress restricting and limiting the number of Chinese that might be brought to our country by each vessel to fifteen. This law was vetoed by President Hayes on the ground that it violated the terms of the Burlingame treaty.

The President having vetoed the law designed to restrict immigration, our Government in 1880 sought and procured a modification of the treaty of 1868, in which China agreed to and did make some concessions. It was stipulated in this treaty that the United States might "regulate, limit, and suspend" the immigration of Chinese laborers, but could not prohibit it absolutely. Then followed in 1882 an act of Congress to carry out the provisions of this treaty, which President Arthur vetoed on the ground that it repudiated the obligations of the treaty of 1880. However, afterwards, in May of the same year, this act was modified to meet the views of the President, and became a law. By the provisions of this law the immigration of Chinese laborers was suspended for a period of ten years, but it was expressly provided that all Chinese laborers who were in the United States on November 17, 1880 at the time of the ratification of the treaty, should not be molested.

Such persons were to be identified by certificate. Also, it was provided that no State or Federal court should admit Chinese to citizenship. This law was soon found to be inadequate to carry out the intention of the treaty, and was amended in 1884 with a view of strengthening it, expressly providing that the certificate of residence required of resident Chinese was the only evidence by which they might regain reentrance into the United States. This amended law also was found inadequate to stay the tide of Chinese immigration. By fraud and false swearing and by all kinds of deception, Chinese laborers who had never before visited our country gained admission by showing upon examination to the satisfaction of Government officials that they had resided here before November 17, 1880.

To make it possible to exclude Chinese laborers, who so successfully had been evading the law by fraudulently establishing their right to reenter our country on the ground that they had resided here before November 17, 1880, the law of 1888, designed absolutely to prohibit Chinese immigration of laborers, was passed. The policy of suspension adopted by our Government having failed to check the immigration of Chinese coolies, who, by false swearing, in great numbers were gaining admission to our country, our Government made an effort to get further concessions from China, by which another treaty was to be made giving us the right absolutely to prohibit for a limited time the coming into the United States of Chinese coolies. This treaty was negotiated and, with amendments, was ratified by the Senate of the United States, but China refused to ratify it as amended, and so the treaty of 1880, without modification, remained in force.

During the time this treaty of 1888 was pending, the Congress, believing that finally it would be ratified, on September 13, 1888, passed a prohibitory act, which was to go into effect upon the ratification of the treaty; but the treaty never having been ratified nor proclaimed, it has always been a question whether this act of September 13, 1888, ever went into effect. It is challenged by a case now pending in the Supreme Court of the United States, in which its validity is assailed. Regardless of the fact that this act recited that it would go into effect when the treaty then pending was ratified and which afterwards failed of ratification, it has been given force and effect by the decision of the Solicitor of the Treasury, who has decided that all of it from section 5 to section 14, both inclusive, except section 12, is valid and in force. The provisions of this act are the most effective of all our legislation upon Chinese exclusion for the staying of the almost irresistible tide of Chinese immigration. It provides for the prohibition of Chinese laborers from our shores.

While this treaty of 1888 was pending, another act, commonly known as the "Scott Act," intended to cure certain defects in prior legislation, and supplementary to the act of May 6, 1882, was passed on October 1, 1888.

The law of May 6, 1882, being about to expire according to its own provision, by suspending immigration for ten years, the Congress, on May 5, 1892, passed what is known as the Geary Act, which provides, in its first section, the continuation for a period of ten years of all laws enacted prior thereto regulating, suspending, and prohibiting the immigration of Chinese laborers, providing as one of its requirements that all Chinese within the United States must register and procure from the proper official a certificate showing his right to remain therein, and throwing the whole burden of proof to establish his right to remain upon him. The Chinese resisted this registration requirement and employed eminent lawyers to test its validity in the Supreme Court of the United States. But its validity was upheld. Pending the decision of the Supreme Court and acting on the advice of their lawyers, many Chinese refused to register in compliance with the law. The decision of the Supreme Court was not rendered until the year that was given them by the law in which to register had expired; so an amendatory act of November 3, 1893, extending the time of registration, was passed. This law of 1893 also for the first time defined the words "labor" and "laborers" and the term "merchant" as used in this act and the acts of which it was amendatory.

Finally the treaty of December 8, 1894, was agreed upon by the two nations, in which China recognized our right absolutely to prohibit the coming into our country of Chinese laborers, except as otherwise provided therein, for a period of ten years, and further provided that unless one of the parties thereto, at least six months before the expiration of this period of ten years, shall have served notice on the other party thereto that it is the intention to terminate said treaty, it shall continue in force for another like period of ten years. In this treaty the Chinese Government not only recognized our right to prohibit Chinese laborers from coming to our country, but expressed a desire to cooperate with our Government in prohibiting such immigration. The preamble of this treaty reads as follows:

Whereas on the 17th day of November, A. D. 1880, a treaty was concluded between the United States and China for the purpose of regulating, limiting, or suspending the coming of Chinese laborers to, and their residence in, the United States;

And whereas the Government of China, in view of the antagonism and much deprecated and serious disorders to which the presence of Chinese laborers has given rise in certain parts of the United States, desires to prohibit the emigration of such laborers from China to the United States;

And whereas the two Governments desire to cooperate in prohibiting such emigration, and to strengthen in other ways the bonds of friendship between the two countries.

Under the stipulations of this treaty, officials, merchants, teachers, students, and travelers for curiosity or pleasure, but not laborers, were continued in their right to enter and be in the United States.

Mr. Chairman, I have thus followed the history of our treaty making and the history of our legislation upon the subject of Chinese immigration from the making of the first commercial treaty of 1844 down to the making of the last one in 1894, which is the last expression of the two nations on the question of Chinese exclusion. We have seen the policy of our Government changed from a policy inviting and encouraging all classes of Chinese to come among us through the varying degrees of regulating, suspending, and excluding to a policy absolutely prohibiting Chinese laborers from our country.

Our laws, treaties, and Treasury regulations upon the subject of Chinese immigration are the result of years of experience in our efforts to exclude from our country Chinese coolies. The wisdom of this experience declares in favor of a prohibitory policy. To-day there is but one sentiment in this House, and that sentiment is in favor of a prohibitory policy. Then, why not at this time declare our intention to make permanent our policy and serve notice on China that we will forever exclude from the privileges of our glorious country a class of people who have not the capacity to become American citizens?

I am in favor of this bill because it declares in favor of a permanent prohibitory policy by our Government forever excluding from our country the Chinese coolies.

It is contended by those who are unfriendly to this bill that if enacted into law it will violate some of our treaty obligations with China. I will not undertake to discuss this feature of the question further than to say that from reading and examining our treaties and a study of the laws enacted for the enforcement of them I do not think that this contention is true. This bill is only a codification of existing laws, embodying our Treasury regulations which experience has approved, and decisions of supreme courts.

It is not the purpose of this bill to change our policy of Chinese exclusion, but to continue it and to make it easy for the exempted classes of Chinese who have a right to enter our country to gain admission here, but, on the other hand, to make it so exceedingly difficult for the prohibited class—Chinese laborers—that fraud, deception, and perjury will not avail them in gaining admittance to our country.

It has been claimed that this bill, if enacted into law, will violate our treaty obligations with China, because they say, in defining the words "teacher," "student," "laborers," and "merchant," it gives to these words a meaning and definition never contemplated by the Chinese Government when they were used in forming the treaty, and gives to them a meaning different from the ordinary meaning as defined by Webster. I do not think that there is much force in this contention, because the words "laborer" and "merchant," as used in the treaty, were defined in the amendatory act of 1893, and no other or different meaning is given to these words in this bill; and the words "student" and "teacher" as used in the treaty were defined in our Treasury regulations before the making of the treaty, and no other or different meaning is given to these words in this bill than that given to them in these Treasury regulations. All these Treasury regulations, including the definition of these words, were in force at the time of the making of the treaty in 1894, and both the regulations and the amendatory act of 1893 were before the Chinese Commission and known to the members thereof when this treaty of 1894 was made. So they knew what meaning and definitions were given to these words as used in our Chinese-exclusion laws and Treasury regulations at the time the treaty was made.

It is claimed that this bill, if enacted into law, will violate our treaty obligations by not fixing a time limit for its expiration on or before December 8, 1904, the time when the treaty may expire. I do not think this contention is tenable, for in this bill we simply say to China that we propose to make permanent our present prohibitory policy, as agreed to and desired by both nations and so expressed in the treaty. It might as well be understood now that nothing less than the right forever to exclude Chinese coolies will ever be accepted and approved by the American people.

This bill may seem harsh and severe to some, but to those who best understand the character of the Chinese coolies and know how much fraud and bribery have been resorted to unlawfully to bring them into our country, it does not seem to be too drastic. It is well known that all kinds of schemes are resorted to by organized companies in both countries for the purpose of evading our exclusion laws in bringing in the prohibited classes. We admit the exempted classes, including officials, teachers, students, merchants, and travelers for curiosity and pleasure, under stringent laws and regulations, because of the well-known disposition and purpose of Chinese laborers to gain admission under the pretense of belonging to the exempted classes. This bill, rightly understood, will not seem severe to those who have a right to come here, but it will seem severe, no doubt, to those who are prohibited from coming and to whom are denied the privileges of our country because of the evil effects of their presence upon our civilization and the injury to the cause of American workingmen.

Our legislation should be as definite and strict as the officers who enforce our laws are honest and diligent, because there is an organized effort by the Six Companies as well as by others to smuggle in Chinamen belonging to the prohibited class.

We should guard our doors against the corrupting influences from all nations. We should deny the privileges of our civilization and the advantages of our glorious country to all who have not the capacity and the disposition, from whatever land they may come, to make good citizens of our Republic. This legislation is not leveled against China as a Government, but against the class of her people whose presence here would be injurious to us. I do not believe that the Chinese Government will object to this bill on account of its severity, but I do believe that the same friendly relations which now exist between their Government and ours will continue after this bill becomes the law of the land.

Some three or four months since an almost universal sentiment prevailed for the reenactment of the Geary law, and there are yet many who believe and contend that Congress should merely continue in force our present laws and regulations until December 8, 1904, or until the expiration of the treaty. They say that our present laws are effective, and cite us to the fact that under their operation the Chinese population in this country has dwindled; that it has been decreased 40 per cent in California, and during the last ten years, as shown by the census reports, the number in the whole country has been reduced some 16,000. But there are some very cogent reasons why it is not wise merely to continue our present laws in force by an enactment in three or four lines, as has been proposed by several bills. One good reason why this should not be done is that the most effective law in force today in support of our prohibitory policy of shutting out Chinese laborers is the act of September 13, 1888, concerning the validity of which there is much doubt.

The effect and force of this act depends upon the decision of the Solicitor of the Treasury. There is a case now pending in the Supreme Court assailing the validity of this law on the ground that it never went into effect. There are no less than five different cases pending in the Supreme Court of the United States assailing the validity and constitutionality of existing laws and Treasury regulations. Why, then, involve this question in so much doubt when it is so easy to make certain our law upon this question by passing this bill? Again, this bill embodies many Treasury regulations which experience has approved and which should be given additional force by enactment into law. Then, again, our present laws are only effective in the mainland of our country, and should be extended to our insular possessions. Our prohibitory policy should be extended to the Philippine Islands. This bill proposes to do this, proposes to prohibit Chinese laborers from going into the Philippine Islands, and from that island to the mainland of our country, and from one insular posession to another, and from the mainland to any insular possessions.

There is one provision of the bill, however, concerning which there is much difference of opinion in the House. I refer to the committee amendment prohibiting the employment of Chinese sailors not entitled to enter our country upon board of vessels holding the American register and flying the American flag on voyages terminating at American ports. Some of us believe and insist that it is no more than fair, right, and just to protect American laboring men on sea as well as upon land. But we are told that it is impossible to secure American seamen or white sailors because of the nature of the work to be performed and the hot climate of the seas over which voyages are made by many of our vessels; but this contention has been refuted by resolutions received by members of Congress from the Firemans and Seamans' Union in Philadelphia and New York, requesting that this provision be placed in the bill, and asserting that white men and American sailors can be had to work in the stokeholes of the vessels and expressing a willingness to accept employment on vessels on voyages to all parts of the world. By far the strongest reason and testimony establishes the fact that difficulty in securing American seamen and white sailors exists because of the low wages paid for this kind of employment.

We have no objections to admitting into our country all that come from foreign lands who have mind and heart and intelligence and are ambitious to become American citizens, if they will renounce their allegiance to kings and potentates, and will declare their loyalty to our institutions and to our Government and become genuine American citizens. Our country has been the asylum of the oppressed from other lands ever since the Pilgrim Fathers landed at Plymouth Rock. From the foundation of our Republic, beginning with the early settlement of our colonies, there have come to our land from foreign countries those

who loved liberty better than slavery, who preferred the free institutions of America to the despotisms and monarchies of the countries from which they came, and mingling their blood with ours and assimilating with us, have become imbued with our civilization until they have become a part of our body politic. Our country has grown great and our nation has become strong and powerful because the liberty-loving people of other countries, the bravest and best, have united their fortunes with us in America to make this the best Government in all the world.

But our civilization has no place for the Chinese cooly. He has no ambition or sentiment in harmony with our people. He has no desire to become an American citizen; indeed our laws and treaties prevent him from so becoming. He clings to the institutions of the Celestial Empire. His object in coming to America is wholly mercenary. He comes here, not because he loves our institutions, not because he loves our flag, but because he finds it a good place to make and accumulate money with which to return to his native land. He is no benefit to our people. He takes what money he earns back to China, instead of investing it here in business or using it to improve and develop our country. Corporations and capitalists, who place their selfish interest above the general good, above the interest of all the people, may be in favor of admitting cheap labor, but all who respect the rights of others will favor the absolute prohibition of Chinese coolies.

There are those who fear that if we are too drastic in our legislation against the admission of Chinese laborers that we will destroy our friendly commercial relations with China which have so long existed. They fear that her merchants will not buy our products nor sell to us theirs. There may be some reason for this fear in the minds of those who are unfriendly to this bill, but in my opinion there is no reason in fact upon which to base such fear. China herself is committed to the policy of prohibiting the emigration of her laborers to this country. By the terms of the treaty of 1894 she was willing to have this policy adopted. But admitting for the sake of the argument that there is danger of losing our trade with China, will we neglect our duty to our own people in order to hold our trade with that country? Our first duty is to our people at home.

As for myself, I am in favor of protecting the American laboring men in their rights and giving them employment at good wages, even though we sacrifice our trade with China. I am in favor of giving up our commercial relations if need be for the good of American toilers and for the elevation of American citizenship. The peace and comfort and happiness of our laboring men are worth more to us than all of our trade with the Orient. Our home market is more valuable to us than the markets of the world. But we will not be compelled to give up our trade with China. We will retain it and it will increase with the coming years. Will we refuse to listen to the just demands of American laboring men? The labor unions of this country have taken a great interest in this question and have sent petition after petition and resolution after resolution to members of the Congress urging them to support a measure, unlimited as to time, absolutely prohibiting the coming to our shores of Chinese laborers. They have a right thus to advise members of Congress. They above all others are interested in protecting their employment and good wages. This legislation is for the protection and purity of their homes and their firesides, their families and friends.

It is the proud boast of our people that labor in America is better paid, better fed, better clothed, better housed, more ambitious, more intelligent, more public-spirited, and consequently more happy and contented than the toilers of any other land beneath the sun. By organization and cooperation American workingmen have been able to demand and to receive from capital a portion of the profits created by their own toil. They are bettering their condition as years come and go. I hope the time will soon come in this country when a man who toils will be able to earn, by working eight hours a day, enough wage to support himself and family with the necessaries and comforts of life in his own happy home of peace and plenty and accumulate and lay aside sufficient money to support his old age and his loved ones after he is gone.

I have always favored protection to American industries and American labor. It is one of the cardinal principles of the Republican party to protect those who toil in factories and fields from the cheap labor of other countries by placing upon the products of those countries seeking our markets with competing goods a tariff equal to the difference in wages paid to the workingmen of those countries and the wages paid to the workingmen of this country for making the same goods. I feel it as much our duty to protect our laboring men from unfair competition with cheap men coming into our country, who have neither the disposition nor the capacity to become American citizens, as it is our duty to protect them against the cheap goods made by the cheap labor of other countries. It would be folly to shut out the cheap goods, produced by the cheap labor of other countries, and throw wide open our doors to admit cheap men, who are willing to work for small wages and thereby deprive our people of employment, reduce the price of wages, and lengthen the hours of toil.

No, Mr. Chairman, we will not permit the incoming of those who are not ambitious to become good citizens of our Republic, who are willing to work for cheap wages, any more than we will permit cheaply made goods from other countries to come into competition with the goods made by the well-paid labor of our country.

We are proud of our broad domain, stretching away from the Atlantic to the Pacific; we are proud of our country, her laws, and her free institutions; we are proud of our flag that has been carried to victory in every war with enemies from within and foes from without, but prouder still are we of the patriotism, industry, and character of our people, by whose valor and courage our Republic has been established and defended, our country developed and built up, and our flag made glorious. [Loud applause.]

Chinese-Exclusion Bill.

SPEECH

OF

HON. GEORGE R. PATTERSON,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 5, 1902,

On the bill (H. R. 13061) to prohibit the coming into and to regulate the residence within the United States, its Territories, and all territories under its jurisdiction, and the District of Columbia, of Chinese and persons of Chinese descent.

Mr. PATTERSON of Pennsylvania said:

Mr. CHAIRMAN: That former Chinese-exclusion legislation has been regarded by so many people of the East as a concession to the citizens of the Pacific slope impels me to express a few thoughts on this subject, hoping that, however imperfect my efforts may be, the fact that an Eastern member appears on this floor in support of this measure will be some slight testimony to the interest taken by the country at large, and particularly by the laboring element, in the reenactment of such legislation.

That Chinese immigration has been so largely confined to the extreme West was most fortunate for the rest of the country. We of the Alleghanies, who have not had to contend with this yellow stream that has practically deluged the Pacific States, can scarcely conceive of the blight it has cast upon the industrial advancement of that section. Beginning as a small rivulet of apparently harmless Orientals, this brooklet soon became a mighty torrent, threatening all before it, and was checked only by the barriers erected in the passage of the exclusion law now in operation.

I do not, Mr. Chairman, propose to go into details as to the character, habits, morals, or, rather, the absolute absence of morals of the Chinaman. I leave that to gentlemen, members of this body, who speak from actual contact with conditions as they exist wherever the Chinese live in any considerable number. I propose to confine myself to an effort to show that the anthracite miner of Pennsylvania is as desirous of the passage of this bill as the California wage worker, and to draw a comparison between this class of immigrant and other classes with which I am somewhat familiar.

We are all naturally and rightfully influenced in our legislative action by the desire and sentiment of the district each represents, and I feel that the great interest in this measure on the part of the people I represent, as evidenced by the large number of petitions, memorials, resolutions, and letters I have received pertaining to this question and introduced on this floor, is such that I would be derelict in my plain duty did I permit this occasion to pass without expressing the overwhelming sentiment that prevails in my district in favor of this bill.

The district which I have the honor to represent is composed largely of mine workers, whose occupation is fraught with the gravest dangers, especially in the deep anthracite coal mines. The dashing bravery of a battle charge, the impulsive leap to the rescue of an endangered life, both pale into insignificance when compared with the intrepid and persistent courage of the men who day after day, night after night, betake themselves to the bowels of the earth, never knowing whether or not the light of God's sun will ever shine upon them again. A fall of top rock, an explosion of gas, and the miner's light is out forever. His work requires care and skill of the highest order, and a long experience is required to perfect him in his avocation.

These men, these miners and laborers, Mr. Chairman, are sincerely in earnest in their demand to keep out the cooly, and so, too, are the merchant, the mechanic, the farmer, and the community at large in which he lives.

We are told that the Chinaman has invaded every branch of industry, and on some lines has established a monopoly. If such conditions can exist with an exclusion law in force, what would be the effect of letting down the bars to the unrestricted immigration of the hundreds of millions inhabitants of the Chinese Empire? If we fail to pass this bill, what assurances have we that our anthracite mines and our workshops will not be overrun with the slave labor of the Orient? For every cooly who reaches our shores is bound for a term of years to the Chinese company that brings him here. Can we afford to degrade the American standard of labor by permitting this immigration?

During the past twenty years the people of the mining districts of Pennsylvania have been called upon to solve the question of another character of immigration. The labor of the native American, and his fellow-citizen of English, Welsh, Irish, and German extraction, came into contact during that period with the Italian, the Russian, the Greek, the Austrian, the Polander, and the Hungarian. Originally these people were regarded as a menace. They were deemed an undesirable addition to our laboring population, and their coming was viewed with apprehension.

But conditions have changed these people. The so-called foreigners have changed in themselves. They are no longer looked upon simply as cheap labor. They are to-day among the most fervent and consistent advocates of organization, and they demand American pay for an American day's labor. They have become citizens, proud of the land of their adoption, loyal to the American flag; they are striving for the elevation of themselves and their children, and endeavoring to merit the esteem of the people with whom they are associated. And, actuated by such sentiments, these people, who have taken upon themselves the duties of citizenship, are to-day hand in hand with the native American, demanding that the hordes of the Chinese Empire be refused admission to this country.

And the reason, Mr. Chairman, is apparent. The European immigrant, unlike the Chinaman, desires to become identified with out national institutions; he seeks citizenship, and to be worthy of it; he desires an American home in all that characterizes an American home; he desires that freedom which the United States alone can grant him; and he wants these things just as soon as he has lived here long enough to grasp their meaning. On the contrary, the Chinaman entertains no such desires; he wants admission to this land without restraint to impose his characteristics upon the community wherein he may elect to reside and lower the standard of living; then to depart to his own country to relapse into his natural degraded environments.

Mr. Chairman, I refer to these European immigrants from a long social and business intercourse with them. I have lived among them for years. I know what they were, I know what they are. Coming to this country with the burden of ages of submission to aristocratic and military power, a residence of a few years under a republican form of government has taught them many things, not the least of which is self-respect. We have to-day people of the nationalities referred to who have become presidents and directors of our banks, savings funds, and other public and semipublic institutions, members of local councils and school boards; many have become large property holders. A glance at the annual reports of some of our high schools demonstrates that their children are taking advantage of the splendid opportunities of our free high-school system. Last June I noticed that the sons of some of these men whom I know well had taken an honorable part in the class-day exercises, and held high rank in their classes; and in December last these same boys were home from college, spending the holiday season with their parents.

Such instances as these show which way the wind blows. Gentlemen who have never been thrown into close association with this class of immigrants would be utterly surprised if I were to take them to Shenandoah, Mahanoy City, or any of the cosmopolitan towns in the anthracite region of Pennsylvania and have them witness a public demonstration in which the societies and organizations of these people are participants. Every man of them is well dressed. Their uniformed organizations compare favorably with American societies, and some of the handsomest American flags I have ever seen are carried in their lines, and each organization carries the flag at its head.

Now, Mr. Chairman, I have dwelt at some length upon a feature of immigration with which I am perfectly familiar. The Chinaman possesses none of the aspirations, entertains none of the ambitions of the European who migrates from his native country. He evinces no desire to become an American citizen, as do the Hungarian, the Pole, and the Greek. He brings with him no regard for an oath, no ambition to improve his condition, no hope to elevate his standard. Bigoted in the highest degree, lost to every sense of decency, imbued with traditions that lead him to the lowest depths of venality, susceptible to no moral or mental improvement, he does not assimilate in any respect with the people with whom he comes into contact. In a word, he is not a home seeker, and the American home is the very foundation of the nation's greatness and the corner stone of her liberties. Had the Spaniard and the Frenchman of the Territory of Louisiana been a home-seeker, and not a pursuer of adventure or a seeker for gold, the history of some sections of North America might have been different.

Nearly all the purely American societies of my district, composed of native-born American citizens, who gather about the camp fires of their organizations regularly, have presented their memorials in favor of this bill. They are men who study the conditions that exist and hope to elevate the standard of American citizenship and hesitate not to oppose that which would lower the value of an American birthright. The Patriotic Order Sons of America, the Junior American Mechanics, and kindred societies are unanimous in the demand that the Chinese be excluded by law.

Organizations composed of citizens of foreign birth, other than those whose nationalities have been referred to, are unanimous against the admission of the Chinese.

The foreign-born citizen of the United States, reared in any of the countries of northern Europe, having emigrated to this country, where he could better his condition, exchange his labor for living wages, provide a home and the comforts that make it a home, educate his children, and possess the abundant blessings of American citizenship, is of one mind on this question of the exclusion of the Chinese.

The native American, conscious of the high plane of American existence, whose arms have been outstretched to the oppressed of every land, declines association with the cooly, because he knows too well the deleterious effects such immigration will have upon American environments.

And so it is, Mr. Chairman, that every class of citizen of the great States of the East joins hands and demands of this Congress that the cooly be kept out.

The American laborer recognizes full well the effect upon him such immigration would bring about. The American laborer reads. He reads good books. After his evening meal the daily paper is greedily devoured. He is conversant with what transpires about him. He is familiar with current events. He knows what has been the experience of the people of the far West with cooly labor, and he wants none of it.

The American laborer is intelligent. His home bears witness thereto. He knows as well and better, possibly, than you or I what the result of indiscriminate Chinese immigration would mean to him and his fellow, and he wants none of it.

The American laborer is organized. He knows that his brawn and his brain produce the wealth of the country. His organization keeps him in close touch with conditions that affect or may affect his condition. His union is well administered. Men are at the helm now in labor matters who permit no rashness, but rather encourage calm consideration and conclusions having in view the greatest benefit to all. They want none of this cooly labor.

The society that is strictly native born, and the organization composed altogether of the citizens formerly called foreigners; the wage worker of whatever craft, and the breadwinner of whatever character; the citizen born, and the citizen naturalized, all join in the demand that the Chinese be excluded. And it is our duty as representatives—mindful of the just demands of those we represent, careful of their proper interests, jealous of their welfare—to heed their uplifted voice.

If it were solely from a desire to be guided aright on this question, would not the experience of the extreme West with the Chinese afford us the best reason for denying his admission? What has been the experience of labor in California? Abler men than I have already informed us. The unanimous demand of the people, the press, the organizations of that State fully answer the question.

In the light of their experience, were this bill defeated, could we hope for different results here in the East? History repeats itself, and will again, if we permit this most undesirable addition to our population.

The wisdom of a former Congress in excluding these people is unquestioned. If it was necessary to exclude the cooly then, is it not imperative now that we continue the refusal to permit his coming in? Now, when we are enjoying the greatest national prosperity, when we are reaching out the world over for new markets for the products of our labor, when we have assimilated what was before regarded as an undesirable immigration, and recovered from the fear therefrom, when we are climbing steadily and without fear of obstruction to the position of the foremost nation in every respect?

Let us protect the American laborer. Let us legislate in his interest, mindful that his prosperity is national prosperity, that the advancement of his interests and the betterment of his conditions means a more glorious national existence and a higher standard of citizenship.

Mr. Chairman, it would be a most dangerous experiment to permit the Chinaman to come into the country now in the hope that he may some time be assimilated. He is unequal to such assimilation. Let us have no such experiment.

We are endeavoring as a Republic to protect the laborer of the country, and to guarantee him his just share of the wealth he produces. We hope for shorter hours of his labor and increased wages in exchange for his labor. Let us not, then, assault him by placing side by side with him a character of slave labor that would take from him his employment, and reduce him to a plane from which he can never hope to recover.

The Present Phenomenal Prosperity of this Country Should not be Disturbed by Needless Tariff Agitation.

SPEECH

OF

HON. JOHN DALZELL,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, April 18, 1902,

On the bill (H. R. 12765) to provide for reciprocal trade relations with Cuba.

Mr. DALZELL said:

Mr. CHAIRMAN: I avail myself of the leave to print granted by the House to insert in the RECORD the following:

A LETTER TO THE HON. JOHN DALZELL.

OFFICE OF THE AMERICAN IRON AND STEEL ASSOCIATION,
No. 261 South Fourth Street, Philadelphia, February 14, 1902.

Hon. JOHN DALZELL,
Member of the Committee on Ways and Means of the House of Representatives, Washington, D. C.

DEAR SIR: In behalf of the American Iron and Steel Association the following statement of reasons why House bill No. 9056, introduced by Mr. BABCOCK, of Wisconsin, should not become a law is respectfully submitted for your consideration. This bill proposes to amend Schedule C of the Dingley tariff by placing certain articles therein enumerated in the free list and reducing the duties on others 25 to 50 per cent.

THERE IS NO IRON AND STEEL MONOPOLY.

House bill No. 9056 is not accompanied by any reasons for its introduction, but in published interviews its author is represented as justifying its radical provisions by alleging that American iron and steel products, especially the products of the United States Steel Corporation, are being sold in foreign markets at lower prices than are charged to home consumers. Waiving for the present the inquiry whether or not this allegation is correct, there are two unquestionable facts which definitely and conclusively prove that home consumers of iron and steel are not charged extortionate or unreasonable prices for these products. These facts are of common knowledge.

First. Prices of iron and steel in this country are fixed by competition and the law of supply and demand. No corporation has a monopoly of their manufacture, or ever can have in this country of boundless individual enterprise, wide opportunities, and widespread natural resources. The corporation alluded to does not to-day control one-half of the country's aggregate iron and steel capacity, more than one-half being controlled by independent companies, most of which possess ample capital, modern plants, and abundant resources in raw material.

Second. The United States Steel Corporation, instead of using its influence to unduly advance prices, has ever since its creation less than a year ago steadily insisted on keeping prices within reasonable limits. The temptation to advance prices of steel rails, for instance, which has been presented in a season of great railroad prosperity, has been resisted, and the price of steel rails is to-day just the same as it was ten months ago, namely, $28 a ton, a price to which no objection is made by any railroad manager in the country.

THE UNITED STATES STEEL CORPORATION.

The testimony of the officers of the United States Steel Corporation upon this subject should be conclusive. In the recent report of the directors to the stockholders appears this statement:

"The demand for the products of the several companies has been so great that prices could easily have been advanced. Indeed, higher prices have been voluntarily offered by consumers who were anxious for immediate execution of orders, but the companies have firmly maintained the position of not advancing prices, believing that the existing prices were sufficient to yield a fair return on capital and maintain the properties in satisfactory physical condition, and that the many collateral advantages to be gained in the long run by refusing to advance prices would be of substantial and lasting value, not only to the companies but also to the general business interests of the country. The strong position thus taken by the companies for stability in prices, both of raw material and finished products, has had a reassuring effect on the trade, and has contributed greatly toward restoring confidence in the general business situation and creating the present large demand for steel products by dispelling any doubt as to prices in the future."

The New York Sun, in its issue of January 31, in commenting upon the above statement by the board of directors, says: "The United States Steel Corporation has so far done exactly what its managers have here said they were trying and will continue to try to do. They have rigidly kept their prices down to the point of reasonableness." The Louisville Courier-Journal recently said: "The policy of the corporation so far has been to try to make money by reducing the cost of production, not by advancing the price to the consumer." While pursuing this policy, it may be added, the corporation has nowhere reduced wages.

The Commercial and Financial Chronicle, of New York, the highest financial authority in this country, bears the following testimony in its issue of February 1 to the conservative course of the United States Steel Corporation in relation to prices. Reviewing our large production of pig iron in 1901, it says:

"One feature in connection with the year's large production and consumption of iron should not escape attention, for it is in one sense really the most striking characteristic of that period. We refer to the fact that, with the demand larger and more urgent than ever before in the country's history, prices were kept within moderate limits. In the case of every one of the leading articles of iron and steel the average of prices for 1901 is lower than the average for 1900, and in most cases it is very much lower. For this result, preventing that extreme upward movement in values which on so many previous occasions has proved disastrous to the iron and steel industry, the policy of the United States Steel Corporation is largely responsible.

"In the early part of the previous year, as will perhaps be remembered, prices had risen to very high figures, but then a decline set in which continued almost to the close of 1900. The beginning of 1901, therefore, found prices at a fairly low level. The business career of the United States Steel Corporation may be said to date from the 1st of April. Before the organization of this company the destructive competition threatened by the rivalry of the different separate companies which are now embraced in its control acted somewhat to demoralize the iron and steel trades, so that some intending buyers were induced to withhold their orders. With the possibility of disturbance from that source removed, the demand, already large, became more active than before: and if the steel corporation had not firmly resisted the rising tendency, prices would undoubtedly have quickly recovered to the extraordinarily high figures ruling at the beginning of 1900.

"But the managers of that concern made it a cardinal point in their policy to keep prices at a level only high enough to leave a fair margin of profit, and their action of course dominated the trade. The result is that prices at the close of 1901, while ruling above the low figures prevailing at the close of 1900, did not on the whole show any very great advances. The price of steel rails was raised from $26 a ton to $28 in May, but early in 1900 the price had been $35, and the average of rails for the whole year 1901 is only $27.33, against $32.29, the average for 1900. Bessemer pig iron at Pittsburg averaged $16.37 in December, 1901, against $13.75 in December, 1900, but in February, 1900, the price had been $25 a ton. Steel billets at Pittsburg were $34.50 in January, 1900, $19.75 in December, 1900, and $27.90 in December, 1901."

THE BILL MAKES INVIDIOUS DISTINCTIONS.

This bill is invidious in this respect: That it aims a blow at our prosperous iron and steel industries while leaving untouched other prosperous domestic industries of equal or almost equal magnitude. Particularly may it be mentioned that the Dingley duties on the products of the farm, the necessaries of life, have not been disturbed in this bill. Iron and steel products have risen with the general advance in values, but not as farm products have risen, except during the short-lived boom of 1899. Dun's Review says that the rise in breadstuffs since July 1, 1897, has been little short of 90 per cent, and that meats have risen in the same time nearly 30 per cent, and dairy and garden products 75 per cent. Mr. BABCOCK makes no attack on the tariff duties which protect the farmers, nor upon the duties which protect our great lumber industry, nor upon the duties which protect any of our great mineral or other industries.

Mr. BABCOCK'S bill is also invidious in another noticeable particular. While transferring to the free list finished or half-finished products of iron and steel or radically reducing the duties on these products, it proposes to retain iron ore in the dutiable list at the rate of duty prescribed in the Dingley tariff, iron ore being a raw material which is wholly supplied by the bounty of nature. Intelligent advocates of a protective policy for American industries do not, however, deny the right of our iron-ore producers to a fair degree of protection from foreign competition, but that the Dingley duty on iron ore, a raw material, should be continued and the duties on the finished or half-finished products of iron and steel should be reduced or repealed altogether is a flagrant violation of the principles underlying a properly balanced protective tariff.

THE IMMINENCE OF CANADIAN COMPETITION.

Next to iron ore in the Dingley tariff comes pig iron, upon which and upon scrap iron and scrap steel Mr. BABCOCK would reduce the duty from $4 to $2 per ton. Although often erroneously referred to as a raw material, pig iron is in fact one of the most delicate and troublesome products of metallurgical art, requiring in its manufacture a vast investment of capital and the application of the highest skill by the mechanical engineer, the chemist, and the experts who look after all the details. A modern blast furnace represents in construction and management a larger amount of capital and a larger display of scientific and mechanical skill than is generally supposed.

Mr. BABCOCK proposes to reduce the Dingley duty of $4 a ton on pig iron to $2; but he virtually places it in the free list, because the duty of $2 which he concedes to pig iron is $1 less than the bounty of $3 a ton which Canada now pays to her pig-iron manufacturers, who have already entered our markets. Under the stimulus of this and other bounties, Canada is rapidly developing important iron and steel industries of her own. A bounty of $3 a ton is paid on every ton of steel ingots produced in Canada and upon every ton of puddled iron bars.

The Canadian production of pig iron in 1901 was greatly increased by the blowing in of three large new furnaces by the Dominion Iron and Steel Company in that year, while another of its furnaces was blown in in January of the present year. Other new furnaces are now being built in Canada and still others are projected. The annual capacity of the furnaces that have been built or are now being built in Canada is not less than a million tons. Canada now has 14 completed blast furnaces, 4 furnaces building, and 4 projected furnaces. It has also 18 completed rolling mills and steel works and 2 building. It will very soon be able to make nearly a million tons of steel annually and to roll nearly a million tons of iron and steel products.

Canada has in very recent years developed two large iron-ore fields—one, the Wabana district, on Belle Island, Newfoundland, and the other the Michipicoten district, on the northern shore of Lake Superior. Immense deposits of excellent iron ore are found in these two districts. At a very early day, even in this year, Canada will become an important rival of the United States in the production of iron ore and iron and steel. The Dominion Iron and Steel Company is already shipping large quantities of pig iron to England and Scotland, and it has commenced to make shipments to the United States. In 1901 Canada shipped to this country 160,000 tons of Michipicoten iron ore. Reduce our present duty on pig iron, and Canada would flood our markets with its pig iron. The production of pig iron in Canada in 1901, as ascertained from the manufacturers by the American Iron and Steel Association, amounted to 244,976 tons, as compared with 86,090 tons in 1900. Put iron and steel finished products in the free list, and Canada will be kept busy on American orders.

EXPORTS OF AMERICAN IRON AND STEEL PRODUCTS.

It is not necessary to consider in detail the remaining provisions of House bill No. 9056. The most important of these provisions provide for absolute free trade in iron and steel products. It is enough to say on this subject that the experience of this country under the Wilson tariff act should be a warning to everybody that even an approximation to free trade in our fiscal legislation is destructive of national prosperity and disastrous to the political party that supports this British policy.

Now, as to exports of American iron and steel products to foreign markets: Statistics show that a large part of these exports in very recent years has been composed of pig iron, steel rails, plates, and sheets, and structural iron and steel, the last named embracing steel bridges. These are largely but not wholly new features of our export trade. Other forms of iron and steel we have exported for many years. A few years ago, beginning in 1893, there was a great depression in our iron and steel industries, and prices were abnormally low and unremunerative; wages in the iron trade were also greatly reduced. Soon afterwards there was developed a boom in the iron and steel industries of our European competitors, particularly Great Britain and Germany, and their prices went up. This was our opportunity.

A serious and prolonged engineering strike in Great Britain subsequently broadened this opportunity. We began for the first time to receive foreign orders for pig iron, steel rails, and ship plates in large quantities, and for steel bridges; the foreign orders for other forms of iron and steel also naturally increased. Our exports of iron and steel first exceeded our imports of these products in 1893, and thereafter until 1901 they steadily increased, but in 1901 they began to decline seriously. The German boom in iron and steel ended in 1900 and so also did that of Great Britain. Prices in both countries have since steadily fallen. In 1899 a boom began in the iron and steel industries of our own country, from which there was a reaction in 1900, followed in 1901 by an improvement in demand and a moderate advance in prices. With an increase in demand and prices in our own country and a shrinkage in demand and prices abroad, it can easily be seen that our exports of iron and steel would necessarily decline. In pig iron, steel rails, ship plates, and steel bridges the decline has been of a very marked character.

In the calendar year 1900 we exported 286,687 tons of pig iron, but in 1901 we exported only 81,178 tons. In 1900 we exported 356,245 tons of steel rails, and in 1901 we exported 318,055 tons. Of steel plates and sheets we exported 45,534 tons in 1900 and 23,923 tons in 1901. Of structural iron and steel, largely in the form of bridges, we exported 67,714 tons in 1900 and 54,005 tons in 1901. There has also been a decline in 1901 in the exports of some other iron and steel products, the total exports of iron and steel and manufactures thereof in 1900 amounting in value to $129,633,480, and in 1901 to $102,539,797. The shrinkage in our iron and steel exports in 1901 has been conspicuously in tonnage as well as in values. To-day the exports of all heavy iron and steel products have almost ceased.

FOREIGN COMPETITION IN OUR OWN MARKETS.

The foregoing summary of the causes of our large exports of iron and steel in recent years and of the recent decline in these exports is necessary as a refutation of the charge so frequently made that our iron and steel industries have captured the world's markets. They have entered the world's markets, but they have not captured them. Nor have we absolute control of our own iron and steel markets, as many persons suppose. In the calendar year 1900 we imported iron and steel and manufactures of iron and steel to the amount of $20,443,911, and in 1901 our imports of these commodities amounted to $20,394,995. These are foreign values. Our imports of iron and steel are to-day increasing, notwithstanding the Dingley tariff. The Iron Age for January 16 reports the sale of 3,000 tons of foreign billets, for delivery at Youngstown, Ohio, at $27.50 per ton, with further business pending. It adds that a number of Eastern consumers are now using small quantities of foreign steel.

The Iron Trade Review of the same date says that a large quantity of German Bessemer pig iron has been sold for delivery in this country, and it notes the sale of 7,000 tons of English Bessemer pig iron also to this country. It says further that "a recent sale of German spiegeleisen for export to the United States, indicates that our steel makers have not been able to supply their wants from such of their furnaces as ordinarily run on spiegel," and adds that "the importation of steel is also expected to grow steadily in the coming months." A telegraphic dispatch from Berlin, Germany, to the London Iron and Coal Trades Review of December 6, 1901, says: "Our exports continue to increase. German manufacturers have even shipped to America sheets for tin plates, and even thick iron sheets, also half-finished products; and in the month of October the quantity of the latter and of finished products exported was nearly equal to half our total production of pig iron."

These and other increased importations of iron and steel would not be possible if foreign prices had not fallen to much lower figures than have prevailed in recent years, and if German and British iron and steel industries were not now greatly depressed. Our own prices are not excessive. They are much lower than they were two years ago.

English trade journals of recent date show how rapidly the prices of British iron and steel have fallen within the last two years. In January, 1900, steel rails at Cardiff were quoted at £7 10s.; in January, 1901, they were quoted at £6, and in January, 1902, they were quoted at £5. Steel ship plates at Glasgow were quoted at £8 10s. in January, 1900; at £6 15s. in January, 1901, and at £6 2s. 6d. in January, 1902. Iron and steel in other forms show similar shrinkages in price. In Germany prices have fallen so low that, even with the low prices now prevailing in Great Britain, English trade journals complain that German iron and steel are being sold in large quantities in British markets. In Belgium prices are also at a very low ebb.

It may be frankly said that some recent importations of iron and steel are the result of a temporary scarcity of two or three products, due to the enforced stoppage last summer of many works in consequence of the Amalgamated strike, followed by the wholly unexpected inability of the railroad companies ever since to move iron and steel raw materials and finished products with reasonable promptness. Our productive capacity in all iron and steel lines is to-day fully equal to the country's wants; but we have not for six or seven months, for the reasons above mentioned, been able to utilize the whole of this capacity. The present scarcity of a few iron and steel products can not last long; but the importations which it has made possible, inconsiderable as they are, teach this plain lesson, that if they can take place with the Dingley tariff rates in full force and with our present reasonable prices they would be immensely swollen if House bill 9056 should become a law. "If they do these things in a green tree, what shall be done in the dry?"

SPECIAL ADVANTAGES OF OUR FOREIGN COMPETITORS.

Whether our importations of iron and steel at any time come from Great Britain or Germany, or any other country, the fact should never be lost sight of that our tariff duties on these products are always largely neutralized by the low ocean freight rates on these importations, and particularly when good times in our own country and bad times in Europe are cotemporaneous, as they are to-day. What are termed tramp vessels call at our ports in large numbers for grain, petroleum, and coal as return cargoes. That these vessels may be properly ballasted on the inward voyage their owners are glad to accept all such heavy products as iron and steel at merely nominal freight rates, frequently as low as $1 a ton and sometimes as low as 25 cents a ton. These low freight rates aid foreign iron and steel manufacturers materially in gaining an entrance to our markets, especially as our own manufacturers must pay higher rates to the railroads to reach important points of consumption on the Atlantic and Pacific coasts and on the Gulf of Mexico. Subsidized French vessels also call at San Francisco for grain.

Just here it is important to remember that German iron and steel manufacturers, operating through their syndicates, habitually make one schedule of prices for home consumers of their products and another schedule for their foreign customers, thus committing as a matter of habitual and daily practice the very offense with which our own iron and steel manufacturers are now charged and against whom House bill No. 9056 is directed. If this bill should become a law it would greatly help German manufacturers to sell to us through their syndicates iron and steel products at cut prices with which our own manufacturers could not hope to compete. This would be a ridiculous display of statesmanship. We would be punishing our own people for occasionally selling iron and steel to foreigners at lower than home prices, and we would be rewarding our German competitors for adopting and systematically adhering to the very same policy.

It will be seen from what has been stated that, if House bill No. 9056 should become a law, our markets would be at once flooded with European iron and steel. The demand for the iron ore of our Lake Superior region, the protective duty on which is retained in this bill, would at once decline. Of what avail would then be the protective duty? This bill would oppose absolutely no obstruction to the shipment to this country of the surplus iron and steel products of Europe. Canada would also be a formidable competitor in our iron and steel markets, as has already been shown. She will be a competitor anyway.

PRICES OF IRON AND STEEL TO FOREIGN BUYERS.

With regard to the prices at which our iron and steel products have been sold abroad, it can be said with entire frankness that, while there have been some sales made at lower prices than have been charged to domestic consumers, the large majority of the sales have been made at the same prices as have been obtained at home or at even higher prices. When lower prices have been charged the inducement to do this has been to dispose of a surplus, as during the years of depression following the panic of 1893 or during the reactionary year 1900, or to secure entrance into a desirable foreign market, or to retain a foothold in a foreign market that has already yielded profitable returns. These reasons for occasional cutting of prices require no defense. They are akin to the reasons which daily govern sales of manufactured and all other products in domestic markets.

Even in years of prosperity it sometimes happens that a rolling mill or steel works, when running to its full capacity, produces a surplus of its products beyond the immediate wants of its customers or of its general market. If this surplus can be sold abroad, even at prices below current quotations, it is better to do this than to reduce production by stopping the rolling mill or steel works for a few days or even for one day. The men would not only lose their wages during the stoppage, but the manufacturers would lose in many ways. As one incident of the stoppage the home consumers of their products could not be supplied so cheaply as when the plants are running full. A moment's reflection will convince any candid man that the manufacturing establishment that is not kept constantly employed, whether it produces iron and steel, or cotton goods, or woolen goods, or pottery, or glassware, or any other articles, can not be operated so economically for its owners or so beneficially for its customers as the establishment that is kept running six days in the week and every week in the year.

It should also be remembered that our tariff legislation for at least a generation has encouraged our manufacturers to seek foreign markets by remitting nearly all of the duties levied on imported raw materials when these materials enter into the manufacture of exported finished products. Under the operation of this drawback system our iron and steel manufacturers have been able to manufacture their products intended for foreign markets at a much lower cost than they could supply similar products to home consumers. The London Engineering for January 17, this year, says of this drawback system: "A certain amount of trade is brought into the country that would otherwise be missed, and no one loses anything." It might have added that the raw materials we import and subsequently export in the form of finished products furnish employment to thousands of American workmen.

OFFICIAL RECORD OF PRICES TO FOREIGNERS.

The official statistics furnish the only trustworthy information of the prices at which our iron and steel products have been sold to foreign buyers. The average value of the 286,687 tons of pig iron shipped abroad in 1900 was $16.23 per ton, and the average value of the 81,178 tons shipped abroad in 1901 was $15.52 per ton. The average value of gray forge pig iron at Pittsburg in 1900 was $16.90 per ton, and in 1901 it was $14.20 per ton. The average value of the 356,245 tons of steel rails exported in 1900 was $30.58 per ton, and the average value of the 318,055 tons exported in 1901 was $27.13 per ton. The average value of all steel rails sold to domestic consumers in 1900 was $32.29 per ton, and the average value of similar sales in 1901 was $27.33 per ton. These illustrations, bearing in mind our drawback system, are sufficient to establish the general proposition that our iron and steel products have not been sold to foreigners at notably lower prices than they have been sold to our own people.

HOW GREAT BRITAIN CAPTURES FOREIGN MARKETS.

Mr. BABCOCK and others, who are just now complaining of occasional sales abroad of American iron and steel at lower prices than they are furnished to home consumers, wholly forget that our British manufacturing rivals have for generations not only practiced the same trade policy that is now so vigorously condemned, but have done so with a wholly indefensible motive that Mr. BABCOCK will not venture to attribute to our own manufacturers. These British manufacturers have not only sought to extend their trade abroad by lowering their prices, but they have done this with the express purpose of destroying the manufactures of other countries. Here are some proofs that our own country has been one of Great Britain's slaughter markets:

In 1816 Lord Brougham, in a speech in Parliament advocating the increased exportation of British goods to the United States, declared that "it was well worth while to incur a loss upon the first exportation, in order by the glut to stifle in the cradle those rising manufactures in the United States which the war has forced into existence contrary to the natural course of things."

In 1854 a British Parliamentary commission reported as follows: "The laboring classes generally in the manufacturing districts of this country, and especially in the iron and coal districts, are very little aware of the extent to which they are often indebted for their being employed at all to the immense losses which their employers voluntarily incur in bad times in order to destroy foreign competition and to gain and keep possession of foreign markets. * * * The large capitals of this country are the great instruments of warfare against the competing capital of foreign countries, and the most essential instruments now remaining by which our manufacturing supremacy can be maintained."

It was only after a long and hard fight that the manufacturers of this country were enabled to overcome this brutal British competition. Now that American products have successfully entered British markets and other markets Mr. BABCOCK would so legislate as to make it difficult for our iron and steel manufacturers to keep control even of their own home markets, for it should be plain to everybody that putting iron and steel in the free list means the partial restoration here of the odious British manufacturing monopoly from which we have recently been delivered, or else it means a reduction of American prices and wages to the normal British standard, which no sensible American wants. British and Continental economic and

social conditions possess no attractions that commend them to the people of this country.

THE DANGER OF OVER-CONFIDENCE.

Instead of a demand being now made to punish American iron and steel manufacturers because of their enterprise in seeking foreign markets, and thus furnishing additional employment for American labor, even in the conversion of foreign raw materials, those who have the welfare of all our industries at heart should jealously guard our own markets against the foreign competition that is always active and aggressive and is even now threatening the prosperity which has been so marked for the last three years. Official statistics just published show that our exports of domestic merchandise in 1900 amounted to $1,453,010,112 and in 1901 to $1,438,083,990, a decrease of $14,926,122, while our imports of merchandise in 1900 amounted to $829,149,714 and in 1901 to $880,421,056, an increase of $51,271,342, making the total loss in our foreign exchanges last year $66,197,464.*

There has been entirely too much thoughtless boasting of our ability to gain and keep control of foreign markets for our manufactured products. In cheap labor our European manufacturing competitors still possess one advantage over our own manufacturers that should never be lost sight of, nor will they hesitate to adopt our latest and best manufacturing methods. They are now doing this and are also watching our markets like hawks. We should always be on our guard against their competition, and more particularly at a time when the home demand for some of their products has so declined that they are eager to book foreign orders at exceptionally low prices.

I am, sir, very respectfully, your obedient servant,

JAMES M. SWANK, *General Manager.*

Sham Reciprocity.

SPEECH

OF

HON. C. L. BARTLETT,

OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, April 16, 1902.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 12726) to provide for reciprocal relations with Cuba—

Mr. BARTLETT said:

Mr. CHAIRMAN: Real and not pretended reduction of the high protective tariff duties should command the support of all Democrats. A reduction of all tariff duties is the demand of the hour, but propositions which have for their purpose no real reduction in the taxes of the people of this country, and which will not result in cheapening manufactured goods and products to the consumer do not in any way meet the demands of the people, and should not commend themselves to the Democrat who is in earnest in his desire to reduce the burdens of the people. Real reciprocity and freer trade with the nations of the world that consume our vast surplus produce should be supported and encouraged by all who are opposed to the high protective tariff system. Republican shams and makeshifts should not allure Democrats from the true doctrine or inveigle them into false paths. In my judgment the pending bill does not bear any semblance to the Democratic demand for a reduction of the tariff, and in no way resembles true Democratic reciprocity and freer trade with the world. It is therefore the duty, especially of Democrats, before they rush to the support of such a measure, that we take our bearings, consult the true Democratic compass, and steer the way its needle points.

In order that we may have a clear insight into the proposition as it is now presented to the House, I shall recall the exact position and status of the bill and the proceedings up to this time. Mr. Chairman, for months the Ways and Means Committee, carrying out the recommendations contained in the message of the President communicated to Congress in December last, considered the proposition, What could be done by the United States for the alleged relief of the Cuban people, soon to assume control of their own government as a free and independent republic? Hearings were had for the purpose of determining what shape that so-called relief should take, whether free trade with the United States or a reduction of the duties on imports from Cuba into this country, consisting principally of sugar and tobacco, and what Cuba should do in return with reference to the collection of duties upon goods and products from the United States going into Cuba. From the proposition of free trade, which was said to be absolutely necessary to give the needed relief to Cuba, after long hearings on both sides the majority of the Ways and Means Committee have reported this bill.

Before that committee those claiming to represent the interests of the Cuban people never suggested that the products of the United States should be admitted into Cuba free of duty, but the only proposition that I could ascertain from the hearings that was submitted or proposed to be carried out was that the present rates of duty imposed in Cuba shall continue as against American products imported there, and that the duties shall be raised as to other countries of the world from 50 to 100 per cent, so as to give to this country a discrimination in the matter of import duties as against the balance of the world. That is, a differential or preferential duty to be placed upon our goods as against the most favored nations. So that I am authorized to consider in the discussion of the pending bill that the proposition made and that has been acted on in the consideration of the matter before the committee—and no different one has been suggested in the debate in the House—that the only effect of this bill will be to reduce the rates of the Dingley tariff law 20 per cent upon products imported into the United States from Cuba, and to leave upon the products of our people which shall be imported into Cuba the same rate that now exists in Cuba.

In other words, there will be no reduction upon American goods that are shipped to Cuba, and there will be a reduction of only 20 per cent upon Cuban products in this country until December, 1903, a reduction which does not reduce to any considerable amount—not sufficient to reduce the price of Cuban products consumed in this country to the American consumer, and which does not benefit our shippers who sell their products to the Cuban people. The bill provides, as we all understand, that upon the enactment by the Cuban government, when established, of our immigration, exclusion, and contract-labor laws, which shall be as fully restrictive of immigration as the laws of the United States, and the President shall enter into an agreement under which concessions may be secured in favor of the products and manufactures of the United States, and by which the rates of duty to be charged upon the products and manufactures of the United States, imported into Cuba, shall be 20 per cent less than the duty upon like articles when imported into Cuba from the most favored of other countries, then that the President shall proclaim such facts, and thereafter, from the date of such proclamation until December 1, 1903, the duties upon the products imported from Cuba, as now imposed, shall be 80 per cent of the rate now imposed upon like articles imported from other foreign countries, and the President is given power, whenever he shall be satisfied that such immigration, exclusion, and contract-labor laws are not being fully executed by the government of Cuba, or that such agreement as to the levying of duties is not being carried out, to restore the present tariff rates upon the products of Cuba coming into this country.

Thus, it will be observed, Congress parts with its power to enact laws and delegates that power to the President, who, in the exercise of the power, is to declare certain reductions in the tariff rates as contained in the Dingley law when, in his judgment, the conditions are complied with, and, further, that the President, and not Congress, shall determine when this proposed arrangement shall cease. Thus the President is given a roving commission to repeal and reenact law with no accountability to Congress, and the people's servants in the matter of tariff reduction and tariff reform abandon the legislative power and make the President supreme.

And this is the pretended tariff reduction and sham reciprocity that some of our friends on this side label Democratic doctrine.

During the consideration of this measure before the Committee on Ways and Means, as has been stated on the floor by the gentleman from Virginia [Mr. SWANSON], a member of that committee, and others, otherwise I would not refer to it, certain other propositions were submitted to the committee by way of amendment for the purpose of reducing the tariff rates generally, and especially to reduce the duties and rates in what are known as the iron and steel schedules, and to remove the differential or preferential duty on refined sugar. In other words, an effort was made in the committee to make this bill the means of relieving the American consumer and the great masses of tax-burdened and tax-ridden people of the United States from the unjust oppression of the high-tariff law as it now exists.

We are informed that all the Democrats on the committee voted for this proposition, and that all the Democrats and one Republican voted for the proposition to take off what is the profit of the sugar-refining trust, called the differential, and when none of these amendments could be voted onto the bill, three Democrats of that committee voted for the bill and three Democrats and one Republican voted against it. Thus, with the votes of a majority of the Republicans, consisting of all the members of the majority, except Mr. TAWNEY of Minnesota and Mr. METCALF of California, and three Democrats, namely, the gentleman from Tennessee [Mr. RICHARDSON], the gentleman from New York [Mr. MCCLELLAN], and the gentleman from Virginia [Mr. SWANSON], the bill was reported to the House in its present form by the chairman of that committee, the gentleman from New

*The Chief of the Bureau of Statistics of the Treasury Department reports that the total value of our imports of merchandise, both free and dutiable, in the first eight months of the fiscal year 1902 amounted to $593,366,077, as compared with $523,539,840 in the first eight months of the fiscal year 1901, and that the total value of our exports of domestic merchandise in the same eight months of the fiscal year 1902 amounted to $857,986,427, as compared with $898,705,337 in the first eight months of the fiscal year 1901, showing an increase in imports of $69,826,237 and a decrease in exports of $40,718,910.

York [Mr. PAYNE], who filed a report for the committee, setting forth the reasons why the bill should pass.

In that report it is naturally suggested that it is in no way intended as an effort on the part of the majority to interfere with the existing tariff laws of the United States, known as the Dingley law, or in any way to contravene the Republican doctrine of protection by high tariff, and he quotes in his report from the message of the President, which declares, not that it is our duty to reduce the tariff rates, but that we are bound by every consideration of honor and expediency to pass commercial measures in behalf of her (Cuba's) well-being. In the same report of the chairman of the Ways and Means Committee it is stated:

All the experts who were called before the committee admit that the price of sugar will not be less to the consumer on account of the 20 per cent reduction proposed. The enactment of this bill will not affect the protection of the sugar producers of the United States.

* * * * * *

Aside from the exceptional case that Cuba presents, the action of the committee is in entire accord with the reciprocity doctrine of the Republican platform and the declarations of President McKinley and President Roosevelt. It involves no proposed revision of the tariff or anything not entirely in harmony with the maintenance of the protective system.

This report, according to the RECORD, was filed in behalf of the Republican majority and two of the Democrats who voted for the bill, the gentleman from Tennessee [Mr. RICHARDSON] and the gentleman from Virginia [Mr. SWANSON], because, while every other member of the minority on that committee, except these two gentlemen, filed special minority reports, presenting their views, the gentleman from Tennessee [Mr. RICHARDSON] and the gentleman from Virginia [Mr. SWANSON] did not present their views, but contented themselves to permit the chairman of the committee to represent them, or, at least, they acquiesced in what he presented as the reasons why the bill should pass, as contained in his report. One Democrat who was in favor of the bill, the gentleman from New York [Mr. MCCLELLAN], filed his own views in a minority report, and undertook to demonstrate that from his standpoint, and from the Democratic standpoint, the bill should pass.

Every Democrat on that committee who was opposed to the bill, as it was his duty to his political associates to do, filed a report containing a statement of his views why the bill should not pass. There were three of these reports of members representing the minority on that committee, namely, the gentleman from Louisiana [Mr. ROBERTSON], the gentleman from Texas [Mr. COOPER], and the gentleman from Nevada [Mr. NEWLANDS], who were not content that the Republican leader of the House should speak for them and present their views to their Democratic associates and to the country; but they made their own report upon this bill, giving their own reasons why they voted against it and why it should not pass. This, then, is the status: It is a Republican measure, suggested by a Republican President as an Administration proposition, adopted and approved by a Republican caucus, passed by the votes of the Republican majority of the committee, reported from that committee in a report made by the Republican chairman, and either assented to or acquiesced in by those Democrats who did not see fit to express and report their views to the House. Of the three Democrats who voted for the bill in the committee the gentleman from New York [Mr. MCCLELLAN] filed his own views, declaring, amongst other things, that it was in accord with his views of the Democratic doctrine of reciprocity, while the gentleman from Tennessee [Mr. RICHARDSON] and the gentleman from Virginia [Mr. SWANSON] filed no views and made no report, but were content, as I have said, to accept the views for their position on the bill as enunciated by the Republican leader of the House. [Applause.]

Now, if I have stated the position of any gentleman on that committee incorrectly, if I have stated the facts incorrectly, I will gladly make the correction here and now, and I pause for a reply. I have no personal feeling in any way in this matter. My conservatism is such and my liberality great enough to respect the views of everyone upon any subject, but when it is asserted in argument on the floor of this House or elsewhere that those of us who are not blindly in favor of this bill because it pretends to reduce the tariff duties, and when some of us are attacked for not voting for it and it is asserted that we are not remaining true to the Democratic doctrine of tariff reform, I must call attention to the fact that it should not be expected that Democrats shall be furnished with arguments why they should support a bill conceived solely by Republican minds, framed solely by Republican hands, and concocted in the brain of Republican leaders of this House, and the outgrowth of a Republican caucus, and which has all along been sought to be passed by the Republican votes, so that Republicans can declare it to be, what it really is, a Republican Administration measure.

Now, if the gentleman from Tennessee [Mr. RICHARDSON] and the gentleman from Virginia [Mr. SWANSON] did not agree with the views of the Republican leader, who declares in his report that this bill is no departure in the slightest from the well-known and established Republican doctrine of tariff protection, who denies that it even takes down one little brick from the top of the tariff wall, that it does not make the least indentation in the great tariff fabric that obstructs the operation of our trade and commerce, I respectfully maintain that it was their duty to present views dissenting from his report to this House and the country, and to assault that Republican doctrine, against which every Democrat in my section of the country who is true to his party teachings, and against which the Democrats of this whole land, whenever they have an opportunity, assert their opposition and make their earnest protest. For myself, whenever a proposition is offered which is in full accord with the theory of the Republican party as to the tariff—a doctrine which the Democratic masses everywhere, not only the Democratic masses, but the tax-burdened masses of the people, manufacturers as well as consumers, are demanding that if the Republicans will not cure the outrages of such tariff laws the Republicans should be defeated—I shall be found opposing such doctrines and principles, no matter what bill they find place in.

Yet the distinguished leader of the minority, the gentleman from Tennessee [Mr. RICHARDSON], and the gentleman from Virginia [Mr. SWANSON], as I have stated, content themselves, so far as separate views are concerned, with at least in acquiescing in the views and reasons presented by the majority leader. When this debate is ended, when this bill has been passed or defeated, when this sham reciprocity shall be proven—as it will be, in my judgment—to be a failure, when it shall have lived its short life of one year, where in the archives of this House, in the document room or elsewhere, save in the speeches made upon this floor by them, when all parties shall have passed from the stage of action, where will be found a suggestion from the gentleman from Tennessee [Mr. RICHARDSON] and the gentleman from Virginia [Mr. SWANSON] that the Republican leader of the majority did not correctly present their views upon this bill? We know that both of these gentlemen are in favor of taking off of refined sugar the differential duty, and yet in no report or document is it suggested by either of them to this House, to their colleagues on the minority side, or to the country, that they will present such a proposition and ask that it be voted for. Ah, gentlemen, your colleagues upon that committee are not satisfied thus to rest. The gentleman from New York [Mr. MCCLELLAN], earnest as he is in the advocacy of this bill, earnest as he is in striving for a reduction of the duties on Cuban products even to 50 per cent or lower until trade shall become free, earnest as he is in the assertion that he is in accord with the Jeffersonian doctrine of Democracy, earnest as he is in his assaults on the sugar trust, he presents his own views. Where are yours? I pause for a reply.

Gentlemen, you have acquiesced in the report of the leader of the majority; you have not, at least, protested to this side of the House, to the world, and to the party that you are not in favor of those views. Therefore, when you ask me, even though you be the accepted, honored, and able leaders on this side—and I do not mean to say anything in the least offensive—but when you ask me to cross the aisle from the old Democracy of Jefferson, stack my arms, stop the fight, shake hands with the Republicans on that side, and proclaim that I do not intend by this measure either to reduce the price of sugar to the consumer or to make a solitary assault, an impression, upon the tariff wall, then you have no right to declare that to oppose it is un-Democratic, when I find that you have joined hands with the great Republican leaders of this House.

My Democracy is equal to yours. Against Republican measures I shall stand to my guns, shotted to the muzzles, and fight Republican propositions no matter where they come from. But they say we voted for a further reduction in the committee; we will vote for it in the House. We wanted to reduce it as low as 50 per cent; we wanted to reduce the tariff on all articles and we could not get it; we are in favor of free sugar from Cuba and free trade with all the world, but this Republican mountain would not come to the Democratic Mahomet, and therefore the Democratic Mahomet went to the Republican mountain. Gentlemen, you may go to the Republican mountain; when you command it to come to you it will not; but, for one, while I differ from many of my colleagues on this side, and especially the distinguished leader of the minority and my friend from Virginia, and some of my own colleagues from Georgia, when you go to the Republican mountain you will not carry this Democrat with you.

Mr. RICHARDSON of Tennessee. Will my colleague from Georgia permit me to interrupt him?

Mr. BARTLETT. Most surely.

Mr. RICHARDSON of Tennessee. I understand the gentleman from Georgia made his criticism of me because——

Mr. BARTLETT. I am not criticising the gentleman. I am stating the facts. If you think it is any criticism, I assure you that it is not.

Mr. RICHARDSON of Tennessee. I do not object; I am open

to criticism; but the gentleman, as I understand, criticises me because I did not file some views on this bill, and he assumes, because I vote for the passage of this bill, that I agree with all the reasons given by the gentleman from New York, who reported the bill and submitted a report. I do not think that is a proper conclusion, for this reason: A report is simply an argument; and if the gentleman from New York sets out his reasons in his report, because I agree to the conclusions, you can not assume that I agree with the reasons that he states for his coming to those conclusions any more than the gentleman might agree with the gentleman from Minnesota [Mr. TAWNEY] in opposing the bill, and vote against it, that he indorses the reasons which lead the gentleman from Minnesota to vote against it.

Mr. BARTLETT. Not at all, Mr. Chairman. It is not very difficult to show the difference. I am not on the greatest committee in the House. I am not the authorized leader of the minority. The members on this side and the Democrats of the country do not look to me as a member of the Ways and Means Committee to assert the Democratic doctrine in a report on this bill. We in the House sat here for ten days, after the filing of this report by the chairman of the Ways and Means Committee, and waited anxiously to see what these two gentlemen on the committee would say. We wanted them to tell us how it was that they support this measure. The gentlemen, until this very minute, or until yesterday, were as dumb as oysters, as uncommunicative as the sphynx of old as to why they support this bill. I tell you, gentlemen, that when you desire that a Democrat shall vote for a Republican measure—and as I shall show if I have time before I take my seat—a measure which no Democrat in this Congress should support and for which in no other Congress have Democrats voted for, you must give the reasons, and they must not be the reasons advanced by Republican leaders.

Mr. THAYER. Mr. Chairman, will the gentleman yield to me for a question?

Mr. BARTLETT. I can not yield to the gentleman; I have not time. I assure the gentleman that I mean no discourtesy to him. As I was saying, if these gentlemen desire us to vote for a proposition which is similar to the one offered as an amendment to the McKinley bill, and for which no Democratic Senator or Representative voted then; if you want me now to change my views as to this pretended reciprocity, which is a fraud and a sham; if you want me to go back on the doctrine that the Democrats indorsed in 1892; if you want me to repudiate the principles as contained in the great Democratic tariff act of 1846, then, my friends, my Democratic leaders on the Ways and Means Committee, you must give me your reasons. When you ask me to follow the lead of the gentleman from New York [Mr. PAYNE], who has grown gray, honored, and distinguished in the service of the protected interests and combinations—and I say this without any intention to be disrespectful—when you ask me to follow the gentleman from New York, who stands here as a champion of the protected interests and monopolies of the country; when you ask me to follow the lead of that ideal champion from Pennsylvania [Mr. DALZELL] of the protected-tariff interests; when you want me to follow them on tariff legislation, I beg you in the name and memory of the great Democratic heroes in the battles for tariff reform that have been fought—those great Democrats who stood like a solid phalanx, as immovable as a stone wall, against the assaults made in this country by the champions of this sort of sham reciprocity, I beg you, my friends, when you ask me to follow the trumpet blast and answer to the bugle call of my friend from New York and my friend from Pennsylvania, give the party your reasons, that the world may know where we stand. [Applause on the Democratic side.] I do not ask you to give the reasons to me, for I am an insignificant part of the Democratic party.

I am one of those old-fashioned Democrats that believe in the old-fashioned doctrine that tariff taxes should be so laid that after raising the necessary revenue the man that consumes a manufactured article should be able to buy as cheap as possible, and when we reduce tariff it should be done in such a way that the consumer of the article upon which the tariff is reduced shall be benefited. The man in his cabin who drives a bobtail mule and makes one bale of cotton has the right to demand that he can buy his sugar as cheap for his wife and children just as much as those who live in palaces in the cities, and much more so than the Cuban or the sugar trust has to demand legislation in their favor; and when you assure me that by this bill the price to the consumer will not be lessened, I do not enthuse for its support. I think I shall demonstrate, if I have the time, that the ten million reduction on sugar will not go for the benefit of the consumer. According to the testimony of these men who appeared before the committee, 30 per cent of it will probably go to the Cuban planter—I think I state the evidence correctly, and if I do not, I will ask to be corrected—that nothing beyond 30 per cent will go to the planter, and that 70 per cent of it will be poured into the already bursting coffers of that most oppressive and gigantic and impudent corporation known as the American Sugar Refining Company, or better known as the American sugar trust, and the people will have no benefit from it.

I shall put into my remarks the testimony of this president of the sugar refining company, who, before the Industrial Commission, declared that so far as the people are concerned, so far as those who compete with him were concerned, it is no business of his or his corporation, but that they simply put a turn of the wheel, reduced the price of sugar, crushed the competitor, and when that was done took it out of the pockets of the consumer by adding to the price.

Why, sir, I state a proposition which will commend itself to this House as undeniable when I say that the sugar trust will get the benefit of this reduction. To substantiate this proposition, I have only to recall the statement I have here, susceptible of absolute proof, that within the last few weeks, since this agitation began, the daily quotations of this stock in the market have advanced 25 per cent; so that the mere suggestion that you take off 50 per cent or 20 per cent of this duty has poured into the coffers of this great corporation nearly $13,000,000.

This is a corporation that started with a capital of $6,000,000. Subsequently it increased it to $45,000,000, then it added $50,000,000, making $95,000,000. This corporation pays enormous dividends upon a pretended capital of $95,000,000. They are the men I am after. This corporation, in combination with the steel trust, and the iron trust, and the copper trust, and the lead trust, and the coal trust, and the paper trust, and the ice trust, and the leather trust, and the tin trust, and those other unholy combinations, make up what they call "the modern jabberwock." This corporation, the sugar trust, is, in fact, the chief power of this modern "jabberwock."

It is these combinations that I am after, and it is they that the whole Democratic party ought to be after. These are the men that the Republicans will not vote to strike.

Now, I have here evidence from the report of the committee which these gentlemen have not dissented from, and acquiescence gives consent in the court of law as in the court of love. On last Tuesday I asked the gentleman from New York [Mr. PAYNE] a question which he answered frankly, as I knew he would do. He said:

> All the experts who were called before the committee admit that the price of sugar to the consumer will not be less on account of the 20 per cent reduction.

When you summon me to follow the banner that is held by Republican hands, that has not even the pretended 20 per cent of Democracy in it, then I hesitate; I must question it and I must know what it is before I obey. Like Hamlet's ghost, it comes in such a questionable shape that I will speak to it. I must know the reasons why tariff reform and honest taxation, which, in 1896, we saw throttled by Republican votes, hearsed, and buried, has burst its cerements, and why it now stalks abroad as a ghost, while some of my friends on this side quake and their teeth almost chatter in fright at the apparition. No proposition like this, coming from a Republican source, inaugurated by a Republican President, born in a Republican caucus, its members lashed and whipped into line to support it, if the press accounts be true, by the party whip and power of patronage, can have my support. For one, I must have some better reason than the gentleman from New York gives in his report.

Does the gentleman from Tennessee or the gentleman from Virginia deny that proposition? If those gentleman wanted the united support, the almost unanimous support, of the Democrats on this floor, why did they not deny that proposition? Do they deny it now?

Amend this bill so it will benefit the American consumer, reduce the price of sugar to the masses, and no man will more cheerfully indorse it than I.

Where does the reduction go? According to all the testimony, 30 per cent or less goes to the Cubans, and 70 per cent to the American refiner—this modern "jabberwock," who produces and sells at least nine-tenths of all the sugar sold in the United States.

Here you ask me to vote, not to help the man who buys sugar in my State or in any part of this great country, not to help the toiling millions down in my section, men who do not get, as the Cuban laborer does, $23 a month and his maintenance, but to vote to take off the tariff and give it to the sugar trust. If you want to help the little farmer or the big one—if you want to help the poor colored laborer who raises our cotton and our corn—you are not proposing the proper way to do it. They are entitled to a little of this Cuban "reciprocity," if you call it such; but that is a sham.

Mr. Chairman, I belong to that class of Democrats who believe in real tariff reform, a reduction of the high and exorbitant protective rates of the Republican tariff scheme all along the line to a revenue basis that will collect by means of import duties on foreign goods sufficient revenue to pay the expenses of the Government

when economically administered. I am unalterably opposed to any system of tariff taxation which has in view any other purpose than to raise the necessary revenue, or any system which fosters one branch of industry to the detriment of another, or cherishes the interests of one portion to the injury of another portion of our common country. From the time that the first Democratic platform was written and adopted down to the last Presidential campaign these principles on the subject of the tariff have been stated and reiterated; and the abuses of the Republican tariff law, which have been known as "protective tariff legislation," have been continually denounced in every Democratic platform.

The Republican tariff confers special favors and privileges to a few, robs the masses to pay tribute to the classes, are trust-breeding measures, giving to the few favors they do not deserve, and placing upon the many burdens they should not bear. Under the Republican tariff great trusts and monopolies have grown up and flourished. These monopolies are indefensible and intolerable; they destroy competition, destroy the prices of raw materials, of the finished product, and thus rob both producer and consumer. Ever before the Republican party has paltered with the trust evil, and their laws passed to carry out their system of tariff have fostered the trusts.

In addition to these evils, the high protective tariff laws of the Republican party have restricted trade and deprived American producers of the great staples access to the natural markets of the world. This policy has continued so long that even Republicans who have heretofore been in favor of erecting high tariff walls to defeat competition in our markets have been compelled, after supplying the American market, to seek a foreign market to sell their products, and have thus presented the remarkable spectacle of selling to the foreign consumer American manufactured goods at a cheaper price than to the domestic consumer, until recently manufacturers, boards of trade, and farmers, alike, have declared that we need no protective tariff on our products, and that they would either remove the prohibitive tariff or so modify it as to permit us to have larger fields for our trade.

In answer to this general demand for tariff reform, the Republican President in his message to Congress at the opening of this session, endeavored to answer that demand by suggesting what he calls "reciprocity," and the kind of reciprocity that he suggests is not freer trade with the great nations of the world which consume our products, but that reciprocity which he declares to be the result of protection, and which must be treated as its handmaiden. After much labor, after many caucuses, after many interviews and consultations with the Chief Executive and the Republican leaders on this floor, as a result we have this bill in reference to Cuba, and we are told that we Democrats must vote for it because it reduces the tariff. The Republican mountain has labored and brought forth a ridiculous mouse. It has no more appearance or semblance to true tariff reform upon Democratic principles than the Republican platform of 1892, which indorsed the McKinley bill and the sham reciprocity which it contained, which President Harrison claimed he undertook to carry out, had to and with the great principles of Democracy on the tariff that were contained in the Democratic platform of 1892, and upon which the Democracy went to the country and was successful in the election of its candidate for President, and the election of a Democratic Congress.

As representing the true sentiment of the people of the United States on the subject of tariff reduction, I call attention to the following replies made to the inquiries of the American Machinist sent to the most prominent manufacturers of machine tools in this country, employing 22,636 men and a capital of $35,000,000. The American Machinist submitted letters to these manufacturers in which were contained, among other inquiries, these:

1. Do you need a protective tariff in your own particular trade?
2. Do you think the present high tariff has a tendency to retard foreign trade?

Summing up the result of its investigations, the Machinist says:

Of the 58 replies 38 unqualifiedly indorse the passages regarding the necessity of reciprocity treaties taken from President McKinley's last address at Buffalo, 7 indorse them qualifiedly, and none disapprove of them; 34 declare they need no tariff on their own products, and 2 say they do need it; 42 would do away with or modify the present tariff on machine tools, while 3 say they would let it alone; 38 say that it does restrict our foreign trade in machinery, 4 think it does not; 24 express the opinion that foreign workmen produce no more per wage unit than is produced by American workmen, 4 declare that the American workman produces more per wage unit, and 1 that the foreign workman produces most; 24 think that free raw materials would help foreign trade, 7 think they would not.

* * * * * * *

The Congressman or official of any kind that thinks he can afford to disregard the spirit that is behind these letters and that has inspired them is sadly mistaken. These letters do not represent campaign froth, but the deliberately and firmly fixed convictions of men of ideas and of great influence in the communities in which they live, and whom not to heed in a matter of this kind is to disregard the plainly spoken sentiments of the best informed business men in this country.

EDITOR AMERICAN MACHINIST.

NEW YORK.

I now quote from a few of these letters:

The Adams Company, Dubuque, Iowa, write:

"Do you need a protective tariff in your own particular trade?—No.

"Do you think the present high tariff has a tendency to retard foreign trade?—Yes."

G. P. Altemberg, of Cincinnati, Ohio, representative of the Fay-Eagan Company, large builders of woodworking machinery, says:

* * * "While times are still prosperous America should turn her attention to a rearrangement of her tariff and enter on broad and liberal lines into reciprocal trade relations with her foreign customers." * * *

Capt. E. P. Reichheim, replying for the American Gas Furnace Company, New York, large manufacturers of gas furnaces for industrial purposes: says:

* * * * * * *

"But any industry developed to a point where it successfully competes with the whole world while paying American wages to American workmen should at once be declared master of the art and its product placed on the free list. If this is not done, protection becomes a fraud upon the whole people, a false pretense and a means of making the people pay arbitrary prices, regardless of intrinsic value, which are imposed by the makers of goods who combine and fix prices anywhere up to the limit where foreign competition can pay duty and still compete. This we know as a matter of fact to be the case at the present time in many industries, and their claim to protection now has become an evil which in the common interest should be removed.

"A surplus derived from taxation I consider nothing else than a national scandal. Therefore taxes should be reduced. First of all, the internal-revenue taxes imposed for defraying the expenses of the late war. Then take down the tariff wall on steel and iron, because this 'infant industry' has grown to full manhood, and is in fact a monster and a prodigy. If some branches of this industry are still in need of soothing sirup or any other artificial stimulus, let them prove their needs before a tariff commission, and give them whatever protection they still may need if they make an honest statement of the facts, and do not ask it merely to enable them to form trusts and combinations with the power of taxing the whole people, in place of having the taxing done by the Government."

* * * * * * *

John J. Grant, writing for the Grant Tool Company, manufacturers of machine tools, steel balls, etc., Franklin, Pa., says:

"We do not believe we need a protective tariff in the manufacture of machine tools. The writer's long experience over there in selling tools abroad leads him to believe we can and do undersell a fairly made machine tool that is made in any foreign country. * * * We certainly ourselves would not care a rap if the tariff was taken off at once."

W. L. Saunders, writing for the Ingersoll-Sergeant Drill Company, manufacturers of air compressors, rock drills, coal cutters, stone-channeling machines, etc., 26 Cortlandt street, New York, says:

"What we want is markets, not protection. We build by machinery, and our productive capacity is so great that the world's market is needed to maintain its stability. It is better to provide markets for our surplus than to curtail our product and discharge our workmen."

"At one time in the Carnegie works 800 men were employed in a department that produced 1,200 tons of steel. By the use of improved machinery 1,500 tons were produced by 65 men. According to Labor Commissioner Wright, an American farm hand raises as much grain as 3 in England, 4 in France, and 5 in Germany. A protective tariff does not benefit the mining-machinery trade. Few in this business know what the duties are on our products, and if they were taken off entirely no harm could result, because American-made mining machinery is better and cheaper than any other. The tariff acts only to increase the cost of our product by increasing the cost of raw materials. It puts an obstacle in our way when we go out to develop foreign business, as we are met by retaliatory duties, by criticism of our prices, which we are told are upheld by high-tariff laws and by the stigma of unpopularity which follows the product of a country which maintains the bars of protection against its neighbors and at the same time seeks business abroad.

"Protection is not a shibboleth—not a religion."

These extracts are but samples, but they demonstrate the sentiment of the people, which has been aroused against the protective system, and which will eventually find utterance in a demand for a general reduction of high tariff duties which must be heeded. I favor a reduction of the tariff because it enables the American consumer to buy at a cheaper price, and it enables the American producer to sell in the best markets. Whenever I shall have an opportunity to vote for a measure to reduce the tariff in such a way that it will reduce the prices of articles of consumption or manufacture that the great masses of the people use and consume, I shall cheerfully support such a measure, but I can not be deluded from my devotion to the Democratic principles in opposition to the protective tariff by such a Republican reciprocity sham as this bill is.

I may not be an old political bird, but I am too old to be caught with such chaff. What the great masses of this country want is freer and more extended trade and trade interchange with the great nations of the world that consume our surplus products. We want enlarged foreign markets with the richest countries of the world, that stand ready to take our surplus products and to exchange therefor commodities which are necessaries and comforts among our own people; and that demand of the masses is not met in the least by this bill, because it simply pretends to establish closer relations with a small island with less than a million and a half people, and whose articles of export are almost exclusively agricultural products, and this is only to last twelve months.

Indeed, the scheme will very nearly die a-borning. Trade interchange on the basis of reciprocal advantages to the countries participating is a time-honored Democratic doctrine, but the demand for that kind of Democratic reciprocity is not met in any particular by this bill. It is simply a Republican Administration bill; it comes first suggested in the message of a Republican President; it was formulated and matured in a Republican conference, and they are now endeavoring to whip all Republicans into line to

support it, because it is a party measure and because the Republican party, now in power, hope to delude the people and by so small a concession to silence them, even for a short time, in their demand for a genuine tariff reduction.

After the famous speech made by the late lamented President at Buffalo the country looked upon the convening of this Congress as an event which would be the beginning of genuine tariff reduction, for that great apostle of tariff protection, who was so prompt to catch the wishes of the people and to heed them, declared:

> What we produce beyond our domestic consumption must have a vent abroad. The excess must be relieved through a foreign outlet, and we should sell everywhere we can and buy wherever the buying will enlarge our sales and production, and thereby make a greater demand for home labor.

And the American people regarded that as an indication, yea, as a promise, that this Congress would take up the question of tariff reduction. This bill does not carry out any line suggested in that famous address, but it is simply an undertaking to further deceive the people on this subject by keeping the promise to the ear and breaking it to the hope. I propose to demonstrate, if I can, that this bill bears no resemblance to either the Democratic doctrine of tariff reduction or Democratic reciprocity.

As everyone understands, this bill relates solely to our trade with Cuba. That trade was, in 1900, imports into the United States, $31,371,704, and exports from the United States to Cuba, $26,513,400. The imports into this country from Cuba are principally raw sugar and tobacco; the others are so inconsiderable as to scarcely deserve mention. The tariff wall is to remain intact to all the balance of the world. The great European markets, where our people might buy and sell to advantage, are to remain as they are. The great nations of the world, with their teeming millions of people, anxious to buy from and sell to us, are still to be subject to the high tariff rates imposed by the Dingley bill, and the present demand for tariff reduction is to be met by this bill, which proposes to reduce the rates in the manner provided in this bill: A homeopathic dose of 20 per cent for one year.

When we reflect that the tariff is to be reduced mainly upon raw sugar, and that no one is to be deceived by the suggestion that all the others products of Cuba are to come in also under the 20 per cent reduction, we are driven to the conclusion that this arrangement is made for the purpose and that the result will be a reduction upon those two articles, the manufacture of which into the finished product is controlled by the most arrogant and oppressive trust in our country. The objections of the beet-sugar manufacturers that they are entitled to the protection of the present duty on raw sugar provided by the Dingley bill and promised to be continued in the Republican platforms of 1896 and 1900 do not appeal to me.

I did not vote for the Dingley bill; I did all that was in my power to defeat it, and I would never levy by tariff any duty on raw sugar that was not necessary to aid in raising revenues for the Government and to administer it economically, and I have always been opposed, and am still opposed, and propose now and here, if I have the opportunity, to destroy that portion of the sugar schedule which gives to the sugar-refining interests the benefit of the protection which is known as the differential. In other words, if I had it in my power I would reenact to-day the provisions of the famous Walker tariff of 1846, which, by the way, was the only genuine, real, unadulterated Democratic tariff law that was ever enacted in this country, and which simply provided the same ad valorem duties upon sugars of all kinds and gave no benefit or protection to the manufacturer of refined sugar over the producer of the raw.

The Democratic party in Congress and in national convention has had to meet and deal with this question of Republican sham reciprocity, and to their credit be it said it never frightened them, they have never fled from it, and they have never joined hands with the Republicans in endeavoring to put it upon the country, but they denounced it as a sham. They voted against it in the Senate and in the House; they met the proposition squarely in the Chicago convention of 1892; they distinctly declared against it and denounced it; they went before the people in the Presidential and Congressional campaigns of that year; they opposed it on every stump in every State of the Union, and when the battle was over, after a fearless fight made for tariff reform and against sham reciprocity, the McKinley bill, with all its high schedule, with its provisions for free sugar, hides, coffee, and tea, its provisions for reciprocal trade relations with the South American republics, lay buried beneath an overwhelming majority of the ballots of the majority of the people.

I prefer to take my views of Democratic reciprocity from those leaders in Congress in 1892 and from the enunciated platform of the Democratic party than to take them now from a Republican President and the Republican leaders on this floor, who have grown gray in the service of the Republican party and in fighting the battles of the protected manufacturing interests. I prefer to draw my inspiration on the subject of the tariff from Colquitt and Crisp, Turner, Vance, VEST, Walthall, and George, from Turpie and Voorhees, from MORGAN and Pugh, from Barber and DANIEL, from Carlisle and Coke and Reagan, and all the great leaders of Democracy in the Fifty-first Congress, than from McKinley and Dingley and from PAYNE and DALZELL, and I prefer to walk in the path and the way on this subject that they blazed out for us in 1890 than to ground my arms and lower the banner of Democracy and join the Republican ranks and shout hosannas for the triumphs of Republican sham reciprocity.

It will serve well the Democratic minority on the floor to bear in mind the ancient proverb, "Fear the Greeks when they bear gifts," and when the Republican Administration and the Republican leaders bring forward that which they claim to be in line with Democratic doctrine and principle and offer it to us it is the part of wisdom to scan it closely—yea, to fear them. It comes in such questionable shape that I for one propose to speak to it to know what it is before I can give it my vote.

Recurring to the proposition that this is not a Democratic measure, nor in line with Democratic principles, I desire to recall briefly some history of high-tariff legislation, and when I do so I think I shall demonstrate clearly that instead of being a Democratic doctrine of tariff reform or Democratic doctrine of reciprocity this proposed bill is but in line with the Republican doctrine of sham reciprocity.

THE REPUBLICAN DOCTRINE OF RECIPROCITY.

When the McKinley bill, with its provision for free sugar, coffee, tea, and hides, passed the House it contained nothing looking to any reciprocal trade relations with any nation.

Mr. Blaine, then Secretary of State, made a furious attack upon it. He contended that while the bill raised the duty on manufactured goods that the farmer consumed, it did not open a market for another bushel of wheat or another barrel of pork, and he further said that "free sugar would not sweeten the pill." He insisted that there should be legislation by which free sugar in the United States could be accompanied by free breadstuffs and provisions in Spanish America.

Congress did not accept Mr. Blaine's proposition. It provided for free sugar, but by the third section of that act it gave the President the right, under certain circumstances, whenever in his opinion the tariff laws of any country producing and exporting the articles which had been made free were reciprocally unequal and unreasonable, to impose the tax provided for in that act.

In pursuance of his views the then Secretary of State submitted an amendment, in a letter to Senator HALE, of Maine, which was as follows:

> And the President of the United States is hereby authorized, without further legislation, to declare the ports of the United States free and open to all the products of any nation of the American Hemisphere, upon which no export duties are imposed, whenever and so long as such nation shall admit to its ports, free of all national, provincial (state), municipal, and other taxes, flour, corn meal, and other breadstuffs, preserved meats, fish, vegetables and fruits, cotton-seed oil, rice, and other provisions, including all articles of food, lumber, furniture, and all other articles of wood, agricultural implements and machinery, mining and mechanical machinery, structural steel and iron, steel rails, locomotives, railway cars and supplies, street cars, refined petroleum, or such products of the United States as may be agreed upon.

Mr. Blaine had completely failed to get a reciprocity provision grafted on the McKinley tariff bill while it was in the hands of the House committee, and on July 11, 1890, he wrote Senator FRYE a letter which contained the following:

> The charge against the protective policy which has injured it most is that its benefits go wholly to the manufacturer and the capitalist and not to the farmer. * * * Here is an opportunity for a Republican Congress to open the markets of 40,000,000 people to the products of the American farmers. I do not doubt that in many respects the tariff bill pending in the Senate is a just measure and that most of its provisions are in accordance with the wise policy of protection; but there is not a section or a line in the entire bill that will open a market for another bushel of wheat or another barrel of pork.

And he added most impressively:

> Our foreign market for breadstuffs grows narrower. Great Britain is exerting every nerve to secure her bread supplies from India, and the rapid expansion of the wheat area in Russia gives us a powerful competitor in the markets of Europe.

This proposed amendment of Mr. Blaine's was not put upon the McKinley bill, but the following amendment, which was proposed by Senator ALDRICH, was added and was finally passed by the conference report submitted to the two Houses, adopted, and became a part of the McKinley law:

> That [the exemptions from duty of sugar, molasses, coffee, tea, and hides provided for in this act are made] with a view to secure reciprocal trade with countries producing these articles; and for this purpose, on and after the 1st day of July, 1891, whenever and so often as the President shall be satisfied that the government of any country producing and exporting sugars, molasses, coffee, tea, and hides, raw and uncured, or any of such articles, imposes duties or other exactions upon the agricultural or other products of the United States, which in view of the free introduction of such sugar, molasses, coffee, tea, and hides into the United States he may deem to be reciprocally unequal and unjust, he shall have the power, and it shall be his duty, to suspend, by proclamation to that effectsthe provisions of this act

relating to the free introduction of such sugar, molasses, coffee, tea, and hides, the production of such country, for such time as he shall deem just, and in such case and during such suspension duties shall be levied and collected and paid upon sugar, molasses, coffee, tea, and hides, the product of or exported from such designated country.

Upon this amendment in the Senate there was a vote, and the Republican Senators, except Senators Edmunds and Evarts, voted for it and the Democratic Senators voted against it. Those Democratic Senators were:

Barbour,	Colquitt,	Gorman,	Pugh,
Bate,	Daniel,	Gray,	Ransom,
Berry,	Edmunds,	Harris,	Reagan,
Butler,	Eustis,	Jones, Ark.	Vance,
Carlisle,	Evarts,	Kenna,	Vest,
Cockrell,	Faulkner,	Morgan,	Walthall,
Coke,	Gibson,	Pasco,	Wilson, Md.

(Page 9909, September 9, 1890, 51st Cong., 1st sess., vol. 21, No. 10, serial No. 111, CONGRESSIONAL RECORD.)

The other Democratic Senators were paired against it.

The third section of the McKinley act provided that, with the view of securing reciprocal trade relations with countries producing the following articles, and for this purpose, etc., and an examination of the present bill will demonstrate that it proposes to enact the same kind of reciprocity for Cuba alone that the third section of the McKinley law declared should be proposed and carried out for those countries exporting sugar, molasses, coffee, tea, and hides. So that the reciprocity provisions of the McKinley bill and the reciprocity proposed in this bill is a purely Republican reciprocity. I specially call attention to the following:

[Extract from speech delivered by Hon. Henry G. Turner, of Georgia, in the House of Representatives, September 27, 1890. Volume 113, CONGRESSIONAL RECORD, Fifty-first Congress, first session, p. 10587.]

My honorable friend from Ohio [Mr. McKinley] says that it is to be hoped that some beneficent results will follow from the inauguration of the reciprocity proposed in this bill. I would like to know whether my friend is very sanguine about it. [A pause.] The gentleman does not answer. My opinion is that it is brutum fulmen so far as any result to the country is concerned in the way of freeing our traffic abroad. But I object to this reciprocity, because it inaugurates a principle in our Government that is contrary to the Constitution. This bill proposes to invest the President of the United States with power to enact law, not simply to execute it.

It gives him power when he thinks that those countries with which he desires reciprocal trade relations have been unfair to us—when he thinks that they have not offered commerce reciprocally fair, he is to put certain rates prescribed in the bill on sugar, on hides, on coffee, and on tea. Now, Mr. Speaker, I am opposed to giving the President any such power—in the first place, because the Constitution devolves that duty upon Congress; in the next place, because Congress is nearly always in session and can attend to its own business, and in the last place, I am opposed to this reciprocity because, while the bill is itself a universal boycott against other nations, it proposes to give to the President a roving commission of marque and reprisal and to make him a buccaneer among our neighbors.

Thus stood the Republican law of reciprocity when the Democratic convention met in Chicago on June 28, 1892, and declared in its platform that—

Trade interchange on the basis of reciprocal duties to the countries participating is a time-honored doctrine of the Democratic faith, but we denounce the sham reciprocity which juggles with the people's desire for enlarged foreign markets and freer exchanges by pretending to establish closer trade relations for a country whose articles of export are almost exclusively agricultural products with other countries that are also agricultural, while erecting a custom-house barrier or prohibitory tariff taxes against the richest countries in the world that stand ready to take our entire surplus of products, and to exchange therefor commodities which are necessaries and comforts of life among our own people.

In the following campaign, which resulted in the election of the Democratic candidate for President and the return of a Democratic House, from every stump the Republican reciprocity sham was denounced by Democratic orators. It was said of it in the Democratic campaign book, issued for that campaign—

That the system of reciprocity to which the Republicans are now pointing with pride was begotten two years ago in fraud, was conceived in dissimulation, was born in falsehood, and is now wrapped in the juggled figures of systematic misrepresentation.

How true was this declaration of the Democratic party on the subject of Republican sham reciprocity is well established by the results which followed. The pretense was hailed with delight by the farmers of the West so much so that many of them formed themselves into organizations known as "Knights of Reciprocity," but they soon learned that it was a deception, and to our farmers a mere mirage on the vast desert of the Republican protective tariff system—Dead Sea fruit that turned to ashes on their lips; for, instead of buying of our products that she did not need, Brazil sent the money to Europe and bought cheap manufactured goods that she did need; for soon after the agreement had been made, because the agreement provided for in the third section of the McKinley bill was made with Brazil, and when it had been in operation for nine months, from April 1 to December 31, after full notice of it was given by the President that such reciprocal arrangement had been made, we find that our exports were, total domestic, in 1891, $7,063,223; during the same period in the year 1890 the same exports amounted to $10,071,871.

The agricultural exports for 1891 amounted to $4,682,546, and for the prior year, 1890, the same exports amounted to $5,208,001; so that there was an actual falling off of agricultural products exported from our country of $521,000, and Brazil sold to us $79,283,344, her exports increasing largely under the provision for free trade in hides, sugar, coffee, and tea, and her imports decreased. They took advantage of our free reciprocal rates to her to sell to us, in competition with our own farmers, this enormous amount of her own products, but they found it more convenient, cheaper and more profitable to buy what they needed from Europe.

Under the provisions of the third section of the McKinley Act of 1890, to carry out the reciprocity therein proposed, arrangements were made with Brazil, the Dominican Republic, Salvador, Guatemala, Austria-Hungary, Spain (as to Cuba and Porto Rico), the German Empire, Nicaragua, Great Britain (as to British Guiana and West India Islands), for the free entry, or at a reduced rate of duty, of certain articles from the United States, in consideration of the free admission of the articles mentioned, namely, sugar, molasses, coffee, tea, and hides, or any of such articles, in the United States.

It may be of interest to know what the Democracy of the great State of New York thinks of this kind of reciprocity. After the passage of the McKinley bill, which, as I have stated, had incorporated in it a section providing for free sugar, hides, tea, and coffee, and proposing to do for the South American Republics what this bill proposes to do for Cuba alone, the New York Democrats met in convention, in January, 1891, and they denounced the McKinley Act as worse than a war tariff and the Blaine reciprocity humbug. Mr. Blaine's reciprocity contemplated more than was put in the McKinley tariff bill, and yet I apprehend if the Blaine proposition which I have quoted were offered to this House now those of the Democrats who feel bound to vote for this bill and to advocate it would not rush to the support of that, and yet that same proposition, which was broader than the one contained in this bill and which proposed to open the markets of the South American Republics, or rather authorized the President to enter into reciprocal relations with them, was denounced by the New York Democracy, and Hon. David B. Hill, then its governor and afterwards its Senator, declared the issues for 1892 to be opposition to the Blaine reciprocity humbug.

And so this doctrine of Republican sham reciprocity was dealt with in the Democratic platform of 1892 and went into the Republican platform of that year. Here we have a true exposition of the difference between Democratic and Republican reciprocity—the Democratic platform demanding trade interchange on the basis of reciprocal advantages with those countries of the world which stand ready to take our surplus products and to exchange therefor commodities which are necessaries and comforts of life among our own people, and the Republican sham reciprocity being a pretext for that, and simply permitting the President to establish trade relations with certain countries that produce certain named articles, confining the trade of our people to particular localities and smaller countries and those that have smaller populations and fewer wants.

I propose to stand by these Democratic principles or true tariff reform, but not to be led into the quagmire of Republican protection by this ignis fatuus, will-o'-the-wisp, in the shape of this bill pretending to establish reciprocity with Cuba. But this bill is not a tariff reduction for the benefit of the consumer here, nor will it reduce the tariff against our products and manufactures that go into Cuba. In the first place, there is no pretense on the part of the advocates of this bill that the 20 per cent reduction solely—leaving the differential, which is for the protection of the sugar refiner, to remain unchanged—will reduce the price of sugar to the American consumer. If it does reduce the price of sugar, then I shall cheerfully support it, because it is my duty as a Democratic representative of the people of my district to reduce the price of consumption to them if in my power.

Will it reduce the price of sugar to the consumer to take off 20 per cent of the duty on raw sugar coming into this country from Cuba? What is the testimony on that proposition? I will read first an interview with the leader of the majority, who presented this bill to the House, published in the Washington Post of March 7 last. Referring to the hearings had before the Ways and Means Committee, he says:

All agreed that the price of sugar to the American consumer would remain the same.

During this debate the following colloquy occurred:

Mr. BARTLETT. Will the gentleman, before he proceeds, permit me an interruption upon the line upon which he has just concluded?

Mr. PAYNE. Yes.

Mr. BARTLETT. The matter I am interested in more than anything else is what effect this bill will have upon the price of sugar to the American consumer.

Mr. PAYNE. The universal testimony before the committee was that it would not reduce the price unless it was continued for such a length of time as to enable Cuba to supply the principal part of the imported sugar.

Mr. BARTLETT. This bill contains a provision that the reduction under it shall cease in December, 1903, and as I understand the gentleman, that would not reduce the price of sugar to the consumer.

Mr. PAYNE. I think it would not. There is a production in the United States and in the islands of about 900,000 tons, and in Cuba of about 900,000 tons, making 1,800,000 tons altogether; and the principal consumption of sugar in the United States will be, during the next year, 2,500,000 tons, so there will be about 700,000 tons that must be imported under full duties.

Mr. BARTLETT. May I ask the gentleman another question? Referring to the sugar trust, is it not a fact that the evidence before the Ways and Means Committee showed that the American Sugar Refining Company bought and sold 90 per cent of the sugar that is used in this country?

Mr. PAYNE. That was not the evidence before the committee, but it was in evidence that Mr. Havemeyer had claimed before the Industrial Commission that that was the fact. That was disputed by Mr. Post before the committee.

Mr. BARTLETT. At the hearings before the Industrial Commission, it is stated that Mr. Havemeyer said that his company refined and sold 90 per cent of the sugar.

Mr. PAYNE. I want to say to the gentleman that this is the precise fact. He was examined several years ago before a committee of the New York legislature, and he testified that he distributed and refined 90 per cent of all the sugar. Before the Industrial Commission he was asked that question, and admitted that he had said so, but said he did not know how much they did refine; but he thought about 90 per cent now. Mr. Post, who is the president of the National Refinery, said that he did not refine more than five-eighths of it. I leave it to those two gentlemen to determine which was right.

Mr. RANDELL of Texas. Will the gentleman permit me an interruption?

Mr. PAYNE. Certainly.

Mr. RANDELL of Texas. The gentleman says that the price of sugar will not be reduced to the consumer. I would like to ask for information how much the revenue will be reduced?

Mr. PAYNE. On sugar?

Mr. RANDELL of Texas. How much will be the reduction of the revenue by the reduction in this bill?

Mr. PAYNE. Between $6,000,000 and $7,000,000.

In the hearings before the committee I find the following statements as to the effect of this proposed reduction on Cuban sugar:

KELLY. Reduction of duty would go to the Cubans, and not until all our sugar comes in free will the home consumer be benefited much (p. 61).

ARMSTRONG. Thinks that the price of refined sugar will be reduced corresponding with the raw, always keeping a certain percentage of difference between the price of the raw and the refined for the profit of the refiners It is aimed to maintain this at 1 cent a pound (p. 71).

POST. States that he does not believe the consumers would get any benefit by the reduction of the tariff on Cuban sugar. Later on, when Cuba shall be producing a million and a half tons of sugar or more a year, it will have some effect on the retail price of sugar in the United States (p. 334).

WHERE THE BENEFITS OF REDUCTION WOULD GO.

BLISS. Q. As I understand it, the present duty on Cuban sugar is about $1.68 per hundred pounds, is it not?

A. On all sugar that polarizes at 96, yes.

Q. If that entire duty were taken off, the Cuban sugar would sell in our market just as the Louisiana sugar and the beet sugar does, would it not? Would there not be an increase?

A. I am not an expert on that question, and I do not like to answer. It appears to me that the question relates to the price that the Cuban producer would get, and I do not know what proportion of the increase would go to him. I believe not more than 30 per cent (pp. 381 and 22).

I have examined all the hearings before the Committee on Ways and Means on this subject, and the universal opinion is that it will not reduce the price of sugar to the consumer. Already, since the discussion of this measure has begun in Congress, anticipating its passage because of its advocacy by the Republican President and by the Republican leaders in Congress, the price of stock in the Sugar Refining Company has advanced—a clear indication of who is to be benefited by it. We know too well the power of this great trust; we know, from the evidence given by its president and the men who formed it, who oppress the people of this country at their will and pleasure, who destroy competitors, crush out competition; whose sole purpose, according to the testimony, is to create millions of dividends upon the thousands of shares of stock, watered and otherwise, owned by himself and his stockholders. We know too well that if this proposed legislation was in the least to effect the price of sugar or the profits of the trust, the stock would not advance as it has done on the market. It is a fact that one sugar refining company in the United States buys, refines, and sells 90 per cent of all the sugar consumed in the United States. What its methods are has been exposed to the country.

I will read some of the testimony before the Industrial Commission, by Mr. Havemeyer:

TESTIMONY OF MR. HAVEMEYER BEFORE INDUSTRIAL COMMISSION.

Q. Now, can sugar be made in Germany from beets, or in the Philippines from cane, or in any other part of the world cheaper than you can make it here? Is that owing to the labor, or what is it?

A. Because, in the evolution of sugar refining, refined sugar can be made directly from the beet without the intermediation of the sugar refinery.

Q. Then it is not the cane sugar abroad that you fear coming in, but the beet?

A. Both.

Q. Do you think it desirable for the Government to do anything to encourage the domestic production?

A. No; I do not. (P. 132, R. Ind. Com.)

Q. If you can make it unprofitable to them (other refiners), they will stop their sales and in the long run the expectation is that the profit will be larger to your stockholders?

A. That would be the natural inference. Of course, it goes without saying, if we protect our own meltings it can only be done under the condition of things that makes it unprofitable for our competitors, the real motive being the protection of our own business, and the result being an absence of profit to them. (P. 108, Rep. Ind. Com.)

Q. Now, I also understood you to imply, at least, that it is the policy of the American Sugar Refining Company to crush out all competition, if possible.

A. But that is not so. There is no such testimony I understand it has been put in that form by one of the gentlemen, but it is not the fact. What I said was, that it was the policy of the American Company to maintain and protect its trade, and if it resulted in crushing a competitor it is no concern of the American Company. If he gets in the press, that is his affair, not ours.

Q. And if anyone interferes with the business, profits, or competition of the American Sugar Refining Company, it is its policy to prevent it, if possible?

A. By lowering profits to defy it.

Q. And if it results in crushing him out——

A (interrupting). That is his affair.

Q. Not the affair of the American Sugar Refining Company?

A. No. (P. 120, Rep. Ind. Com.)

Q. When you sell in this country you control the price?

A. Yes, sir.

Q. And it (the trust) was organized, as I understand it, with a view of controlling the price and output to the people of this country?

A. That was one of the objects of consolidation.

Q. And you have succeeded in doing it?

A. Yes, sir.

Q. That was the principal object in organizing the American Sugar Refining Company?

A. It may be said that was the principal object. (P. 125, Rep. Ind. Com.)

On page 142, Report Industrial Commission, Mr. Jarvie, of Arbuckle Bros., the principal competitor of the American Sugar Refining Company, testified as follows:

Q. Has not their (the American Sugar Refining Company) attitude been an attempt to crush you out of business?

A. If the cutting of prices is that, yes.

Q. Is not that about as good a way as any?

A. We think so.

On page 63 the Commission sums up Mr. Havemeyer's position on competition in the following words:

It is very vital to the prosperity of the company to keep up its output. When competitors begin business, prices must be lowered with the primary purpose of retaining trade. If the result is to crush competitors, that is their affair, not the affair of the trust.

On page 107, Report Industrial Commission, Mr. Havemeyer testified as follows:

Q. What proportion does your output form of the total output of the country now?

A. I have never been able to get at those figures, but I should say about 90 per cent.

Q. You think about 90 per cent of America?

A. That is not of the capacity, but of the output. The fact is that these refineries are not working full.

Q. Does the American Sugar Refining Company itself have a capacity enough to supply the total demand, if it were not for the opposition? Your company could easily supply the total demand at the present capacity?

A. The demand and 20 per cent in excess.

On page 60 the Industrial Commission quotes from Mr. Havemeyer's testimony before the Lexow committee, as follows:

It goes without saying that a man who produces 80 per cent of an article can control the price by not producing.

On page 112 Mr. Havemeyer states:

We maintain that when we reduced the cost we were entitled to the profit and that it was none of the public's business.

On page 117 Mr. Havemeyer's testimony reads as follows:

Q. I say he (the consumer) may be benefited temporarily for six months or a year, but if, after the crushing out has taken place, you then, as you said in your testimony, resume a margin of profit which you consider is the right thing, and that is the only thing you were governed by, I ask you then whether the consumer will be materially benefited or not?

A. Is he not benefited to the extent of the reduction of the prices during the fight?

Q. He is; but if he has to pay double or three times the price after the fight is ended I fail to see where he is benefited.

A. He is not if he has to pay that.

Q. I understood you to say when the war was ended you evened up?

A. Yes.

Q. The price you put on was for the benefit of the stockholder?

A. Yes.

Q. Do you think it is fair that the consumer should pay a dividend to your company on brands, good will, etc.?

A. I think it is fair to get out of the consumer all you can consistent with the business proposition.

Q. You state that as an ethical proposition before this Commission, and you have to stand on that ethical position for fair play. Now, I want to know if you think—you state that the consumer received the benefits of this consolidation of industry—it a fair ethical position, independent of the business view you put on it, that the consumer should pay dividends on this $25,000,000 of overcapitalization?

A. I do not care 2 cents for your ethics. I do not know enough of them to apply them.

To show Mr. Havemeyer's attitude toward Government control of his business, we quote from page 223:

Mr. Havemeyer, president of the American Sugar Refining Company, declares that corporations are under no obligations to the States, but the reverse.

The Industrial Commission, on page 46, sums up the effect of Mr. Havemeyer's position on prices as follows:

On the whole, the chart seems to make it perfectly evident that the sugar combination has raised the price of refined sugar beyond the rates in vogue during the period of active competition before the formation of the sugar trust and the two competitive periods during its existence.

On page 130, in reply to a question asking if he would give raw-sugar producers the benefit of a tariff, Mr. Havemeyer said:

No; they are an agricultural product, and if they can not produce under natural conditions I would not give them anything at all.

And so it is with this bill. It benefits the sugar trust, but in no way aids or benefits the farmer or consumer.

That the proposed legislation will mainly benefit the sugar trust is demonstrated by the rise in the stock of that corporation since this bill was offered and its passage became assured.

The following from the financial pages of New York City newspapers are fair samples of Wall-street sentiment.

Sugar jumped up on the many protests that more than a 20 per cent reduction on raws from Cuba should be granted. Of course, the larger the cut on raw-sugar duties the larger the benefits to the sugar trust. What refiners of cane sugar in New York want is a lower duty on the raw material, so that they can crush out the domestic beet-sugar industry more easily.—New York Press, March 21.

Sugar Refining reacted sharply in the early trading under pool realizing. The stock was stimulated in the later trading on buying orders executed by houses with Washington connections, and reports of a 33⅓ per cent reduction on Cuban sugar, instead of 20, in the reciprocity treaty were circulated.—New York Herald, March 21.

American sugar: The expectation (now almost a certainty) of the reduction in the duty on Cuban sugar has been the chief bull argument on sugar-trust stock, which has advanced on buying by Washington and sugar-trust interests. The sudden upward movement on Friday was coincident with a five-point advance in the price of refined sugar.—New York Times, March 22.

During the month of March this stock advanced from 124¾ to 144¾, and on April 4 to 145¼.

From the following extract it is shown that strenuous effort has been made to mold sentiment in the interest of the sugar trust, and to manufacture petitions to Congress in its interest; in the interest of this bill, which has been heralded as the performance of our duty to Cuba and by others as a reduction of the tariff along Democratic lines, I quote from the American Economist of April 4:

AGAIN THE LITERARY BUREAU.

The Miner, a Democratic daily newspaper of Butte, Mont., has been favored with one of the numerous productions of the literary bureau of the sugar trust, in form as follows:

[Here insert name of your publication]—Coupon.

Sign, cut out, and mail this coupon to

U. S. PRESS BUREAU, 90 WEST BROADWAY, NEW YORK.

To my Representative in Congress:

As one of your constituents, I ask you to support President Roosevelt in his efforts to reduce the tariff duties on Cuban imports into the United States and effect reciprocal reductions in the Cuban tariff on American products imported into Cuba.

Name, ——— ———; address, ——— ———; city, ———; State, ———.

The Miner is not altogether carried away by this patriotic appeal. It is rather inclined to caustic comment. Thus:

"Failing to find in Congress the cheerful cooperation expected, but rather an opposition that can with difficulty be broken down, the friends and backers of the President in the Cuban scheme quite naturally appeal to the people.

"Though the Chief Executive would scorn to resort to the initiative and referendum, he might as well do so as to allow his friends to work the coupon deal—a cheap imitation in this case of the original populistic plan of trying to reach public sentiment as to the merits of a pending question.

"The coupon, however, differs from the referendum idea in that it permits the signer to vote only one way, or refrain from voting entirely, thus representing but one side of public sentiment—with several counties to hear from.

"In view of the recent order issued by the President, the United States Press Bureau was guilty of an unpardonable oversight in not warning Government employees against the free and unlimited use of these coupons."

This, then, being no Democratic reciprocity; the result being not to reduce the price of sugar to the American consumer, but simply to swell the already bursting coffers of the sugar trust, I can see no advantage to my constituents, or to the American people, in condemning my party platform and party principles, and in wavering in my allegiance, which has always been unswerving to my party and its leaders, in order to support this measure. Will it reduce the tariff upon our products which go into Cuba? I do not believe it will, and I propose to demonstrate it. The only suggestion made with reference to this tariff is the one I find in the hearings, and which was submitted by the Cubans themselves, and also suggested by Mr. Placé.

From an investigation of this proposed tariff it is clear that this is all the Cubans have proposed, and all that we can do, because they decline a reduction of the tariff rates upon goods coming from this country of 20 or 50 per cent, or any reduction, because it would so reduce their revenue that they would be compelled to resort to other methods of taxation. The proposition is simply this: Not to reduce the present rates in Cuba by 20 per cent, or any other amount, so as to favor our products or manufactures, or our farmers who sell to Cuba, but to raise the rate to the outside world, and let the present duties charges against the United States and the rest of the world remain as they are as to the United States. I am justified in making this assertion from the statements made by those who appeared before the Ways and Means Committee, and who claimed and in fact represented the Cuban people, and submitted the plan of reciprocity which this bill proposes to carry out.

I read from the printed hearings:

Page 31:

Mr. ATKINS. The Cuban people need the revenue. As I understand the situation, they do not want to cut so into the revenue that they will not have any resources to run the government. Mr. Placé, who is here, is thoroughly posted on that side of the question; and he can answer that question in two words, very much better than I can. Will Mr. Placé answer that question?

Mr. SWANSON. Had we not better finish with this witness first, Mr. Chairman?

Mr. ATKINS. Very well; I will refer that question to Mr. Placé later.

The CHAIRMAN. If there is nothing further, had we not better let Mr. Atkins go?

Mr. SWANSON. I was anxious to find out from Mr. Atkins, as a business man, an American, and one interested in Cuba, to what extent the United States would be benefited if these concessions as to the sale of commodities there should be granted, what inducement can be offered, as to what commodities, and wherein we are going to get any benefit in return.

Mr. ATKINS. A reduction in the duty on certain commodities that now come from the United States would mean loss of revenue on that special line without any accruing benefit to the United States, because a very large proportion of our supplies are now coming from Europe. That can easily be arranged, however, by advancing the tariff on European goods and leaving the tariff on American goods as it is at present. It can be done either in that way or by lowering the tariff on American goods. What you want, in order to effect that particular result, is a discrimination against European goods.

Mr. SWANSON. Are you willing, as an American planter there, to abolish the tariff on the importation of goods from the United States, which will prevent importation from foreign countries, and have a direct tax on your property there sufficient to make revenues for the Cuban government?

Mr. ATKINS. Certainly. If I can have free trade in Cuba, I can pay my taxes in Cuba in exactly the same way that I pay them in Massachusetts.

Page 385:

The CHAIRMAN. If the minimum duty on goods coming from the United States was the same as the minimum duties charged now to those countries from which these goods are imported, the revenue would be the same, would it not?

Colonel BLISS. If the duty charged on products from the United States was the same as now, yes, sir; it would transfer the trade from other countries to the United States, and the products of that country would continue paying the same duty that those articles would pay now, coming, as they now do, from Europe or elsewhere in the world.

The CHAIRMAN. And in order to secure this trade, it would be necessary to inaugurate a new system of tariff for Cuba, under which the minimum duty would be equal to the duty charged now, while the maximum——

Colonel BLISS (interrupting). Would be, perhaps, about 33⅓ per cent higher. In some cases it need not be that high, while in others it would have to be higher.

The CHAIRMAN. Sufficiently advanced, in other words, to give the trade to the United States?

Colonel BLISS. Yes, sir. And there are many people who think that the result of this concession, if any should be made, would be to restore better conditions in Cuba, resulting in more importations. I have not any doubt—although I do not think anybody could prophesy as to the exact figures—that it would increase the importations to such an extent that, while the differential would have to be maintained, the increase in customs revenue would permit the actual rates of duty to be lowered.

The CHAIRMAN. Now, have you proposed a schedule in your papers that carries out that theory?

Colonel BLISS. Yes, sir; but it is a mere suggestion. I do not propose to commit myself to it until an expert examination of the details should prove that it would accomplish what is desired. As I have already said, I have here two statements which suggest two of the various ways of looking at the subject, one showing a straight differential of 33⅓ per cent, and the other a varying differential. The latter one I have submitted to the Department, merely for the purpose of showing the present distribution of trade, and also what seemed to me must be general lines on which Cuba would have to construct her tariff if she wished to give the trade to the United States and at the same time maintain her present revenue.

Mr. METCALF. Will you not say which department? Which department do you mean?

Colonel BLISS. The War Department. To be more accurate, I submitted this statement to the military governor for his information, and he sent it to Washington.

Statement of Mr. Placé (pages 90–91):

The CHAIRMAN. What class of goods are now imported from the United States?

Mr. PLACÉ. Bacon, lard, corn, hay, bran, oats, and lumber; that is all. The manufactured goods come from Europe.

The CHAIRMAN. Now, the duties are the same on goods imported from the United States as on other goods imported from other countries?

Mr. PLACÉ. Yes, sir; the same thing.

The CHAIRMAN. What reduction in duties will be necessary to give us a greater share of the market on Cuban goods?

Mr. PLACÉ. As a Cuban I would like to give the United States free trade. The whole of American products imported into Cuba ought to be free.

The CHAIRMAN. What reduction of duty would secure that trade to the United States?

Mr. PLACÉ. First of all, our present tariff in Cuba to-day is very low. In order to give the Americans the trade of Cuba we ought to raise the present tariff 50, 60, and 70 per cent, and out of that tariff allow the United States 40, 50, and 60 if you are not willing to allow the United States free trade.

F. B. Thurber, president of the United States Export Association (pages 47–48):

Now, as to what concession should be made to Cuba. I believe it would be to the interest of the Cubans, of American flour and provision interests, of American fruit canning and preserving interests, and of all American consumers of sugar if what the Cubans ask could be granted, viz, free raw sugar and one-half the present duties on tobacco and cigars. But if in your wisdom you think we can not go as far as that at this time, then the very least concession which should be made should be 50 per cent on all her products, and this, it should be remembered, would still leave her products subject to a duty equal to the average on the dutiable products received by us from all other countries. This would lower by one-half the high tariff wall which we have erected against our ward. And if she, in return, would establish a tariff averaging 50 per cent on her importations she could reciprocally reduce that one-half on her importations from the United States, and this would enable her merchants to buy all their supplies in the United States, three-fifths of which they now buy in Europe.

This would not violate the "most-favored-nation" clause in treaties with other countries, because no country could offer Cuba such inducements as we would offer her by such an arrangement. It would still give her sufficient revenue, because her present tariff, established by our War Department, only averages about 25 per cent. American products would still enter the Cuban market at the present rate. Hence we would get the trade, and a large and increasing trade, because with increased purchasing power on the part of her people Cuba would become one of our most important markets.

The following, Exhibit G, of the printed hearing contains the

present tariff and suggested modifications. I simply quote the heading and omit schedules:

Cuban tariff (now in force), with suggested modifications, and old Spanish tariff.

(Explanatory note.)

The following is the customs tariff at present in force in the island of Cuba, and opposite each paragraph and letter thereunder is a suggested per cent of increase in the present rates to be applied to goods from all countries except the United States. The second column shows what the duty would be with the increased per cent added. The third column shows what per cent of decrease is suggested on the new "world" rate for goods from the United States, and the fourth column shows what the duty would be on goods from the United States on their entry into Cuba. The fifth and sixth columns show the rates prescribed in the old Spanish-Cuban tariff for the world and for Spanish goods upon their importation into Cuba.

The result of these suggested modifications would be to make a maximum and minimum Cuban tariff, the maximum rates to be applicable to all except United States goods and the minimum rates to apply to United States goods.

It will be noted upon examination that in most of the paragraphs the rate is increased for the world over the present rates, and the decrease suggested for the United States brings the rate back to that at present in force. This plan is suggested because Cuba must collect from customs an amount equal to the present customs revenues in order to meet necessary current expenses.

This being the only formulated plan submitted by anyone, and being the one sent to the War Department and evidently having received the official sanction of General Wood and the Secretary of War, will be the tariff rates fixed in the proposed reciprocity scheme.

An examination of the proposed modifications of the Cuban tariff will demonstrate the real purpose of the framers of this measure. This purpose is plainly exposed in those suggested changes which apply to articles manufactured by the great trusts and combines of this country. These proposed changes in most instances seek to impose a prohibitive tariff upon trust-manufactured articles when imported from countries other than the United States, thus affording the great combines of this country about the same measure of protection in the Cuban markets that they now enjoy in our own markets under the Dingley tariff law.

The small measure of relief, if any at all, afforded to Cuba under the terms of this bill is purely incidental, the main purpose and real purpose being to protect the American trust-manufactured articles in the Cuban market from foreign competition by extending to that country the protective-tariff system. The tariff proposed on most manufactured articles when imported into Cuba from countries other than the United States is practically prohibitive, placing the Cuban consumer absolutely at the mercy of the American trusts. In almost every instance the present Cuban tariff remains unchanged, so far as the United States is concerned, the changes proposed applying to her commerce with countries other than the United States. The effect of the proposed changes is simply to compel the people of Cuba to purchase practically all manufactured articles required by them in the United States.

In the case of the following manufactures, the proposed tariff, as applied to countries other than the United States, is practically prohibitive: Glassware, pottery, articles of gold, silver, platinum, and their alloys, wrought iron and steel, hardware, tools, cutlery, etc., tin plate, copper ware, including copper wire, etc., nails and tacks, pins and pens, gilt or nickeled articles, dyes and varnishes, chemicals, starch and glues, gunpowder, cotton manufactures, nearly all fibers and tissues, paper, boots, shoes, harness, saddlery, and other articles manufactured of leather, musical instruments, clocks, etc., agricultural implements and machinery of all kinds, wagons, buggies, carts, carriages, etc., and all railway equipment and appliances, including locomotives, cars, coaches, etc. All preserves and pickles (canned goods) must pay a tariff of 100 per cent over the duty paid by the American product when imported into Cuba by countries other than the United States.

The correctness of this statement is demonstrated in the following suggested schedules for cotton manufactures and machinery of various kinds. It will be noted that in nearly every instance the discrimination in favor of the American manufacturer is sufficient to prohibit the importation of such articles and manufactures into Cuba from other countries.

CLASS IV.—*Cotton and manufactures thereof.*

GROUP 1.—COTTON IN THE WOOL AND YARNS.

No.	Articles.	Duty.	Increase for world.		Decrease for United States.		Spanish tariff.	
			Per cent.	Duty.	Per cent.	Duty.	World.	Spain.
112	Cotton in the wool and cotton waste, gross weight	$1 per 100 kilograms	50	$1.50	33⅓	$1.00	$2.00	$2.00
113	Cotton yarn and thread for crocheting, embroidering, and sewing, including the weight of reels, net weight.	33 cents per kilogram		.33	33⅓	.22	.68	18

GROUP 2.—TISSUES.

No.		Duty.	Increase for world.		Spanish tariff.	
			Per cent.	Duty.	World.	Spain.
114a	Present tariff	13 cents per kilogram	66⅔	$0.22	$0.26	$0.08
b		17 cents per kilogram	66⅔	.28	.34	.12
c		23 cents per kilogram	66⅔	.38	.46	.18

c		32 cents per kilogram	66⅔	.53	.64	.24
d		43 cents per kilogram	66⅔	.72	.87	.35
e		55 cents per kilogram	66⅔	.92	1.10	.45
f	Surtax, 40 per cent, net weight					
118		24 cents per kilogram	66⅔	.40	.48	.16
119		45 cents per kilogram	66⅔	.75	.90	.30
120a		8 cents per kilogram	66⅔	.15	.17	.06
b		20 cents per kilogram	66⅔	.33	.40	.15
121		47 cents per kilogram	66⅔	.78	.95	.30
122a		70 cents per kilogram	66⅔	1.17	1.50	.60
b		80 cents per kilogram	66⅔	1.33	1.75	.70
c		70 cents per kilogram	66⅔	1.17	1.50	.60
d		90 cents per kilogram	66⅔	1.50	1.75	.70
123a		70 cents per kilogram	66⅔	1.17	1.40	.40
b		92 cents per kilogram	66⅔	1.53	1.85	.60
124		$1.46 per kilogram	66⅔	2.43	2.75	1.00
125		15 cents per kilogram	66⅔	.15	.30	.10
126		32 cents per kilogram	66⅔	.32	.65	.25
127		15 cents per kilogram	66⅔	.15	.30	.10
128		52 cents per kilogram	66⅔	.52	1.05	.35
122[a]		30 cents per kilogram	66⅔	.50		

For the United States there is proposed a uniform reduction of 40 per cent from proposed rate for world, leaving duties the same as at present.

[a] Knitted goods, even with needlework.

No.	Articles.	Duty.	Increase for world.		Decrease for United States.		Spanish tariff.	
			Per cent.	Duty.	Per cent.	Duty.	For world.	Spain.
				Per cent.		*Per cent.*		
214	All weighing machines, including scales and detached parts thereof.	20 per cent ad valorem.	50	30	33⅓	20	$5.40	$1.60
215	Machinery and apparatus for making sugar and brandy	10 per cent ad valorem.	300	20	50	10	.50	.50
216	Agricultural machinery and apparatus	do	300	20	50	10	.80	.80
217	Steam motors, stationary	20 per cent ad valorem.	50	30	33⅓	20	3.75	3.75
218	Marine engines, steam pumps, hydraulic, petroleum, gas, and hot or compressed air motors.	do	50	30	33⅓	20	5.00	5.00
219	Boilers	do	50	30	33⅓	20	3.00	3.00
220	Locomotives and traction engines	do	50	30	33⅓	20	4.50	4.50
221	Turntables, hydraulic cranes, and columns	do	50	30	33⅓	20	1.50	1.50
222	Machines of copper and its alloys	do	50	30	33⅓	20	27.00	13.50
223	Dynamo-electric machines, etc	do	50	30	33⅓	20	17.60	8.80
224	Sewing machines and detached parts	do	50	30	33⅓	20	4.00	4.00
225	Bicycles, etc	do	50	30	33⅓	20	6.00	4.00
226	Machines of other kinds, and detached parts not of copper	do	50	30	33⅓	20	9.80	2.30

Conceding, for the sake of the argument, that the doctrine of protection is based upon a correct economic principle, a study of the import trade of Cuba will convince anyone that these trust-manufactured articles of the United States require no protection in the markets of Cuba from foreign competition. In nearly every instance where such articles are sought to be protected by a practically prohibitive tariff upon the same articles when imported from countries other than the United States the American manufacturer already enjoys very nearly, if not quite, a monopoly of the Cuban trade, so that the only possible effect of these proposed changes or concessions, wrung from the people of Cuba in exchange for the reduction of 20 per cent on raw sugar, will be to enable the trusts and combines of this country to raise the prices on their products to the Cuban consumer. Therefore, the manifest purpose of the Administration and the Republican majority was to take a base advantage of the supposed immediate and pressing necessities of the Cuban people and fasten upon them our own vicious system of tariff protection.

The truth of this assertion that the American trust-manufactured articles, in favor of which it is proposed to erect a tariff wall around Cuba, do not require protection in the markets of Cuba is strongly emphasized by the following figures, taken from a compilation made by the Division of Insular Affairs, showing the export and import trade of Cuba for the fiscal year ended June 30, 1901:

Manufactures of tin from the United States, $72,274, as against $9,745 from the United Kingdom, the closest competitor.

Scales and balances from the United States, $32,006, as against $1,474 from France, the closest competitor.

Pipes and fittings from the United States, $147,129, as against $16,432 from the United Kingdom, the closest competitor.

Wire from the United States, $28,652, as against $1,349 from Germany, the closest competitor.

Agricultural machinery, for year ending June 30, 1900, from the United States, $36,429, as against $290 from the United Kingdom, the closest competitor.

Electrical machinery, from the United States, $89,966, as against $1,351 from France, the closest competitor.

Pumps and pump machinery, from the United States, $78,202, as against $4,074 from France, the closest competitor.

Sewing machines, from the United States, $107,300, as against $5,104 from Germany, the closest competitor.

Steam engines and parts of, from the United States, $115,219, as against $990 from France, the closest competitor.

Boilers and parts of engines, from the United States, $255,471, as against $8,223 from the United Kingdom, the closest competitor.

Sugar and brandy machinery, from the United States, $440,395, as against $15,702 from the United Kingdom, the closest competitor.

All other machinery, not enumerated, for 1900, from the United States, $1,099,798, as against $80,042 from Germany, the closest competitor.

Structural iron and steel, from the United States, $350,045, as against $8,584 from France, the only competitor.

Wire and wire cables, from the United States, $177,034, as against $11,688 from the United Kingdom, the closest competitor.

Rails for railways, from the United States, $211,961, as against $5,325 from the United Kingdom, the closest competitor.

Steel, from the United States, $231,230, as against $46,054 from the United Kingdom, the closest competitor.

And yet, notwithstanding the fact that the American manufacturers of the articles I have just mentioned already enjoy a practical monopoly in the markets of Cuba, it is now proposed to levy a tariff, practically prohibitive in its effects, upon these articles when imported from countries other than the United States.

COTTON-SEED OIL.

Cotton-seed oil under classification a, section 274, imported from the United States, would pay a duty of $2.40 per 100 kilograms, and under classification b, of same section, it would pay a duty of $3 per 100 kilograms.

Yet, when cotton-seed oil is imported from the United States, upon the direct demand of soap manufacturers in Cuba, under regulations obviously designed to enable such manufacturers to purchase their material at a lower rate in this country, the duty would be 50 cents per 100 kilograms. The American producer of cotton-seed oil can receive no benefit from this reduced rate, because he can not import his cotton-seed oil into Cuba except by the cooperation and consent of the soap manufacturer, who would naturally reap the advantage since the proposed bill places it absolutely in his power to do so.

The soap manufacturer of Cuba would enjoy a monopoly of the cotton-seed oil import trade in Cuba and cotton-seed oil export trade from the United States to Cuba. He would have in the Cuban market an advantage of from $1.90 to $2.50 per 100 kilograms over the American exporter. Naturally he would purchase his cotton-seed oil in this country at the lower rate and sell in Cuba according to the higher rate. On all cotton-seed oil imported by him he would have a clear margin of $1.90 for one class and $2.50 for the other class of oil upon which to meet competition at the hands of American cotton-seed oil producers. The result is that the American exporter will suffer all the disadvantages of the high rate, the Cuban consumer will suffer all the disadvantages of the high rate, while the soap manufacturer will reap (1) the benefit of a lower rate to himself, (2) protection from competition at the hands of American cotton-seed oil producers by reason of the high rate, thereby insuring him a monopoly of the market, and (3) the corresponding benefit of a high price to the Cuban consumer by reason of the high rate.

The following proposed tariff schedules for cotton-seed oil will demonstrate the correctness of this conclusion:

No.	Articles.	Duty.	Increase for world.		Decrease for United States.		Spanish tariff.	
			Per cent.	Duty.	Per cent.	Duty.	World.	Spain.
274	Olive oil, cotton-seed oil (except for the manufacture of soap):							
a	In receptacles of earthenware, wood, or tin, gross weight	$2.40 per 100 kilograms.	83⅓	$4.40	45½	$2.40	$6.75	$2.35
b	In bottles, including the weight of bottles, gross weight	$3 per 100 kilograms	83⅓	5.40	54⅓	3.00	10.00	3.00

101 c. Cotton-seed oil to be used exclusively in the manufacture of soap, provided that the importation be made at the direct demand of the manufacturers of soap, and that the latter submit their works at all times to the inspection of the customs authorities, and that the importer give such bond as may be regarded necessary by the acting collector, gross weight, 50 cents per 100 kilograms.

No change of any kind suggested.

It is a very significant fact, however, that these proposed discriminations do not apply to a great many agricultural products of this country when imported into Cuba. The following proposed tariff schedule will demonstrate that such farm produce of this country as pork, lard, tallow (except for soap), eggs, wheat, corn, rye, oats, etc., will be compelled to compete on equal terms with the same products imported into Cuba from other countries:

No.		Duty for world.	Duty for United States.
237b	Pork, brine or salt, per 100 kilograms	$2.80	$2.80
238	Lard, per 100 kilograms	2.80	2.80
239	Tallow, except for soap, per 100 kilograms	2.80	2.80
252	Eggs, per 100 kilograms	5.50	5.50
254	Wheat, per 100 kilograms	.60	.60
255a	Corn, per 100 kilograms	.30	.30
b	Rye, per 100 kilograms	.40	.40
d	Oats, per 100 kilograms	.40	.40

It will be further observed, as a significant fact, that while the American wheat grower must compete on equal terms with the wheat growers of other countries, the flour trust is amply protected from foreign competition of any kind in the markets of Cuba.

No.	Flour.	Duty for world.	Duty for United States.
256a	Of wheat, per 100 kilograms	$1.00	$0.55
b	Of rice, per 100 kilograms	1.10	.55
d	Of oats, per 100 kilograms	1.10	.55

So that I come back to the proposition that this is but a sham reciprocity and that the Republican Congress and Republican Administration by this bill seek simply to extend the principles of the Dingley bill and the McKinley bill and all the other abominations of Republican protective tariff to Cuba, and simply extends the tariff wall across the ocean and builds it up higher against the outside world, while it makes the American producer pay the same rates that we are now paying, and this is done in order to reduce our rates upon Cuban products 20 per cent for one year, but the Cuban is not to reduce his rates to us a particle from the existing rate.

Against such a sham reciprocity; against the extension of special favors to the manufacturers of this country or of Cuba; against taxing the struggling people of Cuba as the people of America have been taxed and plundered under the Dingley bill and all Republican tariff laws, I enter my protest, and I shall not support it by my vote. I will vote for any measure which actually reduces the duties upon our goods in Cuba, and a reduction of our rates to Cuba that will reduce the price to our consumers, but I will not vote for a measure like this which proposes to reduce the rates so as to benefit one protected interest and fill the coffers of the sugar trust, and at the same time proposes to graft upon the new republic of Cuba the principles of Republican tariff protection.

In support of my position on this—though I may not have many companions—I can draw my inspiration from the fathers of the Democracy and from its teachings in the past.

On the subject of our duty to Cuba, on account of the peculiar relations, I do not yield to the clamor raised in the interest of the great protected sugar trusts of this country that we owe something to Cuba, and ought to give them something to aid them in their struggles to establish an independent government and to prevent the bankruptcy of the island. I think if a balance were struck the debt would be to us and not to Cuba. We have given her liberty and independence for which she fought for thirty years in vain. We have poured out blood and lavishly spent our treasure for her. Our debt is fully paid.

The Cuban sugar planter is not in distress; the hearings before the committee show that labor is all employed at high wages. Far better had we be concerned in answering the demands which humanity and the principles of freedom and our institutions make to us in regard to establishing a free government in the Philippines than to devote our time, energies, and money upon these people whom we have freed, who have not yet become, and I trust will not be soon, citizens of the United States.

It may be true that we will have to assume responsible duties; it is true that we had to free Cuba: it is true that we are aiding her to establish an independent government, and we wish her God speed in her effort to become an independent nation; it is true that we have put upon her what is known as the Platt amendment, but which was not placed upon her by my consent or vote; but it is also true that in the same war, with the same foe, we inherited other burdens and other responsibilities and other duties to 10,000,000 of people in the Philippine Islands, who are now within the jurisdiction of the United States, who are a part of the United States, and who are at least entitled to some consideration at our hands. What are we to do for them?

There is no distress among the laborers of Cuba. Her people are all employed at far better wages than the laborers in my own State who do farm work. From the evidence on this subject I will quote a few statements:

Colonel Bliss says "the men themselves get varying wages, but many of them, in many portions of the island, get as much as $30 a month American gold; others much less than that. When I say much less I mean $4, $5, or $6 less." (P. 388.)

BLISS. Q. You have said that labor there is employed all over the island. In what does this distress of which you speak consist?

A. I have not spoken of any distress, except to deny that any existed so far as I knew. It is a long time since I have seen anyone begging on the streets, or anybody who wanted to work who was not at work at good wages. (P. 389.)

ATKINS. Wages in Cuba high and supply of labor limited. Wages quite as high as in the United States. (P. 18.)

ATKINS. The labor in Cuba is very limited, and I have very strong doubts in my mind whether there is labor enough in Cuba to cut and take off possibly a crop of 800,000 tons. (P. 15.)

Mr. Atkins claims wages have increased 75 per cent since the termination of the war. He pays $23 per month. On east end of island wages are $1 per day. (P. 18.)

ATKINS. States that the average cost of agricultural labor in United States is below that of Cuba. (P. 20.)

ATKINS. Cuban labor higher than that of our Southern States. (P. 29.)

ATKINS. Labor in Cuba not sufficient to go around. (P. 36.)

Q. As I understand it, the labor in Cuba is at present well employed, and at good wages? (P. 382.)

A. Yes, sir.

Q. That means that the present production of sugar utilizes all the labor that now exists in Cuba, does it not?

A. Yes, sir.

ATKINS. In my section I pay about $23 for a month of twenty-six working days. Mr. Kelly has to pay $1 a day. (P. 18.)

HAWLEY. Q. Is labor employed there? (P. 358.)

A. It is.

Q. Can labor find full employment?

A. It has employment at the present time.

Q. At good wages?

A. At good wages; yes.

KELLY. Roustabout or unskilled labor in Cuba is 90 cents to $1.10 per day, United States gold. (P. 51.)

KELLY. In our end of the island we are paying an average of $30 a month. (P. 57.)

So far as I am concerned, and so far as my people are concerned, I am exercised much more to do what is right and proper with the Philippines and establish civil liberty there, giving them a free government and ending the war and strife, than I am for doing something for the million and a half people in Cuba. Our duty to humanity, our duty to the world, demands that the Philippines should be considered first; they who are our own citizens, whom we govern, whom we control. Against these islands of ours we have built up a tariff wall; we have established there a tariff wall against our own country and our own products, and before we pour out our charity in the shape of millions of dollars a year to the Cubans, whom we freed, to whom we gave liberty and a government of their own, we ought to answer the demands of justice in giving liberty and constitutional government, humane and wise laws to the Filipinos, who did that which the Cubans never did—aided us in destroying the Spanish power.

So, Mr. Chairman, my position upon this bill is that I shall vote for a proposition that shall reduce the differential upon refined sugar to the same rate as that upon the raw, and if that is put upon it I shall cheerfully vote for this bill. In that way I reduce the price of sugar to the American consumer, and in that way I take away at least some of the power of the great combination and trust known as the American Sugar Refining Company to further oppress the people, both the consumer and those who undertake to compete with it in the manufacture of this necessary article to our people; but I do not feel disposed, on account of any views of mine on the subject of Democratic reciprocity, to support this bill, which is simply a sham and pretext, a snare and a delusion. I shall not rush into the ranks of the Republican majority and follow the lead of the Republican President or the Republican leaders in this House; I shall not hasten to lower the Democratic banner in the front of the charge made by the Republican Congress, but I shall stand by my Democratic guns and oppose this Republican sham reciprocity measure—this measure which comes out of a Republican caucus, which is in line and but a continuation of Republican tariff schemes, which is offered to allay the demands of the Republican masses for tariff reform—and in doing this I shall feel that I am discharging my duty as a Democrat. To do less would not be in accord with my belief in Democratic principles.

It gives me concern and some pain to know that I differ in this particular with some of my Democratic colleagues from my own State. It gives me pause and causes me to reflect. But, much as I value their opinion, much as I regret to differ with

them, glad as I would be to yield to their judgment and decision, I have not seen my way clear, entertaining the views that I do on this subject, to do so. I regret also that it falls to my lot to disagree with the minority members of the Ways and Means Committee who support this measure, one of whom is the distinguished leader of the minority in this Congress. I always desire to uphold his hands in resisting Republican policies, and I say to him now that I regret that in the vote upon this measure I find myself not following him in his vote and advocacy of this bill. I sincerely wish that he could have found it consistent with his views to lead us in opposition to this Republican measure, and that it would not have been necessary that he should consent to advocate it and join the ranks and march along with the Republican column in advancing its own interests and purposes.

The fact that I have to account to my constituents for my votes does not at all frighten me. At all times I have endeavored to subserve their interests and to carry out their views. Fortunately for me, they have always agreed with mine, and I feel assured now that they stand with me in the views I have presented upon this measure. All votes that I have given upon measures since I have been in Congress have received their indorsement. For four successive terms, without opposition in the party, they have chosen me to represent them. Their generosity and confidence are far beyond measure and far beyond my merits. When they demand an explanation, as they have the right to do, I shall make it without fear and trembling. When I tell them, as I have stated here, and as I propose to tell them again, that I voted against a Republican measure which had no semblance or vestige of resemblance to Democratic tariff reform, but was a pretext and a sham; that I voted as Colquitt and Crisp and Blount and Turner, of Georgia, voted on this subject; that I followed the beacon lights that these great leaders I have mentioned hung out for my guidance and protection, I am sure they will applaud my course.

But whatever be my political fate, Mr. Chairman, whether this vote shall cost my seat in Congress or whether it shall meet with the approval of my constituents, I can give back to them my honors again and still shall have that peace which is above all earthly dignities, a still and quiet conscience.

And, Mr. Chairman, how different is this proposed and pretended reciprocity from that just and fair and profitable reciprocity with all the world, that true Democratic reciprocity, which Jefferson taught and which he had in mind when he said:

> Peace, commerce, and honest friendship with all nations, entangling alliances with none.
